Every Day Problems.

Problem 1. Bad Roads:—

The old way was to curse nature and idly await sun's return.
The new way is to telephone for what you want and smile because you get information in a thousand part of the time.

Problem 2. Weather Forecasts:—

The old way was to work on belated information, and to excuse the losses with "That's what the farmer has to put up with."
The new way is to telephone every morning to the weather man and overcome much of the needless hustle and bustle of the old way.

Problem 3. Prices Current:—

The old way was to ask a neighbor or trust to the newspapers.
The new way is to get information in the nick of time over the 'phone, thus knowing when to sell and when to hold.

Problem 4. Emergencies:—

The old way of procedure when some one took sick, was to harness up the "driver" and make all haste for the doctor. Effort in this direction often procured as its only result the information :—"doctor is out."
The new way is to call up the doctor on the 'phone, and know instantly what can be done pending the medical man's arrival.

Problem 5. Help:—

The old way was to allow men to go on boy's errands—waste half a morning walking to Smith's only to find his harrow was already loaned.
The new way is to make the 'phone your errand boy—buy, borrow, beget by means of the "silent partner."

FLORICULTURE.

Growing Roman Hyacinths in Water.

A. M. of St. John writes: I can not [illegible] grown in water that I wish to recommend the experiment to others.

Ans. One bulb placed in a small vase on October 9th, was brought into light November 25th and bloomed from December 11th to January 1st, there were two flower spikes bearing sixteen small, but very fragrant blossoms.

There is nothing so effective in the spring as a bed of bright blossoming bulbs. So one of the first pieces of out door work in the fall is the preparation of the bulb bed and buying Dutch bulbs.

But still a great deal depends on the way the bulb is grown, good ground, good cultivation and proper care will develop better flowers than poor ground and neglect from bulbs of equal quality, the poorly grown bulbs will have just as many flowers as the well grown bulbs, but they will not be as large nor as fine. The soil that bulbs like best is of light texture that gives good drainage and the percentage of loss is not so great if a lot of rain comes just after planting. If your soil is stiff and clayey and takes a long time to dry out, add sand in large quantities mixing it well with the soil.

Bulbs will flower in either sunshine or shade, but like most flowering plants they are mostly partial to sunshine, especially the early spring flowers such as the Tulips, Hyacinth and Daffodil, at the same time if they are wanted in a shaded place don't hesitate to plant there as they will surely flower and look well, but the flower will probably be weaker stemmed and not so large as if grown in the sunlight.

Single Tulips are best for bedding purposes, in fact for all general purposes it is better than the double flowered type, but, as with all flowers you will find some people who prefer a double Tulip simply because it is double. I often wonder if these cranks on double flowers ever stopped to admire the beauty of a head of cabbage, it is double enough and only lacks in color what some of our double flowers are.

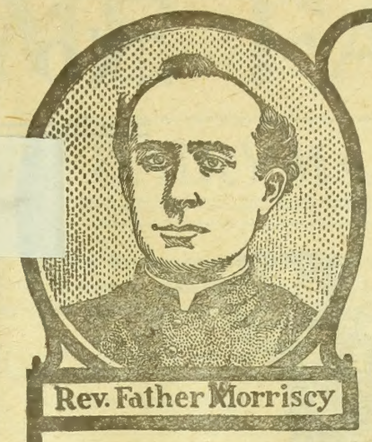
The best single white Tulip is Joast Van Vondel, this is one of the earliest of all Tulips, pure white with very large pointed buds.

The yellow Tulips are very popular and justly deserve it, the colors being of a clearness hard to find in any other flower.

One of the good Pinks is the College Maid.

Everyone should plant a few Crocuses, if only for the inexpensiveness of the bulbs, they cost one cent each, moreover they may be planted on lawns in shrubbery borders and such places and will gradually spread until they cover a large area and they are not troublesome to other vegetation as they require no handling and if the tops are cut with the lawn mower it does no harm. They flower so very early in the spring that they add cheerfulness to the most barren spots and it is not infrequent seeing them flowering when a light flurry of snow happens along. Plant the bulbs in clumps about six inches apart and three inches deep, cover with strawey manure or brush.

Hoarseness in a child subject to croup is a sure indication of the approach of the disease. If Chamberlain's Cough Remedy is given at once or even after the croupy cough has appeared, it will prevent the attack. Contains no poison. Sold by all dealers.



Take Father Morriscy's "No. 10" (Lung Tonic) And Be Sure

that it will cure your cough, cold or lung troubles. It is the very same medicine which the priest-physician himself prescribed so often and so successfully during his lifetime, and thousands are the cases it has cured.

Take it—or give it to the children—with confidence, because **it is absolutely free from opium, morphine or any other harmful drug.** Many cough medicines are loaded with these dangerous ingredients, but Father Morriscy would not use anything that was not perfectly safe even for a baby.

"No. 10" contains nothing but Nature's own remedies—Herbs, Roots and Balsams—combined as only Father Morriscy knew how to combine them. Keep a bottle in the house as a safeguard against all troubles of throat and lungs.

Trial size 25c. per bottle. Regular size 50c.

THE HALIFAX EXHIBITION.

IN the clear sunlight of a perfect Indian summer day, Nova Scotia's thirteenth annual Provincial Exhibition was formally opened on Saturday, September 25th. The opening exercises took place at a luncheon, given by the Commission in their dining room in the Executive Building, and were marked by some excellent speeches, in which the educational value of the exhibition, in demonstrating the variety of Nova Scotia's agricultural, horticultural and other varied resources, was set forth. The luncheon was presided over by Mr. Justice Longley, President of the Exhibition Commission, and after a series of addresses by prominent gentlemen, expressing satisfaction at progress of the exhibition, hopefulness for the future and the elimination of dangerous spectacular acts before the grand stand, the fair was formally declared open by His Honor, Lieutenant-Governor Fraser.

Judge Longley's Address

was in part as follows :—"I have so often, on this opening occasion referred to matters touching the Provincial Exhibition that I fear my story will become trite. For some years we struggled with the initial difficulties—unmerited criticism, local prejudice, and needless worry over deficits. We were favored with kindly proposals that we should hold exhibitions every other year, alternately with St. John; that we should abjure amusements of every form and generally look solemn. I must frankly confess that the Commission was very little affected by these crude suggestions coming from persons who had no responsibility and who had scarcely earned, by successful efforts in the show business, the right to obtrude their opinions. We have gone straight on attending to our business to the best of our judgment, and I think I may say that at last we can regard ourselves as a permanency. It is no longer a question of working up special interest or creating special attractions to get public attention; the exhibition is now a well-established and eagerly-looked-forward-to event, with its large and firm constituency of friends. We hear no more talk of semi-annual exhibitions, very little statement that "Halifax is not the proper place," and by degrees the reformer has quieted down in respect to the moral qualities of our attractions.

"This year we have a new departure in respect of attractions. We have determined to have no vaudeville, no special blood-curdling acts and no evening performance. It is only frank to say that moral considerations have had nothing to do with this change of policy. We used vaudeville and special attractions in the beginning because they were distinct agencies in drawing patrons; the public wanted amusement and we gave them the best that could be got. We had evening performances because they were enthusiastically patronized by the public. But in course of time their drawing properties began to subsidize. Autumn evenings in this climate are liable to be chilly and grand-stand performances uncomfortable. The moving pictures arrived and other forms of evening entertainment, which interfered with our evening performances. When they cease to be profitable we drop them. That is all.

"We, this year, experiment with an exhibition devoid of all special attractions except the speeding contests, and we have hope that our patronage will not on that account be seriously diminished. We are assured this year of a splendid exhibit in all departments. The entries have been more numerous than ever before, except at the Dominion Exhibition. In our efforts to have the evening performances made as agreeable as possible, we were compelled to fix early dates. Having dropped these, we are able to make the date correspond with the acme of our agricultural productions and we have reason to believe that the later dates we have fixed this year are very acceptable to the farmers generally.

"The exhibition has, I think I may fairly say, developed into a permanent and recognized institution, and the people of the province look forward to this autumn show with the same anticipation as to the religious and fraternal conventions in the early summer. We have no doubt whatever that the exhibition has had an immensely stimulating influence upon the agricultural and industrial life of the province. Without it we should be hopeless. We see a steady career of usefulness before us. At this period, when the Government is making special efforts to revive the agricultural interests of the province, and seeking to create industrial activity by a Technical College, the need is more imperative to second and give effect to these efforts by a large Provincial Exhibition. Here is to be seen the result of all activities. Whatever we are doing will be seen here. The yearly progress will be observed here, and any county, which is not seen here is not participating in the general progress. The best county, industrially, is the one with the greatest number of exhibits here.

"In addition to the educational and stimulating effects of the exhibition as a field of friendly rivalry among exhibitors, we seek to make it the centre of social meeting and union among all classes in the province. Upon these grounds gather all the enterprising citizens of the country in the capital city of the province. Apart from the exhibition, Halifax offers many attractions to visitors. It has beautiful scenery, charming boat clubs, various amusements, and is the centre of the commercial life of the province. Halifax seeks the visitors and the visitors seek Halifax. The Provincial Exhibition brings them together. Our efforts in this direction, however, will fall short of the best results unless we are seconded by the cordial co-operation of all classes. We expect the business men of Halifax to aid in making the many thousands who come to Halifax enjoy themselves and derive advantages from the trip. We expect all enterprising farmers to favor us with their exhibits and their presence. The higher the point of efficiency this exhibition can attain, the greater will be its industrial effects. We distribute $10,000 a year among exhibitors—comparatively little of which remains in Halifax City.

"While we cannot shut our eyes to the fact that at this time the great Northwest is absorbing the larger share of the progress of Canada, yet I think there are indications that, in common with the other Eastern Provinces, Nova Scotia is growing faster and developing better than at any period since Confederation. Probably the next census will reveal a substantial increase in population and a still greater increase in wealth.

"The history of the world, especially in modern times, demonstrates beyond controversy, that every progressive community has exhibitions, and, without exhibitions, there is no progress. The live country is an exhibition country. The country without an exhibition is dead. Nova Scotia has the best exhibition of any community in Canada of the same size and it calls for the loyal support of every patriotic citizen. It has been handsomely sustained by the Government, the Capital City and the Press. Let it never be wanting in the sympathy and cordial approval of the people."

The Weather.

The weather man did not favor the Halifax Exhibition season. He rolled in a pall of water laden nimbus clouds that poured torrents of rain or heavy mists incessantly on Monday, Tuesday, Wednesday and Thursday. Friday, in its usual proverbial contrariness to the other days of the week, brought fine weather again, but a promising Saturday morning gave way to a drizzling disagreeable afternoon. The unfavorable weather prevented thousands of visitors from attending the fair and consequently the Commission's financial burden will not be a light one. In order to complete their programme, the management found it necessary to extend their time limit to include October 4th and 5th, but the greater number of exhibitors having moved out on October 2nd, the returns from the two extra fair days would not make up the damage caused by the weather man.

The Manufacturers' Exhibits

in the Main Building, as a whole, were only fair, but there were some exceptionally good displays. Among former advertisers, who had displays, were : The National Drug and Chemical Co., who dispensed their Sovereign Lime Juice from a tastily arranged well with its old-fashioned moss-covered bucket. The W. H. Johnson Co. showed a fine line of pianos and organs, and the Hewson Woolen Mills showed their superior Tweeds and underwear.

In the annex to the Main Building the Melotte, DeLaval, Sharples, National and Capital Cream Separators were exhibited by their respective representatives.

Machinery Hall

resounded with the whirl of machinery in motion and a set of barrel making machinery by the Lloyd Mfg. Co., Kentville, and several lines of Gasoline Engines by their respective agents. The Carritte-Patterson Co. had a display of their Amatite Roofing.

The Marine and Fisheries' Hall

contained interesting displays of live fish in tanks and all kinds of prepared and frozen fish. The mineral wealth of the province in the rough and refined stages were tastily displayed.

Agricultural Hall.

contained the best display of root and grain crops, thanks to the timely exhibition season, that was ever seen at a Halifax fair. The exhibits were of fine size and quality in every department with the exception of the potato classes which were hardly up to that displayed in those lines on previous occasions. It was a pleasing sight to enter the agricultural hall and there behold the acme which may be attained by the industrious tiller of the soil in the growing of such magnificent specimens of the various agricultural product's line. Superintendent Robertson of the Nappan Experimentul Farm was on hand with a series of tastily arranged arches on which he displayed specimens of the products of the Nappan farm.

The Horticultural Hall

contained a magnificent display of flowers and plants by professional and amateur floriculturists. The fruit display was very creditable, for special report see page 8.

The Dairy and Apiary Products.

were shown in the agricultural hall. There was a large entry in the cheese classes. The butter, owing to the warm weather prevailing at the time it was shipped to the fair had depreciated in quality and was rather oily, otherwise the quality was good. L. R. Rose, of Urbania, having won extensively at Fredericton and at the county fair, Stewiacke, showed at Halifax and won their first prizes. He is well pleased with the number of red tickets captured this year, next year, he expects to invade the Toronto show and claim some of the awards. Mr. Harvey Mitchell judged the dairy exhibits. A list of the prize winners will be found on another page.

Mr. Baker of Amherst, judged the apiary products. It would be advisable to have a section specially arranged for honey display, as it cannot be shown at its best in the dairy cold storage as at present. In cognizance to the important place the apiarist's interests occupies, the fair management would do well to give them ample opportunity to display their wares to the best possible advantage.

In the Women's Building.

the display of fine arts and various feminine handicrafts that testify to the ingenuity and skill of our maritime ladies. One of the interesting features displayed in this building was the tuberculosis exhibits. It was certainly worthy of the attention of every visitor. In pursuance with the great interest manifested by the world at large in the methods that are being adopted to stop the spread of tuberculosis, the Women's Council devoted many weeks of labor to the getting up of an exhibit that was calculated to give a great deal of information on the subject, as well as presenting a tuberculosis exhibit that was most scientific as well as interesting.

The walls were covered with charts and illustrations showing the spread of the disease in various countries in Europe, America and Canada and the preventatives, as also photographs of the most famous sanitarium, in which that of Kentville was shown with an excellent illustration of the splendid work accomplished since its establishment.

Some model open air tents and shacks were also shown, one of the most complete being the work of Richard Brown. In every illustration the necessity of light and fresh air was emphasized as factors in health and life.

The Live Stock and Judging.

The strongest feature at the Halifax exhibition is its live stock. Take the live stock away and the chief centre of attraction is lost. In view of this fact retrenchion of expenses in connection with the securing of competent judges for the various lines of live stock cannot be justified. It is almost an impossibility for any one man to judge both the heavy and light horse classes and give satisfaction to all concerned. Some exhibitors who haven't the stock to carry them to the highest awards and who cannot endure the thought of going to the bottom of the list are often dissatisfied with the placings, but when honest exhibitors who show stock that they know should not win the highest awards in the competition, find that they are unjustly given the first places, are heard denouncing the placing of the ribbons, there is something wrong and the judging operation ceases to give the instruction to the onlooker that it is calculated to give. There is entirely too much of the hop-step and a leap style of judging practised. Stock seems to be judged one year according to one standard and the next year another judge comes along with a different view of what constitutes a certain breed and the exhibitor and spectator are kept in an undecided muddle. Let us have consistent judges. Men who know what they are judging. Let us have a good light horse judge and another for the heavy horse classes. What is true in the horse classes is also true in the dairy classes. It is impossible for a man to judge Jerseys, Guernseys, Ayrshires and Holsteins with equal satisfactory results in the respective classes. While the Jersey men were well satisfied and while little or no dissatisfaction was expressed by the Guernsey men, some of the Ayrshire and Holstein men could not follow the judge's reasoning in many of the sections and in a few sections surprises came thick and fast. We might quote the case of McIntyre Bros, who won very extensively at Fredericton and who placed their stock under the judge at Halifax, under protest went down in practically the same company and with their stock in just as high a state of bloom. Matters of the same nature happened in the Holstein classes and we fail to know where the education comes in. More consistency is needed. And while a man may be an expert Jersey judge it does not follow that he is equally strong in his discerning faculties in regard to the other breeds. Considerable dissatisfaction also existed among the sheep men and that among breeders who are not habitual squealers.

The Horses.

were judged by J. H. Reed of Guelph, Ont. The equine exhibit with the exception of the Clydesdale class was not up to that of other years.

THOROUGHBREDS.— Haphazard and Cyclist shown by Geo. Haley, Windsor and H. C. Jewett, Fredericton, were the only stallions in the aged class. The only young stallion was Lucifer II, by Lucifer, shown by Wm. Robinson, Halifax, who also showed the only females, Binnelta Colton and Sileuel and their 1909 foals, by Lucifer, the famous College farm thoroughbred stallion. Haphazard won the championship diploma.

STANDARD BREDS—were out in fairly large numbers, Frank Power, by Rampart, Maids King by Maid King and Thos. Munro's beautiful black horse won first, second and third places respectively. The three-year-old stallions Rampart II, Baron Ajalon and King Dodds by Kaloe, won respectively in their class. Kinkrilla, by Achille and Brookside, by Woronoco were the only entries in the two-year-old stallion section. Hopewell Boy, by Maritime Prince and a handsome bay colt, by Achille won first and second respectively in the one-year-old stallion class. Dina Hartshow with Achille foal led the brood mare section. Frank Boutilier's Jessie Rampart took the blue ribbon and Messenger's Lady Farron captured the green. Grace Abbott, by Abbott Wilkes, Lady Brazilian and Bessie Pardner captured the fattest plums, respectively in their class.

Miss Woodburn, an Achille filly, led the way in the two-year-old class. I. L. Hartlen had the only entry, Cherry Blossom an Achille filly, in the one-year-old class.

D. R. Sutherland's Achille foal headed his class. An Achille foal also took third place while a foal shown by T. B. Messenger was sandwiched in between them in second place.

ROADSTERS—Achille colts figured quite extensively in the Roadster classes as well as in the standard bred class. With the exception of second and third prize monies in the three and two-year-old filly classes, third money in the one-year-old filly and matched team in harness classes, all the prizes being up for competition were captured. R. A. Corbett's fast trotting pair, Daisy DeWitt and Anita led their class. A full list of awards will be found on another page.

CARRIAGE HORSES—were few in numbers. Two brood mares and their 1909 foals were the only entries in their respective classes, R. A. Snowball's Jubilee Beauty and her foal by Warwick, captured the red ribbon in their classes. Two matched teams responded to the judges called, R. H. Melzter's pair, Kruger and Prince led the way, Harlten's black span capturing second money. All the monies for competition in the single horses to harness were awarded. Snowball's, Jubilee Beauty won the diploma for the best horse, any age.

PONIES—A few very nice ponies were exhibited. There was no competition except in the Shetland mare or filly class where Etta Fuller, of Truro, won the first place. Donald McCurdy of Halifax, was the other contestant.

GENERAL PURPOSE HORSES—Were a good useful lot. There is however much room for improvement in this class as much diversity of type appears. About one quarter of the prizes offered were not competed for.

HEAVY DRAUGHT HORSES were few in numbers, Wm. Sharp, Windsor, led the way in the yearling filly or gelding class, first with brood mare and foal of 1909 and first with two-year-old filly or gelding and won the diploma for mare and three of her get. The horses shown were mostly all Clydesdales.

HACKNEYS—R. A. Snowball, W. W. Black and Geo. R. Chipman, C. A. Webster and Roper Bros. exhibited Hackneys, Roper Bros.', Fashioner, captured the red in the aged stallion class. Chipman's, Sensation, took second money, Snowball's, Model Performer and Webster's, Sunburn, captured first and second, respectively, in the two-year-old stallion class.

Snowball's, Langton Lily, a winner of the first award on two occasions at the Royal in England had no competition in the brood mare class. Her foal of 1909 had no competition in his class, Langton Lily got the diploma for best mare and Model Performer, won the diploma in the stallion class.

C. A. Webster's three-year-old fillies Shiny Shoes and Good Friday, by Cliffe Rosador and W. W. Black's, Miss Violet captured first, second and third monies, respectively. C. A. Webster showed Firebrand, the only mare in the four-year-old filly classes

COACH HORSES—H. C. Jewett's aged stallion, Onyx, was the only Coacher at the fair.

PERCHERONS.—Frank Ellis, Whitenburg, N. S., showed Aubin, the only Percheron stallion at the fair. Chas. Symes had the only brood mare and foal of 1909. There were no entries in the other classes.

CLYDESDALES were the best lot seen at Halifax for some time. Six aged stallions appeared in the ring. After considerable deliberation the judge placed Lord Delmaney, P. C. Brown's horse, at the head of the list. H. C. Jewett's Sorbie Boy was put in second position, while C. R. H. Starr & Son's Baron Primrose stood in third position. Some of the horsemen, who stood around the ring, did not agree with Judge Reid in his decision.

Two stallions came forward in the three-year-old class. W. W. Black's Saxon Prince and Geo. B. O'Brien's Norseman were placed first and second, respectively.

W. W. Black with Amherst Lad and R. A. Snowball with Baron Belgradon were the only contestants in the two-year-old stallion class. Baron Belgradon led the way.

Three one-year-old stallions, shown by C. R. H. Starr & Son, Donald McIntyre and H. C. Jewett, won out in their respective order.

In the brood mare class Logan Bros.' Soubrette and Pink Rose captured first and third, respectively. Their foals stood in second and third place in their class to C. R. H. Starr & Son's foal of 1909, whose dam was second in the brood mare class.

R. A. Snowball had May Lothian, the only one in the four-year-old filly class.

C. R. H. Starr led the way in the three-year-old filly class. Snowball's Rosie Miller, the only other contestant, captured the second award.

W. W. Black's Bessie was the only filly in the two-year-old class.

Logan Bros.' Baron's Fancy and Princess May, imported in their dams, Soubrette and Pink Rose, where the only entries in the one-year-old filly class.

P. C. Brown's Lord Delmaney captured the stallion diploma.

Logan Bros.' Soubrette won a similar distinction in the female class, while Baron Primrose, C. R. H. Starr's horse, proudly stood at the head of the list with three of his get. The uniformity and quality of a stallion's get is, after all, the tell-tale that goes to show whether or not a stallion is of any consequence. Baron Primrose's colts are as even in quality and as much alike as three peas in a pod.

Beef Cattle.

There was no addition to the beef herds over those shown at the Fredericton Exhibition. H. S. Arkell, of St. Anne de Bellevue, placed the awards.

SHORTHORNS were shown by R. A. Snowball and C. A. Archibald. Both these herds were out in the pink of condition. The champion bull, Major Lewis, bred by C. A. Archibald, headed the Snowball's aged herd and was first in his class, without competition.

The champion female was in Archibald's herd. Archibald captured the first and second awards for best three animals, the get of one bull, with six good ones, sired by old Huntleywood.

Archibald also captured first and second monies for the best two animals, the progeny of one cow. He also pulled out two breeders' herds and captured first and second monies. The honor for the best graded herd also went to Mr. Archibald.

There was no competition in some sections, but where competition existed, although Snowball was a close competitor, Archibald captured the red ribbon in every case. Mr. Bennett showed the Snowball herd in good shape. The Bellevue herd shows that Mr. Archibald and his efficient herdsman, Mr. Douglas Burgess, have been feeding and breeding very carefully. Every animal in Mr. Archibald's Shorthorn herd was bred by himself. It is certainly a great credit to a man to be able to select and breed up such magnificent specimens as is found in the Bellevue herd. Any person, who has money enough at his command, can go out and buy exhibition winners, but to breed, feed and rear them so that their progeny will be winners, is where the stumbling block meets the average breeder. Mr. Archibald has seemingly mastered this art and his stock testifies to his ability.

HEREFORDS.—W. W. Black's Herefords were out in their usual good show condition, but met with no competition. We have so often commented on the creditable appearance of Mr. Black's white faces, despite the lack of competition, that to repeat the story, which is as true this year as previous occasions, would be giving our readers what the boys commonly designate a "chestnut."

BEEF GRADES AND FAT CATTLE.—W. W. Black had no competition in these classes and carried off the awards with stock good enough to win in keener competition.

DEVONS.—Chas. G. Pinkney and Wm. A. Pinkney, of Melbourn, Yarmouth Co., were on hand with two very fine herds of Devons. Their stock shows a vast improvement over former years and, undoubtedly, the tendency will be to bring them more in favor with the general public.

Dairy Cattle.

The battle royal of the fair concentrated in the dairy classes. The showing was one of the best ever made at Halifax and it is a regrettable fact that there was so much dissatisfaction with Judge Pier's decisions. It is hoped that the Commission will see their way clear to put an out-and-out Ayrshire man over the Ayrshire class and a Holstein man to judge the Holsteins, as the competition in these classes is becoming particularly keen. There was no dissatisfaction among the Jersey men, but they and the Guernsey men will look for a competent man to place the awards in their respective classes.

AYRSHIRES.—M. H. Parlee, C. A. Archibald, Easton Bros., McIntyre Bros., Retson Bros., Chas. Symes and John McDonald & Sons were out with their magnificent herds. McIntyre Bros., who did not approve of Judge Pier's awards on a previous occasion, placed their stock under him under protest. There was quite a scuffle in placing the awards and the Fredericton decisions were reversed in many cases. The stock shown was the same as shown at Fredericton, with the exception of the addition of Easton Bros.' and John McDonald & Sons' herds.

Easton Bros. led the way in the aged bull, senior yearling bull, senior yearling heifer, senior heifer calves, aged herd and breeder's young herd classes, as well as winning the diploma for best bull and three of his get. The various Ayrshire men in the ring did not agree with the placing of the first prize in the aged herd class. The award was seemingly placed on the strength of it containing the first prize aged bull, but the females did not begin to belong to the same class as those in some of the other herds. C. A. Archibald had the champion male, the two-year-old bull, Morton Main's Guerthrope, the only animal in Mr. Archibald's herd that was not bred by himself. In the contest for herd prize, accompanied by some females that stood higher in their class than those in the herd, awarded first money, as will be seen by our list of awards, he had to take third place.

M. H. Parlee had the champion female cow in Culcraigre Hilda II, shown in the aged cow class. In the herd contest she was accompanied by her mate, the second prize aged cow, the third prize three-year-old cow and the first prize two-year-old heifer. Although Lord Dudley, the aged bull at the head of the Parlee herd, only took third place in his class, there was not enough difference between him and the first prize bull to offset the standard of the females in his herd or put them down to second place. McIntyre Bros., with a second prize aged bull and some grand females, should have been within easy reach of first money, instead of outside its pale, as decreed by Judge Pier. We know the Easton Bros. will understand that we are not making any attempt at depreciating their aged herd. They had their stock out in grand, good shape and won quite extensively, but we do not believe the Ayrshire men could swallow the judge's decision on aged herds.

Easton Bros. led the way with Fizzaway's Heir and three of his get. The first prize on young herd went to Easton Bros. McIntyre Bros. came in for second money and C. A. Archibald captured third award. Parlee's champion cow also carried off the diploma for best cow and two of her progeny.

A full list of the winnings will be found on another page of this issue.

JERSEYS.—R. Robinson, Glen View Farm and H. S. Pipes & Son were the only exhibitors in the Jersey class, with the exception of C. T. Elderkin, who showed an exceptionally fine senior yearling heifer, on which he won the red ribbon, and J. E. Baker & Sons, who showed the second prize senior bull calf. Glen View Farm's aged bull, LaChasse Foxey, second in his class at Fredericton, led the way in the aged bull class and carried off the diploma for best bull, any age. H. S. Pipes & Son's bull, Brampton Financier, first in his class at Fredericton, went down to third position, while Blue Blood of Dentonia, third aged bull at Fredericton, mounted to second place.

H. S. Pipes & Son's Brampton Monarch's Ora, first in the dry cow class at Fredericton, led the aged cow class at Halifax and carried off the diploma for best female, any age. Hood Farm Bonnie, Robinson's champion female at Fredericton, was not in such high bloom and went to second place, but carried off the diploma for cow and two of her progeny. Glen View Farm led the two-year-old heifer class with Norwood Golden, second in her class at Fredericton. H. S. Pipes & Son's Blue Blood of Dentonia was first with three of his get. They also captured first prize on aged herd and first and third prizes on young herds. R. Robinson had the second prize aged and young herds.

GUERNSEYS —Roper Bros., Glen View Farm and H. W. Corning had the largest number of entries in the Guernsey class. M. M. Thompson had the second prize aged bull, J. A. McGee had the second prize two-year-old bull, John McDonald & Sons had the best senior yearling bull, the third junior yearling heifer and the second senior heifer calf. Roper Bros. captured the lion's share of the red ribbons and won the diplomas for champion bull, champion female, bull and three of his get and cow and two of her progeny. Glen View Farm had the third prize aged bull, first prize two-year-old bull, first junior yearling bull, second senior calf, first junior bull calf, first three-year-old cow and a number of second and third prize winners in the other sections. H. W. Corning had an exceptionally fine and strong senior bull calf that carried off the red ribbon in his class and headed the first prize breeder's young herd. Corning also led the way with Dairy Maid of Hillside in the two-year-old class. Corning's Bonnie's Image of Hillside and Columbine's Image of Hillside captured the red and the blue in the junior calf section. The third prize senior calf and the second prize junior yearling heifer as well as the third prize senior yearling heifer were shown by Mr. Corning.

HOLSTEINS.—Logan Bros., Samuel Dickie and J. D. Irvin were the principal exhibitors of the black and white beauties. M. M. Thompson, of Shubenacadie, showed a junior yearling bull on which he won the red ribbon. The remainder of the animals in the ring had met during the previous week at Fredericton, but evidently Judge Pier's decision did not coincide with Mr. Stevenson's decision. Dickie's aged bull, first in his class at Fredericton, went down to second place at Halifax and was sandwiched in between Togo Rooker and Lord Albion Wales, Irvin's herd headers. Logan's two-year-old bull, Mercena Vale, champion male at Fredericton, had no competition in his class, nor was he destined to carry off the championship honors for Judge Pier placed this coveted award on Irvin's Togo Rooker. Samuel Dickie's Helbon DeKol's Prince was the only senior yearling in the class. Logan Bros. took first and third in the senior bull calf class and second and third in the junior bull calf section. Samuel Dickie and J. D. Irvin captured the remaining prizes in these sections.

In the aged cow class Samuel Dickie's Locust Hill Nellie III, first in the dry cow class at Fredericton, again mounted to the front and carried off the diploma for the best female, any age. Logan Bros. captured second and third places with Clothilde Dorinda and Mary Rooker II, first in the aged milch and dry cow classes, respectively, at Fredericton.

Minnie Rooker's Poem, Logan's champion female at Fredericton, was again first in the three-year-old class. Brookland's Louise DeKol was the third and Dickie's Blahe Lahonda stood in second place.

Logan Bros. captured the red and the green in the two-year-old heifer class with Tanta Rooker II and Artis Juba Oatka. Irvin came in for second money with Minnie Burke.

Logan Bros. had the third prize winner, Empress Concordia, in the senior yearling and the first prize winner in the junior yearling classes. They also captured all the prizes in the senior and junior calf classes, as well as first prizes and diplomas for best cow and two of her progeny, and for bull and three of his get. The first prize for aged herd and the first and second prizes for young herds also went to their lot, which makes an enviable record in such good company.

GRADE JERSYS AND GRADE GUERNSEYS were out in fairly large numbers. Roper Bros. and Allison McDonald had the first and second prizes pretty evenly divided. D. Adams took most of the third prizes and a second in the one-year-old heifer class.

GRADE AYRSHIRES AND GRADE HOLSTEINS were strong classes in the hands of McIntyre Bros., John McDonald & Sons and Eddy Tupper. McIntyre Bros. won two first prizes, five second prizes, four third prizes and two fourth prizes in this class. Eddy Tupper won four first prizes, one second prize, one third prize, one fourth prize and a diploma for best cow and three of her progeny. For list of other winnings see prize list.

Sheep.

The sheep classes at Halifax were filled with the cream of the Maritime Province flocks and foolish, indeed, would be the Maritime man, who would pass these flocks to go further afield for good stuff. He could not find better anywhere. The stock was well fitted and shown in a condition that did credit to the owners and to the respective breeds. H. S. Arkell placed the awards.

LEICESTERS.—Burder Goodwin, Albert Boswell, S. L. Boswell and Retson Bros. were the only exhibitors in the Leicester class. The competition was keen, but the highly fitted Boswell flocks carried off the lion's share of the premiums.

COTSWOLDS.—H. W. Corning and H. H. Churchill were the only exhibitors in the Cotswold class. They had their stock in the pink of condition.

LINCOLNS.—Chas. Symes, Albert Boswell, Jr., and Geo. L. Boswell had three very fine flocks of Lincolns. All the first prizes went to the Boswell flocks. Symes has good stuff, but his flock was not so highly fitted nor as uniform as the Boswell flocks.

SHROPSHIRES.—Logan Bros. and Geo. L. Boswell had two highly fitted flocks of Shropshires. The honors were pretty evenly divided.

SOUTH DOWNS.—Two grand flocks of these big little sheep were shown by J. E. Baker & Sons and Cephas Nunn. In all classes where there was competition, except in the ewe lamb class, all the first prizes went to the Prince Edward Island flock.

OXFORD DOWNS.—J. E. Baker & Sons had their magnificent prize-winning Oxfords. Burder Goodwin was their only competitor. He won third money on shearling ram, ewe, two shears and over, first on shearling ewe and second on ewe lamb, aged pen, young pen and pen of four lambs, either sex. All the other prizes went to Baker's flock.

HAMPSHIRE DOWNS.—Cephas and Oliver Nunn had enough good Hampshires to capture nearly all the money hung up in their class.

CHEVIOTS—Henry Lethead and Chas. Symes waged the battle royal with their Cheviots. Leithead won all the firsts, with the exception of that in the ewe, two shears and over class, where Symes made a clean sweep of first, second and third. Symes was also a close second and third in the other classes.

DORSETS.—H. W. Corning was the only exhibitor of Dorsets. He showed some nice ones in the shearling ram, aged ewe, sharling ewe, ewe lamb and pen sections.

GRADES were a good lot and the kind that would make money for their owners. They showed the ideal that any farmer may attain by using pure bred sires on their common ewes.

Swine.

The pure bred classes of swine was not up to previous years in quality or quantity. The grade classes were well filled.

BERKSHIRES were almost at the vanishing point. This class used to be very strong on previous occasions.

YORKSHIRES were shown by H. H. Churchill, who won the lion's share of the awards, and A. J. Nicholson, Roper Bros. and C. J. Keeler. See list of prize winners.

CHESTER WHITES were very few in numbers. There was no competition in any one class and the quality was not up to the usual standard.

POLAND CHINAS.—Chas. Symes was the only exhibitor in this class. He had some good ones.

TAMWORTHS.—Roper Bros. showed some good Tams, but had no competition.

DUROC JERSEYS.—The competition in this class was keener than usual. J. E. Baker & Sons captured most of the awards.

Poultry.

The poultry classes were fully fifty per cent. short of what they were a year ago, but as a rule, the quality was excellent. Barred Rocks were the strongest sections and competition was very keen, particularly in the cockerel and pullet classes. The competition in the other classes was not very strong, although the individual breeders in the respective classes showed some excellent specimens that only thoughtful, careful breeding could produce. Judge Smith, of Hillgrove Poultry Yards, Waltham, Mass., placed the awards to the entire satisfaction of all concerned. His placings will be found on another page.

Rules for Feeding.

Professor C. H. Echles, of Wisconsin Experimental Station, says :

"It is possible to feed a bunch of cows economically only when they are fed as individuals and not as a herd. A too common practice, even in the otherwise well conducted herds, is for all animals to be fed the same amount of grain regardless of the period of lactation or the quantity of milk individnal cows are producing. Such feedling always lacks economy, as the high producing cow does not get enough, and while she may milk very well for a short time, she soon comes down to a lower level, while the lighter producing cow gets too much and accumulates fat.

"The following rules regarding the amount to feed cows covers the case fairly well :

"1. Feed all the roughness they will eat up clean at all times.

"2. Feed one pound of grain per day for each pound butter fat produced per week, or one pound grain daily for each three pounds of milk.

"3. Feed all the cows will take without gaining weight.

The rule regarding the amount of grain to feed per day for each cow applies best when based upon the amount of butter fat produced per week, as this makes it applicable to any breed. The second part of the rule in regard to feeding one pound of grain for three pounds of milk would not work out in all cases, since in a heavy milking Holstein cow this gives a little too large a quantity of grain, and with a Jersey, giving very rich milk, it is a little too low."

Help for those who have Stomach Trouble.

Arter doctoring for about twelve years for a bad stomach trouble, and spending nearly five hundred dollars for medicine and doctors' fees, I purchased my wife one box of Chamberlain's Stomach and Liver Tablets, which did her so much good that she continued to use them and they have done her more good than all of the medicine I bought before—SAMUEL BOYER, Folsom, Iowa. This medicine is for sale by all dealers. Samples free.

THE MARITIME FARMER

And Co-operative Dairyman.

Semi-Monthly Journal devoted to the interests of the farmer of the Maritime Provinces.

Official Organ of The Farmers, and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association The Nova Scotia and P. E. Island Fruit Growers' Associations The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers Association, and The New Brunswick Poultry Association.

Subscription Price $1.00 per year. When paid in advance 80 cts. Persons taking advantage of the 80 cent rate when subscribing are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definite order for dis. continuance is given.

The date after your name on the little green label on front Page is, in every case, the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser be said :—**"I saw your adv. in the MARITIME FARMER."**

RATES FOR CASUAL ADVERTISEMENTS.

1 inch—First insertion 75 cents; 2 inches—First insertion $1.50; 3 inches—First insertion $2.25.

VOL. XV NO. 1.

We have passed the fourteenth milestone in our history and with this number we introduce to our readers volume XV. We have received much material assistance from our most progressive readers; the assistance and instruction they have thus so willingly brought to their fellow men is best known to those who have been benefited. The future looks bright with promise for the MARITIME FLRMER. Our subscription lists have been augmented by leaps and bounds and like a mighty octupus the MARITIME FARMER is extending its influence into the highways and by-ways of the Maritime Provinces. With this increase in circulation, we have extended our bounds into farm hands where no farm literature was previously read and the letters of appreciation we receive is a sure indication that the class agric ultural is fast awakening to a sense of the magnamity and importance of their calling. The story of successful farming experience is never old. It is always new, inspiring and refreshing. "The greatest good to the greatest number" is the MARITIME FARMER'S motto. The important truths, those we need to dwell upon are: "The truths already known to everybody." The fact that we all know the truth doesn't make the truth less important. It is more important because it is more firmly established. Hence the importance of relating experiences for the benefit and guidance of our fellow men. The man who thinks he knows it all is as bad off as a castaway on some lonely isle—stranded on the island of self satisfaction, entirely surrounded by oceans of obliviousness.

The man who shuts his eyes and stops his ears to every idea except those that he himself originates, get to be old fogeyfied and ridiculous. He's isolated, cut off from all the world. The up-to-date methods used by the other men never come under his observation.

Get in line for better conditions and more prosperity and help along the great movement by reflecting forth rays of agricultural knowledge, that may have benefitted you. Have you been particulary successful in any lines of your farming operations? Relate how you accomplished results for the benefit of your fellow men. It will help the other fellow; you yourself will profit by so doing and it will make Volume XV more useful and helpful than any of its predecessors and will be the means of bringing along the happy, millenium in agricultural pursuits when each and every Maritime farmer will be farming at a profit. We look to our readers to help along in this noble cause. Will you do your part?

THE BOY EXHIBITOR.

The inborn principle of ownership is one of the first properties of child mind that is manifiested. This does not naturally grow less as the child grows older, but rather becomes more fixed and set in its nature as it learns to recognize and enjoy its possessions. Here is the beginning principle of creating in the boy a pride to excel in the things that he recoginzes as his own. The child that grows up to appreciate ownership in the toys and playthings of childhood and is forced to relinquish all these as he passes into boyhood and is given nothing to take their place, soon looses confidence in humanity and active interest in the things about him that others are interested in owning.

There is a natural instinct in the child to own, to possess things, and this is manifest at a very early age. It is said, in explanation or emphasis of advantage, that possession is nine points in law. It is everything with the child. That there is not sufficient attention or encouragement given the boy at home in becoming an independent owner and producer of stock and crops there can be but little question. The boy should not only be made an owner or part owner in some branch of livestock on the farm, but he should be encouraged to take an interest in the production of some crop or crops.

One of the best incentives to labor, attention and interest in the affairs of the farm is the encouragement that the agricultural and live stock fair offers. The boy that can have the opportunity and encouragement of becoming an exhibitor at the county or provincial fair, in some department, if it is only exhibiting a pair of bantam fowls or a few vegetables or samples of grain he will at once begin to think more of himself and measure his importance with the magnitude of the enterprise and the people he is associated with.

County, district and provincial fairs should all recognize the importance of getting the boys and girls interested in those lines of exhibits most suited to their tastes, inclinations and abilitiy to produce and exhibit. It is not right that the boys and girls be obliged to compete in classes at these fairs with the grown people, the old, skilled producers and exhibitors A boy's and girl's department should be provided in every fair and the boys and girls early encouraged to become exhibitors.

The local seed growing contests that have been organized by the Canadian Seed Growers Association are doing a grand work along this line of education. We must recognize in the boy the coming farmer, the man of future, the hope of our county and nation.

All boys need encouragement and the boy on the farm is no exception simply because he has all the bodily comforts of plenty about him. The solution of the farm labor proposition is to come from an increased number of farm owners by keeping more boys on the farm. By this is meant the creation of an early boyhood interest and attachment for the things of the farm, and the ownership interests it is capable of offering him.

THANKSGIVING.

Thanksgiving approaches. Before another issue of the "FARMER" reaches our reader Thanksgiving Day, will have passed and gone, the Governor and Council having decided that Monday, October 25th, shall be set aside as a day of thanksgiving to benign Providence for the bountiful harvests and blessings we have enjoyed during the past year.

The fulness of the harvest has been realized. North, east, soath and west there is the glorious fruition of the promise of seed time. It is fitting that there should be set aside a day of thanksgiving, a day of rejoicing. Human nature is always better for a free expression of its finer qualities, suppressed emotion is deadening. Throughout this great land there is one common joy—the joy of the great harvest. The laborer, the mechanic, the merchant, the manufacturer, every man, whatsoever his calling, has for months had his eyes on the ripening crops, as well as the farmer, and now is rejoicing. Why not give this universal spirit expression? Why not harvest festivals throughout country and town which shall bring together each several neighborhood. What an inspiring expression of the true spirit of thanksgiving it would be!

At this season, when the crops are safely housed in the barn, we look back on the past year with a feeling of thankfulness. This year we have cause for rejoicing. Our country is growing in prosperity, and is daily adding to her population. Slowly, but steadily, the tide of immigration has turned our way, until to-day Canada's population is increasing by leaps and bound. The fertile prairies of the West are making many men independent and their own masters, who, had they stayed in the old world, would have continued servitors till their death. There is much land in our own provinces that contains acres upon acres of fertile farm land, waiting for settlement. All over the country we see activity in every line of enterprise, the factories are running full time and are crowded with orders. The farmers are now threshing good crops, prices are good, and the demand for Canadian farm products in Europe is most encouraging. The railroads are improving their main lines, throwing out branch lines, and adding to their rolling stock and equipment, and this is a good sign of the prosperous needs of the country.

Almost every day we hear of discoveries of minerals, commercial ores, or precious metals. These, too, will add their quota to the future of Canada, and make her a commercial power. We have a country that is blessed with many great, natural advantages, fertile soils and abounding in mineral wealth that is yet to be uncovered. We can grow almost anything, from tender fruits up to hard wheat. Therefore, we must strive to the utmost of our power to develop and improve our resources, and husband them, so that they may continue a source of national wealth. With such a prosperous year behind us, let us hope that the following years may bring us many more seasons of thankfulness and peace in this fair Dominion.

What a beautiful spirit it is which animates and lightens up these dull October days—the spirit of thanksgiving and rejoicing over the year's fruition. There is a certain little community which has adopted the custom of celebrating this October holiday by means of a harvest festival, a festival which brings together in joyous assembly all the neighborhood. Is it not a splendid idea?

Thanksgiving is now less than two weeks away. What are you going to do to make it memorable? Why not a universal adoption of this idea of a Thanksgiving or harvest festival? What an inspiration it would be to know that all over this broad land the people were united in celebrating the completion of a season's labor, and the reaping of a just reward!

"Sweet is the breath of a vernal shower,
The bees collected treasures sweet,
Sweet music's melting fall,
But sweeter yet the still, small voice of gratitude."

But why have that voice still and small? Why not a mighty, nation wide expression of the rejoicing which Thanksgiving day typifies? What a splendid chance for the Institutes and the other organizations of our farmers to bring together the people of their several neighborhoods for a celebration befitting the season.

Let us make this coming Thanksgiving a memorable one in every way. Plan to make it a Thanksgiving which shall stand forth from among other Thanksgivings. There are nearly two weeks in which to plan for it. Make it a day of days, and then write us about it. Tell us just what you did. Give us your programs. Share your good time with others by telling others all about it through these columns.

The Prince Edward Island Exhibition.

The 1909 Prince Edward Island Interprovincial Exhibition was held, in Charlottetown on, September 21st to 24th inclusive. Although inter-provincial in intent there was little or no competition from outside the Island province except in the poultry and fruit classes. This may be accounted for by the fact that the breeders on the mainland had their live-stock at Fredericton when the Island fair opened and as the Halifax fair opened one day after the New Brunswick exhibition they could not very well cross the straits, and consequently the fair was wholly an exposition of Island production. The natural tendency then would be towards a smaller fair than in years gone by. The showing made in the respective classes was very creditable indeed and made up in quality what was lacking in quantity. The weather throughout the fair season was more like July than late September weather and the attendance was up to the most sanguine expectations of the management. C. R. Swallwood, the genial secretary, was at the helm cheerful as usual and doing his level best to have every department running as smoothly as possible.

The formal opening took place on Tuesday, September 21st, at one o'clock P. M. The speakers of the occasion were His Honor Lieutenaut-Governor McKinnon, Mr. Justice Fitzgerald, President of the Exhibition Association, Sir Louis H. Davis, K. C. M. G., Hon. Frank Deedmeyer, American Consul, Premier Haszard, Hon. John Richards, Commissioner of Agriculture and C. C. Gardner. A spirit of optimism and patriotism prevaded the various addresses.

Mr. S. J. Moore of Truro, judged the grains, roots and vegetables, the competition was not so keen as in former years, but the quality was excellent.

Mr. R. W. Starr the veteran fruit judge of Port Williams, N. S., placed the awards in the fruit classes. The display, although not very large, was full of quality and an indication of what Island fruit growers, who follow modern methods of caring for their trees can produce. The fruit was well developed, well colored and clean. An interesting feature in connection with the fruit department was a practical demonstration of packing apples for export by Mr. Fred G. Earl of Litton, B. C., who is visiting the Maritime Provinces under the auspices of the Fruit Division, Ottawa, for demonstrating to fruit growers the desirable pack in box and barrel.

Mr. Harvey Mitchell of the Dairy Division judged the Dairy Products. Following is a summary of his report:

"There was a very creditable display of creamery butter and factory cheese. The quality was fully up to that of previous years. The quality of the private dairy butter shown, taken as a whole, was not as fine in quality as I have seen here in the past. "The importance of having iced show cases for the butter exhibit should be considered by the committee in charge before another season."

The Horses

Dr. J. Watson of Howick, Que., judged the light classes, and Mr. Thos. McMillan, Seaforth, Ont., judged the heavy classes. The horse show at Charlottown attracks much attention from the outside world and not a few buyers go there to locate desirable horses. The prices asked for good horses should make farmers look to the horse raising industry as a regular goldmine if they breed to a definite-type and cling to high ideals.

THOROUGHBREEDS.—Some nice filies in the three-year and two-year-old classes were the only exhibits in their class.

CARRIAGE HORSES.—The judge recommended that as there is no Roadster class at Charlottown and as horses that are good Roadsters but not ideal Carriage horses predominate and are shown in the Carriage class that a roadster class be substituted in place of the carriage class. Eastland, owned by H. R. McLellan, St. John, N. B., led the aged stallion class. Oakley Baron, W. S. McKie's Standard Bred took second money and Baron Ideal, shown by J. A. Cameron took third money. Only two three-year-old stallions were shown. The year-old stallions were out in stronger numbers and so were two-year-old fillies. There were only two entres in the three-year-old filly class. All the other sections of this class were well filled with horses of good roadster action and type. Eastland captured the special prize, bronze medal, offered by the Canadian Bank of commerce for the best carriage stallion, mare or gelding in the Carriage class.

SADDLE HORSES.—Only two entries put in an appearance in each of the gentlemen's Saddle Horse and Ladies' saddle horse classes.

HACKNEYS.—Roper Bros., Fashioner, led in the aged stallion contest. W. Moffatt's, Island Swell, took second money. Mr. Moffatt also had a nice 1 year filly that captured Mr. John B. Roper's special for the best colt or filly, one-year-old by Fashioner.

A. A. McBeth and R. E. Longworth captured second and third places in the latter contest. A. Boswell, R. E. Longworth and Silas Prowse were the successful winners in a similar contest for foals of 1909 by Fashioner.

CLYDESDALES AND SHIRES — were shown in the same class. The former were strong in numbers, and of good quality. P. S. Brown's Lord Delmaney captured the coveted red. Wigton Hero owned by the Head St. St. Peter's Bay Clydesdale Co., came in for second money while Daniel McGregors' Shire Eskham Waggoner, took third award. John Richards had the only entry in the three-year-old stallion class and captured the diploma for best stallion any age. He also had the only two-year-old filly, which also captured the diploma for female any age.

DRAFT HORSES—The draft horse class had strong competition in every section, and showed horses of excellent conformation and type and a fitting object lesson of what may be accomplished by the use of pure herd sires on grade mares. A great deal of money goes to Island horsemen every year for horses of this class. The Steam Navigation Co's. special prize for the best four draft colts, under three years old, the get of any one registered draft stallion was captured by R. B. McKinley with four Crown Rights colts.

GENERAL PURPOSE HORSES— were also out in large numbers. It would be a difficult matter to find so many useful mares together as was seen at Charlottown; mares of strong conformation, and good active action. This was certainly a class that would attract the attention of any persons interested in light agricultural horses.

Beef Cattle.

The beef class at Charlottetown reached a very low ebb. A three-year-old bull shown by John Walker and a two-year old bull shown by Samuel C. Lane were the only pure bred Shorthorns on the grounds. A few grade females and two pair of steers made up the remainder of the beef class exhibit. J. M. Gardhouse, Weston, Ont., placed the awards.

DAIRY CATTLE.—Ayrshires, Jerseys, Guernseys and Holstein-Friesians and their grades were out in good shape and in fairly large numbers. The numbers of new beginners in pure bred stock line is a strong indication of an awakening interest in modern dairying and of the ascendency of the dairying industry in Prince Edward Island. A. C. Halman, of Breseau, Ont., placed the awards.

AYRSHIRES.—Easton Bros., and Simmonds Bros., had the largest number of entries in the Ayrshire sections. The Easton herd was out in excellent fit and won the lion's share of the awards. They captured all the first prizes on bulls of all ages with the single exception of the senior calf class where Simmonds Bros., had no competition. Simmonds Bros. captured the coveted red in the yearling heifer and junior calf classes, while a similar award in the senior calf class went to Robert Stewart. All the reds in the remainder of the classes were captured by Easton Bros. This included first aged herd, first breeder's young herd and champion bull. Their two-year-old Howie's Crusader and champion female Pearl of Springhill shown ih the aged cow class. Chas. Weatherbie showed the third prize aged bull. W. Moffatt had the second prize two-year-old bull and Ray Bulpitt captured a similar prize in the one-year-old bull class.

JERSEYS.—William Clark had the largest number of entries in the Jersey class. He was out with his stock in a condition that would stand some keen competition. His aged bull Dreadnought of St. Lambert was the champion male, while his aged cow Cana Meines of Maple Grove won a similar distinction in the female class. The awards for aged herd and for breeders' young herd went to Mr. Clark without any competition. Frank Glydon, Wallace Stead, Spurgeon Warren and James Essory were the other Jersey exhibitors. Mr. Stead won first award in the bull calf classes and in the yearlIng heifer and junior calf classes. James Essory had the best yearling bull and the second prize two-year-old heifer. Frank Glydon won the second prize in the aged bull class.

GUERNSEYS.—Roper Bros. and James Roper won all the awards in the Guernsey class with the exception of second prize on junior bull calf and first prize on senior heifer calf. Roper Bros. had a strong line of Guernseys at the fair despite the fact that the cream of their herd was away at the Fredericton exhibition.

HOLSTEIN-FRIESIANS. — There was some keen competition in the Holstein classes. Each succeeding year a marked growing interest in the black and whites at Island fair is noted before. This is particularly obvious when one looks at the variety of names in the bull class exhibitors' list, a fact which accounts for the strong showing of Holstein-Friesian grades.

A glance at the list of awards will show the names of the prize winners.

Gavin Harding and Fred C. Clark had matters pretty much their own way in the female classes. Gavin Harding's Jewel Sylvia, champion female at Toronto, Sherbrooke and Halifax in 1907, with a record of 90 pound milk per day on the Toronto fair grounds, while a member of Logan Bros'. herd won the first award in her class and female championship at Charlottetown. F. C. Clark's Johanna Mercines Posch won the coveted red in the two-year-old cow or heifer class. Harding won first award in the aged herd class, first on breeders' young herd and first on his aged bull Artis Jake and three of his get.

Fred C. Clark's Jacoba Johanna was first in the class for cow, any age, and two of her offspring. The other exhibitors who came within the money's pale there in the female classes were E. Heartz, J. M. Leard and W. J. Gibson.

Although every one of the Holstein exhibitors were practically new beginners they made a very creditable showing and when their herds increase in numbers we will expect to hear from them at fairs outside their Island domain.

DAIRY GRADES—Were a good, useful lot, indeed, there were some grades that would pass muster for pure breds. A full list of awards will be found on another page. Fred C. Clark won the Holstein Fresian Association's special prize, Silver Cup, for the best grade dairy cow sired by a registered Holstein bull.

Sheep.

Prince Edward Island is noted for its flocks of sheep and the Charlottetown exhibition is where one can see them at their best. Leicesters, Cotswolds, Lincolns, South Downs, Shropshires, Oxford Downs, Hampshire Downs and grades of the above mentioned breeds were out in excellent fit. Mr. J. M. Guardhouse who placed the awards spoke very highly of the excellent quality of the respective flocks. He was particularly strong in his acclaim of the Leicester class, a better lot of which he had never handled.

Swine.

Mr. A. C. Halman, who judged in the dairy classes also judged the Swine classes. Berkshires, Yorkshires, Tamworths and Chester Whites were out in fairly large numbers. It has been quite customary in years gone by to find one breeder taking all the fattest plums in a particular class. A glance at the list of awards at this year's fair will show that not one breeder had a cinch competition was keen; the quality throughout the whole was very even and the monies were pretty well divided. The breeders were out to win and no one had a monopoly of his particular class.

Poultry.

J. P. Landry, Superintendent of the Poultry Department at the Truro Agricultural College placed the awards at Charlottetown in his usual efficient manner, No favor wins and no fear awes," is his motto and wherever he comes across a disqualification he invariably lets the axe fall, and it makes no difference to him whither the exhibitor likes it or not. He judges the birds on their merits not on the merits of their owners. The Barred Rocks, Brown Leghorn and White Leghorn classes had the most competition and Cirds of excellent quality were shown. White Wyandottes were a particularly good lot but there was no competition. Charlottetown also has its quota of poultry men who pick up specimens of almost every variety in the standard but who cannot furnish a bird or a setting of eggs in the breeding season.

The Ladies Work and Fine Arts exhibits were fully up to the standard of other Maritime fairs and shows that the thrifty wives and daughters of Prince Edward Island know the arts that tend to the comforts of home life.

Charlottetown Prize List.

HORSES.

CLASS 11.—THOROUGHBREDS.

Filly, 3 years old and upwards, 1, Daniel McDonald; 2, Robert E. Longworth; 3, A. McKenzie.

Filly, 2 years old, 1, W. W. Owen.

CLASS 3—CARRIAGE HORSES.

Stallion, 4 years old and upwards, 1, H. R. McLellan, Eastland; 2 W. S. McKie, Oakley Baron; 3, J.A. Campbell, Baron Ideal.

Stallion 3 years old, 1, Duncan Robertson; 2, John Stewart.

Stallion 2 years old, 1, John Ford; 2, J. H. Nantes; 3, Daniel N Taylor.

Filly 3 years old, 1, Alex. Kennedy; 2, D. W. White.

Filly, 2 years old 1, Wm. Auld; 2, John, J. McLeod; 3, Geo H. Reddin.

Filly, 1 year old 1, Bessie Stewart; 2, Harry Weeks; 3, A. A. McBeth.

Foal of 1909, 1, Bagnell; 2, Albert Boswell; 3, Robert E. Longworth.

Mare with foal at her foot, 1, Albert Boswell; 2, Robert E. Longworth; 3 Silas Prowse.

Mare or Gelding, 15½ hands or over, shown in carriage, 1, R. J. Steele; 2, A. A. McBeth; 3 Geo, Handrahan.

Mare or Gelding under 15½ hands, shown in harness, 1, E. R. Reid; 2, Claire E. McMillan; 3, H. R. Hilson.

Special prize, for the best carriage stallion, mare or gelding in the carriage class, offered by the Canadian Bank of Commerce, Bronze medal, H. R. McLellan, Eastland.

CLASS 4.—SADDLE HORSES.

Gentleman's saddled horse, gelding or mare, not less than 15¼ hands, Diploma, William McKinley; 2, A. A. McBeth.

Lady's saddle horse gelding or mare, not less than 15 hands, Diploma, P. Moore; 2, Claire E McMillan.

CLASS 5.—HACKNEY HORSES.

Stallion 3 years old and upwards, 1, Roper Bros, Fashioner; 2, W. Moffatt, Island Swell.

Filly, 1 year old, 1, W. Moffatt.

Special prizes given by Mr. John, B. Roper, Charlot etown Royalty.

For the best Colt or Filly, 1 year old, sired by Imported Hackney Stallion "Fashioner," 1, W. Moffatt; 2, A. A. McBeth; 3, R. E Longworth.

For the best foal of 1909, sired by "Fashioner," 1, Albert Boswell; 2, R. R. E. Longworth; 3, Silas Prowse.

Continued on page 17.

HORTICULTURE

Horticulture at the Nova Scotia Provincial Exhibition.

A fine display of fruit was made at the Halifax show. During the past year the early date made it impossible to show apples in anything like shipping condition, and the interest of fruit growers of the Annapolis Valley has been drawn away from the Provincial to their own district exhibition. The distance from the fruit centre also cuts off small exhibitors who can not afford the time or expense to enter a few plates. Again the prize list has been cut down so there is but a small amount to compete for and after all it is money the most of us are after. In these days of deficits it seems useless to ask for more money for fruit in the prize list, yet it seems to have some peculiar features. Prof. Robinson told the agriculturists some years ago, that the Nova Scotia hens produced more than the orchards, that may be true, and perhaps it is a good business to make a large prize list for poultry, however, the fruitmen think, when ornamental fowls including pigeons, canaries, guinea pigs and rabbits can secure a prize list of $257.00, that more than $105.00 might be squeezed out for apples. The offerings for single plates of apples is but $77.00 while prizes on canaries alone total $77.00 and pigeons about as much more. The Dominion Fruit Division say that Nova Scotia produced and sold 675000 of apples last year, netting about $1,500,000, so the canary business must grow some to catch us.

The county collections were all good. From Kings three good lots graced the centre table. A. C. Starr of Port Williams got first, with A.C.Johnson a close second. J. H. Cox of Cambridge, had a nice display and got a third prize ticket. From Hants County came three fine lots of handsome apples. Mrs. Sangester of Falmore, got first place, with C. A. Dill of Windsor, second, Annapolis also had three competitors. Mrs. T. B. Messenger, Byron Chesley and C. Young, getting prizes in the order named. Halifax County had three competitors, G. N. McKeen of Gay's River, as usual winning first prize. R. MacAloney, Provincial Cashier, brought in a nice collection from his gardens near Halifax. It cost Mr. MacAloney $1500.00 to clear an acre of land from stones so we can appreciate his enthusiasm in Horticulture. Lunenburg County had five collections fully up to the Annapolis Valley stuff in size, though a little off in color and showing lack of experience in selection. W. A. Hebb of Bridgewater got a first prize, and J. Wentzel of New Germany, won a good second. Geo. F. Anderson of New Annan, Colchester Co., had a fine show, fair size, good color, well grown and selected. Cumberland and Antigonish were represented by two and five collections respectively, none of these showing above the medium.

Exhibits of single plates were very fine, competition running very close in many classes. Pears and plums were in abundance and of very fine quality. Some nice plates of peaches were shown and a few nice lots of cranberries.—S. C. P.

Obtains Results.

E. H. Perry, a scientific fruit grower, of Manchester, N. Y., two years ago set out an apple orchard of 1,400 trees to be cared for under new methods which would hasten the bearing of the trees and also produce better fruit. Mr. Perry expected to raise a crop of apples in five years, and a full crop in seven years, while under the old method about twenty years elapsed after setting out an apple orchard before a full crop was harvested.

Mr. Perry states that this plan of growing apples, he knows, after two years, will be a success for the reason that apples were picked from a large percentage of the trees this fall after having been set out only two years, and when he was not expecting a crop so soon.

He states that he has been making a study for many years of apple growing and his aim is to produce a single stock tree from which there will be no prongs running from the trunk, with the idea that more fruit will be raised of a good quality from the one stalk tree than from the usually formed tree.

Mr. Perry says that no first-class apples will grow more than a foot away from some outside portion of a tree and that it requires as much sap for a large centre of a tree as it does for the outside which bears the first-class fruit. Much of the energy that should go to the fruit goes to the growth of wood on the inside of the tree, and this newly planned tree will have far greater surface near the outside, considering the centre that it has to suppport, than the apple tree that is grown in the ordinary manner.

Mr. Perry's orchard, which bore fruit the second year, was set from two-year old stock, and after the trees were set men passed from tree to tree with pruning knives cutting off the top and a portion of the trunk, leaving a piece about a foot high protruding from the ground.

Of this new method of growing apple trees it is said that the flow of sap is so much greater that the tree will mature younger, and the fruit will be of such a quality that it will bring double the market price paid for ordinary fruit.

Mr. Perry's study of scientific tree growing teaches him that to build a tree in the old manner is wrong, as it requires too much pruning in the centre of the tree, stops the flow of the sap and is to a great extent the cause of disease in the tree. As such pruning will be unnecessary in the single stalk tree, the principal part of the tree's energy will go to the fruit and not to the top.—American Fruits.

Tree Surgery.

What is tree surgery? In so far as it applies to the cement work alone a good answer would be that it is the practical application of dentistry to trees, says Cement Age. But the answer would not cover the many other branches of the profession, consisting of trimming, chaining, packing, scraping, spraying and fertilizing. Tree surgery is, in fact, an advanced development of arboriculture. Both fruit and shade trees are valued now as never before, and the fact has become generally known that by skillful methods of the tree surgeon it is possible to give a new lease of life to trees which apparently had reached their limit of existence. It is safe to say that almost any tree of medium age may be saved by these methods. Of the many branches embraced in this work cement filling forms by far the largest and most important part. The practice of filling cavities with cement has long been in use, but when carried out along the usual lines it only serves to add to the original trouble. The method of sealing up the decayed section simply increases the decay. Many examples may be seen where the bark at the side of the cavity was covered by the cement, no regard having been paid to drainage or the subsequent healing of the wound. As the cement did not stick to the wood and the swaying of the tree by the wind often enlarged the crack between the wood and the filling, water penetrated behind the cement, and decay went on even more rapidly than before.

The tree grows in girth by the deposit of a thin layer of new wood between the wood and the bark. There are three layers in this coat—the middle one being composed of thin forming tissue known as the "cambium." The inner side of this layer forms new wood, the outer new bark. It is this new layer and the layers of the four or five previous years which are known as the sapwood, and from the active section of the trunk and branches. The cells of these inner rings are gradually covered by the yearly deposit of new growth, and from living sapwood becomes heartwood, which is dead and serves merely as a strong framework for the living parts of the tree and storehouses for excess material.

This is the reason why hollow trees may often be found in a flourishing condition when the heartwood may have entirely disappeared. However, a landscape tree in this condition, deprived of the shelter of its fellows, is in grave danger, for a high wind or a heavy snowfall may find it an easy victim.

After the mass of decay has been removed from the interior of a rotting trunk there remains a shell of living sapwood and bark. Now comes an important operation, the cutting of the watersheds, which gives to the tree a stability which by the decay of the supporting heartwood it had lost. In this cavity a steel brace is inserted and bolted in place. This gives the entrance of moisture The watersheds consist of a deep groove cut about an inch inside the edge and opening to the ground below. The cement being packed tightly into these grooves, forms a channel down which the water flows, to be led out at the base. The cavity is then wired throughout, the wire being stretched from nails driven into the wood, and acting as reinforcing for the cement. This work having been completed, the cement is made as moist as possible, and then built into the original outline of the tree. The bark which has been cut back for an inch or so in order to prevent bruising while the work is in progress will eventually cover the filled in wound, the tree thus regaining its normal appearance.

In the case of exceptionally large cavities the opening is covered by large strips of zinc. The cement is then forced down into every crevice and allowed to set, after which the zinc is removed and a coat of fine finishing cement put on and painted the color of the bark. By this method the tree surgeon is enabled to build out trees where fully half the wood may have been destroyed by lightning or some other cause. This treatment serves as a fine example of the healing powers of nature, for it is remarkable how quickly these wounds will heal when protected from moisture and further decay by the cement filling insured by the watersheds.

Is it Wise to Dip Nursery Stock?

NURSERY STOCK DISTRIBUTES INSECTS.

Many common injurious insects may be distributed upon nursery stock; and several methods have been quite generally employed to lessen the frequency of such distribution. Especially since the San Jose scale has become a serious menace to fruit trees in the East, many states have demanded either inspection or fumigation of all stock grown or distributed; and by these methods fairly satisfactory freedom from dangerous pests on planting stock has been secured.

FUMIGATION MOST EFFECTIVE.

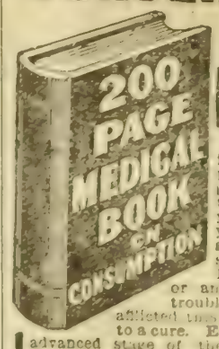
Of these methods, thorough fumigation is undoubtedly the most effective in disposing of insects; and in careful hands it is perfectly safe.

But fumigation requires some well-made apparatus and involves the use of poisonous and corrosive chemicals; so that it cannot be entrusted to careless or untrained hands without danger of ineffective work or risk of life. For this reason some advocate dipping the stock in an insecticide as a substitute for fumigation, especially for use by orchardists who are not content with certificates of inspection or guarantee of fumigation; but desire personally to treat all stock they plant.

DIPS RECOMMENDED.

The success of the lime-sulphur wash as a spray has led to advocacy of its use as a dip for nursery stock, and to the

Consumption Book FREE



This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 1175 Rose Street, Kalamazoo, Mich., and they will send you from their Canadian Depot the book and a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful cure before it is too late. Don't wait — write today. It may mean the saving of your life.

Shoe Boils, Capped Hock, Bursitis are hard to cure, yet

ABSORBINE

will remove them and leave no blemish. Does not blister or remove the hair. Cures any puff or swelling. Horse can be worked. $2.00 per bottle, delivered. Book 6 D free.

ABSORBINE, JR., (mankind, $1.00 bottle.) For Boils, Bruises, Old Sores, Swellings, Goitre, Varicose Veins, Varicocele, Milk Fever.

adoption of such dipping as the official method of treatment in Oregon. Manufacturers of certain proprietary insecticides, especially the miscible oils have also urged their use for this purpose.

TESTING DIPS.

Little information of definite character was available relative to the effect of these materials upon dug nursery stock; but the few careful experiments made indicated that their use sometimes injured the young trees. Neither was it known what strength of any of the mixtures was most effective upon the insects. Accordingly, extensive tests were made at the Station in which both clean and scale-infested trees were dipped for differents periods of time in the boiled lime-sulphur wash heated to different temperatures from 60 to 210 degrees F, or in kerosene emulsion or miscible oil mixtures of varied strength. In many cases the lots of trees were halved, part being immersed completely in the mixture under test, the others dipped only to the collar, the roots not being wet.

More than 2500 trees were used, including apples, pears, peaches and plums. After treatment, the trees, and their fumigated and check trees from the same lots, were set out in the field and their subsequent behavior watched.

RESULTS WITH LIME-SULPHUR WASH.

The trees immersed in the lime-sulphur wash at from 60 to 120 degrees F. and for periods of time varying from instantaneous dipping to submersion for ten minutes were not entirely freed from scales. Some trees were cleaned perfectly; but on others the infection later in the season was from 2 p. c. to 25 p. c. of what it was before treatment. When the wash was not hotter than 120 degrees F. and the trees were exposed three minutes or less, little or no injury to the stock took place unless the roots also were dipped. Whenever the roots were wet with the lime-sulphur wash, most of the trees showed plain signs of injury. When the trees were immersed, even for an instant, in the wash heated to 212 degrees F., the buds and bark suffered severely. At this temperature the scales were all killed.

RESULTS WITH KEROSENE AND MISCIBLE OIL.

In laboratory tests, 20 per cent. kerosene emulsion caused injury to the trees if the roots were dipped; but in field tests with emulsion of the same strength no resulta t injury was observed. Weaker emulsion and miscible oil diluted with 10 or 15 parts of water did not harm the trees and were more efficient in destroying the scale than the lime-sulphur wash at any temperature safe to use.

FUMIGATION BEST.

None of the trees fumigated with hydrocyanic acid gas were injured; and all were perfectly freed from scales.

CONCLUSION.

While good results were secured from some of the mixtures used in these tests, the practice of dipping cannot be recommended as a general substitute for fumigation with hydrocyanic gas. None of the mixtures was as effective as the gas, except under conditions destructive to the trees; while the gas treatment, properly managed, is harmless. Nurserymen, who have to test large numbers of trees, will find dipping little, if any, more convenient than fumigation; but where only small numbers of trees are to be handled, dipping may be easier. For this purpose kerosene emulsion and miscible oil mixtures are apparently most efficient, and are harmless if care is used to dip the tops of the trees only, down as far as the collar. Also, for those who prefer to use the lime-sulphur mixture, the temperature of the wash should be moderate and submersion short; and the greatest care should be taken not to expose the roots to the mixture. The results secured from such use of the wash, however, are not as good as would come from spraying the tree, after planting, with the same mixture.—F. H. HALL, Geneva, N. Y.

FREE TO YOU—MY SISTER

FREE TO YOU AND EVERY SISTER SUFFERING FROM WOMEN'S AILMENTS.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from women's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is a safe and sure cure for Leucorrhœa or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors or Growths, also pains in the head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete 10 days' treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that it will cost you nothing to give the treatment a complete trial; and if you should wish to continue, it will cost you only about 12 cents a week, or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer, if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all, old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhœa, Green Sickness and Painful or Irregular Menstruation in Young Ladies. Plumpness and health always result from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all woman's diseases and makes women well, strong, plump and robust. Just send me your address, and the free ten days' treatment is yours, also the book. Write to-day as you may not see this offer again. Address:

PILES CURED at HOME by New Absorption Method

If you suffer from bleeding, itching, blind or protruding Piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment; and will also send some of this home treatment free for trial, with references from your own locality if requested. Immediate relief and permanent cure assured. Send no money but tell others of this offer. Write today to Mrs. M. Summers, Box P. 309, Windsor, Ont.

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

Dairy Form.

Dairy form and function are so closely related to each other that a discussion of the one must also consider the other. It may not be entirely clear to all the readers just what is ment by the term dairy form. The "typical dairy form," the dairy "wedges" or the "wedges of the dairy cow" are often referred to and the terms handled so indiscriminately that it sometimes seems that those who use the terms are not otherwise fully aware of just what they mean.

The work of the dairy cow has made her what she it. She is, in a certain sense, an artificial product, and during the many years through which she has been developing she has taken on a form which is distinguishingly characteristic.

Her large barrel, great chest development, and ponderous udder were not sought for in and of themselves. The dairy cow has been developed to produce milk. Her ability to do that is the reason for her existence, and high milk producing powers have given her the definite dairy shape—the large barrel to enable her to consume large quantities of feed; the well developed chest to give her great heart and lung capacity, insuring a vigorous circulation of rich, pure blood; and a large udder to enable her to draw on the blood stream and appropriate the vital fluid in large quantities for secreting milk in abundance. It would be hard to conceive a dairy cow being any other shape than what she is and still do the work for which she has been developed.

Speaking of the "dairy wedge" is just another way of saying that the organs having to do with milk production must be well developed if the cow is to have any claim for dairy superiority. Her body is the base of the wedge tapering from rear to fore, and from back line towards the ground.

Improving Conditions.

A 1908 bulletin from Storrs, Conn, experiment station, prepared by J. M. Trueman, treats the subject, "Improving Dairy Conditions," and has the following to say about the head of the herd:

The dairy herd can be improved in the least time and with the least cost by the use of a high class, pure bred, but should be a good pure bred. The time has gone by for paying high prices for animals simply because they are registered. The dairyman of today should have a bull whose immediate ancestors are, or have been, heavy producers. His dam, and his granddam on his sire's side, must be able to produce milk, or butterfat, or both, in large quantities. If these two ancestors are first class in every way the question of pedigree is largely settled. It is folly to go back five or six generations to find a good animal, or even a famous animal in a pedigree, and to pass over four or five generations of non-producers. It is the immediate ancestry that counts. The dairyman who wants a good bull is safe, as far as pedigree is concerned, in selecting one whose dam and two granddams have been fine producers, and whose sire is a good individual of dairy type.

The bull chosen should be a good individual as well as have a good pedigree. It is not wise to use a poor animal simply because his ancestors have been good, for he will be one of the ancestors of the succeeding generations.

The bull should be vigorous as shown by a bright eye, a wideawake, active disposition, a full crest, broad chest, fine silky hair, and soft hide. He should have a large deep body, with well-sprung ribs, indicating feeding capacity. He should not be coarse and beefy. The hind quarters should not be peaked, but should be comparatively light. The thighs should not be overloaded with fat, and he should be well cut up in the twist. He should have a fine straight-away walking gait, not cros-legged When you find one just right, buy him, and do not be too particular about the price.

This bull should be used on the best cow that can be selected from those available. They need not be pure breds. In fact, many men will get better results to stick to grades. It does not require as much skill to breed good grades as it does to breed good pure-breds. The pure bred bull will be prepotent over the grade cows, and the calves will be more than half blood in actual characteristics. The strong blood of the pure bred bull impresses the offspring much more than does the weaker blood of the grade, so that the bull becomes more than half the grade herd. On the other hand, in breeding pure breds together great judgment is required to get the two currents of strong blood to mix well, otherwise the results may be, and often are, disastrous. The two do not "nick" well and the offspring is poorer than either parent.

The blood of the good bull may be more strongly impressed upon the grades by closer inbreeding than is advisable when rising pure breds. A strong bull bred to grade cows gets strong heifers, and he may be bred again to his own with a strong likelihood of getting good results. This method gives 75 per cent. of the blood of the sire in the heifers of the second generation. It is not wise to inbreed too much when raising bure breds, but it may be practiced with excellent results in the case of grades.

Breed to Use.—The particular breed that is used is not important. Each farmer should elect the one he likes best. In building up a herd for the dairy it is best to use one of the distinctive dairy breeds. There is variety and quality enough in the four leading dairy breeds to satisfy the ambition and exercise the skill of any and all dairymen.

Breed does not guarantee excellence in individuals. Unfortunately there are poor specimens in every breed, and the only safe method is to depend on pedgree and performance, and not to think that an animal must be good simply because it belongs to a good breed

Young bulls should not be placed at the head of a herd until they have been tested. That means that bulls are not ready for general or extensive use until they are three or four years old. Instead of keeping them until fully matured the common custom is to use them freely as yearlings and two-year-olds, and then get rid of them because they may get cross. We can hardly blame the bull for getting cross when he is kept tied up the year round without exercise. If properly cared for he should be easy to handle, and sure and quick in service until he is ten or twelve years old. Sarcastic Lad is eleven years old and is still at the head of the Holstein herd owned by the Illinois agricultural college. He weighs over 2,400 pounds, is active, and is getting as fine a lot of calves as anyone could wish to own. Old Pedro, No. 3187, was used by T. S Cooper untill he was nineteen years old. The value of sires that have been tested and have proved to be fine stock getters can hardly be estimated. Almost invariably the one case of failure and bad temper in old bulls is lack of exercise. An hour's walk on a treadmill every day will do wonders towards making a bull vigorous, quick and good natured.

Brighten Up

The Fall is an excellent time to paint your buildings. The weather as a rule is more favorable for painting in the Fall than any other time —less damp and rain to soak the lumber before painting, and no flies and insects to stick to the wet paint and mar or spoil the surface. If your buildings need paint protection from the winter storms, do not delay. Paint them this Fall. Ask your dealer for

Petrol Butter the Latest Invention.

There seems to be no end of products made from crude petroleum, in addition to the supposedly chief purpose of lighting and greasing. Just now another discovery has been made and the oil well comes in direct competition with the cow. The next step will probably be the production of fresh milk or whole cream cheese. The first roll of petroleum butter, the Standard Oil's latest product, has just been turned out at the Wood River refineey near Alton, Ill. Preparations are being made to manufacture the product, and the machinery has been shipped. The new product will be known as "petrol butter." It is said to be of the same consistency as lacteal butter, but brown in color. It lasts a great deal longer than real butter, it is said, and does not become rancid.

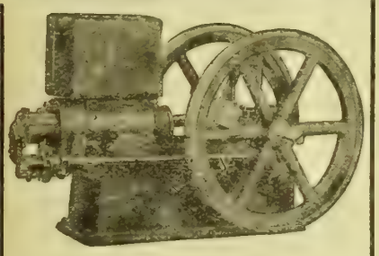
Headquarters for Maritime Provinces: AMHERST, N. S.



When you are thinking of purchasing a gasoline engine, write for our catalogue showing the Hooper Cooled engine, and remember that the Woodpecker has been sold in Canada for the last six years. These engines are acknowledged by all who have seen them, as being the most simple and easiest to operate of any engine made. We will absolutely guarantee them to use less gasoline than any other engine.

Do not believe the dealer who says his engine will develop 2 H. P. more for the same rating. He does not mean to tell you an untruth, but he doesn't now what H. P. Woodpecker engines will develop. They have larger bore than any other engine sold at the same rated H. P., and, therefore, will develop more H. P. than any other. They will run continually for 10 hours without any attention, excepting to keep the gasoline and water tanks full.

If you anticipate buying an engine, see our exhibit at the Halifax Exhibition, or write us card for prices, catalogue and full information. It will save you money.

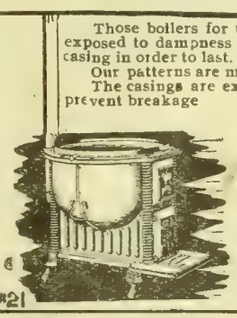
Don't Hesitate.

Every dairy farmer must face the proposition of increasing his milk and butter yield. If he does not, his herd is running behind. There are certain things feed can do, and certain things management can do. Both of these need study and the making up of good judgement. But breeding is the foundation. We must have the right foundation. We know of farmers who have been putting off buying a regitered bull for years and they are no nearer to it to day than ever. They are not quite convinced that such a bull's daughters would yield any better than their mothers. The reason they look at the question that way is because they have had no experience and they do not feel like taking other men's word for it. Yet we have seen some remarkable instances of improvement worked out in one generation. We have a registered cow in our herd that has just passed through the Advanced Registry with a credit of 408 lbs. of butter fat in one year. Her mother was the poorest Guernsey cow we ever owned and could not make over 225 lbs. of butter in a year. Yet here is her heifer that produces at the rate of nearly 470 lbs. of butter per year. What did it? We believe the chief cause to be the character of her sire. The Cornell University took a herd that averaged only about 3000 lbs. or milk per cow, yet the heifers from these cows averaged 7500 lbs. of milk in one year and they say that the leading cause of this great change was the use of a pure bred bull and a rigid selection of the best heifers. Farmers can not afford to longer delay the breeding up of their herds.—Hoards.

FARMER'S BOILERS AND FEED COOKERS,
Manufactured by A. Belanger, Montmagny, Que.



Those boilers for use in out houses, barns, etc., where they are exposed to dampness and rust, must be built with a strong exterior casing in order to last.

Our patterns are made up to meet such requirements.

The casings are exceptionally heavy and made up in sections to prevent breakage

Each joint is carefully adjusted and **tightly fitted in cement** to prevent rust in the joints.

The fire-box sides are corrugated, giving them strength and preventing breakage or burning out. **Revertible draft and damper** insure heating with one-half the fuel.

High rim on caldron prevents boiling over.

The exterior is finished with "GRAPHITE" paint—the best rust preventor known.

Will give you dimensions and weights upon receipt of request.

LIVE STOCK.

Choosing a Flock Header.

One of the things that makes the work of the farm and the care of stock interesting in our time is that the putting down of the experience of the best operators in books and the dissemination of knowledge in our agricultural journals places at the disposal of everyone an organized body of facts, knowledge and experiences that constitute the science of the work. Science is no longer a knowledge of masses and gases and things ponderable only. Every art has its science, which is the body of organized knowledge derived from experience and observation in the pursuit of that art. There is a science underlying the matter of choosing live stock of any kind. Impression or taste is not a sufficient guide and it is possible to know the why in all cases.

In the selection of a ram there are three bases on which the buyer should work or three considera ions that should go together to determine his choice. These are constitutional, feeding and blocking qualities. The shepherd is a breeder, a feeder and a seller of meat or meat animals. There are certain indications that show forth the desired qualities in an animal. For good constitution a ram should have a capacious chest chamber. It should be broad in the floor and extended well forward but should not drop to a point. It should be full behind the fore leg and full at the crops. The top should not be narrow or peaked. The sensibilities should be keen. The ear should be alert, the eye lively, and the nostrils open. The bone should be clean and not meaty. There should likewise be suitable masculine character shown in the strength of neck, aggressiveness of head and boldness of expression. The male parts should be well developed.

For good feeding qualities a sheep should have a broad level back throughout. The shoulder top should not be narrow and the ribs should be well sprung to make a roomy food chamber. The skin should be thin, the oily secretion generous according to the breed, the wool springy to the touch, the feeling of flesh mellow and the disposition placid. The flesh should be evenly put on and not lumpy. The head should be broad on top and short The neck short and set nicely into the shoulder.

The most valuable parts of the carcass are the leg and the loin. The meat should reach well down to the hock. The legs should set well apart and be well filled between. The upper part of the quarter should be long and broad. The length and breadth should be well carried out. The loin should be broad and level and should be well covered with flesh.

These qualities apply to all mutton sheep alike. In addition to attending to these the buyer should pay attention to breed type.

In most breeds of sheep the ram is about one-third larger aud heavier than the ewe, but inordinate size is not generally desirable. Most breeders of experience are ready to accept reasonable size or even to select a moderately or slightly smaller male, if by so doing right symmetry and proper balance of parts are secured.—N. W. Farmer.

New Century
for Country Homes
Not Wash-Day—But Wash-Hour
The woman, who uses THE "NEW CENTURY" has the clothes on the line and is ready for her morning shopping or recreation—when other women are still toiling over the tubs in a hot kitchen.
The "NEW CENTURY" washes a tubful of clothes in five minutes—washes them cleaner than can be done by hand.
Do your washing in the "New Century" way and change wash-day to wash-hour. Our booklet tells how. Sent free.

Stoppage of the Bowels in Cattle.

This is one of the most common ailments that cattle are subject to; at the same time more cattle die from this cause than any other, for the simple reason that stoppage is due to paralysis of the bowels.

Stoppage of the bowels is to be regarded as a sign of another disease rather than a disease of itself. It occurs in almost all fevers, indigestion and over eating.

In order to overcome stoppage of the bowels a treatment must be applied to overcome the ailment which causes it, such as paralysis of the bowels. Seventy-five per cent. of the cases of stoppage of the bowels are due to partial paralysis of the bowels. In this case the bowels require a laxative and tonic and not a physic, for if the bowels are paralyzed a physic will have a tendency to cause irritation, indigestion, inflammation, and death follows. For this reason it is dangerous to give a cow salts or oil.

A cow thus afflicted should be given a laxative and tonic, plenty of drinking water, with the chill taken from it, bran mashes made from flax seed tea, also inject several quarts of warm water once or twice daily through the rectum by the use of a hose and funnel, and give the animal a reasonable amount of exercise.—Dr. David Roberts, Wisconsin State Veterinarian.

The Profitable Feeder.

It pays to feed some kinds of animals, and some kinds it does not pay to feed. The condition of the animal, in selecting feeders, is perhaps not of so much consideration as some other things. We would much rather feed some lean animals than others. A broad backed animal with good heart girth, the right kind of a head, and of good breeding, even though it be thin in flesh, will outfeed a cat-hammed, narrow chested, long-legged scrub. The one will respond to generous treatment while the other will eat its owner poor. The more scrub cattle a man feeds through the winter, the poorer he will be in the

CREELMAN BROS.
Box 596 GEORGETOWN, Ontario.

When answering advertisements please mention the MaritimeFarmer

spring. Our climate is not so severe as to make stock feeding unprofitable, but it is too severe to enable a man to get market prices for his grain if fed to scrub animals.

A good and safe guide to follow in picking out a bunch of feeders is to select those having the broadest backs. Along with broad backs go low-settness, good heart and lung capacity, and consequently a good barrel which means good digestive capacity and good spring of ribs for covering over with flesh This corelation of parts in animal form is not merely a nice theory but it is a practicality of the commonest sort. Some may have the idea that the character of the skin and hair must also be considered in selecting feeding cattle. Not at all. Get the good wide backs and the rest will take care of themselves. It is not essential to feel the coat of a feeder; in many cases the buyer could not if he wanted to for such cattle do not stand very readily for such close examination. This matter of coat is of importance in considering the finished or show animal as it, with other things, is an indication of the general tone of the body. Cattle running out as feeders during the summer do not always have the smoothest coats, so this point is not of prime importance, if the other characteristics of a good animal are present.

Now why, someone may ask, does an animal of the above conformation lay on flesh quicker than the fish-backed scrub? A well bred animal has behind it a line of ancestors that have possessed the property of early maturity on a reasonable amount of feed. Moreover a wide chest floor and a good heart girth is indicative of good air and blood apparatus. The lungs will have plenty of room to expand. This insures a good oxygen bath for the blood which stimulates the heart to pump the life stream more vigorously to all parts of the body. Pure blood means that the food eaten can be used to the best advantage and thus we find that growth takes place and that right rapidly. In the narrow-chested, cat-hammed beast, the opposite conditions prevail and the feed goes largely to keep up the activities of the body instead of making new tissue. The character of the profit and loss account will depend largely on the selection of feeders made.

Some Wounds of Live Stock.

Accidents are constantly occurring among live stock and the impossibility of getting veterinary assistance forces a farmer to be his own surgeon. To be able to intelligently treat such animals, we publish the few following hints from our veterinary surgeon.

FOUR KINDS OF WOUNDS.

Wounds are of four kinds; clean-cut, torn, bruised and punctured. A clean-cut wound, lengthwise of the muscle is the easiest to manage. First, see how deep it is and that there is no foreign substance in it, then stop the bleeding by applying hot or cold water. If a large artery has been cut, tie it. Put a teaspoonful of carbolic acid into a quart of water and let a little run over the cut surface. If the wound is not deep, the edges of it can be drawn together, by either silk thread or catgut steeped in the above solution. If, however, the wound is across the muscle, or an inch or more in depth, do not stitch, because the cut end will move below the stitches.

Torn wounds should have the bleeding stopped as above mentioned and then cleaned by letting water run over them. Do not try to sew them up. If the wound assumes an unhealthy appearance, use acetate of lead, 1-2 oz.; sulphate of zinc, 1-2 oz.; carbolic acid. one drachm, and wster one quart. Clean wound with water and apply this lotion twice a day.

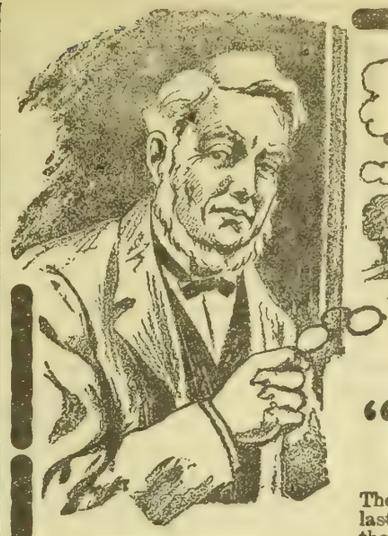
Punctured wounds are the worst of all because they are liable to have foreign substances, such as hair and pieces of wood within, causing inflammation, mortification and death. Probe the part to find the depth and direction of the wound, see if there is any foreign substance in it and remove it. Clean it as well as possible, then dip a piece of soft muslin in a solution of carbolic acid, 3 drachms; water 4 ounces; press this to the bottom of the wound, let it remain a few hours, draw it out and put in a fresh one, and do this 3 times a day. When it begins to matter the danger is passed. Clean it out twice a day and inject a little of the carbolic acid lotion used for cut wounds.

Bruised wounds, if bathed with acetate of lead 1-2 ounce: water 1 quart, several times a day, will not imflame. Sometimes matter will collect and the parts swell up and be soft and puffy. In this case open it and inject a little of the following twice a day: zinc chloride 2 drachms; water, 1 quart. If it leaves a thickening rub with the following every second week: Biniodide of mercury, 1 drachm; lard, 1 1-2 ounces.

For old, unhealthy sores, such as are made by constant rubbing and will not heal, remove the cause and apply a little terchloride of antimony with a feather. In three days a scab will come off and if it looks soft and spongy, apply a little more of the antimony every 3 days until the part becomes healthy. Then use zinc oxide, 1 ounce: lard 2 ounces; rubbing on a little once daily. When the bruises are below the knee, in what is called the low order of tissue, more care will be required. Usually a low form of inflammation sets in, a yellowish discharge begins, and the surrounding parts swell and become hard, the centre of the wound fills up, causing a bad blemish.

The first thing to do in case of a barbed-wire cut on these parts is to put the animal where it can be kept quiet. Bathe the leg every half-hour for the first twenty-four hours with a lotion made of acetate of lead, 1-2 ounce; sulphste of zinc, 1-2 ounce; tincture of arnica, 2 ounces; water, I quart. After the first twenty-four hours, bathe it 3 times a day. If it fills up higher than the skin apply a little bichloride of mercury with a smooth piece of stick, but do not use more at a time than will lie on a dime, as there is danger of the poison being absorbed.

If the animal is fevered or its legs swell from standing give the adult horse half an ounce of nitrate of potassium three times a day in drinking water or a bran mash for a few days, and give half this quantity to a yearling. If in an unthrifty condition give the following: sulphate of iron, 4 ozs.; nux vomica, 2 ounces; mix and divide into twenty-four doses, one to be given twice a day in a mash, and half the quantity for a yearling.



Now is the Time to Repair the Roof

Harvest is over—winter and storms will soon be here—you have a few weeks of spare time while the weather is fine and comparitively warm. This is your opportunity to repair the roofs of your barns, houses and buildings.

Did you ever think how expensive this repairing necessary every year with wooden roofs is, not alone in material but for labor? It will pay you to cover your buildings with a durable fire proof roof of

"Eastlake" Metallic Shingles

"Do you know that a wooden roof equipped with lightning rods costs more than a Metallic roof."

THE PHILOSOPHER OF METAL TOWN.

They never need repairs—can be cheaply and quickly laid *by yourself,* and will last a lifetime. Roofs laid 25 years ago with "Eastlake" Shingles are weatherproof to-day. A roof covered with ***"EASTLAKE" STEEL SHINGLES*** **is proof against *lightning, wind, rain* or *snow.***

A barn roofed with *"EASTLAKE" METALLIC SHINGLES* and sided with our *Galvanized Corragated Iron Siding,* is absolutely protected from fire from outside sources.

Let us quote you on rat and mice-proof sheet metal lining for your granary, also send measurements of your barn and let us give you complete estimates of cost of roofing or siding, or both.

THE HORSE.

Some Horse Talk.

In a bulletin published some little time ago by the Ohio Agricultural College, Prof. Marshall, of that institution, has compiled some very good points about horses. He claims that in the U. S. about three horses out of every four are being used on farms; and in Canada the proportion would be greater.

DIFFERENT KINDS OF HORSES.

Different kinds of work require different kinds of horses. A horse is of no particular value except for what he can do. To fulfill his mission he must travel. If he can draw a buggy containing one or two persons at the rate of ten miles an honr he is valuable as a roadster. Another horse that can draw his share of a load weighing upwards of a ton, even though he moves slowly, performs an equal amount of actual work and is just as useful to his owner as is the roadster. Since all horses are valuable because they travel, although at various rates and under varying conditions, it will be interesting to make a study of those parts of the horse's body directly connected with his locomotion.

It is not difficult to understand that with the horse, as with ourselves, all motion is the result of the action of the muscles. About 40 per cent. of the weight of an ordinary horse is muscle. All muscles concerned with locomotion are attached to bones, and when they contract they cause the bones to which they are fastened to move. The lower part of a horse's legs are nearly all bones, but the muscles in the body and upper part of the limbs are attached to various parts of the bony construction by tendons and can thus produce a motion of the parts located some distance away. The muscles we are discussing, when contracted, are about three-quarters as long as when at rest. The amount of motion produced by the action of the muscles of, say, one of the horse's hind legs, will depend upon the length of the muscles and the relation of the bones to which they are attached. The commonest idea among students of this subject is expressed in these words: "Long muscles for speed, short muscles for power." A long muscle enables a horse to get over the ground rapidly. A short muscle, however, is not powerful because it is short, but because in horses constructed on that plan the muscles are thicker, contain more fibers, all of which pulling together when contracted exert a much greater pulling force than a long more slender muscle. It is because of this that in buying horses to draw heavy loads we look for large and heavy muscles, while in roadsters we attach more importance to the length of the muscles.

THE HORSES MUSCLES.

The most of a horse's muscle is in the hind quarters. This may be a surprise to you, but the next time you have an opportunity to see a horse pulling a heavy load study him carefully. You will be impressed with the idea that most of the work is being done with the hind legs. When the hind foot is moved forward the toe rests on the ground and the leg is bent at the hock joint; if the toe does not slip, and the horse is strong enough for his load, the muscles above, pulling on the tendon fastened to the back and upper joint of the hock, will close the joint, or, in other words, straighten the leg and cause the body to move forward. It is by the performance of this act at every step that the horse moves, although, of course, the strain on all the parts is much greater when pulling very hard. This will also show the necessity of having large, broad, strait joints and legs, that give the horse the most secure footing. You have probably also noticed when driving that many horses put their hind foot on in the ground in front of the mark left by the fore foot, and the faster they go the greater will be the distance between the marks made by the fore and the hind feet. This shows that the length of the step is determined by the hind quarters; it also explains the need of large, strong hocks and legs that are not so crooked as to seem weak or so straight as to lessen the leverage afforded by this very wonderful arrangement of the parts.

THINGS REQUIRED OF HORSES.

Then there are some other things that are desired in all kinds of horses. One of these is a short back—that is, short from the hips to the top of the shoulders (the withers). From what we have learned of the hind parts we see that the horse is really pushing his body along. If the back is short and strong, instead of long and weak, the whole body will move more easily and rapidly in obedience to to the force produced in the hind parts.

Although the hind parts have most to do with the horse's travelling, we must not forget that the front parts are also very important, No matter how much muscle a horse has or how strong his hocks are, if there is anything seriously wrong with his front legs he cannot travel, and so derives no benefit from his good parts. Some horses may be seen whose knees are not straight, others when looked at from in front show that their feet are not in line with their legs. Such animals are more likely to slip or strike one leg with the opposite foot, thus making themselves lame and unable to do any work.

THE HORSES FEET.

There are a great many interesting things about a horse which cannot be told here, but which you may learn at home or from some neighbor who keeps good horses. We will, however, say something about horses' feet. Inside a horse's hoofs there are some very sensitive parts resembling the attachment of the finger nail and the finger. When anything gets wrong with the foot, these parts cause a great deal of pain, and even though the horse is otherwise perfect the pain in his feet makes him too lame to travel. Horses with large, wide feet that are wide across where they touch the ground when you look at them from behind (or in the heels) are not likely to have this trouble.

Chamberlain's Cough Remedy has become famous for its cures of coughs, colds, croup and influenza. Try it when in need. It contains no harmful substance and always gives prompt relief. Sold by all dealers.

Weak Men, Have Courage!

If you get up in the morning with a dull brain, tired nerves, an ache in your back, a dread of the toil and hardships of everyday life, these are signs that your vitality is at a low ebb—that some of the organs or functions of your body are in a weakened, morbid condition.

If you are a young man, and free rein for evil habits and passions has exhausted your vital energy, or if on the shady side of forty, you have not the strength and stamina that should be possessed by a man of your years, you can regain your health, strength and energy with Electricity.

"None are so blind as those who will not see," but if you are open to conviction and want to improve your condition, I can convince you that my Belt does all I claim for it, and even more.

You don't need to be taught that restless nights, sleeplessness, despondency, inability to concentrate your thoughts, loss of appetite, weak back, headache, pains here and there in other parts of your body, lack of energy and push, are all signs of nervous breakdown, physical debility; you know that, but what you want is a remedy that will restore the vitality that you have lost.

If you have doctored and drugged and got no benefit, that's no sign you ought to give up. Drugs can't restore your vitality. Electricity is for men like you. It's the greatest nerve-builder in the world.

See what people say who have used my Belt. Every mail I get brings scores of such letters.

Dear Sir,—I write to let you know I am well pleased with your treatment. I feel like a new man. I have gained over 20 pounds and am still gaining. I would not be without your Belt for what it cost, and if this one gets played out, I will send for another, for it is worth a good deal to have one's health, and Dr. McLaughlin's Belt will give it to any one when it has helped me.

DAVID CRAWFORD, Oso Station, Ont.

Dear Sir,—I have been suffering from Rheumatism for the last two years, and your Belt has completely cured me in two weeks. I would not part with it for twice what I paid for it. I highly recommend your belt when I have an opportunity, and I am thankful for what the Belt has done for me. JOSEPH LARGISS, Huntingdom, Que.

My Belt, with special Electric attachment, will restore your vigor. It will check all loss of vitality, and affect every organ of the body. It cures Nervous Debility, Varicocele, Rheumatism, Lame Back, Lumbago, Sciatica, any case of Kidney Disease that has not gone as far as Bright's Disease, Stomach Trouble, Constipation. If you haven't confidence in electricity, let me treat you at my risk. I will give you the Belt on trial, without one cent of risk to yourself. Give me reasonable security and I will take your case, and you can

PAY WHEN CURED.

Call at my office and let me explain my Belt. If you can't do this, cut out this coupon, send me your name and address to-day, and I'll mail you, closely sealed, my elegantly illustrated 80-page book, which is FREE. MY FREE BOOK for women is now ready. All men and women who are interested in recovering their health should read these books, for they point the way to Health and Happiness. Office Hours—9 a. m. to 6 p. m. Wednesday and Saturday until 8.30 p. m.

M. K. McLaughlin
214 St. James St., Montreal, Can.
Please send me your book for men or (women), sealed, free.

BILIOUSNESS
AND ALL LIVER DISORDERS

ARE CURED BY

The tortures of biliousness must yield to Mother Seigel's Syrup, because this great medicine tones and strengthens the liver, regulates the flow of bile, and cleanses the whole system.

MOTHER SEIGEL'S SYRUP. Sold Everywhere.

A. J. White & Co., Ltd., Montreal.

Our 60 Years' Experience

and continued success is a guarantee to You of Good Qual y and Fair Dealing.

We are offering for the next 30 days our No. 15 "Martello" Single Strap Nickel Mounted Driving Harness at only $12.00. It is fine enough to suit any one who needs a medium price set, well made and well finished Harness.

Ask your dealer for this Harness, and if he does not keep them, write us, and we will forward the same prepaid to your nearest express office on receipt of the amount. **If not satisfied we will refund the amount.**

DESCRIPTION

Bridle—⅝; box loop cheeks; patent leather blinds.
Breast Collar—Single strap.
Traces—1¼ wide; heavy single strap lined at both ends; sewed to breast collar.
Saddle—2¾ in., full padded; patent leather; swell skirts.
Breeching—Well made, with flaxseed stuffed cropper.
Reins—Cut from good leather.

6 & 11 Market Square, St. John, N. B

POULTRY.

Doctoring Fowls.

The few chicks that die in a flock that is properly cared for, usually should die; the flock is better to be rid of them. We are too sentimental in regard to ailing chicks. "It is making such a hard fight for its life, I can't bear to kill it," is a common remark about a dwarfed or stunted chick. We can't afford to let these weaklings live; they are the first to succumb to disease, and may become a source of danger to others. A tubercular chick is a menace to the entire flock; kill it and burn it before it contaminates the rest. A roupy chick, or a weakling with chicken-pox or a dirty nose is as bad. Get rid of the weaklings early. A thrifty chicken is not worth very much; a weakling, with its power of damaging healthy members of the flock, is a positive menace.

Where it seems best to doctor sick fowls, they must be separated from the others; disinfect the houses and runs the sick birds have been in, and then treat according to symptoms. A few simple remedies should always be on hand, a good disinfectant, a tonic, carbolished vaesline, and peroxide of hydrogen. Cure the disease before it gets a good start; don't neglect taking early precautions to prevent the spread of the disease. Keep up a constant warfare against lice, give conditions conductive to health, check the first symptoms of disease, isolate the sick, kill and burn the advanced cases, and the losses from preventable causes will be light.

Lice and Mites.

There are several varieties of lice which attack poultry. They subsist mainly on the feathers and perhaps on the epidermic scales. They are found largely on the head and neck, under the wings and about the vent, and when present in large numbers they cause the fowls much discomfort. Persian insect powder (pryethrum), powdered sulphur, and some of the various preparations on the market such as the louse powders, are good in combating these pests. The pens can be dusted with one of these powders after they have gone to roost. Have the powder in a box with a perforated cover, grasp the fowl by the legs, and shake the powder well among the feathers. Dust at least three times at intervals of about a weak in order to catch the lice which hatch out after the first dusting.

The mites subsist on the blood of the fowls and are not usually found on the bodies of the birds except when at roost or on the nest. During the day they inhabit cracks and crevices of the walls, roosts and nests. Sitting hens are often so annoyed that they are compelled to leave the nests in order to relieve themselves of these parasites. The free use of kerosene about the nests and perches is useful in fighting the mites. The walls of the house may be sprayed with kerosene, the operation being repeated every three or four days for two weeks. Insect powders are of little avail.

The following method has proved excellent in ridding houses of mites and lice when the weather conditions are such as to permit the birds being kept outside the house for five or six hours. Close all the doors and windows and see that there are no cracks or any other openings to admit air. Get an iron vessel and set it on gravel or sand near the centre of the house; place a handful of shavings on these, sprinkle sulphur at the rate of one pound to every 90 or 100 square feet of floor space. Instead of using the shavings and kerosene the sulphur can be saturated with wood alcohol When everything else is in readiness light the material and hastily leave the house. In case any anxiety is felt about fire, a glance through a window will show whether everything is all right. There is very little danger of fire when precautions have been taken to have plenty of soil beneath the vessel. Allow the house to remain closed for three or four hours, at the end of which time one can safely conclude that there are no living beings inside. Now throw all the doors and windows wide open so as to drive out the sulphur fumes thoroughly, and then the fowls may be allowed to enter. Let them in one by one, and as each enters catch it and dust it well with insect powder, which will destroy the lice on the birds. Tobacco dust is also good to use instead of insect powder The birds and house have now been freed from vermin for the present, but the eggs of the insects have not been destroyed, and in a week another swarm will be hatched out. Therefore, it will be necessary to repeat the operation once or twice before the pests are exterminated. After this, care should be used that no strange fowl be addmitted to the house or yard without having been thoroughly rid of lice, for one lousy hen will contaminate all the rest. —U. S. Dept. of Agriculture.

Get Rid of the Culls.

Get rid of your "culls" just as soon as possible after they are ready for market. This is an important matter that is sometimes overlooked by breeders. Especially is this important where space is limited. "Culls" are a hindrance to the growth and development of the balance of the flock, for several reasons. Neither growing chicks or the old fowls do well in overcrowded quarters, and are more liable to contract disease and become lousy. Besides the breeder is enabled to give better care to the balance of the flock after the culls are out of the way. Cull closly, disposing of all specimens that show any permanent defect, such as wry tails, crooked breast bone, roach back, twisted back, feathers on legs or toes in American, Spanish and other clean legged breeds, and lack of feathers on legs and toes in the Asiatic breeds, or any serious defect in comb, wattles or earlobes. In fact get rid of all birds having any defect that you know cannot be outgrown. If raising market poultry, of course these defects cut no figure, but even in this branch of the business careful culling is desirable and profitable, as the flocks should be weeded out and the non-productive birds discarded.

Scaly Leg.

Scaly leg is a disease about which some poultry owners know very little. It is caused by a very small insect burrowing under the scales of the legs. The affected parts should be thoroughly cleansed daily with warm soap-suds, using a hard bristle brush. Dry thoroughly and anoint with a mixture of sublimated sulphur one part and vaseline two parts. Rub well in between the scales, and after a few treatments the legs will be clean and smooth. Scaly leg is contagious in the same sense that lousiness is contagious, but if taken in time is easy to cure.

The pleasant purgative effect experienced by all who use Chamberlain's Stomach and Liver Tablets, and the healthy condition of the body and mind which they create, makes one feel joyful. Sold by all dealers.

Piano News.

Fall is here now and you want to get that new piano. We have a beautiful stock of the very best makes, such as **Gerhard Heintzman, Brinsmead, Bell, Martin-Orme** and others. We assure you if you will examine this list you will find them, for quality and value, unequalled. Our prices and terms will be most reasonable. Our Exhibition stock is coming in daily and it will pay you to buy now, rather than wait for the rush. Call and see us or write for prices.

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage. Address all communications to EVANGELINE, Port Williams Station, N. S.

Who is the Greatest.

We have read of kings and monarchs,
All the conquests they have won,
How some ruled their nation wisely
And noble deeds had done,
And how heroes of our navy
Won for us many a fight,
But we've overlooked the mother
Who has trained her children right.

We have read how some wise statesmen
Served their native land so well,
How the generals gained the victories
Ere on battlefields they fell,
And how patriots of our country
Did their duty with delight,
But we've overlooked the mother,
Who had trained her children right.

We rise statues for the noble,
Who have done some mighty work,
Who ever acted wisely
And duty never shirked,
And we praise the saintly heroes
Who proclaim the Truth and Light,
But we've overlooked the mother
Who has trained her children right.
—A. E. Vassar.

Miss Slimmens's Boarding House.

(Continued from last issue.)

May I take the paper to my room, Dora? Humph! that impudent jade! and to think that I actually kissed her! my blood boils when I think of it; and it boils harder still when I read that scrap of paper I picked up in her room, after she went away. Let me look at it again.

"Such fun, Belle, such fun alive! I thought I should suffocate! She wanted to kiss me, but I resisted a long time, for I was afraid she took snuff; but at last she conquered me—she was the strongest. However, she dosen't take snuff; the kiss, whatever else it was, was not snuffy!"

Ha! snuffy, indeed! If he ever brings his bride back here, she'll get her dress tore some day; she didn't reflect she was making an enemy for life. Harry Weldon had better settle in some other place, if he wishes his wife to have any peace. I'll have my revenge for that scrap of paper yet.

CHAPTER XVI.

RAT EXTERMINATION.

What's that you remarked, Dr. Burton? Arsenic? O my! I thought that horid stuff was only good for killing rats or committing suicide! It'll make a woman of fifty, you say, as fair and blooming as a girl of twenty, and it's wonderful for fattening people up! If I was in danger of getting to be forty or fifty years old soon, I believe I'd commence taking it, to preserve my complexion. I don't suppose I shall ever need fattening, though I look rather thin in the face; it runs in the Slimmens family to be thin in the face and fleshy otherwise. Them Circassian women must be dreadfully vain females, to take such terrible stuff as arsenic to keep themselves white and soft. Don't you think so, Mr. Bethuen? Don't you think it perfectly unexcusable for the feminine sex to be given such arts? Their minds ought to be set on higher things, Mr. Bethuen, on higher things; I've long felt it. But I suppose them Circassian ladies are heathens and Mahomadens, and don't know any better. Don't you ever feel as if you had a call to go and teach them better! Only to reflect upon their eating arsenic like sugar candy, and we sitting here in our comfortable homes, and never making an effort in their behalf! Oh, Mr. Bethuen, it's disparaging to our benevolence that such is the fact! But it is not so bad in them as to think that English women and our own American girls are a-going and doing the same, as much as they durst. Eating arsenic to make themselves look fair, you say, Dr. Burton? I'm glad you told me; I'm glad I'm warned against the deprivity which exists in our midst. After this, when I see anybody very plump and white, I shall be sure they are arsenic-eaters. There's them twins, Philista and Philistina Podd, as fat and babyish—Oh, you needn't color up so, Mr. Barker; I don't mean nothing, only I wish to warn Mr. Bethuen of what might be. It would be dreadful for a minister of the gospel to find out that his wife was a suicide, as it were, a self-poisoner, and all for the vain glory of the flesh. Dursn't never leave it off, after they've once become victims of its pernicious influence? Have to keep on taking more and more? O Doctor! And how much is it safe to begin with? I merely inquire to satisfy a physical curiosity. How many did you say, Mr. Little? Forty grains? You should think the ladies would have scruples against taking such drachms?—he! he! But that's borrowed wit, for I've heard it before.

Have some more of the fried trout, Doctor; they didn't cost me anything, for Mr. Little caught 'em himself, and made 'em a present to the house, so you can thank him for 'em. Have some more, Dora, do. Dear, dear, what a light and trifling generation this is getting to be! Hoops, and bustles, and crinoline enough for a bloon, and now it's arsenic for an emetic. Hey, Mr. Little? Tarter emetic, you should call it, considering where it originated? You jest about the soberest subject. He's a little too much of a jesticulater; don't you think so, Mr. Bethuen?

O Lord of Mercy! I've went, and gone and done it! I know I have! I feel it here! Committed suicide! I've gone and killed myself! Oh, how it burns! my stomach's all a-fire! Oh, I wish I hadn't—I wish I hadn't tried it; but I was so awfully yellow, and it would show through spite of all I could do, and so wrinkly, and now I've gone and poisoned myself. I've taken too much! it's eating me up and burning me up alive! Dora! Dora! where are you? Oh, let me in, and tell me what to do! I'm sick—I'm poisoned with arsenic! I just took a little, not much bigger than a quinine powder; and my stomach's all griping up and burning like fire. Take an antidote? What? Eggs? O dear, I wonder if there's any in the house; I'll go and see. You go and find out where the Doctor is. If he isn't in his room, send Caturah after him—quick. Never mind the eggs; run for the Doctor. Oh-h-h! Susan, where's the eggs? Bring me some. here! hand 'em to me—a dozen. Oh-h-h!

There! I've swallowed a dozen raw. Oh, Doctor, is that you? I'm afraid you're too late. I'm poisoned; I'm dying dead this minute. Did you bring your stomach-pump? Arsenic—it's arsenic. I'll open my mouth. Oh-h-h!

I believe I feel better. Do you think it's all up? Do you think I'm out of danger? Oh, Doctor, I've run a narrow risk this time. It all come of them pesky rats. I got some vermifuge, or extermination, or whatever you call it, and put it on a plate in the pantry to keep the rats away; and somehow I forgot, and mistook it for sugar; and sweetened some lemonade with it I was making, the day was so warm. I never thought till I began to be sick, what was the matter. Oh, Doctor, if it hadn't been for them eggs and that pump, I shudder to think—Yes, I'll lay down; I feel as weak as a cat. If you will just help me up the stairs I'll go to bed. Dora? Yes, I'm afraid I scared her most to death. After I'm comfortable, you'd better go and see if the excitement has hurt her. O my, them pesky rats! There! that'll do. Come in again after supper, and see how I am. And, Doctor, a word more—be sure and let the boarders know it was them pesky insects that did it.

Now't I'm out of danger, you'll never catch me at that again; not if I get to be yellower than brimstun itself, and need bleaching more'n old Aunt Peggy's best bunnit. My sensations were undescribable; I hardley knew which it was best to send for—the Doctor or Mr. Bethuen. I hope Timothy Bethuen won't distrust the truth of the matter. I didn't much more than begin to feel better before I luckily thought of laying it to the rats. Nobody'll guess the truth but Dora, and she's seen me in too many predicaments for me to care for her. She's a good soul, for she never betrays me; but now that she's a husband, it will be different. I'm awful afraid she'll confide it to him, and he's so fond of fun, he'll let it all out; he's an awful person to get jokes on people. I feel as weak and used up as if I'd been sick for a month. I shall have to keep my room two or three days, at least; and there's them currants getting too ripe for jelly; and the house a-going to rack and ruin, with nobody to watch them everlesting girls. But I'm thankful I'm alive, currant jelly or no currant jelly and the next time anybody catches me taking arsenic to bleach myself, they may set me down for a bigger simpleton than I am. I'm afraid there's no such thing as making a young woman out of an old one, as easy as making a new Tuscan out of an old one. I hate to give up—I can't, that's the long and short of it. But ugh, that arsenic!

CHAPTER XVII.

"BLESS US! THIS IS PLEASANT, RIDING ON THE RAIL."

I've come to ask a very great favor of you, Dora, if you feel equal to the task. I've been so poorly ever since that dose of rat poison that I took by mistake, I'm afraid I'm going into a decline. Doctor Burton recommends sea air; he says he known of nothing but a change of air that'll do me any particular good, and I've about made up my mind to go to Newport for a couple of weeks. It's a very expensive place, I know; but I've made considerable of money since I came into this house, and a young lady ought to see something of the world outside of her native village'—specially if she anticipates ever making a good match. We often hear that

"Distance lends enchantment to the view,"

and it may be that I shall be more properly appreciated in a new spear than I am in Pennyvilie—particularly if it's discreetly given out that Miss Slimmens is a beauty, a blue, and an heiress! I've made up my mind to afford the money for the tower; but I don't know what to do about them everlasting girls. Caturah's handy, and Susan's got so she can go ahead as well as I can; and if you'd just trouble to have an eye to the sugar, and the tea-caddy, and a few little things, I don't know but what I might trust 'em. My family's uncommonly small now, and they won't have much to do.

Thank you! Much obliged. But it's just like you Dora; you're always ready to do a good turn for anybody that asks it. I felt rather delicate about putting any care on you, at present, though I don't ask of you to do a thing but to keep the keys. Yes, I do need the change;" I realized it myself. I can hardly drag about the house this warm weather. And now that the matter's settled, what shall I wear? that's the great question. I expect my wardrobe'll cost me more than all my other expenses put together. I must dress genteelly, or I sha'n't stand any chance to make an impression. That white satin I got the time the professor boarded here will do for one ball-dress, and my pink silk for another. I've got a handsome watch and chain, you know, and considerable jewelry, and if you'd lend me that pearl set Mr. Little gave you on your birth-day, I'd take good care of it and conside it a favor. You won't be going out much this warm weather to need it, and it just suits my style, don't you think so? Probably you'd never have had it if it hadn't been for my good-will, making a match between you and George; so you see I consider I've sort of a claim on it. He! he! I think a new white muslin, flounced to the waist, with blue trimmings and your pearl-set, will be sweet for another evening toilet. I'm going to take my new gray more-antique for a travelling dress. I expect it will get ruined; but, considering that I am going for the benefit of my health, and to

Care In Preparing Food.

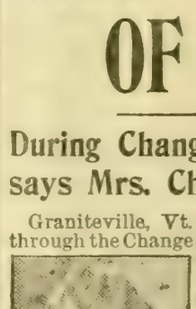
In recent years scientists have proved that the value of food is measured largely by its purity; the result is the most stringent pure food laws that have ever been known.

One food that has stood out prominently as a perfectly clean and pure food and which was as pure before the enactment of these laws as it could possibly be is Quaker Oats; conceded by the experts to be the ideal food for making strength of muscle and brain. The best and cheapest of all foods. The superiority of Quaker Oats over all other oatmeals is due to two things; the greatest care in the selection of the finest oats obtainable and the special machinery by which this oats is cleaned, rolled and packed. The Quaker Oats Company is the only manufacturer of oatmeal that has satisfactorily solved the problem of removing the husks and black specks which are so annoying when other brands are eaten. 1

WORTH MOUNTAINS OF GOLD

During Change of Life, says Mrs. Chas. Barclay

Graniteville, Vt. — "I was passing through the Change of Life and suffered



from nervousness and other annoying symptoms, and I can truly say that Lydia E. Pinkham's Vegetable Compound has proved worth mountains of gold to me, as it restored my health and strength. I never forget to tell my friends what Lydia E. Pinkham's Vegetable Compound has done for me during this trying period. Complete restoration to health means so much to me that for the sake of other suffering women I am willing to make my trouble public so you may publish this letter." — MRS. CHAS. BARCLAY, R.F.D., Graniteville, Vt.

No other medicine for woman's ills has received such wide-spread and unqualified endorsement. No other medicine we know of has such a record of cures of female ills as has Lydia E. Pinkham's Vegetable Compound.

For more than 30 years it has been curing female complaints such as inflammation, ulceration, local weaknesses, fibroid tumors, irregularities, periodic pains, backache, indigestion and nervous prostration, and it is unequalled for carrying women safely through the period of change of life. It costs but little to try Lydia E. Pinkham's Vegetable Compound, and, as Mrs. Barclay says, it is "worth mountains of gold" to suffering women.

see a little of general society, I guess can afford it. There's nothing like making an astonishing impression at first. I hope those darling hats, with lace around the brims, and ribbons flying, will be the fashion again this season at the watering-places; they're so bewitching, and they'll be so becoming to my long curls. Ringlets, flowing from beneath a broad-brimmed straw hat, cannot fail to impart a coquettish appearance. I think I shall wear one during my promenades, whether other ladies do or not. I have hardly decided whether to adopt a playful or pensile demeanor; but considering my delicate health, and that I am unaccompanied by an escort, I shall likely decide in favor of the pensile.

(Continued in next issue.)

How Experiences Differ.

The Country Gentleman says hay caps made of muslin will not last more than two seasons. Hay caps are now in use on the farm of the Senior Editor of this paper, made from A sheeting, not hemmed, that have been used three times a year for the last five years. If care is taken not to allow the caps to remain on the ground more than a few hours after the hay is hauled and they are kept in a dry place away from mice, there is no reason why heavy muslin caps should not last several years. It is also a useless expense to buttonhole the corners for the strings. A stout string tied with a square knot to the corners rarely gets loose. The weight at each corner, to hold in high wind, should be about eight ounces. A weight of that size can be cheaply made of cement with a hole through the centre for tying on the string.

A Fly Repellant.

The following formula for a fly repellant for cows has been tested by the Kansas Agricultural College and is recommended by them:—Resin, 1½ pounds; laundry soap, 2 cakes; fish oil, ½ pint; enough water to make three gallons. Dissolve the resin in a solution of soap and water by heating, add the fish oil and the rest of the water. Apply with a brush. If to be used as a spray, add ½ pint of kerosene. This mixture will cost from seven to eight cents per gallon, and may be used on cows or calves. One-half pint of this mixture is considered enough for one application for a cow; a calf, of course, would require considerably less. It will be more economical to apply this only to the parts of the animal not reached by the tail. At first it will be necessary to give two or three applications per week, until the outer ends of the hair become coated with resin. After that retouch those parts where the resin is rubbed off.

Cowan's

Cake Icings

If you had trouble with prepared Cake Icing, it was not Cowan's.

Even a child can ice a cake perfectly, in three minutes, with Cowan's Icing. Eight delicious flavors. Sold everywhere.

The Cowan Co. Limited, Toronto. 89

that spoons, forks, knives, etc., of best reputation bear the trade mark

"1847 ROGERS BROS."

The 50 years since they were first introduced have developed nothing better.

In buying Tea Sets, Candelabra, Trays, etc., ask for the goods of

MERIDEN BRITA CO.

It is in time of sudden mishap or accident that Chamberlain's Liniment can be relied upon to take the place of the family doctor, who cannot always be found at the moment. Then it is that Chamberlain's Liniment is never found wanting. In case of sprains, cuts, wounds and bruises Chamberlain's Liniment takes out the soreness and drives away the pain. Sold by all dealers.

Formal and Informal Thanksgiving.

Thanksgiving day will have come and gone ere we go to press again. We must consider it now.

The charter members of Thanksgiving day assembled under far different conditions than we celebrate the day in this age. Were they more devout? Had they more to be thankful for?

True devotion is of the inner man. It is hard to measure. It cannot be measured by the length of prayers any more than great sorrow can be expressed by sack cloth and ashes. A prosperous people never give much formal expression to their joys or sorrows. Hence we have drifted far from the formal Thanksgiving day of the Pilgrims.

We have more to be thankful for? There is no question about that. Do you realize that the Pilgrims never saw a train, a street car, a telegraph, telephone, electric light, gas light or even a kerosene lamp. They never saw a bicycle, automobile, or even a ballooon, say nothing of airships? Wouldn't it make their eyes bung out if a phonograph spoke the Lord's prayer to them? Wouldn't they stare in terror if they saw a moving picture show of an Indian fight? They never milked a cow by machinery, harvested grain with a self-binder, threshed wheat with a separator, skimmed milk with a separator, all these and countless others are new things.

Do we realize these things? Are we thankful for the privilege of living in an age like this?

God has been good to our nation. He has blessed us more than any other people. It is well that we keep alive the true spirit of Thanksgiving. It is well that we can halt one day in the year and "Count our many blessings, name them one by one," as the song goes.

While we give formal expression to the thankfulness we feel as a nation, let us not forget to render daily the informal, the secret thanks due to the Giver of all good gifts. Only thus can we keep Canada in the forefront of the nations.

Uses of Paraffin.

Shoes that have become hardened by water may be rendered quite soft again by the application of a little paraffin. The oil should be applied on a cloth, and rubbed well into the leather. It also tends to preserve the leather, and so lengthens the life of the footgear.

A few drops of paraffin added to the water in which linoleum or oilcloth is washed will not only help to preserve it, but will also give it a better polish.

To clean a copper kettle, rub with paraffin and powdered bathbrick, and afterward polish with dry whiting.

Charlottetown Prize List.

(Continued from page 7.)

CLASS 6.—CLYDESDALES, SHIRES AND OTHER REGISTERED DRAFT HORSES.

Stallion, 4 years old and upwards, 1, P. S. Brown, Lord Delmaney, 2, Head St. Peters Bay Clydesdale Co., Wigtown Hero, 3, Daniel McGregor, Eskham, Waggoner.
Stallion, 3 years old, John Richards.
Stallion, 2 years old, 1, Geo. Dockendorff, Atlas; 2, A. E. Ings; 3, Frank Mutch.
Stallion, 1 year old, 1, Gavin Harding; 2, Wallace Stead.
Filly, 3 years old, 1, Robert Roberts; 2, Wm. Vickerson; 3, John Walker.
Filly, 2 years, 1, John Richards.
Filly, 1 year old, 1, Francis Chown.
Foal of 1909, 1, E. Heartz; 2, John T. Morris; 3, W. W. Owen.
Mare, with foal at foot, 1, E. Heartz, 2, W. H. Godfrey; 3, J. T. Morris.
Mare over 3 years old, 1, 2, and 3, John Richards.
Champion Stallion, any age, Diploma, John Richards.
Champion mare, any age, Diploma, John Richards.

CLASS 7.—DRAFT HORSES NOT ELIGIBLE FOR REGISTRY.

Filly, 3 years old, 1, Duncan Reeves, Norboro, P. E. I.; 2, Chester McEwen, North River; 3, Rev. J. B McIntyrre, St. Dustan's.
Filly, 2 years old, Richard Clark, Summerside; 2, Donald Meuchison, North River; 3, Francis Chown, Winsloe.
Filly, 1 years old, 1, David Matheson, Oyster Bed Bridge; 2, A. H. Boswell, Marshfield; 3, Leslie McEwen, North River.
Foal of 1909, 1, Jas. Livingstone, Clyde River; 2, R. B. McKinley, North River; 3, Leslie McEwen
Mare with foal at foot, 1, James Hughes, Covehead; 2, Alex. Matheson, Emerald; 3, R. B. McKinley.
Draft mare or gelding, not less than 1400 lbs, 1, Wilbert Dockendorff, North River; 2, Geo. Handrahan, Charlottetown; 3, Geo., Dockendorff, North River.

CLASS 7.

Special prize given by the Charlottetown Steam Navigation Co. to the 4 best draft colts, under 3 years old, the get of any one registered draft stallion entry to be made in the name of the owner of the sire, 1, R. B. McKinley, North River

CLASS 9.—GENERAL PURPOSE HORSES.

Mare, 3 years old and upwards, 1, R. E. Longworth, 2, James McPhail, Argyle Shore; 3, A. R. Wise, North Milton.
Mare, 2 years old, 1, Andrew McRae, East Royalty; 2, Michael McManus, New Haven; 3, Chester McEwen N. River.
Brood mare with foal at foot, 1, Rev. J. B. McIntyrre, St. D. College; 2, Jas. Livingstone; 3, Pope Cook, Little York.

CLASS 10.—WALKING HORSES.

Mare or gelding, shown in carriage, 1, J. McLeod; 2, J. Wedlock; 3, Thos Beer.
Mare or gelding, draft, to be shown in cart or truckwagon, 1, E. G. Love; 2, Oliver Saunders; 3, John Walker

BEEF CTTLE.

SHORTHORNS.

Bull 3 years and upwards, 1, John Walker.
Bull 2 years old, 1, Samuel C. Lane.

BEEF GRADES.

Cow 4 years and upwards, 1 and 2, Robt. E. Longworth, 3, Wallace Stead.
Heifer 2 years old, 1, Robt E Longworth.
Heifer, 1 year old, 1 and 3, R. E. Longworth; 2 Francis Chowan.
Heifer senior calf, 1, Wm. McKinley.
Heifer junior calf, 1, Robert E. Longworth.

STEERS.

Best pair of steers, 1, year old, 1, A. H. Boswell.
Best pair of steer calves, 1, Samuel C. Lane.

DAIRY CATTLE.

AYRSHIRES.

Bull three years or older, 1, Easton Bros., Fizzaway's Heir; 2, Simmonds Bros. Netherall Gentleman Jeo; 3, Chas. Weatherbe.
Bull, 2 years old, 1 Easton Bros.; Howie's Crusader; 2, W. Moffatt.
Bull 1 year old, 1, Easton Bros., Flash Light of Spruce Row; 2, Roy Bulpitt; 3, Simmonds Bros., Randolph of Spring Park.
Bull senior calf, 1 and 2, Simmonds Bros.; Sir Wilfred and Hector.
Bull junior calf, 1 and 2, Easton Bros.
Cow 3 years old or over, 1, Easton Bros., Pearl of Springhill; 2 and 3, Simmonds Bros., Rose of Kelso and Burnsine Snowlake.
Cow in milk or calf, 2 years old, 1, Easton Bros., Lady Marshfield; 2 and 3, Simmonds Bros., Queen and Princess
Heifer one year old, 1, Simmonds Bros., Pearl of Spring Park; 2 and 3, Easton Bros, White Lady.
Heifer senior calf, 1, Robert Stewart; 2, Easton Bros
Heifer junior calf, 1, Simmonds Bros., Jean; 2, Easton Bros.
Aged herd headed by Howie's Crusader, 1, Easton Bros.; 2, Simmonds Bros.
Breeder's young herd, 1, Eston Bros.; 2, Simmonds Bros
Champion bull, 1, Easton Bros., Howie's Crusader.
Champion female, 1, Easton Bros., Pearl of Springhill.

JERSEYS.

Bull 3 years old or older, 1, Wm. Clark, Dreadnought of St. Lambert; 2; Frank Glydon.
Bull 1 year old, 1, James Essory.
Bull senior calf, 1, Wallace Stead,
Bull junior calf, 1, Wallace Stead; 2, Spurgeon Warren.
Cow 3 years or older, 1 and 2 Wm. Clark, Cana Meines of Maple Grove, Rosalina of Maple Grove; 3, Wallace Stead
Cow or heifer two years old, 1, Wm. Clark, Vesta Vice; 2, James Essory; 3, Wallace Stead.
Heifer, 1 year old, 1, Wallace Stead; 2, Wm. Clark.
Heifer senior calf, 1, Wm. Clark.
Heifer junior calf, 1, Wallace Stead; 2, Wm. Clark.
Aged herd, 1, Wm. Clark.
Breeder's young herd, 1, Wm. Clark.
Champion bull any age, 1, Wm. Clark, Dreadnought of St. Lambert.
Champion female, any age, 1, Wm. Clark, Cana Meines.

GUERNSEYS.

Bull 2 years old, 1, Roper Bros.
Bull 1 year old, 1, James Roper; 2, Roper Bros.
Bull senior calf, 1, James Roper.
Bull, junior calf, 1, Roper Bros.; 2, Francis Chowan.
Cow 3 years or older, 1 and 2, Roper Bros.; 3, James Roper.
Cow or heifer, 2 years old, 1 and 3, James Roper; 2, Roper Bros.
Heifer, 1 year old, 1 and 3, Roper Bros.; 2, James Roper.
Heifer senior calf, 1, Francis Chowan; 2, James Roper.
Heifer junior calf, 1, Roper Bros., 2, James Roper.
Aged herd, 1, Roper Bros.
Breeder's young herd, 1, Roper Bros.
Champion bull 1, Roper Bros.
Champion female, any age, 1, Roper Bros.

HOLSTEIN FRIESIANS.

Bull 3 years old or older, 1, Gavin Harding, Artis Jake; 2, J. A. Wedlock; 3, Peter M. Robertson.
Bull 2 years old, 1, John Tweddy; 2, Josiah Howatt; 3, John H. Court, Prince Johanna Lad.
Bull 1 year old, 1, Gavin Harding, Prince Posch; 2, C. J. Bruce, College Artis; 3, Fred C. Clark
Bull senior calf, 1, Horace Wright; 2, Fred C. Clark.
Bull junior calf, 1, Wm. McKinlay; 2, John Stewart.
Cow 3 years or older, 1, Gavin Harding, Jewel Sylvia; 2 and 3, Fred C. Clark, Jacoba Johanna.
Cow or heifer, 2 years old, 1, F. C. Clarke Johanna Mercides Poeh; 2, Gavin Harding, Orn, Rooker; 3, E. Heartz.
Heifer 1 year old, 1, J. M. Leard; 2, Fred C. Clark; 3, Gavin Harding, Little Emily.
Heifer senior calf, 1, Gavin Harding, Gay Lass; 2, Fred C. Clark.
Heifer junior calf, 1, Gavin Harding, Miss Mercena Posch; 2, W. J. Gibson.
Aged Herd, 1, Gavin. Harding; 2, Fred C. Clark.
Breeder's young herd, 1, Gavin Harding.
Bull and 3 of his get, 1, Gavin Harding, Artis Jake.
Cow any age and three of her offspring, 1, Fred C. Clark, Jacoba Johanna.
Champion bull, 1, Gavin Harding, Artis Jake.
Champion female, 1, Gavin Harding, Jewel Sylvia

AYRSHIRE GRADES.

Cow 4 year old and upwards, 1, Alex. Robertson; 2 and 3, Simmonds Bros; 4, Easton Bros.; 5, R. E. Longworth.
Cow 3 years old, 1, Tupper Ferguson; 2, Easton Bros.; 3, E. G. Love.
Heifer 2 years old, 1, Robert Stewart; 2, Easton Bros; 3, Tupper Ferguson.
Heifer, 1 year old, 1 and 3, Alex. Robertson; 2, E. G. Love.
Heifer senior calf, 1, Alex. Robertson; 2, Byrne Bros.
Heifer junior calf, 1, Hector McRae; 2, Tupper Ferguson.

JERSEY OR GUERNSEY GRADES.

Cow 4 years and upwards, 1, Roper Bros.; 2, Simmonds Bros.; 3, Easton Bros.
Cow, 3 years old, 1, Roper Bros.; 2, Easton Bros.
Heifer 2 years old, 1 and 2, Simmonds Bros.; 3, Roper Bros.
Heifer 1 year, 1 and 3, Simmonds Bros; 2, Wm. Gregory.
Heifer senior calf, 1, Joseph Carter; 2, Roper Bros.
Heifer junior calf, 1, Wallace Stead; 2, Wm. Clark.

HOLSTEIN GRADES.

Cow 4 years and upwards, 1 and 4, Peter M. Robertson; 2 and 5, Fred C. Clark; 3, Alex. Robertson.
Cow, 3 years old, Fred C. Clarke.
Heifer 2 years old, 1, Alex. Robertson; 2, Peter M. Robertson; 3, Fred C. Clark.
Heifer 1 year old, 1 and 2, Fred C. Clark; 3, Byrne Bros.
Heifer senior calf, 1, and 2, Byrne Bros.
Heifer junior calf, 1, Fred C. Clark; 2, Wm. McKinley.
Champion grade dairy cow sired by a Holstein registered bull, 1, Fred C. Clark.

SHEEP.

LEICESTERS.

Ram, 2 shears and over, 1, Samuel C. Lane; 2, A. H. Boswell.
Ram shearling, 1, Albert Boswell; 2, Wm. Clarke; 3, S. L. Boswell.
Ram lamb, 1, Wm. Clarke; 2, Albert Boswell Sr.; 3, S. L. Boswell.
Ewe, 2 shears and over, 1 and 2, Albert Boswell; 3, S. L. Boswell.
Ewe shearling, 1, Albert Boswell; 2, Wm. Clark; 3, S. L. Boswell.
Ewe lamb, 1, Albert Boswell; 2, S. L. Boswell; 3, Wm. Clark.
Best flock, 1, Albert Boswell; 2, Wm. Clark; 3, S. L. Boswell.

COTSWOLDS.

Ram 2 years old, 1, John Tweedy; 2, Byrne Bros; 3, Alf. Robertson.
Ram shearling, 1, John Tweedy.
Ram lamb, 1 and 2, John Tweedy; 3, Alf. Robertson.
Ewe 2 years old, 1 and 2, John Tweedy; 3, Alf. Robertson.
Ewe shearling, 1 and 2, John Tweedy; 3, Alf. Robertson.
Ewe lamb, 1 and 3, John Tweedy; 2, Alf. Robertson.
Best flock, 1, John Tweedy; 2, Alf. Robertson.

LINCOLNS.

Ram 2 shears and over, 1, Albert Boswell, Jr.; 2, Ernest Lund; 3, Geo. Boswell.
Ram shearling, 1, Albert Boswell, Jr.
Ram lamb, 1, Albert Boswell; 2, Ernest Lund; 3, Geo. Boswell.
Ewe 2 shears and over, 1, Ernest Lund; 2, Albert Boswell; 3, Geo. Boswell.
Ewe shearling, 1, 3, Albert Boswell, Jr.; 2, Geo. Boswell.
Ewe lamb, 1 and 3, Albert Boswell; 2, Geo. Boswell.
Flock, 1, Albert Boswell, Jr.; 2, Ernest Lund; 3, Geo. Boswell.

SOUTH DOWNS.

Ram 2 shears and over, 1, Cephas Nunn; 2, Oliver Saunders.
Ram lamb, 1, Cephas Nunn; 2 and 3, Oliver Saunders.
Ewe, 2 shears and over, 1, Cephas Nunn; 2, Oliver Nunn; 3, Oliver Saunders.
Ewe shearling, 1, Cephas Nunn; 2, Oliver Saunders; 3, Oliver Nunn.
Ewe lamb, 1, Cephas Nunn; 2 and 3, Oliver Saunders.
Best flock, 1, Cephas Nunn; 2, Oliver Saunders; 3, Oliver Nunn.

SHROPSHIRES

Ram, 2 shears and over, 1, Geo. Boswell; 2, A. H. D. Foster, 3, Wm. M. McRae.
Ram shearling, 1 and 2, Geo. Boswell; 3, Oliver Nunn.
Ram lamb, 1, Geo. Boswell; 2, A. H. Boswell; 3, Oliver Nunn.
Ewe 2 shears and over, 1, Geo. Boswell; 2, A. H. Boswell; 3, Oliver Nunn.
Ewe shearling, 1, Geo. Boswell; 2, A. H. Boswell; 3, Oliver Nunn.
Ewe lamb 1, Geo. Boswell; 2, A. H. Boswell; 3, Oliver Nunn
Best flock, 1, Geo. Boswell; 2, A. H. Boswell, 3, Oliver Nunn.

OXFORD DOWNS.

Amatite ROOFING

ROOF PROTECTION *for the* FARM

Send for a Free Sample

PEOPLE who have "smooth surfaced" roofs on their buildings find it necessary to *paint them continually* to keep them serviceable.

This expense and labor can all be cut out by using Amatite.

Its *real mineral surface* absolutely does away with *all* painting.

If you will write for a sample you will get an exact idea of what Amatite looks like. This will be immensely more satisfactory than any description we could give—no matter how minutely done. It is really the only fair way for you to judge,

Amatite is so thoroughly durable and reliable without any care or attention after you have nailed it on that, were its cost twice what it is, it would be still the most economical roof to buy. Its durability is unapproached.

It is easy to lay and requires no skilled labor to do the work.

In purchasing any ready roofing the question of whether it requires painting or not should be thoroughly considered. The busy man has no time to spend tinkering his roof every year or two. He wants to feel that when a piece of work of this sort is completed, he is through with it.

Write to-day for a sample of Amatite.

Paterson Manufacturing Co., Ltd.

Pair Perkin ducks, hatched in 1909, 1, Mrs. A. Boswell, Jr

Don't Judge a Roofing By Its Looks

On the surface, most ready roofings look the same.

But the weather finds the hidden weakness.

The weather finds the vegetable fibers in the fabric and rots them.

The weather finds the volatile oils which are concealed below the surface. The sun draws these oils, in globules, to the top of the roofing, where they evaporate in the air.

Where there was a globule of air, there remains a hole. And behind each hole is a tiny channel which lets the weather and water into the very heart of the roofing.

When the sun and the wind and weather have sought out the hidden weaknesses, the roofing is porous, instead of solid; watersoaked, instead of waterproof.

You can't tell by looks, which roofing will last twenty years, and which will go to pieces in a single summer.

Seventeen Years of Service

But you *can* do this: You *can* tell the original Ruberoid roofing—the only roofing which *has* lasted seventeen years—from the 300 substitutes which have proven their unworthiness.

Ruberoid was the first ready roofing. Its basis is the best wool felt impregnated with Ruberoid gum.

It is this wonderful flexible gum which no other maker can duplicate.

It is this gum which gives Ruberoid all the flexibility of rubber without containing an iota of it. It is this gum which withstands wind, weather, sun, fire, acid, gases and fumes, where all other compounds fail.

It is this gum, in the Ruberine cement which accompanies each roll of Ruberoid roofing, which makes ours practically a *one-piece* roofing—sealed against leaks — sealed against the weather.

Ruberoid comes plain and in colors. The attractive Red, Brown and Green Ruberoid are fine enough for the costliest home. And the color feature is exclusive—protected by patents.

In the past twenty years we have had experience not only with all ready roofings, but with other roofings—shingles, tar, tin, iron and other roofings.

We Test All Roofings

Each roofing we have exposed to the weather test, on our roof garden at our factory.

The result of these twenty years of tests we have written into a book which will be gladly sent you free.

This book is a gold mine of roofing information, telling about the advantages and disadvantages of each roofing for each purpose. To secure a copy, address Dept 103 The Standard Paint Company of Canada, Ltd., Montreal.

RUBEROID
(TRADEMARK REGISTERED)

Be sure to look for this registered trademark which is stamped every four feet on the *under* side of all genuine Ruberoid. This is your protection against substitutes which many dealers brazenly sell as Ruberoid. Ruberoid is usually sold by but one dealer in a town. We will tell you the name of your Ruberoid dealer when you send for our free book.

The Standard Paint Company of Canada, Ltd., Montreal, Canada

HOW LITTLE RAIN-WATER REBELS SECRETLY DESTROY MOST ROOFING

Rain-water is deadly to nearly all Roofing, except *Brantford*. It contains millions of little germs which eat away its very *life*, and you are not aware of this rebellion until Roofing is destroyed. Wood pulp, jute, cotton-cloth, etc., is used as a foundation in most Roofing. It is lifeless, and cannot fight for itself. The refuse coating which does not possess one particle of resistance, is itself injurious to Roofing. Slight bending will produce numerous cracks or open seams, because it is brittle. But the foundation of *Brantford Crystal Roofing* is a long-fibred, evenly condensed sheet of pure *Wool*, which goes through special Saturatory Process, forcing Asphalt saturation through and through, and becoming as hard as flint. This saturated Wool now, alone, is capable of resisting the onslaught of *any* enemy. But to make it doubly durable *Brantford* is heavily coated with weather-resisting, fire-proof Rock Crystals, which require no painting. After going through this process no Roofing Enemy can effect it.

Brantford Roofing

is pliable, and water, frost, snow, alkali, acid and fire-proof. It *cannot* absorb moisture, freeze, crack or open at seams. It fits itself smoothly to Roof—*cannot* warp—and remains that way, resisting ravages of savage winter and tortures of summer's heat—it *cannot* melt or become sticky. And in the end, after many years of service, you will be glad you made the investment. Only *one* cost to *Brantford : first.*

It needs no repairs, and *anyone* can lay it in any weather. Big Roofing Book, with samples, free .from dealer or us. Brantford Asphalt Roofing, Nos. 1, 2, 3. Brantford Rubber Roofing, Nos 1, 2, 3. Brantford Crystal Roofing, one grade only, (heavy). Mohawk Roofing, one grade only.

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted part of the advertisement and each initial a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad. as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, Sussex, N. B.

SHORTHORN BULLS, all ages, for sale.—WALTER E. EATON, Upper Canard, Kings Co., N. S.

ALL kinds of books on Poultry, Pigeons, Rabbits, Pheasants, Horses, Cattle, Farming, Gardening, Bees, Fruits, Flowers, Vegetables, etc. Catalogue free.—MORGAN'S POULTRY SUPPLY HOUSE, London, Ont.

PRINTING.—Letterheads, $2.00 per thousand, up. Envelopes, $1.50 per thousand, up. Special facilities for stock breeders' supplies. Cash with order.—MARITIME PUBLISHING CO., Sussex, N. B.

WANTED.—A herdsman to take charge of an Ayrshire herd and Yorkshire breeding stock. Married man preferred. Four-room house and fuel provided. Apply S. J. GOODLIFFE, Sussex, N. B.

FOR SALE—Fine breeding pen, S. C. B. Leghorns, ten birds, only ten dollars. Pure bred W. Wyandotte eggs, per setting 75 cents. W. Pekin and Cayuga duck eggs, $2.00 per eleven. Newly hatched chicks 15 cents each, 50 egg Incubator, good as new, only $4.00. J. W. Hughes, Firgrove Bellisle Creek Kinds Co N. B.

WANTED.—One reliable man in each locality with rig or capable of handling horses, on salary or commission, to introduce and advertise our Royal Purple Stock and Poultry Specifics to the trade and direct, post up large bills, 7 feet wide and 9 feet high, tack up tin signs, and generally look after the introduction and advertising of our goods. Apply at once.—W. A. JENKINS MFG., CO., London, Ont., Canada.

SPECIAL OFFERING IN HOLSTEINS—"Chief Becker Mercenas" a grandson of Mercenas 3rd, has an official 7 day butter record of 25.87 lbs. Butter 85.7 p. c. fat. This bull is seventeen months old, is in fine condition, a fine individual of large size. Cow No. 1—6 years old, bred to the above described bull and due to freshen Oct. 20th, has proven herself to be an A1 cow and a very profitable producer. Cow No. 2 was 2 years old March 31st, 1909, dropped her first calf December 29th, 1908, is bred to the same bull and due to freshen Nov. 20th, 1909. She is a fair size for her age and has milked well for so young a heifer. No. 3 is a heifer that will be 2 years old Sept. 26th, 1909, is bred to Mercenas Sir Posch, owned by H. Bollert, of Cassel, Ont., and due to freshen Nov. 13th. She is one of the very best individuals of perfect dairy type and cannot fail to make a grand cow. As I have sold my farm I now offer this small bunch of choice Holsteins and every one is exceptional value for the money asked.—R. L. HICKS, Dalhousie Jct., Restigouche Co N. B.

POTATOES.

It never pays to rush the fall market in potatoes, especially when Cold Storage is at hand for overcoming the ordinary shrinkage in store. We can quote on straight storage or on bulk receipts, barreled, stored, stowed and delivered to steamer or car, as ordered. Write for our proposition.

FRUIT.

Collection, best 10 sorts or Commercial apples, 1, H. A. D. Almaine, Wolfville, N. S.; 2, John Robertson & Son, Inkerman, P. E. I.; 3, A. E. Dewar, Royalty.

Collection, best 5 sorts of apples grown on Prince Edward Island, 1, John Robertson & Son; 2, A. E. Dewar.

Collection of plums, 1, E. G. Love; 2, A. E. Dewar; 3, W. C. White.

Best collection of canned fruit, 1, Mrs. J. W. Warren, N. River.

Best Collection of preserved fruit in glass, 1, A. E. Dewar

STOCK NOTES.

MCPHERSON'S SHROPSHIRES — Mr. Andrew McPherson, Rocklin, Pictou Co., writes:

The inquiry for good breeding stock has never been better and in calling your readers' attention to our advertisement in the last two issues of the MARITIME FARMER of ram lambs and shearling rams, and to the ewes offered in this present issue, I would say that the quality of our 1909 lambs, sired by "Factoterie" out of "Belvoir Sirdas", justifies us in paying the price we paid for him. They are without exception the best covered and most uniformed lot we ever offered for sale. Although quite young, as they were only dropped in May, they are very thrifty and are the low down blocky sort that gives a good account of themselves. On account of being somewhat over crowded we are offering a few ewes that are regular breeders. We offer a first class chance for any one wanting to start a pure-bred flock at a moderate cost. The ewes will be bred to our imported ram if desired.

Club Roots.

J. P., N. S.—What is the cause of club root, or finger and toe, in turnips, and the remedy if known?

Ans.—Club root is a fungous disease which is prevalent throughout the Maritime Provinces, and when once the soil is infested with the spores, if neglected, it is very difficult to get rid of. The fungus belongs to a division known as the Slime Fungi. The spores do not float in the air as with some other kinds, but remain in the soil to attack crops grown subsequently on the same land, if these belong to the cabbage family, such as turnips, radishes, cauliflowers, etc. The best treatment is to put the land under a regular rotation of crops, so that no plants of the cabbage family are grown on the infested land for at least four or five years. As a direct remedy fresh stone lime should be applied to the surface of the land, at the rate of 37 bushels to the acre. This should be done in autumn and left to slake during the winter. Gas lime in an equal quantity may also be used if this is obtainable. In the following spring the land should be ploughed lightly, and seeded to clover; after the clover is turned down, plant corn or potatoes, follow with a grain crop and grass, after which the land may be used again for cabbage or turnips.

Your cough annoys you Keep on hacking and tearing the delicate membranes of your throat if you want to be annoyed. But if you want relief, want to be cured, take Chamberlain's Cough Remedy. Sold by all dealers.

260 Acres. Stock, Tools and Machinery

No better farm in the state, 1000 Baldwin apple trees in their prime, cuts 65 tons hay, spring watered pasture for 40 cows, 1000 cds wood will sell for $5500; good school and neighbors; 2-story, 10-room house, barn for 30 head, stable with cellar; owner includes cows, poultry, wagons and tools for only $3900; all details of this and other money-making farms in So. Me page 124, "Strout's New Farm Buyers' Guide No 28," just out, copy free. Dept 2611. E. A. Strout, Kent's Hill, Maine.

FLORICULTURE.

Leave your Lily of the Valley plants in the ground, they are a hardy, perennial but matured prips or crowns can be forced at any time of the year, provided they have had a dormant period (a rest) In regard to Rose Crimson Rambler you can leave it in the ground, but in a late November after first heavy frost, lay it down on on the soil, cover it with a few inches of soil and over that place six inches of straw, manure, dead leaves or similar material. Do not think it will stand the winter here in open ground without being protected. Do not uncover until the first of May. Cuttings taken from roses growing in open ground will seldom root in summer months or in any high temperature. Cutting from open ground plants made from ripened wood after growth ceases in the autumn can be rooted if placed in sand or soil kept moist and not allowed a temperature of over 40 or less than 30, under these conditions the cuttings will root in from three to four months. Propagating of rose cuttings in high temperatures have to be cuttings taken from roses growing under glass.

If you wish to increase roses in the open grounds the safest way is to layer them which may be done from spring to September by bending down a shoot, the wood of which should be well matured at the portion to be worked, cut a slit in the stem half way through and split the shoot for about an inch, scoop out a shallow trench in the soil, let a few inches of the end of the shoot remain in the air. Cover the cut portion firmly with soil and lay a turf or sod over it and keep moist and in six weeks roots will be started out from the parent plant and transplant or pot, forming a new plant.

Callas can be repotted at any time of the year, any good garden soil will answer. They grow best flooded with water. They should have three months rest perfectly dry every year, seperate at the end of dormant period when potting up. If your Oleander is root bound give it Liquid manure freely. Lack of nourishment is probably the cause of blighted beds.

Do not try to force your Chrysanthemums, they have their own period of blooming according to habit of varieties, early to late and cannot be forced except at the expense of vitality of the plant and consequent inferiority of bloom. They should never be allowed to dry out as it hardens the wood and injures the bloom. Keep them cool, give them all the sun and air and give all the water they need, always having good drainage when pots are well filled with roots, feed liberally with weak liquid manure up to the time buds show color then cease feeding or injury may result to color the bloom.

Please give some information for growing Carnations, says a St. John amature. I have some about six inches high kept under glass (is this beneficial), when should they flower and what conditions do they require? I understand from others who have tried that it is very difficult to culture.

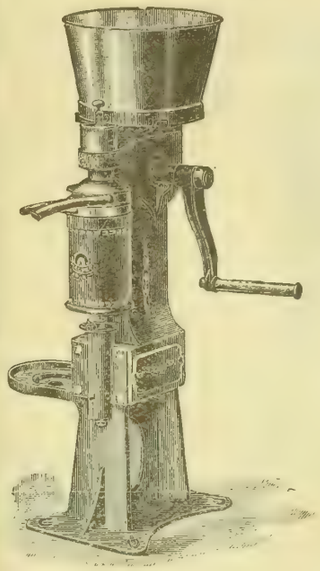
Carnations should not be a difficult plant to grow if properly treated. The plant when set out should be staved firmly and thoroughly watered. Plant out in four inch pots one bud of good size. They want a sunny bed with light soil which should be well watered. Do not think Carnations should be kept under glass, after June they will stand light frosts without injury, I think they grow better if planted the last of May rather than the last of June. Carnations respond quickly to liquid manure as soon as well rooted, but they should never get any stimulant until they are thoroughly rooted. If large flowers are wanted they should be disbudded, only one bud being allowed to remain on a stem. Carnations should bloom from the middle of July until after frosts when, if potted they will bloom until Christmas.

All our customers are satisfied customers. S. P. GOUDEY, Seedsman, Yarmouth,

Wake Up, Dairymen!

Use Your Eyes Before You Buy a CREAM SEPARATOR.

THE MAGNET.



Steady as a Rock.

LOOK at the STAND and if it is so STRONG and RIGID that it can be set up and OPERATED ON THE GROUND or any floor it is the MAGNET, because it is the only one built that way. LOOK INSIDE and if you find it has a STRONG and PERFECTLY ARRANGED SQUARE GEAR, again you WILL KNOW it is a MAGNET, as it is the ONLY ONE BUILT THAT WAY, and YOUR JUDGMENT will tell you that it is the MACHINE to buy, even if it is a LITTLE MORE IN PRICE, because it WILL WEAR LONGER and be CHEAPER IN THE END. Then look at the MAGNET'S EXTRA LARGE bowl, which IS SUPPORTED AT BOTH TOP AND BOTTOM, when ALL OTHERS have only ONE END SUPPORTED. A PERFECT BRAKE, which ENCIRCLES the BOWL, A SKIMMER in ONE PIECE that takes out ALL THE BUTTER FAT, at the same time separates ALL IMPURITIES, and the MAGNET is SO EASY TO OPERATE, A CHILD CAN TURN IT. If you buy a MAGNET, the size CAN BE INCREASED to larger sizes, up to 1,000 LBS. AN HOUR IN THE SAME MACHINE, and A CHILD CAN TURN THAT SIZE ALSO. Your close examination will show that the MAGNET is NOT SLIGHTED IN ANY PART, and that each part is so built and fitted together that the machine will not wear out in 50 YEARS.

It will cost you one cent to look the Magnet over and try it in your own Dairy—better spend the cent on a postal card NOW.

OUR VANISHING BIRTHIRIGHT.

By A. H. D. Ross, M. A., M. F.

Faculty of Forestry, University of Toronto.

THE lumber areas and farm wood lots of the Maritime Provinces are so ruthlessly butchered, without a seeming thought for the wants of future generations, that we reproduce, from the March number of The Canadian Magazine, "Our Vanishing Birthright," an excellent treatise on our forests by A. H. D. Ross, M. A., M. F., University of Toronto.

We trust our readers will peruse it carefully and apply its teachings wherever possible to the conservation of our native forests :

"The effects of the forest upon its surroundings are so important and far-reaching that it may well be likened to "Nature's Balance Wheel." Its importance does not consist merely in the immediate output of lumber, ties, timber, fuel, pulpwood and other forest products; but also in its regulation of the stream flow, the prevention of soil erosion, the formation of a good game cover and its ameliorating influences upon climate. By retarding evaporation, checking the drying effects of winds, rendering the soil more porous and fertile, retaining the moisture favorable to agriculture, and regulating the flow of water in the streams, it is of the highest importance in the general economy of nature. Through mighty cycles of time vegetable growth and tree growth have wrought incessantly to clothe the rocks with life and beauty and to prepare the earth for the habitation of man. Wherever man has disturbed the nice balance that exists between the forested and non-forested areas he has been severely punished, but where he has restored the proper balance his efforts have been generously rewarded by better climatic conditions, increased fertility of soil, and a more equable stream flow.

"Almost everywhere in the great characters in which Nature writes her chronicles there are indications that Egypt, Syria and Persia were formerly densely wooded and traversed by streams which are now dried up or shrunk within narrow bounds. Once the garden spots of the world, where Nature rewarded the labors of the cultivator with lavish profusion, they are largely desolate and infertile regions, incapable of supporting a tithe of their former populations—the once mighty Persian Empire being reduced to an average of only fourteen inhabitants to every square mile. British India, Turkey, Spain, Southern France, and parts of Italy and Russia also know, to their cost, that a disturbance of Nature's Balance Wheel means a reduction of soil fertility, the general impoverishment of the people and a constantly diminishing population. Not until it has disappeared does mankind seem to realize that the preservation of the forest is just as indispensable to civilization as tilled fields. In Southern France the destruction of the forest, just after the Revolution, resulted in violent floods, which in a few years rendered eight million acres of fertile land unfit for cultivation. Already the French Government has spent $40,000,000 in an effort to reclaim the agricultural land destroyed by erosion, and it is estimated that fully $100,000,000 more must be spent before the work is complete. In this one instance alone the restoration of Nature's Balance Wheel will cost the French Republic $140,000,000, plus the value of the crops, which might have been grown on 8,000,000 acres of fertile land during all these years, plus the value of the timber crop, which should have been growing on the denuded areas. Only slowly does it seem to dawn upon the public mind that the loss of our forests, without adequate restoration, will be the deadliest imaginable blow to our future progress and prosperity. A prosperous nation cannot be built up in a desert, nor can a people continue in power and affluence when the territory from which they draw their sustenance shall have receded into barrenness by the ruthless destruction of the forest cover—by the removal of Nature's Balance Wheel.

"The water powers of Canada vastly excel those of any other country, and have been estimated to be equal to forty per cent. of the total water power of the world. The preservation and proper utilization of this great national asset for the development of electric energy, for irrigation in the West, and for navigation in all parts of the Dominion depends upon the preservation of the forest on all lands known to be unsuitable for agricultural purposes.

"There can no longer be any doubt that electric energy is to be the great motive power of the future, and that in many matallurgical operations it will play a leading part. It should be remembered, however, that the efficiency of a stream for power purposes depends upon the amount of energy it is capable of developing at the time of low water. Here we have an additional reason for the preservation of the forest cover. Without it we will have the destructive spring freshets and the long summer drought. With it we will have a much more equable stream flow and the development of plenty of electrical energy for industrial purposes. With the electrification of our railways we would largely eliminate the fire peril—especially in the exceedingly inflammable spruce forests of the north country, through which the Grand Trunk Pacific and other railway lines are to run.

"Still another reason for the preservation of the forest on all non-agricultural land is the protection it affords to fish and game. Without forests we cannot have a constant supply of pure, sweet water in our streams, and without such water in abundance we cannot have fish. A board of fish commissioners once asked a Scotch game warden why the salmon were no longer running up a once famous river, and to their surprise were answered : "Ye canna hae feesh when ye hae stoppit the water." There is the whole story in a nutshell. In a recent address before the Toronto Canadian Club, Mr. Cy Warman said: "Protect your forest while you have it, for when it is gone you will be utterly helpless. . . . Destroy your forests, and your game will go; your rivers will dry up; your fish will die, and desolation will brood over this land that God has made so fair."

"All over Canada huge tracts of woodland and timberland are annually devastated by fire, involving the loss of millions of dollars' worth of property which might easily be prevented by the exercise of a little care on the part of settlers, prospectors, hunters, and railway employees. The lumberman pursues a legitimate business, and in time will learn to conduct his operations so as to secure another crop, and in many cases a better crop, from his cut-over areas; but the man who is responsible for the destruction of forest property, public or private, is a positive menace to the well-being of the country. In the Labrador Peninsula I have seen great stretches of country which were burned over by the Indians to clear the ground for hunting. Members of the Geological Survey of Canada, who have travelled the country west of Hudson Bay and north of the Saskatchewan River, tell me that forest fires are of very frequent occurrence. Lumber enough to build whole cities, ties enough to supply complete railway systems, and enough fuel-wood for the entire population of the Dominion are annually swept out of existence by the fire fiend, without exciting the slightest interest.

"The careless burning of brush by settlers is also responsible for many forest fires. By prohibiting the burning of brush and stumps in very dry weather and the exercise of a little common sense, almost every fire started in this manner could be prevented. Other fires are caused by the carelessness of campers, the deliberate firing of the woods to facilitate the work of prospecting for minerals, and sparks from railway locomotives. Danger from the latter source can be almost entirely eliminated by equipping the locomotives with suitable spark arresters, as is shown by tests made during last summer on the lines of Alberta and Irrigation Company, and during the last two years on the Quebec and Lake St. John Railway.

"What we need in Canada, above everthing else, is a thorough understanding of what the disappearance of the forest would mean to us as a nation and the cultivation of a strong public sentiment to back the enforcement of laws designed to prevent forest fires. The deliberate firing of the woods is a criminal offence that should merit the same punishment as setting fire to a building in a crowded city; and the man who is careless about the use of fire in the bush is an absolute menace to the welfare of the whole country.

"Hitherto our forests have been regarded by the pioneer as a foe, by the lumberman as a source of wealth, and by the Government as a means of revenue. Since Confederation our export of unmanufactured and manufactured wood products has reached the enormous value $1,139,360,034—the average for the forty-one years being $27,789,281; rising from $19,651, 706 in 1868 to $49,507,528 in 1908. This is about one and a third times the value of the agricultural products export-

ed during the same period, and four times the value of the fish exported.

During the last five years the average annual revenues derived from the forest lands, controlled by the Federal and Provincial Governments, have been as follows: Dominion, $335,289; Ontario, $2,082,878; Quebec, 1,217,795; British Columbia, $463,077; New Brunswick, $230,098; Nova Scotia and Prince Edward Island, not stated This gives a total of $4,329,127—say, four and a half million dollars for the whole Dominion. From these figures it will be seen that our forests have been a great source of wealth in times past. Unfortunately, however, this rich harvest cannot be reaped much longer, unless prompt measures are taken for the economic use, protection and reproduction of our woods. For years we have been talking about "Canada's inexhaustible timber resources," without knowing whether the statement was true or false. During the last ten years, though, enough information has been obtained to show that the amount of our standing timber, of commercial sizes, is very much less than we fondly imagined it was. The accessible saw-log timber is estimated by Dr. Fernow at six hundred billion feet, board measure—enough to supply the United States fifteen years. Unquestionably we have very large quantities of pulpwood; although this, also, has been greatly over-estimated. If properly managed, the revenue derived from our pulpwood should be quite as great as that obtained from the sale of our saw-log timber. The whole civilized world is looking to Canada for a supply of pulp and paper, as well as lumber, and if we are wise in our day and generation we will carefully husband these resources.

Every year our forest areas are being steadily drawn upon for the production of sawn lumber, railroad ties, construction timber, fuel, pulpwood, telegraph and telephone poles, fencing, lath, shingles, cooperage stock, and other forest products. According to the census of Canada for 1900, nearly nine million cords of firewood, 668,034 cords of pulpwood 12,000,000 cubic feet of square, flat and wany timber, 300,329 pieces of piling, 255,000 telegraph and telephone poles and 17,000,000 fence posts were cut. Expressed in broad measure, this amounts to a trifle over ten billion feet. With our constantly increasing population, the amount is sure to increase, and it is now somewhere in the neighborhood of eleven billion feet.

The latest available figures indicate that the following amounts of sawn lumber are now being produced every year: Ontario, 1,335,000,000, board feet; Quebec, 1,292,000,000; British Columbia, 657,000,000; Nova Scotia, 294,000,000; New Brunswick, 291,000,000; the Dominion lands in Manitoba, Saskatchewan and Alberta, 141,000,000; Prince Edward Island, 6,000,000—a total of 4,016,000,000, or a trifle over four billion feet per annum. During 1907, the amount of sawn lumber produced in the United States was forty billion feet.

For the maintenance of our railways alone, we will require enormous amounts of timber every year. At present we have 27,517 miles of track in operation or under construction. The average number of ties being about 3,000 per mile and the average life of each between six and seven years, it will be seen that over 14,000,000 ties - 392,000,000 board feet—will be required every year to keep the tracks in repair. For the construction of bridges, station houses, etc., the railways also require large quantities of timber—probably 200,000,000 feet a year. Altogether, the Dominion is using somewhere between fifteen and sixteen billion feet, board measure, per annum of lumber, fuel and other forest products; or 2,818 boad feet (235 cubic feet) a year for every man, woman and child in the country. For lumber alone it is 730 feet.

When we remember, too, that nearly seven hundred feet of timber remains in the woods for every thousand taken out, it will be seen that the actual consumption is much higher than I have indicated.

In the past our timber interests have been closely indentified with those of the United States, and in the near future they will be even more closely identified. Mr. Gifford Pinchot, chief of the United States Forest Service, says that their forests are being chopped down three and a half times as fast as they are growing, and estimates that they will be exhausted in about twenty-five years, unless immediate steps are taken to prevent the enormous waste due to forest fires and destructive methods of lumbering. President Roosevelt regards the conservation of the timber and mineral wealth of the Republic as their most serious internal problem, and recently sent Mr. Pinchot to Ottawa to invite the Canadian Government to send three delegates to Washington to confer with three appointed by the Mexican Goverment and three representing the United States. The findings of this joint commission will unquestionably be that the whole North American Continent has very much less timber and mineral wealth than is generally supposed.

During the fiscal year 1908 Canada exported forest products and manufactured wood products to the value of $49,000,000, $31,000,000 worth going to the United States, $13,000,000 worth to Great Britain, and $5,000,000 worth to other countries. As the United States timber becomes exhausted, our exports will increase very rapidly. During the last five years the general cost of wood used for mechanical and chemical pulp has more than doubled in the Eastern States, which has resulted in the importation of large quantities of pulpwood from the Maritime Provinces. In 1904 we exported 479,238 cords of pulpwood; in 1905, 293,624 cords; in 1906, 614,286 cords; in 1907, (9 months), 452,999 cords; and in 1908, 902,311 cords.

In his evidence before the Ways and Means Committee of the United States Congress, Representative Clark, of Missouri, expressed the opinion that free trade in lumber would tend to prevent the devastation of American forests, and it did not matter whether Canada did devastate her forests!

This is certainly a very candid statement of the present condition of affairs.

The best informed of our American cousins frankly tell us that in the reckless cutting and burning of their timber they have lost what cannot be replaced in a couple of centuries and then only at a cost of billions of dollars. If, therefore, Canada only remains true to herself and properly protects her forests she will reap the benefit of their mistake and yearly draw from their pockets many millions of dollars.

In the Province of Ontario the export of pulpwood cut on Crown Lands is prohibited, and the result is that a large number of pulp and paper mills are being erected and giving employment to a great many workmen at good wages. In Quebec the export duty is only twenty-five cents a cord, which is not sufficient to build up a large industry within the borders of the province. Besides this, the high prices offered by American buyers are resulting in the stripping of all pulpwood timber from private holdings, thus turning many parts of the province into "man-made deserts." In New Brunswick there is now a strong agitation for the imposition of a prohibitive export duty on pulpwood. In the opinion of the writer, the proper thing would be to entirely prohibit the export of pulpwood from Canada. The result of such a measure would be to build up a very large pulp and paper industry, give employment to thousands of skilled workmen and enable us to command the pulp and paper trade of the world. In Newfoundland the export of pulpwood is entirely prohibited. The result is the erection of two of the largest pulp and paper mills in the world, and the probable establishment of others in the near future.

In his address before the Ottawa Canadian Club a few weeks ago Mr. Pinchot said: "In dealing with the common problems for the common good of the people of the United State, we are trying to use business common-sense. As a people, we are trying to handle our affairs with the same prudence that every man in this room would exercise in the conduct of his own private affairs. We are the trustees for the future of the people of the twentieth and twenty-first centuries. What we do now with the resources on which they are to depend for their lives when they come will control the kind of life they will live . . . We are at the parting of the ways, and if we do not make the right decision soon the flight of time will make it for us and make it wrong."

Sir Dietrich Brandis, the father of the present system of foresty in British India, in a letter written to the Dominion Superintendent of Forestry, some two years ago, said: "I cannot sufficiently urge upon you the necessity of concentrating all your energies upon one point, and that is the constitution of as large an area of State forests as possible . . . Norway and Sweden are cutting more timber than their forests annually produce and must soon cease to export. The United States now export little to England, and Canada is the only country from which a permanent supply of coniferous timber can be expected. All this means that prices will rise steadliy, and it is for you in Canada to now seize the opportunity and lay the foundation of a magnificent future developement of your forest wealth. Hence it is necessary that you should form as large an area as possible of State forests, and that you should place them under efficient, systematic management, so as to secure ample regeneration of the species you want."

It is interesting to notice that Sir Dietrich has charge of 200,000 acres of forest land in India, much of which has been burned over repeatedly by the natives and is in very bad condition. So far he has managed to efficiently protect 30,000 square miles of it from fire, at an annual average cost of half a cent per acre. The net revenue derived from the whole property is nearly three million dollars a year, and will rapidly increase as more and more of it comes under proper management.

All history proves that while the private individual makes the best farmer, the State makes the best forester, and perhaps the only safe forester. Being a permanent institution, it can exercise its providential function and make provision for the future. In Germany the scientific treatment of forest properties has reached its highest development. With her rapidly increasing population, Germany needs land for her people to settle on much more than we do, yet she carefully preserves the forest on all the principal hills and other rough spots. France is perfecting a most practical and effective system of forestry. Norway and Sweden have practically eliminated forest fires and are working towards the preservation of their timber wealth. In Japan the national Government has employed a German forester (Dr. Mayer), and her intelligent, industrious people are rapidly restoring her forests to their former condition. In Australia, New Zealand and Cape Colony, State forestry has already made some advance. In the United States some 171 Federal forest reserves, containing 175,000,000 acres, or 273,437 square miles, have been created and placed under management. In Canada, the Dominion Government has set aside 5,391 square miles of forest reserves and 18,467 square miles of national parks, situated in the four Western Provinces. In Ontario, the Provincial Government has established 15,308 square miles of forest reserves and the Algonquin National Park of 1,930 square miles. In Quebec a great forward stride has been made by the setting aside of no less than 166,795 square miles of forest reserves and 4,595 square miles of National Parks. New Brunswick and Nova Scotia have as yet no reserves.

So far very little has been done to place these Canadian reserves under management. Obviously, the first important duty is to protect them from fire and timber thieves. The next will be to classify the land outside the reserves, retaining the good land for agricultural purposes and setting aside the poor land for the growing of timber. In Ontario, for example, we should have at least 90,000 square miles of reserves. The next forwasd step would be for each Government to regulate the cutting of its own timber in a way as to give the young growth a chance to reach maturity. Our people are sufficiently patriotic to support any government which looks well to the future and takes the necessary steps for the establishment of a far-sighted forestry policy based upon a scientific and permanent basis.

From the foregoing it is surely evident that the conservation of our forest wealth — the retention of Nature's Balance Wheel—means the possession of plenty of wood for various purposes, a perpetual revenue from the sale of our forest products, and the consequent lessening of our taxes, the building up of wood-working industries, the assurance that navigation will always be possible upon our principal rivers, the extension of our irrigation schemes in southern Alberta, the development of cheap power in all parts of the Dominion, the retention of the soil moisture necessary for agriculture, the preservation of our fish and game, and the tempering of our climate.

Value of Rotation.

One of the most essential things Along the line of improvement even of as great importance as thorough tillage, is proper crop rotation.

In rotating crops the idea is to so vary the crop that the demands on the soil will be different, it being now fully established that one kind of growth makes one demand on the soil and another something different. It is very interesting and useful to notice the way the various crops occupy the soil.

The power of roots deserves consideration. A plant, like clover, for example, has great ability in gathering nitrogen, and another, like wheat, no power.

The weight of roots also varies largely in different growths. Clover has several times as much roots as wheat, and the roots of clover are much richer in nitrogen than those of wheat. On this account wheat follows clover advantageously.

We have known this to be a fact so strikingly that twice the ordinary yield for the neighborhood was so produced year after year. There are other advantages. By a good system of rotating crops, the insect and fungoid enemies that prey upon the particular growths, get starved out or seriously interfered with. This is based on the fact that each plant has its own particular enemies. Such is especially true of the plant that is above the ground.

We will be the more impressed with the importance of the rotation of crops if it is remembered how much call each crop makes upon the soil. Thus, while wheat say, takes only 1 1-4 pounds of potash for every pound of phosphoric acid, potatoes takes 3-14 pounds of potash for each pound of phosphoric acid. Potatoes grown continuously would exhaust the potash of the soil or of that supplied by manure, long before that of phosphoric acid would give out.

The character of the leafage is to be taken into consideration also. The leaves vary in their season of active growth and are both broad and narrow.

The labor element plays a part in rotation, as the system is best suited for home consumption of crops and the return of the fertilization to the farm. The practices of thousands of years all points to its importance.

Lame back comes on suddenly and is extremely painful. It is crused by rheumatism of the muscles. Quick relief is afforded by applying Chamberlain's Liniment. Sold by all dealers.

The best Seeds, bought by the carloads and sold to Farmers' Associations and Agricultural Societies, at 5% commission, by S. P. Goudey, Yarmouth. Twenty years experience.

Local Exhibitions in Nova Scotia

The fall of 1909 has witnessed the most successful series of fall exhibitions ever held in the Province of Nova Scotia. For a number of years, prior to 1907, aside from the Provincial Exhibition, there were never more than three local exhibitions annually held. But the present administration is impressed with the possibilities for good which exist in the local show and has increased its financial support to these exhibitions six times over. Moreover, there exists in Nova Scotia to-day a greater spirit of enthusiasm and optimism in regard to agriculture than has here-to-fore prevailed, and hence the local support of these exhibitions is of the most thorough going and enthusiastic kind.

Altogether, there have been held during the months of September and October eleven local exhibitions, as follows: The Nova Scotia Fruit Exhibition, Middleton, Annapolis Co.; the Digby County; Exhibition, Bear River; The Yarmouth County Exhibition, Yarmouth; The Shelburne County Exhibition, Shelburne; The Queens County Exhibition, Caledonia; The Lunenburg County Exhibition, Bridgewater; The Colchester County Exhibition, Stewiacke; The Pictou County Exhibition, Pictou; The Antigonish County Exhibition, Antigonish; the Guysboro County Exhibition, Guysboro; the Cape Breton County Exhibition, North Sydney. The attendance at those exhibitions has varied from one thousand in some of the smaller places to seven thousand, with an average of considerably over three thousand, and this despite rather inclement weather. Moreover, supported as they have been, by the public, every local exhibition will this year have a surplus.

The exhibits have universally been of a most excellent character. Of course, in some of the less extensive agricultural counties the exhibits were naturally smaller and scarcely up to the average of those in the more distinctly agricultural counties. But even in these lesser agricultural Counties there were exhibited in some cases, vegetables, in others fruit, or cattle, which were a revelation to visitors as to the possibilities of the various parts of the country. The fact is, that Nova Scotian farms, when given a proper chance, can produce field products and live stock which cannot be excelled. More especially is this the case with the various vegetables, roots, fruit, etc., which are produced under the most favorable circumstances in this province, where even in the middle of summer, humid couditions generally prevail,

The judging at most of the exhibitions was, for the most part, done by expert judges supplied by the Provincial and Dominion Departments of Agriculture. The general management was under the direction of Mr. F. L. Fuller, Superintendent of Agricultural Societies and Associations. Among the judges, the following may be mentioned: W. T. Macoun, Central Experimental Farm, Ottawa; J. Hay, Lachute, Quebec; Harvey Mitchell, of the Dominion Department of Agriculture; R. Robertson, Nappan, N. S.; S. J. Moore, Truro; Seth Jones, Sussex, N. B.; F. Johnson, Bridgetown; F. L. Fuller, Truro; P. J. Shaw, Truro; E. S. Archibald, Truro; J. P. Landry, Truro; S. A. Logan, Amherst Point; J. R. Starr, Port Williams; Robert Starr, Wolfville, together with other local men. In every instance, the directors report satisfaction, not only with the work of the judges, but also with the fact that the presence of outside disinterested judges has proven the means of reducing local jealousies to a minimum.

We hear considerable discussion as to the relation of these local fairs to the provincial exhibitions. Some claim that they are detracting from the support usually acorded the Provincial exhibition. Others claim that they should take the place of the Provincial exhibition. Our own view, and we think it is a sound one, is that each have their place and each should complement the other. The local fair appeals to the great mass of exhibitors; the larger Provincial fair, is the final court of appeal and should represent not merely the best of one locality, but the best the province affords. It is significent that those countries which have the largest and most successful provincial or state fairs also have the largest number of successfully conducted local fairs. We believe that the ultimate outcome of this movement for holding local exhibitions will be to strengthen the provincial exhibition and that the general policy of well conducted local and provincial exhibitions will lead to an improvement in the character of the products of the field, the garden and the stable which the province greatly needs.

Some local exhibitions have already selected their dates for their exhibition of 1910 and it looks now as if the fall of 1910 would witness a still larger number of local exhibitions, each with a better patronage than the fall of 1909.

S. P. Goudey,

the hustling Secretary of the Yarmouth Co. Farmers Association, Yarmouth, N.S. Mr. Goudey is offering to sell seeds at carload prices to agricultural societies. We have known Mr. Goudey for several years and feel confident that his 20 years' experience in supplying the agricultural societies of Yarmouth and adjoining counties with first-class seeds will be advantageous to any other agricultural societies who may place their orders in his hands. See his ads. on other pages of this issue.

The County Exhibitions.

The series of fall fairs held by many of our progressive Maritime Counties is now over. Lack of space prevents giving a full report of the various fairs in these columns. Our representatives, who visited the exhibitions held by the respective counties, are loud in their praise of the evidences of progress in live stock breeding and in the raising of agricultural products in the various sections of the Maritime Provinces. Some of the counties held fairs covering a period of three days, other counties held two day fairs and again some others held only a one day fair. Some of the departments at the county fairs equalled and in many cases excelled the showing made in the same departments at the provincial fairs.

We have before us copies of the awards made by the judges at the respective exhibitions and we regret that lack of space prevents us from giving to our readers a full list of the winners. Winnings at county fairs are, however, only of local interest and undoubtedly the local papers have published the list of winners in their respective territories. We are pleased to note that the progress that is being made by the exhibitors at the county fairs is inducing them, one by one, to come forward and combat in the battle royal for the prizes offered at the provincial and inter-provincial fairs. In this way the county fairs act as feeders to the larger fairs.

There was a greater number of county fairs this year than in any previous year. Counties that did not hold a fair for periods ranging from five to twenty five or more years made very creditable showings. We trust that the efforts made in 1909 will be redoubled in 1910, that our farmers will prepare good and early and come forward ready to show the agricultural possibilities of their respective districts.

A Talk on Oats

A grain of oats is made up of two main parts: the outside or hull, and the inside or kernel. Another name commonly applied to the kernel is the meat. It is in the kernel that we are mainly interested, because this is the nourishing part of the grain. The chief use of the hull is to protect the tiny oat plant within, and to preserve the stored-up food material for its future use.

As a food for stock, and as an article of human diet, oats take a high rank. Since the value of the grain depends so much upon the part which is of little use for food, consumers of oats in any form whatever should be interested in the relationship existing between the hull and the meat.

The oat grain is always grown for its meat; the hull is generally regarded as a necessary evil by the stockman and the miller. The range of hull in oats is from 20 to 48 per cent., 30 per cent is the average. Oats have the largest percentage of hull to kernel of any of our grains. Barley comes next with an average of 15 per cent.

The percentage of hull to meat depends largely upon the variety. For example the Joanette oat generally averages 23 pounds of hull from every hundred pounds of grain; while the Banner gives thirty pounds of hull, and the Fifty Pound Black 40 pounds. This simply means that by purchasing one hundred pounds of Joanette oats the buyer gets seventeen pounds more of the most valuable part of the oat grain than he would get were he to purchase the same weight of Fifty Pound Black—a gain surely worth consideration.

This difference is the proportion of the two main parts of the oat grain accounts for the fact, observed by all feeders, that horses will often do as well on three pecks of one variety as on four pecks of another. As a rule, grains high in hull have a more tough and indigestible covering than those low in hull, with the result that the nutriment they do possess is not so fully extracted by the animals.

The relative proportion of hull and meat in any oat can be determined roughly by removing the hull from fifteen or twenty representative grains and then comparing the amount of hull with the meat. Varieties, also may be compared in this way.

Aside from the question of variety the two principal factors which influence the proportion of the parts under consideration are: the time at which the oats were sown, and the time they are harvested. Late-sown oats are usually high in hull, and the same holds true of oats cut before maturity. Last year a plot of oats cut in the milk stage ran 48 per cent. of hull, while an adjoining plot of the same variety which had been handled in exactly the same way, excepting that it had been allowed to ripen perfectly before cutting, ran only 28 per cent. Any unfavorable condition of soil or season which tends to stunt the plant or retard the proper filling of the grain will also cause a higher per cent. of hull.

From the foregoing it may appear that the ideal oat would be hull-less one. But we have noted that the hull serves to protect the future plant and its supply of food material. It is claimed also that there is a relationship between percentage of hull and strength of straw—a low percentage of hull generally going with a fine, weak straw. This contention seems to be borne out in the case of the Joanette, but the heavy-hulled Fifty Pound Black is found to have straw which is soft and brittle. We may conclude that the most desirable oat, other things being equal is the one with the lowest percentage of hull.—L. S. KLINCK. McDonald College, St. Anne DeBellevue.

Balanced Rations.

In reading current daily literature two such glaring misprints have been observed that the average farmer is apt to be seriously misled unless considering carefelly what he is reading. For instance, one daily paper solemnly announces that "for daily maintenance the cow needs per 1,000 lbs. live weight, seven pounds of protein." Another current issue of a different paper prints "for daily maintenance a cow needs .01 lb. fat."

To put the matter right, let it be clearly stated that the accepted standards give the food of maintenance required daily by a 1,000 lb. cow as 0.7 of a lb. of protein, 7 lbs. of carbohydrates, and 0.1 lb. of fat. The total digestible nutrients required, assuming that a 1,000lb. cow is giving 20 pounds of milk, testing 3.0 per cent. fat, would be 1.5 lbs. protein, 10.6 lbs. of carbohydrates, 0.38 lbs. of fat.—C. F. W.

Soap Washes

Dissolve one pound of whale oil soap n four gallons of warm water for black or brown aphis, and one pound in six gallons of green aphis.

Another remedy for aphis is the following: Boil 8 pounds of quassia chips in 8 gallons of water for an hour, dissolve 7 pounds of whale oil soap in hot water; strain the quassia decoction and mix with the soap solution; then dilute to make 100 gallons. Spray forcibly while hot; this will kill the plant-lice and not injure the plants.

Cook's Carbolic Soap Wash.—Hard soap, one pound, or soft soap, 1 quart; crude carbolic acid, 1 pint; water (boiling), 1 gallon. Dissolve the soap in the boiling water: while still hot add the carbolic acid; emulsify thoroughly. This is the stock solution. For use, dilute with 30 to 50 times its bulk of water. Very effective against root maggots of cabbage, raddish and onion.

Information Wanted re Goat Keeping.

S. S. "Prince Arthur,"
Long Wharf, Boston,
Oct. 6th, 09.

TO THE DEPT. OF AGRICULTURE,
Truro, N. S.

GENTLEMEN:—Be good enough to give me whatever information you have in relation to the raising of goats—location and climatic conditions most suitable (chiefly in connection with Nova Scotia) and marketing conditions for the hair.

Yours gratefully,
JOSEPH WARD.

The foregoing letter has been handed to us by Prof. Cumming, of the Truro Agricultural College, who wishes to get in touch with men who have had some practical experience with the rearing and handling of goats. Will any one of our readers, who has had this experience or who knows parties who are conversant with goat-keeping write to Prof. Cumming, Truro, N. S.

It will pay farmers to look into this Seed proposition of S. P. GOUDEY'S. He has supplied thousands of satisfied customers for years and now offers his services to you. Any Farmers' Association or Agricultural Society can secure a supply for their members for spring of 1910, if they will ask for particulars. He imports by the carload and sells on 5% commission. S. P. GOUDEY, Yarmouth N. S.

Twenty-five cents is the Price of Peace.

The terrible itching and smarting, incident to certain skin diseases, is almost instantly allayed by applying Chamberlain's Salve. Price, 25 cents. For sale by all dealers.

THE MARITIME FARMER

And Co-operative Dairyman.

Semi-Monthly Journal devoted to the interests of the farmer of the Maritime Provinces.

Official Organ of The Farmers, and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association The Nova Scotia and P. E. Island Fruit Growers' Associations The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers Association, and The New Brunswick Poultry Association.

Subscription Price $1.00 per year. **When paid in advance** 80 cts. Persons taking advantage of the 80 cent rate when subscribing are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definite order for dis. continuance is given.

The date after your name on the little green label on front Page is, in every case, the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser be said :—**"I saw your adv. in the MARITIME FARMER."**

RATES FOR CASUAL ADVERTISEMENTS.

1 inch—First insertion 75 cents; 2 inches—First insertion $1.50; 3 inches—First insertion $2.25.

Contract rates on application.

Address all letters and make all checks, money orders, postal notes, etc., payable to

The Maritime Farmer,

SOME OF THE BENEFITS OF THE WOMEN'S INSTITUTE TO FARMER'S WIVES.

Mrs. L. L. Shannon, Brighton, Ont., writing in Farm and Dairy says :

"The Women's Institute is destined to work a change in the condition of Canadian women and Canadian homes. It can reach all classes, place, creed or age. The topics discussed are of interest to all, being chiefly "the improvement of the home." Broadly speaking, the work of the Institute includes anything which tends to the betterment of home conditions and making life more attractive in the rural districts. On this very account it does a work that church organization cannot do. A church organization embraces those whose religious views and social outlook are in the same channel. A social club comprises those whose tastes are congenial but the Women's Institute is the broadest form of club life for women, combining so many varied elements from so many classes of life.

"Our farmers' wives aside from their attendance to church get out none too often. The Women's Institute is a benefit to them, they get new thoughts, new ideas which greatly widen their spheres of usefulness. In this noble Canada of ours, influential men are bending their energies to nation building and the general prosperity of our fair Dominion. Is not this the time for Institute workers to bend their energies to character building? Mr. Gladstone said, "the home is the foundation of the state," then surely the home and the nation are one.

"The foundation for good in our children is laid in the home, and the Institute is for making efficient women in the home. It has been said that "the hand that rocks the cradle is the hand that rules the world." The careless ones are learning that motherhood should be revered and that parentage is a sacred duty. All the world is realizing that the home means much to the nation.

"In our homes, we should have a good living and no matter how straitened the circumstances, the physical welfare of the family should be looked after, and the mental and spiritual is sure to follow. This is where the benefits of the Institute comes in, with its lessons on "Care of Babies," Food Value and Economical Dinners."

"The home to be preserved must be cared for. The girl of to-day is the matron of to-morrow, so let us look well to the spiritual development of our boys and girls. The lady delegates to the Women's Institute meetings little realize how much good they are doing, visiting different institutions and speaking to all classes of women. I heard a lady remark after listening to one of the speakers at an afternoon meeting "Had I heard talk like that years ago, it would have made a difference in my life." So our daughters have the benefits in training, that the Institute gives, that we who are older have missed. The moral tone of the whole community can be raised by the combined efforts of the Women's Institute.

"In our Institute there is growing interest, not only changing recipes, but studying food values of the different foods prepared. We have had some meetings of particular interest. One a lesson on "Fruits, tropical and home grown." We gave their origin, the acids they contained, their medical value if any, and their helps in our diet. Slips of paper were prepared and handed around before the meeting as all had a part in the afternoon program.

"There has been a lack of young ladies in some of the Institutes. I am glad to say in our home Institute we have a large number of young ladies. They have had full charge of the two meetings; the one a full course dinner. The menu was given (2) laying of the tables and decorations, (3) the recipes given and explained by the young ladies who had that part of the dinner in charge. It was excellent. The other meeting was a literary one. The program was given entirely by the young people, which goes to show that the young ladies of Brighton Institute are more than ornaments.

"Not only are farmers' wives benefitted, but town ladies may learn from Women's Institutes. Hear what a lawyer's wife in a large town says. I have had to keep a housekeeper as I have had so little experience along the line of housekeeping. The benefits of the Institute are such that I derived sufficient information that I am now doing practically all my own housekeeping and I give great praise to the local branch of the Women's Institute. Another town lady, a member of our own Institute, says she never attended a meeting she did not learn something. Another great benefit which comes from the Institute, is the friendly feeling which exists among women, some who had only a bowing acquaintance, are now warm friends. The Institute has brought them together and they have grown to know each other. Another benefit is the reviving of talents which have been buried for years. Now the women write papers on the topics of the day, or provide some part of the musical line of the program.

"We must not forget the "Question Drawer," for the timid ones when they have a chance to write that which they would not say, and the social side after the program."

AGRICULTURE, A SCHOOL SUBJECT.

There are two good reasons for considering agriculture a good subject to teach in school, viz, that it affords in a preminent way (1) a wide field for accurate, interesting, and uplifting knowledge, and (2) a wide field for doing. Agriculture is a cultural subject because it is "concerned with the highest truths that the mind can consider, namely, the laws of life, of growth, of heredity, of adaptation, of selection, of environment." It is also a practical subject because of the direct application of its principles to life and because it shows the relation between cause and effect.

THE POWER OF RESPONSIBILITY.

Responsibility is a great power developer. Where there is responsibility there is growth. People who are never thrust into responsible positions never develop their real strength. This is one reason why it is so rare to find very strong men and women among those who have spent their lives in subordinate positions, in the service of others. They go through life comparative weaklings because their powers have never been tested or developed by having great responsibility thrust upon them. The thinking has been done for them. They have simply carried out somebody else's programme. They have never learned to stand alone, to think for themselves, to act independently. Because they have never been obliged to plan for themselves, they have never developed the best thing in them—their power of originality, inventiveness, initiative, independency, self reliance, their possible grit and stamina. The power to create, to make combinations, to meet emergencies, the power which comes from continuous marshaling of one's forces to meet difficult situations, to adjust means to ends, that stamina or power which makes one equal to the great crisis in the life of a nation, is only developed by years of practical training under great responsibility.

There is nothing more misleading than the philosophy that if there is anything in a youth it will come out. It may come out and it may not. It depends largely upon circumstances, upon the presence or absence of an ambition arousing, a grit awakening enviroment. The greatest ability is not always accompanied by the greatest confidence or the greatert ambition.

DISTRICT SOCIABILITY.

In visiting about the country we have often been impressed with the utter dreariness of the winter season in some communities. Yet this condition does not universally obtain. In some places the frozen-up period is punctuated with district debates, literary society gatherings, occasional lectures and musical festivals. These all make for greater sociability, draw out the young people, and develop mentality. And they are all wholly under the control of the community itself. In every district where there is a school-house there is a centre for the social and and intellectual life, and it would be well if our school buildings were more generally used for gatherings such as we have suggested. The school is supposed to stand for education, and among the children it really does so. But the elder folk require mental and emotional exercises; infact they must have it; and this is only another phase of the educational problem. Is it not proper that suitable provision should be made in such legitimate and natural ways as the best ingenuity and good sense of the community can suggest? It is a great thing for any district to possess one or two well-balanced and fully equipt social leaders, but there is no place so destitute of talent that it cannot, even in spite of theold proverb to the contrary, lift itself by its own bootstraps.

WE MUST HAVE NAMES.

The recent receipt of letters from correspondents who did not sign their names causes us again to state our rule, which is that no notice will be taken of unsigned communications. We are not averse to answer enquiries and publishing expressions of opinion from bona-fide correspondents who wish to use only some selected nom-de-plume, but as a guarantee of good faith the real names and addresses of the senders must be furnished to this office.

EDITORIAL NOTES.

A good motto for every farmer would be,—"A place for everything and everything in its place." This would apply to everything on the farm and every part of the farm operations. It would include, among other things, the machine shed, the tool house, the crops and their rotation, the dairy, orchard, garden, etc.

Nature and Source of Water.

Chemically, water is a compound of two gaseous elements, hydrogen and oxygen with the formula (H2O).

Physically it is a colorless, transparent, tasteless liquid. While both its competent elements exist free in nature, the presence of free oxygen being an essential condition of life, water is itself one of the most abundant substances in nature. Practically three-fourths of the earth's surface is covered with water. Its depth is often several miles. The atmosphere is always more or less charged and frequently saturated with its vapor.

Land areas all carry lakes and rivers. The earth is moist and often wet with the rain that descends upon it. There is, perhaps, no land area where standing water does not exist at a greater or less depth below the surface, and generally within a few feet.

It is constantly evaporating from the surface of land and sea, carried off in the air, condensing into the clouds, precipitating as rain or snow, sink into the earth, emerging again in springs, forming in rills, uniting into streams which converge into rivers and flow again into the sea. Thus the cycle is completed and repeated from the dawn of time until eternity.

WATER CAPACITY OF SOILS.

The maximum capacity of soils for water is measured by the amount of pore space between the soil grains. It has been computed that this ranges between 35 and 63 per cent. of the volume. Coarse sands have the least and fine clays the greatest aggregate space between the grains of a given cubic amount. About 40 to 45% of good loam is occupied by air.

Onder ordinary soil conditions the force of gravity removes the hydrostatic, or standing, water to lower levels by drainage, leaving only the capillary water which is held by the force of adhension or surface tension. It is the capacity of soils for capillary water, that is of real agricultural significance. Here again the capacity is in inverse ratio to the size of the grains.

It has been computed that the soil grains present the following amounts of surface per cubic foot :

	Square feet
Coarse sand	3.000
Sandy loam	37.000
Loam	45.000
Clay loam	60.000
Heavy clay	90.000
Finest clay	175.000

In as much as the capillary water is held in the form of a film around each soil grain, the amount of surface presented directly determines the capacity for water, under perfect conditions.

The capacity of water is greatest in humus soils and least in sandy soils. It is greatest in the surface foot and gradually diminishes downwards. The greater the distance to the water table or standing water, the less the capillary power.

A rough estimate of the capacity of soils to hold water under average conditions in the first four feet in depth, might be 25 to 30 per cent of its volume, equal to from 12 to 15 inches of rainfall. In many Montana soils it is probable that the percentage capacity would remain very little diminished to much greater depth on account of the absence of subsoil and hardpan.

Movements of water in soils are two. The first a downward movement, occasioned by the force of gravity, tends to rid the soil of superfluous water by drainage, and while necessary in humid climates it is the occasion of some loss of soluble plant food. In the arid regions, without irrigation, this movement may be disregarded.

The second or capillary movement is caused by the physical force of surface tension or capillarity, where each drop attracts and draws to itself other drops in the zone of its influence. It is the force which causes oil to rise in the wick, or water to run over the edge of a basin through a wet towel. Practically this movement is upwards in soils because of the attraction of the water which is being transpired by plants or dispersed in the air by evaporation. Water is constantly drawn upwards to replace that which has gone off in vapor. Capillarity is most active when the soil is moist and on a perfectly dry surface, rains will often run off without wetting the soil to any great depth.—Montana Farmer's Bulletin No. 1.

Vitality of Weed Seeds in Manure.

The question sometimes arises as to how great a measure of vatility will be shown by weed seeds after they have passed through the digestive tract of an animal. E. I. Oswald, of the Maryland Station, undertook to obtain more definite information on this point, and also on the effect of the fermentation of manure handled in different ways. His feeding stuffs, included about fifty of the worst weeds found in Maryland.

In experiments in which the manure remained (1) for six months in a barnyard heap, and (2) for a short while in piles, it was found that in the first case there was no danger and in the second case little danger of distributing live weed seeds. In the experiments in which the weeds were fed to yearling steers and the manure handled in various ways it was found that—

(1) Where the manure was hauled directly from the stable as a top dressing an average of only 12.8 per cent. of the seed fed to animals germinated.

(2) Where the manure was hauled directly from the stable upon the land and plowed under 2.3 per cent. of the seeds fed to animals came up.

(3) Where the droppings remained on the pasture fields unadulterated as they fell an average of only 3.1 per cent of the seeds fed to animals germinated.

The result sindicate that in general it is safe to assume that the vitality of weed seeds is destroyed in wellrotted manure, but that many pass unharmed through the digestive tracts of animals and may be carried to the land in the manure if not well rotted before use.

Prepare the Pump for Winter.

"The leak pin should be taken out, and, if the well is less than 16 feet deep, a second platform should be put in about four feet below the surface and made air tight. This can be done by covering it with a couple of layers of heavy building paper or some old bags; or clean snow is very good for the purpose, if there is any at the time. The upper cover ought to be made close and tight, and if the crib is above the ground, it should be banked up even with the top of the well.

"Many persous never think about the pump until it is frozen up. It is a friend you will need every day through the winter, and you ought to see that it is in good repair and taken care of before the winter starts; and it can be done much better and cheaper now than when it is colder. This work should be done not later than Nov. 5th.

Croup is most prevalent during the dry cold weather of the early winter months. Parents of young children should be prepared for it. All that is needed is a bottle of Chamberlain's Cough Remedy. Many mothers are never without it in their homes and it has never disappointed them. Sold by all dealers.

Halifax Prize List.

HORSES.

CLASS 1—THOROUGHBREDS.

Stallion, 4 years old and upwards, 1, Geo. Haley, Windsor, Haphazard; 2, H. C. Jewett, Fredericton, Cyclist.

Stallion, 1 year old, 1, Wm. Robinson, Halifax, Lucifer II.

Brood mare, with foal by her side, Wm. Robinson, Cotton; 3, Wm. Robinson, Silence.

Foal, of 1909, 1, Wm. Robinson, 2, Wm. Robinson.

Stallion any age, diploma, Geo. Haley.

Brood mare any age, diploma, Wm. Robinson, Cotton.

CLASS 2.—STANDARD BRED HORSES.

Stallion, 4 years old and upwards, 1, Frank Boutilier, Frank Power; 2, Dr. M. Ronan, Maid's King; 3, Thos. Munro.

Stallion, 3 years old, 1, Dr. Saunders, Rampart II; 2, S. A. Rockford, Baron Ajalon; 3, Dodd Dwyer, King Dodd's.

Stallion, 2 years old, 1, Phaire & Allen, Kinkrilla; 2, S. A. Bowser, Brookside.

Stallion, 1 year old, 1, DeWolfe McLean, Hopewell Boy; 2, Mrs. W. H Musgrave.

Brood mare with foal by her side, 1, D. R. Sutherland, Dina Hartshine; 2, Frank Boutilier, Jessie Rampart; 3, T. B. Messenger, Lady Ferron.

Filly, 4 years old and upwards, 1, G. A. Wallace, Grace Abbott; 2, G. A. Sellers, Lady Brazilian; 3, H. C. Jewett, Bessie Pardner.

Filly, 2 years old, 1, H. K. McLean, Miss Woodburn; 2, T. B. Messenger, E. D. M.

Filly, 1 year old, 1, I. L. Hartlen, Cherry Blossom.

Foal of 1909, 1, D. R. Sutherland; 2, T. B. Messenger, 3, I. L. Hartlen.

Brood mare, any age, diploma, D. R. Sutherland.

CLASS 3.—ROADSTER HORSES.

Brood mare, with foal by her side, 1, A. H. Hilton; 2, Robert Settle Jr; 3, A. G. Drysdale.

Filly or gelding, 3 years old, 1, A. Hornstein.

Filly or gelding, 2 years old, 1, E. J. McKenna.

Filly or gelding, 1 year old, 1, G. A. Sellars; 2, P. S. Purcell.

Foal of 1909, 1, Robert Settle Jr., 2, A. H. Hilton; 3, James Adams.

Pair matched roadsters in harness, 15 hands and over, 1, H. A. Corbett, Daisy Dewitt and Anita, 2, James Blake, Clay and Flora.

Single horse in harness 15 hands and over, 1, D. J. Buckley; 2, James Adams; 3, Alex. Woodworth.

CLASS 4.—CARRIAGE HORSES.

Brood mare with foal by her side, 1, R. H. Snowball, Jubilee Beauty; 2, Geo. Haley.

Foal of 1909, 1, R. A. Snowball; 2, Geo. Hayley.

Pair of matched carriage horses in harness, 15½ hands and over, 1, R. H. Melzter, 2, I. L. Hartlen.

Single horse in harness, 15½ hands high and over, 1, R. J. Steele; 2, John Redden; 3, R. H. Melzter.

Best horse, any age, diploma, 1, R. A. Snowball.

CLASS 5.—PONIES.

Stallion, over 12 and not exceeding 14 hands 1, Patrick Dacey, Halifax.

Mare or gelding, over 13 and not exceeding 14½ hands, 1, Geo. A. Thompson.

Mare or gelding, under 12 hands, 1, Mary Hooper, Truro.

Shetland stallion, not exceeding 10½ hands, 1, Nelson B. Smith, Halifax.

Shetland mare or gelding, not exceeding 10½ hands, 1, Etta Fuller, Truro, N. S.; 2, Donald McCurdy, Halifax.

CLASS 6—GENERAL PURPOSE HORSES.

Mare or gelding, 4 years old and upwards, not exceeding 1,350 pounds, 1, R. J. Steele, Charlottetown; 2, M. M. Thomyson, Shubenacadie; 3, D. R. Sutherland, Pictou.

Mare or gelding, 3 years old, not exceeding 1,200 pounds, 1, W. R. Newcombe, Halifax; 3, Geo. Haley, Windsor; 3, Johnson Cameron, Stellarton.

Filly or gelding, 2 years old, not exceeding 1,000 pounds, 3, W. R. Newcombe.

Filly or gelding, 1 year old, 1, John W. Richard, Dartmouth.

Brood Mare with foal by her side, 1, John McDonald & Sons; 2, A. J. Keddy, Dartmouth.

Foal of 1909, 1, C R. H. Starr & Son; 2, John McDonald & Sons; 3, A. J. Keddy, Dartmouth.

Matched team, geldings or mares, shown in harness, under 2,700 pounds, 1, W. W. Black, Amherst. Baby and Dora; 2, R. Chisholm, Lr Canard.

CLASS 7.—HEAVY DRAUGHT HORSES.

Mare or gelding, 4 years old and upwards, over 1,350 pounds, 1, R. R. Innis; 2, Johnson Cameron; 3, J. M. McGrath & Co.

Mare or gelding, 3 years old and over, 1,200 pounds, 1, Geo. B. O'Brien; 2, Johnson Cameron.

Filly or gelding, 2 years old, over 1,000 pounds 1, Wm. Sharp; 2, Logan Bros.

Filly or gelding, 1 year old, 1, Wm. Sharp.

Brood mare with foal by her side, 1, Wm. Sharp; 2, Davis Densmore.

Foal of 1909, Wm. 1 Sharp; 2, Davis Densmore.

Matched team, over 2,700 pounds, 1, Geo. B. O'Brien; 2, J. M. McGrath & Co.

Mare and 3 of her, progeny, diploma, Wm. Sharp.

CLASS 8.—HACKNEY HORSES.

Stallion 4 years old and upwards, 1, Roper Bros., Charlottetown, "Fashioner;" 2, Geo. R. Chipman, Grand Pre, Sensation.

Stallion, 2 years old, 1, R. A. Snowball, Model Performer, 2, C. A. Webster, Yarmouth, Sunburn.

Brood mare with foal by her side, 1, R. A. Snowball, Langton Lily.

Filly, 4 years old and upwards, 1, C. A. Webster, Firebrand.

Filly, 3 years old, 1, C. A. Webster, Shiny Shoe; 2, C. A. Webster, Good Friday; 3, W. W. Black, Miss Violet.

Foal of 1909, 1, R. A. Snowball.

Stallion, any age, diploma, R. A. Snowball, Model Performer.

Mare, any age, diploma, R. A. Snowball, Langton Lily.

CLASS 10.—COACH HORSES.

Stallion, 4 years old and upwards, 1, H. C. Jewett, Onyx.

Stallion, any age, diploma, H. C. Jewett, Onyx.

CLASS 11.—CLYDESDALE HORSES.

Stallion, 4 years old and upwards, 1, P. C. Brown, Lord Delmaney; 2, H. C. Jewett, Sorbie Boy; 3, C R. H. Starr & Son, Baron Primrose.

Stallion, 3 years old, 1, W. W. Black, Saxon Prince; 2, Geo. B. O'Brien, Norseman.

Stallion, 2 years old, 1, R. A. Snowball, Baron Belgradon; 2, W. W. Black, Amherst Lad.

Stallion, 1 year old, 1, C. R. H. Starr & Son; 2, Donald McIntyre; 3, H. C. Jewett.

Brood mare, with foal by her side, 1, Logan Bros., Soubrette; 2, C. R. H. Starr & Son; 2, Logan Bros., Pink Rose.

Filly, 4 years old and upwards, 1, R. A. Snowball, May Lothian.

Filly, 3 years old, 1, C. R. H. Starr & Son; 2, R A. Snowball, Rosie Miller.

Filly, 2 years old, 1, W. W. Black, Bessie.

Filly, 1 year old, 1, Logan Bros., Baron's Fancy; 2, Logan Bros., Princess Msy.

Foal of 1909 1, C, H. R, Starr & Son; 2, Logan Bros., Soubrette II; 3, Logan Bros., Pink Rose.

Stallion, any age, diploma, P. C, Brown.

Mare, any age, diploma, Logan Bros.

Stallion and 3 of his get, diploma, C, H. R, Starr & Son.

Silver cup, offered by the Dominion Clydesdale Association, for the best stallion, any age, recorded in the Dominion Clydesdale Stud Book. Cup must be won three times by the same owner before it becomes his property. Cup, P. C. Brown.

Foal of 1909, Chas. Symes.

CLASS 14.—PERCHERON HORSES.

Stallion, 4 years old and upwards, 1, Frank Ellis, Aubin.

Brood mare, with foal by her side, 1, Chas. Symes.

BEEF CATTLE.

CLASS 16.—SHORTHORNS.

Bull, 3 years old and upwards, 1, R. A. Snowball, Major Lewis.

Bull, 2 years old, 1, C. A. Archibald, Merry Jock.

Bull, senior yearling, 1, R. A. Snowball, Dun Robin Sailor.

Bull, junior yearling, 1, C. A. Archipald, Huskie II.

Bull, senior calf, 1 and 2, R. A. Snowball, Chatham Laddie and Chatham Lad.

Bull, junior calf, 1, C. A. Archibald, Wood King; 2, R. A. Snowball, Major of Meadowville.

Cow, 4 years old and upwards, in milk or calf, 1 and 2. C. A. Archibald, Lady Roan and Merry Maid IV.

Cow, 3 years old, in milk or calf, 1, R. A. Snowball, White Lady.

Heifer, 2 years old, 1 and 3, C. A. Archibald, Katrina of Bellevue and Rosabella of Bellevue XIV; 2, R. A. Snowball, Mina Snowdrop.

Heifer, senior yearling, 1, C. A Archibald, Heronia; 2, R. A. Snowball, Chatham Lassie.

Heifer, junior yearling, 1 and 2, C. A. Archibald, Merry Maid V and Lady Woodland; 3, R. A. Snowball, Lady of the Snow.

Heifer, senior calf, 1, C.A. Archibald, Mermaid; 2 and 3, R. A. Snowball, Mina Snowball and Queen of Meadowbrook.

Heifer, junior calf, 1 and 2, C. A. Archibald, Jilt and Merry Maid VI.

Champion bull, diploma, R. A. Snowball, Major Lewis.

Champion female, diploma, C. A. Archibald.

Best 3 animals, get of one bull, 1 and 2, C. A. Archibald.

Best 2 animals, progeny of one cow, 1 and 2, C. A. Archibald.

Best breeders' herd, to consist of one bull, under 2 years; 2 heifers, 1 year old and under 2 years; 2 heifers, under 1 year, all bred and owned by exhibitor, 1 and 2, C. A. Archibald; 3, R. A. Snowball.

Best graded herd, to consist of 1 bull, 2 years old and over; cow, 3 years old and over; heifer, 2 years old and under 3 years; heifer, 1 year old and under 2 years, and heifer calf, under 1 year, 1, C. A. Archibald; 2, R. A. Snowball.

CLASS 17.—HEREFORDS.

Bull, 3 years old and upwards, 1, W. W. Black.
Bull, 2 years old, 1, W. W. Black.

How the Shenadoah Gets Her Cargo.

EDITOR MARITIME FARMER:—

The steamship Shenadoah of the Furness Line sailed from Halifax for London on Oct 1st, carrying 19000 barrels of apples. I have heard it said the growers and packers of apples would follow their fruit to market and see it opened they would learn some things of importance, many points of interest to one in the business can also be picked up on the dock at Halifax when one of the big apple boats is packing in cargo. There were some ten carloads of apples in the shed, and a score of stevedores were unloading cars. The men were using every care in handling, quite as well as in the average packing house. Some things they could not control; the big cars piled five tiers high are hard to handle the men cannot reach the top barrel, so the next thing is to pull out the bottom and let them come down on the run. Here comes an Armoustrong Refrigerator car. with a low door and barrels piled above the door, two men with pinch bars tackle it, and pry out a barrel from the bottom, it is rough work on Gravenskeins, but the only way. Here is a car loaded at Cambridge Station, the last freight on that car seemed to have been molasses or some other sticky substance, the car had not been properly cleaned before using and a dozen barrels were damped with black stuff, contaminating every other with which they came in contact. A few boxes came out of one car from the Walkerville Fruit Co. Fine colored Gravensteins could be seen through the openings in the boxes. This nice lot was used in "chinking" up cargo, the stevedores tucking in a box anywhere a barrel would not go, and I am afraid they will come out in bad shape in London. Before box packing becomes general it will be necessary to have them properly carried to market, and the only way to carry them is to have a part of the deck where they can be properly tiered up and not mixed in with barrels.

Two inspectors, Fitch and Sangster, were on duty, busy looking after the shipment. Their duties are manifold and there is plenty to keep them busy. Six barrels are loaded in rope slings and a donkey engine hoists from the dock and lowers into the hold. Once the engine was starting when the Inspector called a halt; the head was started from a barrel, inspection showed four nails supposed to be driven in the piece of head that was started but there out of four had gone under the head not into it. A few barrels from each car are opened by the Inspectors. If the first barrel of a lot is good that usually satisfies them, if bad others are opened. Inspector Fitch seems to know by instinct where the poor stuff is. He scents it from afar and approaches with his hatchet. One barrel is opened, showing miserable, early picked gravensetins, no color, badly spotted, greasy. An English Commission man standing by remarks, "My word, vinegar apples." The inspector rolls out five barrels all he can find of that mark, they are all opened and seemingly each is worse than the other, out comes the red ink and "Falsely marked" goes in a dozen places on every barrel. The Report to the Department reads, "Gravensteins No. 1 and 2, 5 barrels marked A. D., small spotted, washy, bad lot, recommend for prosecution." This lot certainly deserved all it got as the apples were worthless for anything but vinegar, and several other lots that escaped the fatal brand will not give any satisfaction to the buyer, and can only be sold on the reputation of some other lot. When well grown and carefully packed the Gravenstein is one of the finest apples of the world, if not it is amo. g the poorest. The Inspectors report all their doings to the Fruit Department at Ottawa, the condition of every lot inspected as well as anything wrong that comes under their notice. Here is a specimen page from their note book:—"Inspected 7 barrels Gravensteins, branded 5 barrels falsely marked, too small, no spot. No. 1 should be No. 2 and No. 2 should be No. 3." "Dirty car I. C. R. 8072 very dirty loaded at Cambridge for H. O." "Box apples, Wagner, Mark S. B. Chute, Berwick, fine fruit, poor box." "Box apples, A. S. Banks, Waterville, splendid fruit, well packed, boxes not fit, ends split."

"Gravensteins No. 1 fairly good, no address." "Lot marked xxx instead of No. 1 wrote shipper."

"Car Ribstons No's one, two and three, fair, inspected six," and so on indefinitely. The Shenadoah should have sailed five days previously but was held back waiting for cargo, this is an abuse that is frequently practiced, and should not be allowed on subsidized boats.

The Nova Scotia Horticultural Exhibition.

The Animal Horticultnral Exhibition was this year held at Middleton. For six years this show has been held at various towns in the Annapolis Valley, and in every case a very creditable display has been made. This was the first attempt of the newly incorporated town of Middletown in the fair business and certainly the Committee of the Management may be congratulated on their success. The display of apples was very good indeed. Some varieties were above the average. Gravensteins, Kings and Nonpariels were very fine in size, color, and uniformity, showing great care in selection. In collections of commercial varieties competition was very keen, and all the prizes were won by a very small margin. Apples in boxes and barrels packed for market showed a distinct improvement over previous exhibitions. The methods of packing are yearly improving, and competition helps the packer by giving him an opportunity to see the ideas of others. Pears were displayed in great profusion, making a very large and fine exhibit. Plums, although somewhat out of season were brought out in a abundance, in fair condition. Peaches, grapes, quinces and fruits in glass, all added to the appearance of the display.

Mr. W. G. Macoun of Ottawa was the acting judge, and examined the whole Exhibit with great care.

Mr. F. G. Earl the B. C. expert box-packer was the center of an interested group of practical fruit growers about all the time during the three days of the show.

Farm Weeds of Canada

We have recently received from the Seed Commissioner a copy of the revised edition of the "Farm Weeds of Canada." The first edition of this book was distributed free to public institutions, including rural schools.

The revised edition contains seventy-six plates of weeds and weed seeds, illustrated in their natural colour, and one hundred and eighty pages of text, It has been published to meet the demands from farmers and others who desire the book for their personal use. The unusual expense entailed in connection with its issue precludes it from those pulications of the Department that are printed for general distribution, free of charge.

The book is now available to the farmers of Canada (single copies only) at the office of the Superintendent of Stationery, Government Printing Bureau, Ottawa, for the nominal price of one dollar ($1). We hope that every one of our readers who are interested in agriculture will procure a copy of "Farm Weeds," thoroughly study its contents and lend willing assistance in keeping down the weed pests.

To successfully combat the weeds and keep them in check one must know the habits of growth of the particular weeds he is fighting. "Farm Weeds" contains the necessary information and should be in every Canadian Farmer's library. Send for one today, lest you forget.

Renovating Old Orchards.

There are some old orchards that have really outlived their usefulness except to be made into stove wood and back logs for the fireplace. There are a few old seedling apple orchards that bear poor fruit and are too old and feeble to be worth top grafting, writes Prof. H. E. Van Deman in Green's Fruit Grower. These are surely better in the woodpile than as orchard trees. Some of the trees of really good kinds, when they reach very old age, especially if they are in unfavorable soil or have been badly neglected, may as well be turned into fuel.

But there are many orchards, not only of the apple but of the pear, cherry and other fruits, that are well worth giving good treatment. If there are only a very few trees standing about that have fairly good health and are not very old, yet lack vigor to make them bear profitably, it would be surprising to see what good treatment will do for them.

One of the first things to do to an old fruit tree is to see that there are no borers in it. By a little close looking one can see where borers are at work. Both apple and peach trees have borers that work under the bark at the collar. With a hoe or garden trowel clear away the earth so that there is a good chance to see all the surface of the tree down to the roots. Borers usually make very plain marks and a little practice will enable one to see where they are. There is nothing surer. cheaper or better than digging out or killing the borers with a knife and wire probe. By a little dexterity they can be killed without seriously hurting the tree. The borers do enough harm, and the greatest care should be used in getting them out not to cut any more live tissue than is impossible to prevent. If tough paper is tied firmly about the collar of the tree before the earth is replaced, and having it extend several inches above the surface it will prevent, in some mearure, the laying of the eggs of the insects that hatch into borers.

Plowing or digging up the sod that usually grows in old orchards and about

Small Animals

are as effectually imprisoned as the larger ones, for we make "Maritime" Wire Fence with spaces too small for the little, wee piggies to squeeze through.

The absolute regularity of the weaving, the stiffness and springiness of the English high-carbon, hard-drawn steel wire, the remarkable gripping-strength of our lock, make "Maritime" Wire Fence a decidedly stronger fence—one that you ought to know more about.

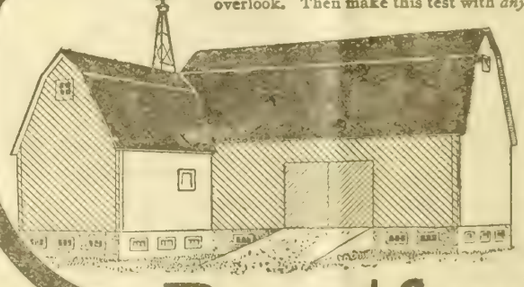
Make this 60-Day Test of Brantford Roofing--then Test Any Other Make

Write us, or your dealer, for sample of *Brantford Asphalt Roofing*. Place it in water for sixty days. When you remove it, rip open with heavy knife, and you'll find insides—the vital part—perfectly dry, life-like, solid—as *before* test. Just think of severeness of this test! The result is evidence you *cannot* overlook. Then make this test with *any other* Roofing. You'll find the wood pulp—jute or cotton-cloth insides soaked—softened—lifeless. It *cannot* withstand severe weather, which is, at its worst, not *one-twentieth* so severe as *Brantford's Test*. Wood pulp is like paper. It *acts* like paper, when soaked—wilts away. How *could* you expect such a foundation to fight off Roofing Enemies! For resistance, it *must* depend upon animal fat, grease, or other refuse coating, themselves veritable mines of danger. They evaporate—wear off—expose shameful foundation to awaiting enemies. This coating cannot *prevent* penetration—protect defenceless insides from harm. But *Brantford Asphalt Roofing* Foundation is one sheet of evenly-condensed, long-fibred *pure Wool*, with life and body of its *own*. A *secret* mixture of *Asphalt* is *forced* into it, soaking every fibre. After mixture dries, foundation posseses resisting-power *no* amount of soaking or bending can effect.



Brantford Roofing

after special Water-proof Coating, into which Silica Sand is rolled under pressure, is applied, becomes a solid mass of resistance. It is weather, acid, alkali, frost, water-proof. *Cannot* freeze, crack or melt. Wonderfully pliable. Brantford has but one cost—first. Write for free Book and Samples.

scattered fruit trees will do a world of good to them. Thorough plowing and working of the soil during the growing period is the most important of all things that can be done to an old orchard. It should never be deep but shallow and frequent. Deep plowing will break many roots, but even this is better than to have no plowing. From three to four inches is deep enough to plough. This leaves the most of the roots undisturbed.

Next after plowing is the tillage. This should begin as early as possible and be continued throughout the entire growing season. This has a most beneficial effect and for several reasons.

The chief benefit from tillage, provided it is thorough, is from the preservation of soil moisture. As true as this is there are comparatively few who till the soil that clearly understand the fact. A hard surface allows the moisture to escape easily, while one that is loose does not. The doctrine of the dust mulch is getting to be understood and believed, but it is none too well known yet, nor can it ever be. It is one of the cardinal principles of farming, no matter of what kind, that lies at the bottom of all rural prosperity. Those who do not clearly understand the principle sometimes follow the practice of it, but if one understands it well he can the better know how to practice. Any tool that will pulverize the soil well is good, but some are better than others. If it is loose and easily worked the harrows and weeders will be very serviceable; but if the soil is stiff and apt to be cloddy they may be of little value, except when it has been first put in fine condition with other tools, and the cultivators and stouter stirring implements must be used. One thing should be kept constantly in mind; that the more frequently the soil is gone over the more easily it is done. Two cultivations will often cost less than one; because wider impements can be used to do the same or better work than narrow ones that are rarely used. The effect on the soil and trees that grow in it will be remarkable, and as to the resulting crop, it goes without saying that it will be correspondingly benefitted. The elements of plant food may be ever so abundant, but if they are not dissolved by the soil moisture, the roots of the trees, or weatever else may be growing, cannot lay hold of it.

Tillage also helps to bring together the various particles of the soil, causing them to form chemical unions that are essential to vigorous plant growth. It so aerates the soil that the bacteria can not only live but flourish; for there must be myriads of these tiny friends of the farmer and fruit grower at work if we get the best crops.

Tillage keeps down other growth that would, in some degree, rob the trees of moisture and fertility. Whatever grows in an orchard besides the trees, when they are of bearing age is sure to detract from them, except it be leguminous crops that are allowed to become incorporated with the soil. These, especially cow peas and clover, I think a decided advantage, but weeds, grass, etc., should not be allowed to grow in orchards except to come up in the fall and lie on the ground over winter.

Manure of almost any kind is an advantage and usually a necessity in an old orchard. Spread on all the stable manure that can be spared from other crops. It matters little what time of year it is applied, so that it is put on. Commercial fertilizers are very helpful, especially those having an abundance of potash and phosphorous in them. Feed the trees liberally if it is expected that they will bear liberally.

Spraying is also a necessity in these days of insect and fungus scourges. The whole subject of spraying is so well set forth in the government and state bulletins and in the rural papers that it is not necessary that much should be said here about it, except to urge that there be no neglect of it. There is about as much need of spraying as of cultivating an orchard. The details are mentioned so often and so well that there need be no lack of information about them.

Milk to a Pound of Butter.

Producers and manufacturers of milk often have need of a reference table showing the quantity of milk required to produce a pound of butter. The true ratio of milk to butter is determined by the percentage of butter fat in the milk. The table below presented by the New York Farmer shows the pounds and quarts of milk used to produce a pound of butter, starting with 3 per cent. fat milk and proceeding by one-tenth of one per cent. increase up to 6 per cent. fat milk. In this computation we have used 2 15 pounds as weight of a quart of milk, and have reckoned the butter at 85.7 per cent the usual ratio. The first column shows the fat percentage of the milk, the second column shows the number of pounds and the third column shows the number of quarts of milk of the given degree of richness required to make one pound of butter, the computations being carried to the third decimal place.

Butter fat	Lbs. Milk to Lb. Butter	Qts. Milk to Lb. Butter
3.0 per cent	28.566	13.286
3.1 per cent	27.651	12.861
3.2 per cent	26.781	12.456
3.3 per cent	25.969	12.078
3.4 per cent	25.205	11 723
3.5 per cent	24.485	11.388

Variation of Fat in Milk.

Prof. C. H. Eckles of the Missouri Agricultural College has been making quite exhaustive experiments for the purpose of solving the problem of the variation of fat in milk which has for years been a question that scientists and dairymen alike have been studying to understand. The point at issue has been whether the fat in cow's milk could be increased by feeding and it has been difficult for farmers to believe that the "richness" of the milk could not be increased by feeding the cow heavily on feeds rich in fat-making material. Results of the most accurate experimenting have not confirmed the popular opinion held and scientific men have quite generally agreed that the percentage of fat is a characteristic of the individual cow and cannot be increased by feeding to any appreciable extent.

Prof. Eckles' investigations seems destined to throw some light on the extreme production of butter fat that is secured in some of the seven-day tests and other tests of short duration. Prof. Eckles' findings follow :

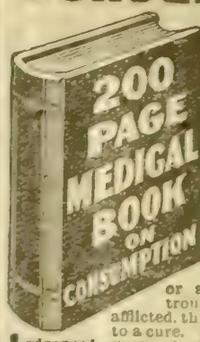
"During the last few years considerable data has been gathered in our experimental work here with dairy cows which indicate that it is possible in another way to increase the per cent. of fat to an abnormal degree for a short time and probably to a less degree for a longer time. The rule seems to be that when the ration of a cow is insufficient to support her milk production and she draws on the fat stored on her body, that the per cent. of fat in the milk is increased. The reverse seems to be ture as well; that is, when she is gaining in weight or storing fat on the body there is a tendency for the per cent. of fat in the milk to be lower. This increase in the per cent. of fat in milk due to transfer of fat from the body to the milk is most marked immediately after calving.

"In the course of one of our investigations a Holstein heifer calved in as fat a condition as it was possible to get her by continuous heavy feeding from birth. Another heifer of practically the same age and breeding, was fed from birth until she came in milk on a ration of skimmilk and hay without any grain whatever. As a consequence, she was decidedly thin at calf birth. The milk of the heifer in good condition tested over 4 per cent at the start, while the milk from the one in thin condition tested about 3 per cent. The fat heifer declined in weight for several weeks and during this time continued to show a high per cent. of fat. When her weight became stationary her per cent. of fat declined until it was practically the same as the other. The thin heifer made no decline in weight and showed no decline in the fat in her milk. Later she began to gain in live weight, she having been put on a liberal grain ration immediately after calving. Her per cent. of fat increased slightly until the two became practically together. Similiar results have been obtained with two other pairs of heifers under similiar treatment. The most marked example of how this works out is shown in the following :

A mature Jersey cow was fed a liberal ration for two months before calving in order to get her unusually fat. Immediately after the birth of the calf she was put on a ration that was sufficient only to maintain her body weight, according to the maintenance values sa usually estimated. She was fed for thirty days on a ration of three and one-half pounds grain and seven pounds hay a day, which was estimated body maintenance. At the beginning she produced 21 pounds of milk a day. During the thirty days the decline in milk was very slight. Indeed, at the end of the thirty day period she was producing 19 1-2 pounds a day. During this time she lost 115 pounds in live weight. In the beginning she was smooth and excessively fat for a Jersey cow, but at the end of thirty days she was decidedly thin and emaciated. Beginning with the twenty-eighth day it was observed that she was becoming weak and she staggered as she walked. On the twenty-ninth day she could scarcely get up when down, yet she produced 19 1-2 pounds of milk. It was not considered safe to continue the test any longer and her ration was increased to a normal amount. During the thirty days this cow produced milk continuously without any feed whatever to supply the nutrients. It is evident that the solids in this milk must have been taken from the body and the decline of 115 pounds in weight shows this was the case. During the thirty days 43 pounds of fat and 52 pounds of other solids were produced in the milk. The average per cent. of fat during the thirty day was 6 9; the normal test for this cow is slightly under 5 per cent. Within forty-eight hours after her feed was increased at the end of the thirty day period the per cent of fat in the milk declined about 2 per cent.

"Further and more extensive trials are necessary to fully prove this law and especially to determine its metes

Consumption Book FREE



This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and fee, there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 1275 Rose Street, Kalamazoo, Mich., and they will send you from their Canadian Depot the book and a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful cure before it is too late. and bounds, but it is believed these results are of great significance in a number of ways. In the first place it will mean that short periods are absolutely valueless in carrying on feeding trials with dairy cows. If a cow will produce milk for a month without having any food to furnish the necessary material, it is evident that the effect of any feed can not be measured in a short period. In an experimental way it also has a bearing on methods of carrying out many lines of investigation, as, for example, the effect of feeds of the composition of milk, since here we will have to avoid the probability that milk fat taken from that stored in the body and secreted in the milk is of different composition from normal milk fat.

"Another interesting question brought up by these experiments is its relation to the common method of carrying on seven-day tests of dairy cattle. It has been the subject of comment frequently by leading authorities that in recent years much higher fat percentages are secured in seven-day tests than was formerly the case. The possibility of increasing the per cent. of fat in milk for a period after calving by the means mentioned has apparently been used by those who are the most successful in making these phenomenal seven-day tests. A cow that will average 3.2 per cent. of fat for the year, can with reasonable are certainty be made to test 4 per cent. or even higher for a week if properly handled. The way it is done is to fatten the cow as much as possible before calving. Then after calving the animal is fed only moderately and the test is begun within four or five days. Under these conditions the animal has insufficient feed to support the enormous milk fat production. Since her body is loaded with fat, this fat is taken from the tissues and a large amount of it is secreted in the milk.

"As said before, a large amount of additional investigation will have to be carried on to establish the limitations of this principle and to make it possible to understand its full significance. The investigations under way in this line, it is hoped, will supply data that will make it possible to reach some definite conclusions. The material already at hand is sufficient and so consistent in every respect that in the opinion of the writer there is no doubt of the accuracy of the general proposition laid down. The reason for presenting this preliminary statement regarding work is that it will be some time before results can be worked out in detail, and on account of the importance of the subject and its many applications, it seems to the writer to justify this preliminary notice."

Feed and Richness of Milk.

There is much that may be done to influence the quantity of milk that any certain cow will give, but very little effect on the richness of it can be obtained by varying the feeding. The question has often arisen as to whether or not feeding meal will cause a cow to give milk with a large percentage of butterfat. Once we heard one of the best known dairy farmers in Canada state that the feeding of meal would cause a cow to give richer milk; yet the general trend of experimental work shows that meal has little or no effect upon the percentage of fat in milk, but does tend to increase the flow or quantity of milk, especially where cows are not being fed to their capacity. There are few apparent exceptions to the rule, but they only serve to emphasize the law that cows govern the quality or percentage of fat in milk, and feed and cow govern the quantity.

Sheep Breeding Problems.

Is in-and-in breeding a correct practice to follow? We answer yes and no. Safe with wise selection and a mighty lever for improvement carried down to the danger line, and a powerful engine for destruction carried beyond that point. Many are the one-time noted breeders who have plunged headlong into that pitfall. They became giddy over success and were too proud and narrow to recognize merit in other strains. They harped upon concentrated blood for potency, forgetting that type was the measure of individuality and that type depended upon type breeding.

With how close relationship is mating admissible? Never with sire and daughter and sister. If conditions seemed to demand it I would mate half brother and sister where the dams of each were of reomtt blood, and the progeny of half brother by the same sire whose dams were remote from each other. This is a favorite cross with me. Some strains will bear more in-breeding than others. The Wilkes strain of trotting horses is conspicuous in this respect. To my mind the greatest danger that lies before American merino breeders is the kindred blood of all our flocks.

Are so-called violent crosses dangerous and unscientific? No. What are violent crosess? The mating of a fine-fleeced ewe with a strong-stapled ram, a plain light-fleecedewe with a wrinkley, dense, heavy-fleeced ram. Go beyond your ideal in a ram in the object sought for the first cross and to your ideal for subsequent crosses, and stay there. This is the cross-lot route to the goal.

Is uniformity in a flock the test of a breeder's skill and a measure of the value of his blood line? No, uniformity is but another name for mediocrity. The blood that improves a breed comes from the flock of the breeder whose motto is good, better, best. Never use a ram more than two season on the same ewe if it can be avoided. Who ever saw the third crop of lambs from the same sire and dams that were equal to the first and second crops? If the nick is great use a good son and then go back to the old ram. Who ever saw a really great ram that had a full brother a year younger that was his equal? I never did. I killed a brother to Don Dudley for mutton (and it was as good a fate as he deserved) and sold a full brother to Kaiser for $2.50 to be slaughtered. Great are the mystries of the breeding problem!

We have taken the American Merino as a special subject for discussion because he represents one of the highest achievements of the breeder's art, and because the family should be preserved as the fountain-head to be drawn from for fieece improvement, and because the principles involved in his successful breeding apply to all breeds and kinds of domestic animals. Many long centuries have intervened since One queried "How much better is a man than a sheep?" Then put the man behind the sheep and be true to your own manhood and to your brother man. Let your name stand for all that is moral, honest and upright, and let your methods and practices be an open book, read and known to all men. If he who makes two blades of grass to grow where one grew before is a public benefactor, how much more is he a benefactor who enhances the meat or wool-producing capacity of a breed. Verily he should rank among princes and not among mean men. "But," says one, "are all these rules to be observed in successful sheep breeding, and are the principles laid down inviolable?" We answer yes, and more too. In these strenuous days of heroic endeavor, when success is measured by marvelous achievement, every detail that contributes to the end becomes an essential. I pity the man who has no ambition to stamp his name and impress upon something that will benefit his fellows. Such a one is a weakling and unworthy of true manhood and his generation.—John P. Ray, before Pennsylvania Live Stock Breeder's Association.

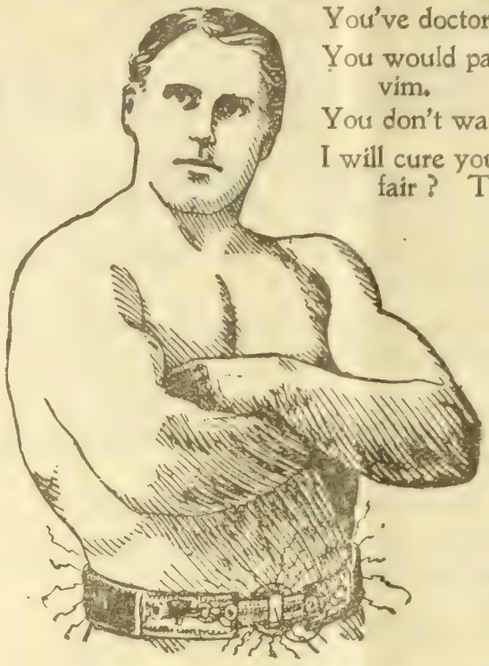
The old, old story, told times without number, and repeated over and over again for the last 36 years, but it is always a welcome story to those in search of health—There is nothing in the world that cures coughs and colds as Chamberlain's Cough Remedy. Sold by all dealers.

Management of a Ram.

Sheep are, or may be made, prolific animals. Naturally the ewes are twin bearers, and will breed twice in a year. There is, however, a prevalent belief that one lamb in a year is sufficient, and that twins are a nuisance. Doubtless this exact expression is the common fact, and the owners of ordinary flocks are averse to the birth of twin lambs on account of the bother of caring for them.

MEN, HERE'S AN OFFER

Wear My Electric Belt Free Until I Cure You.



You've doctored and doped till you are sick of it all.

You would pay for anything that would give you back your old vim.

You don't want to pay out any more money till you are sure.

I will cure you first, and you can pay me afterwards. Is that fair? Then get in line.

I know what I can do, because I've done it and am doing it every day. I'm sure that Electricity is the life, and that I can restore it where it's lost. So if you need what I offer and don't want to risk my price, wear my Belt free until you are cured, then you can pay me.

And when you do pay me the cost is less than a short season of drugging, and how much more pleasant! You put my Belt on when you go to bed; you feel the soothing, exhilarating vigor flowing into your weak body, and while you sleep peacefully it fills you full of the fire of life. You wake up in the morning feeling like a giant.

Now I can't cure everything. I don't claim to, and I won't take a case that I don't feel sure of, but all these troubles which come from an early waste of vitality, from dissipation of any kind, from decay of nerve power, or from any organic stomach, liver or kidney weakness, I can cure, and those are the cases I am willing to tackle and take the chances on. I am curing them every day.

All I ask is a reasonable security for my Belt while you are wearing it.

Miracles are worked every day. Read the story of Phillip McGahey, River Aux Pine, St. Gabriel, P. Q., as he gives it in his own words:

"DEAR SIR—I take the opportunity of letting you know the benefit your Belt has given me. I was a poor cripple before I got it, now I can stoop and pick up a pin with ease. It was worth a great amount of money the good it has done me. My advice is, that no home should be without one. I thank you for the benefit it has done me."

Another report of a cure from GEO. STANLEY, Perth, N. B.

"DEAR SIR—Your Belt is all you claim it to be. My back is all right. I am very well. I should have written you sooner, but I wanted to give your Belt a thorough test. I considered mine a very bad case, as I have been troubled with my back a great deal, but I have found a cure in your Belt."

That's enough. You need the cure. I've got it. You want it. I'll give it to you or you need not pay me a cent. Come and get it now. The pleasurable moments of this life are too few, so don't throw any away. While there's a chance to be husky and strong, to throw out your chest and look at yourself in the glass and say "I'm a man," do it, and don't waste time thinking about it.

I've got a beautiful book, full of good, honest talk about how men are made big and noble, and I'll send it to you, free, sealed, if you send this coupon.

CALL TO-DAY. If you can't call send Coupon for Free Book.

When writing advertisers please mention the Farmer.

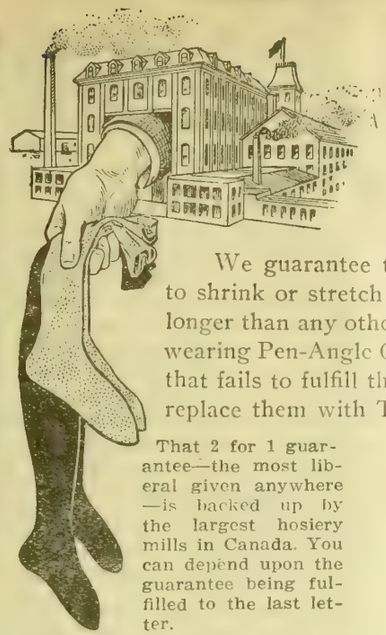
But nothing of value comes without proportionate labor or care, and the shepherd who desires to succeed in his business must make up his mind that nothing in his special line comes without working for it with head and hands. But much handwork may be saved by a little head work, and the actual labor incident to the proper care of a flock under the best management may be very much lightened by thoughtful, preparatory preparation.

So, if the right method is applied, there is no good reason why a flock may not treble in a year's time, and do it every time with success. We may take many lessons from the English shepherds, who by continued care for a few years, have succeeded in making their flocks treble the number of ewes bred annually. And this has been done through a course of careful feeding and breeding—both are necessary conditions of the case—for a few years. English shepherds have an advantage over us in the fact that their flocks are made life-long matters, and in the care of them things are done in preparation for years ahead. This is certainly a very important part of the business, but it cannot be evaded if we would succeed in the work. And it will pay. Two lambs are worth twice as much as one is! Here is the whole thing in a nutshell, as the saying goes. It is only consistent with the rest of the management of a flock in which there are so many great little matters, everyone of which is of equal importance.

The ram is the father of the flock, as was written two thousand years ago by the ancient shepherd poet, whose works still live as the very best authority and guide to a modern shepherd in the care of a flock. And the value of the ram is inherited from year to year, and generation to generation, if the whole of it is got out of it. Thus, once a flock is made to double the crop of lambs, the ewes so bred will permanently retain the habit if the necessary means are made continuous.

It is all in the feeding. All nature is subject to the same laws. Plants have been bred in this way to improved qualities and greater productiveness. Wheat has been increased by selection of seed and improved culture, from making one plant from one seed to the making of several, each of which bears an ear; and this of increased size and number of grains. Thus, a full hundred bushels of grain per acre has been made the rule, instead of a fourth as much. Corn has been improved in the same line up to a hundred and more bushels to the acre and this increased yield has been made a permanent habit. There are flocks of sheep which have been improved in this way in the production of lambs during the course of a few years, so that every year there are twice as many lambs as ewes, and a margin over to make up for accidents. But there are no cacidents in flocks managed in this way with all the care that may be possible. Everything comes out as exact as figures do, and these examples are instructive to us. The world—as we read—was given to mankind to possess and improve. This world possesses means literally to do as we wish with anything. This is only full possession, and it may mean a great deal to the enterprising shepherd if he will only realize the facts.

These matters are essentially timely now. Breed the ewes to the best ram possible. Feed liberally during the coupling season, and on to the season of lambing. It is no use doubling the seed of a crop if we do not apply the needed plant food to nourish the produce. The season is now on. And if due care is given, a beginning may be made in the improvement of every flock, until in good time the lamp crop may be doubled as easily as the corn crop may be. The principle appertaining to one applies precisely to the other.—Ancient Shepherd, in Sheep Breeder.



Buy Hosiery Made by the Largest Mills on a 2-for-1 Guarantee

We guarantee the following lines of Pen-Angle Hosiery to fit you perfectly, not to shrink or stretch and the dyes to be absolutely fast. We guarantee them to wear longer than any other cashmere or cotton hosiery sold at the same prices. If, after wearing Pen-Angle Guaranteed Hosiery any length of time, you should ever find a pair that fails to fulfill this guarantee in any particular, return the same to us and we will replace them with TWO new pairs free of charge.

That 2 for 1 guarantee—the most liberal given anywhere—is backed up by the largest hosiery mills in Canada. You can depend upon the guarantee being fulfilled to the last letter.

Buying hosiery on this plan you make doubly sure of satisfaction, for if the hosiery does not fulfill the guarantee the makers have to pay a double penalty.

But after you've worn a pair of Pen-Angle Hosiery you'll understand why we give this 2 for 1 guarantee, for you will have discovered your ideal hosiery—form-knitted, seamless, longest-wearing.

The reason for Pen-Angle superiority is due to the exceptional quality of the cashmere and cotton yarns we use. And because we knit them on Penmans' exclusive machines. We have the sole rights to use these machines in Canada.

Seamless Hosiery

These machines form-knit the hosiery to fit the form of the leg, ankle and foot perfectly, without a single seam anywhere to irritate the feet or rip apart.

They reinforce the feet, heels and toes—the places that get the hardest usage—without you ever being aware of any extra thickness.

Don't be content another day with hosiery which has those horrid seams up the leg and across the foot—with hosiery less serviceable—but get Pen-Angle 2 for 1 guaranteed hosiery

For Ladies

No. 1760.—"Lady Fair" Black Cashmere hose. Medium weight. Made of fine, soft cashmere yarns. 2-ply leg, 5-ply foot, heel, toe and high splice, giving them strength where strength is needed. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1020.—Same quality as 1760, but heavier weight. Black only. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1150.—Very fine Cashmere hose. Medium weight. 2-ply leg. 4-ply foot, heel and toe. Black, light and dark tan, leather, champagne, myrtle, pearl gray, oxblood, helio, cardinal. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1720.—Fine quality Cotton hose. Made of 2-ply Egyptian yarn, with 3-ply heels and toes. Black, light and dark tan, champagne, myrtle, pearl gray, oxblood, helio, sky, pink, bisque. Box of 4 pairs, $1.00; 6 pairs, $1.50.

No. 1175.—Mercerized. Same colors as 1720. Box of 3 pairs, $1.00; 6 pairs, $2.00.

For Men

No. 2404.—Medium weight Cashmere half-hose. Made of 2-ply Botany yarn with our special "Everlast" heels and toes, which add to its wearing qualities, while the hosiery still remains soft and comfortable. Black, light and dark tan, leather, champagne, navy, myrtle, pearl gray, slate, oxblood, helio, cadet blue and bisque. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 500.—"Black Knight." Winter weight black Cashmere half-hose. 5-ply body, spun from pure Australian wool. 9-ply silk splicing in heels and toes. Soft, comfortable, and a wonder to resist wear. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1090.—Cashmere half-hose. Same quality as 500, but lighter weight. Black only. Box of 3 pairs, $1.00; 6 pairs, $2.00.

No. 330. — "Everlast" Cotton Socks. Medium weight. Made from four-ply long staple combed Egyptian cotton yarn, with six-ply heels and toes. Soft in finish and very comfortable to the feet. A winner. Black, light and dark tan. Put up in boxes. Box of 3 pairs, $1.00; 6 pairs, $2.00.

Instructions

If your dealer cannot supply you, state number, size and color of hosiery desired, and enclose price, and we will fill your order postpaid. If not sure of size of hosiery, send size of shoe worn. Remember, we will fill no order for less than one box and only one size in a box.

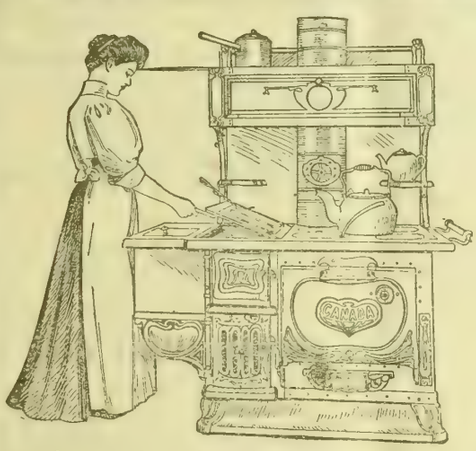
Pen-Angle Hosiery

WARRANTED HIGH PENMAN'S GRADE HOSIERY

The Stay-Satisfactory Kind of Stove



will fill the heart of an ambitious housewife with joy. Steel frames and plates and firm rivetting result, in the NATIONAL, in an oven that is, to all intents and purposes, hermetically sealed. It will stay that way for ten years, for twenty years, and even longer.

All the time it will cook more quickly, more perfectly, and will burn less fuel than any other stove manufactured. It is air tight and dust tight. If you have fire enough to heat the top of a National for cooking, the oven is ready for baking too—no special "firing up," no wasteful piling on of fuel. You cannot make a more complete mistake than to buy an inferior Stove which seems to be cheap, but for which you will have to pay three or four times its first cost on repairs and wasted fuel.—Buy the **National** and buy the **best.**

FIRST COST IS THE ONLY COST OF THE NATIONAL.

It will give us pleasure to show you the advantages of the National line it you will write us or call at one of our stores.

MADE ONLY BY

The MOFFAT STOVE CO., Weston, Ont., Calgary, Winnipeg

If NATIONAL Ranges are not for sale in your town, send direct to Our Weston office for Circulars and Prices delivered safely to your nearest station.

THE HORSE.

Conditioning Horses Quickly.

A correspondent states that he owns a pair of farm horses, weighing about 1,200 pounds apiece, which he desires to put in market condition in the shortest possible space of time. He says they are four and five years old, but gives no inkling as to the breed, the feed he has on hand, nor the accommodation which he is prepared to give the horses.

Reply must, therefore, be made in the most general terms. If the horses must be worked at the regular farm labor it will be impossible to get the requisite amount of flesh on their bones in anything like a short time. Flies are bad at this time of year and the work exacting. If they must work at all it should be only half a day at a time, the other half to be spent in the stable, which should be darkened so as to repe the pestilential flies. Best of all it will be to let the horses remain altogether idle, not putting the harness on them from the time they are started until they are sold.

PRACTICE OF PROFESSIONAL FEEDERS.

In the United States, where many men make a specialty of conditioning draft horses for the market, the general practice is to shut the thin feeders up in box stalls, feed them all the ear corn and bright clover or timothy hay—clover for choice—they will eat, and at the end of 90 days or thereby sell them. In that length of time they will become as fat as butter, 300 pounds in the three months being a not uncommon gain. This method of feeding does rather better with the grades of the Percheron and Belgian breeds than it does with those of the British breeds, but it works very well with the latter if they are not too rough in their legs.

FOOD MUST NOT BE CHANGED.

Horses will fatten on almost any sort of grain if they are accustomed to it gradually and then no change is made. It is the sudden and great change in food that brings on digestive troubles, of which colic is the commonest example. Stick to whatever you start in with until the fattening is completed. For the grades of the Clydesdales and Shire a mixture of corn and oats, half and half by weight, will be found the most advantageous. The rule is that when a horse is working he should have a pound of grain for every hundredweight he weighs. In the instance of a horse weighing 1,200 pounds, he should then have 12 pounds of grain each day. He may require more to do his best and perhaps he will not clean that much up, but no matter, so long as the object is to force as much flesh as possible on him in the shortest possible space of time. He should have all he will clean up, but he should be brought gradually to his maximum capacity and then closely watched. The same rule holds good as to the hay. A 1,200-lb. horse should never have more than 12 pounds of hay in 24 hours.

ONLY A LITTLE EXERCISE.

If these horses can not be given darkened box stalls then they should be turned out into a small yard for a few hours at nightfall. This yard should not be large enough to permit them to run and wrestle and work the flesh off themselves. The main point is to give them all they will eat, and of the best at that, and little or nothing to do. Horses treated thus give enormous returns for the grain fed them. This inquirer should have no trouble in making his horses gain 25 pounds each per week or 200 in 60 days.

FEED NO GRASS.

Grass is the poorest food that can be placed before a horse. It invariably, when used occasionally or as part of a ration, causes indigestion, which is evidenced by the droppings. Besides, people, who are willing to pay for flesh on the market, do not want it made on grass. They want it made of good, hard grain and old hay, and they are willing to pay for it accordingly. Incidentally it may be observed that the time-honored custom of turning the work horses out at night to grass is all wrong. A horse needs about so much hay and grain anyway, in order to do his work properly. After he has had this, what is the sense of turning him out into a field to overload his small stomach with a great lot of washy, green stuff that contains no nourishment to speak of and serves only as a sort of aperient medicine ?—Canadian Farm.

Oat Hay for Horses.

Oat hay makes an excellent feed for horses, from the pure straw point of view, with the seed threshed out. Oats furnish the very best coarse cereal roughage.

Many persons feed oats unthreshed. The horses relish both straw and grain in this form. In certain sections it is quite a common custom to sow oats in the spring, and later, when the crop is well advanced, to cut and cure as hay, the same as one would handle timothy or other hay crops. In this case the crop is not quite so mature as it would be if to be treated for threshing out the grain.

If well cured, this makes a bright and very palatable hay. The experiment stations say that oat hay is ranked as materially better than timothy, the former containing 4.3 per cent. digestible protein and 46.4 per cent. carbohydrates, compared with 2.8 per cent. digestible protein and 43.4 per cent. digestible carbohydrates in timothy Naturally, the greener the condition of the oats, when cut, the poorer will be the crop in digestible food. When cut for hay, oats should be mown as any other grass and treated in a similar manner. Heavy succulent oats may be cut in the morning, after the dew is off, and then kept stirred to let in the air so as to cure out well. With warm, drying weather it may be cocked the same afternoon, and if opened up and exposed the next day to a bright, clear sky, possibly may be hauled in that afternoon. Of course, the essential thing is to get in the crop free of excess moisture so that it will not mildew in the mow. It will quite likely take three days to do the entire job.

One of the commonest faults in feeding horses is the lack of variety in feed. Considering the number of different grains and feed stuffs, it does seem strange that every team owner should not provide for his animals a ration that would be perfectly acceptable to their systems at all times. It is a fact, however, that no more than 20 per cent. give what may be termed a well-balanced ration The other 80 per cent. still cling to the old ration of corn and hay, or oats and hay, which practical experiments have long since proved to be expensive and wasteful. If you want the best results feed a ration that contains all the elements of nutrition in properly balanced portions. Corn alone is not a well balanced grain for feeding, neither is oats or barley. Of the three grains, oats is probably fed more extensively than either corn or barley combined. Barley is rapidly gaining favor as a feed, however, and when properly combined with the other grain makes an ideal ration. When you feed a ground ration, you prepare it for quick digestion. Your animals utilize it more readily and there is practically no waste. It should be remembered that the horse digests its food quickly, and whatever ration you feed should be prepared with a view to supply the nutrition the horse needs. Your horses will work better and keep in condition on five or six quarts of ground feed, mixed, than they will on eight quarts of whole grain. Feed a variety of grains, properly balanced, and have it well ground, and you will not only have better horses, but it will cost you less money to obtain this much-desired result.

Roaring in Horses.

I have lately bought a horse which made a roaring noise when being driven. I would like to know if you could suggest a cure for it.—H. W.

The roaring arises from a disproportion between the size of the horse's chest, and the passages which convey air thereto. So that when the animal is pressed by exercise to breathe rapidly, the air, rushing violently through a tube of too small porportions, makes a loud grunting sound. Tne obstruction, either local or general, in the respiratory canal, may exist in the larynx, the cartilaginous box occupied by the mechanism of the voice.

The system of tight-reining is, in many cases, a cause of roaring. It forces the lower jaw on the neck; the larynx and the portion of the windpipe immediately beneath it, become flattened, and the respiratory passage not obstructed, but in a manner closed. This mischief is usually done when the horse is young. It is effected in some measure by the impatience of the animal, unused to control, and suffering pain.

Your Little Girl Can Do The Washing
WITH THE
"New Century" Washing Machine

It's far easier than churning or running a sewing machine. No rubbing—no work. Just turn the handle for 5 minutes and the clothes are washed — snowy white. Has a strong wringer stand that allows the water to drain right into the tub.

Price delivered at any railway station in Ontario or Quebec—$9.50.

Our booklet tells how to turn wash day into child's play. Write for free copy. 33

POULTRY.

Poultry Diseases at a Glance.

The following hints will, perhaps, help in the prompt detection of the difficulty or disease which may be troubling a fowl :

Admistering Medicine.—Too often is a profitless expense. Avoid the necessity for it by maintaining the healthiness of the flock.

Abdominal Dropsy.—Abdomen distended with liquid, hangs down. Fowl loses appetite, becomes weak and pale.

Anaemia.—Poor blood or poverty of blood from lack of proper nourishment, pure air, and sunshine.

Apoplexy.—Bursting of blood-vessel in the brain prostrates the bird ; comb purple.

Asthenia.—"Going light," due to starving, digestive disorder, vermin, blood poison.

Atrophy of liver.—Stupor and possibly convulsions, may indicate wasting of the liver, induced by lack of exercise, over-feeding, and unbalanced rations

Breakdown.—Abdomen hangs down at rear from excess of fat, fatty degeneration, or disorder of the oviduct.

Broken Bones.—Unless the fowl is very valuable, treatment is avoided by killing for the table.

Bronchitis.—Cold or catarrh may lead to inflammation of the throat, whistling, or rattling breath, due to exposure to cold, foul air, draughts, irritating dust.

Bumble-foot.—Cushion of the foot has a corn with abscess. Joints of leg may also be affected. Usual cause, narrow perches, alighting on hard floor from high perches, embedding of pebble in sole of foot.

Canker.—Painful attempts at swallowing, white, grey, or yellow patches develop on the membrane lining the mouth or throat Due to colds, catarrh, roup, exposure to cold, dampness, draughts, foulness.

Catarrh.—A common cold may continue until breathing is hindered by inflammation and mucous secretions collected in nostrils and mouth. There is drowsiness, loss of appetite, ruffled feathers, wheezing.

Chicken Pox.—Yellowish pimples on the head and underside of wings, loss of sight, weakness, paleness.

Choking.—Shaking of the head, straining and jerking of the neck in trying to swallow.

Cholera.—Diarrhoea, with yellow discharges, rough plumage, drooping wings contracted neck, great thirst, pale comb, exhaustion ; contagious.

Colds.—Inflammation of the nostrils and throat from catching cold is shown by sneezing and running at the nostrils, due to exposure to chilling temperature, dampness, draughts.

Congestion of the Liver.—Overfatness and sluggishness sometimes accompany congestion of the liver, due to overfeeding, starchy rations, lack of exercise, and disgestive disorders.

Congestion of the Lungs.—Overcharging the blood-vessels of the lungs, following a sudden or severe chilling, may occur in young chicks or moulting fowls. There is rapid, labored respiration, stupor, and purple color of comb and wattles.

Constipation.—Stoppage of the bowels or clogging of the vent may result from digestive disorders, due oftentimes to lack of green food and failure to exercise.

Consumption.—Wasting and weakening of the body may be accompanied by foetid diarrhoea. The breathing may be somewhat rasping, and there is paleness of the comb and wattles.

Corns.—Hardened and thickened cuticle of the sole of the foot; due to narrow perches, alighting from high perches on hard floor, pressure of embedded pebble.

Crop-bound.—Impaction and enlargement of the crop from gorging or stoppage.

Depraved Appetite.—Gorging with food, or swallowing substances unsuitable to the digestive tract, causing indigestion or stoppage. May result from lack of grit.

Diarrhoea.—Looseness of the bowels, caused by sudden chilling or digestive disorders.

Diphtheria.—See roup.

Dysentery.—Excessive and persistent diarrhoea, due usually to filthy food or drink or foul conditions.

Eczema.—White pimples show on wattles, increase in size, run together, discharge, and become crusted.

Enteritis.—Inflamed condition of the mucous lining of the stomach and intestines, resulting in acute diarrhoea, and caused by poison, internal parasites, over-heating, fermented food, condiments, filthy drinking-water; especially liable to attack growing chickens and moulting fowls.

Eversion.—Protrusion of the inflammed oviduct from the vent may result from straining in laying an egg which is malformed, extra large, or broken within the oviduct or cloaca.

Fatty Deeneration.—Fatty particles taken the place of the cell tissue of internal organs. Fowls become heavy and sluggish.

Frost-bite.—Freezing of comb and wattles shows in stiffness and purple color of the frozen part, which later turns black, and finally drops off.

Gapes.—Due to irritation of the windpipe by parasites. Bronchitis may cause gaping.

Gastritis.—Loss of appetite, constipation, ruffled feathers, drooping wings, emaciation, exhaustion, due to inflammation or catarrh of the stomach

Hepatitis.—Loss of appetite, sluggishness, pale yellow skin over the abodmen, and diarrhoea; may show inflammation of the liver.

Inflamed Oviduct.—Irritation of the oviduct may cause straining, rubbing of the abdomen along the floor, ruffled plumage, stupor, and paleness.

Jaundice.—Excess of bile, resulting from excess of grain food, may even cause a greenish stain to show through the walls of the abdomen.

Leg Weakness.—Staggering gait, flapping of wings to aid in walking, moving along on the hocks, squatting while eating.

Peritonitis.—Failure to eat, restlessness, abdominal pain and heat.

Pip.—A dry scale forms on the tongue, due to breathing through the mouth because of other diseases.

Pneumonia.—Panting for breath, crackling sound in the air-cells of the lungs; effect of sudden exposure to cold and damp conditions.

Poisoning—Salt, nitrate of soda, arsenic, lead, copper, phosphorus, may poison fowls.

Roup.—Discharges at nostrils and mouth, frothy or running eyes, swelled head, offensive breath, canker spots, difficult breathing and swallowing, loss of sight, exhaustion, are some of the signs of this scourge, which attack fowls especially when they are subjected to exposure to extremes of heat and cold, dampness, foulness, filthiness, and neglect.

Tuberculosis.—Wasting, fever, and sometimes diarrhoea are the exterior signs which may accompany the internal work of the tubercle bacillus.

Vertigo.—Giddiness, staggering gait, walking in a circle, slight convulsions, throwing of the head up and back or to one side, are signs of a rush of blood to the brain, with, possibly, a slight hemorrhage; especially liable to affect old and very fat fowls.

Worms.—Internal parasites; prepare the way for several diseases.

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage. Address all communications to EVANGELINE, Port Williams Station, N. S.

The Return.

After long following of stranger faces
By untried hills and over fretful foam,
After long wandering in alien places,
Tonight I sleep at home.

Tonight the old house opens tender arms
To draw me in to its breast,
While, slow, a throng of scarce-remembered charms
Weaves me a spell of rest.

Ah, nowhere else in all this world can dark,
Come down so velvet-footed through the air
And spread its quiet tent, to dim to mark,
In all the world, nowhere!

With slow, reluctant colors in the west,
And spires outlined against the light afar;
Crown like upon a lonely cedar's crest,
The Jewelled evening star.

Distant, a truant cow-bell, lost and late,
With soft reiterated silver wo d,
Faint in the nesting-tree beside the gate,
Croon of a drowsy bird.

I shall lie down in an old, brooding room,
On restful pillows fashioned for my head,
And watch with drooping eyes amid the gloom
Dear shadows by my bed;

And breathe awhile the faint, familiar breath
Of dew-wet garden roses, half aware
Of murmuring voices in the hall beneath
And soft steps on the stairs.

Dear God of sleep, make me forget tonight
The way I came, the world I learned to roam;
Let me be dreamless till tomorrow's light
Wake me again at home
—Youth's Companion.

Miss Slimmens's Boarding House.

(Continued from last issue.)

How soon? About a week, if I can get the dress-maker to hurry up my things. I shall ruffle the white muslin myself. I guess I've been out of the millinery business so long there won't be any odor of brimstun follow me to Newport. I intend to pass myself off as a young lady of leisure, of only the most literal pursuits, who inherited my estates in Pennyville by contract. I wish I knew some agreeable person who was going along at the same time; I'm such a timid creature, and shall feel so unprotected in the cars. I sha'n't sleep much of nights till I'm ready, and the start is over; I feel so flustered at the prospect and the hurry and all, my nerves are quite unstrung. Taking that exterminator was one of the worst things I ever done. I shall send, to-night, by express, to Boston, for a new set of curls and braids, and—shut the door, Dora, please—and I've nigh about concluded to order a wig, and done with it. I think that poison took the color out of my hair, its certainly getting gray. I might color it, of course, as I've been doing for several years; but it's so thin and harsh. A nice, thick glossy wig of shiny false hair would be better, and not half the trouble. Only don't tell anybody; for I wouldn't have it get to Mehitable Green's ears for a fortune. I pulled her's off once, you remember, and I've no doubt she's waiting for me to get to wearing one, to return the complement.

You'd like to know what I received in that box that came from Boston, by express this morning? I've no objections to satisfying your curiosity, Mr. Little, nor that of any of the gentlemen who I see before me, gathered round the convivial board. That box contained ruches to sew round the flounce of the white tarletan you saw me making; which accounts for its being so light. Hey? What's that you remarked? A "preverse and wig-ged generation!" You ought to be ashamed of yourself, George, punning upon Scripture—hadn't he, Mr Bethuen? You don't intend to insinuate I'd tell an up and down wrong story about a trifle.

"'Trifles light as air,
Are, to the jealous, confirmation strong
As proofs of Holy Writ.

Oh, George! clear out with you! You're the greatest pest and bother that ever sat down to a boarding-house table. Dora, if you don't put a stop to his nonsense, I'll have to take him in hand myself. What's that?—

"With all my 'alse, you love me still."

He! he! Well, a body might as well stop a mill-race as to stop your propensity for quizzing, only I trust the rest of my family will not take your insinuations in earnest. How? There goes Mehitable Green, and you must overtake her, and inform her of the arrival of a box of Russians from Boston? If that fellow hasn't actually caught his hat, and ran! Do you suppose he really intends to tell her anything, Dora? Only wants to tease me?_ He'll be the death of me yet, with some of his practicing jokes.

Have you any objections to my occupying this vacant seat, sir? The cars are so crowded and I am impelled to sit by somebody, and I have selected you because I feel certain you are a clergyman—now, have I not guessed aright? Oh, I judge by your white cravat, and your general appearance, sir, but mostly by your countenance; your countenance speakes for itself. I am a great observer of physiology; I flatter myself I can read a stranger at glance. The study of the human face devine is my particular fort, and brief as my experience with mankind has thus far necessarily been, I am seldom mistaken in my judgments. To New Port for my health, sir. And as I am impelled to travel without an escort, I have taken the liberty of placing myself under your temporal protection for the period of our mutual journey. I shall not undertake to explain, even to myself, the feelings which prompted me to select you out of all these people. There are mesmeric mysteries on earth which I seek not to unfold; I simply resign mysely to their guidance. Your clerical air, doubtless, had somewhat of an influence; but that was not all, I am certain that was not all.

Married? Not yet; time enough for that yet, sir. I've ever been opposed to early marriages, which has induced me to refuse the offers I have thus far received; though I feel that I am now arriving at an age when it will be safe for me to make a choice. Yet, while not a believer in early marriages, I have ever been a believer in love at first sight. What is your opinion upon that much-disputed topic, if I may make so free as to inquire? Have you never yet realized the sensation experienced by the poet, when he says, "Oh!—" mercy! how terrified I was! I thought there had been a collusion, certainly, there was such a jolt. Excuse me for the unpremeditated manner in which I threw myself into your protecting arms. I knew not what I was about until I felt your breath fan my cheek, which revived me from my trance of terror. I'm excessively timid; the wild fawn of the forest cannot be more so. I am afraid I mussed your shirt bosom, sir I aught never to attempt to travel alone.

What were we conversing about? You are right; it was about love at first sight, and you had not yet given me your opinion. You are a firm believer in it? I knew you was; I could tell it without asking. Is it not curious that I, clinging as I am, have never yet beheld the being in the shape of man to whom I should be willing to yield up my affections?—that is, never until recently—indeed I may say quite recently—within an hour. My retired and thoughtful life has been mostly given to meditation, music and poetry, and to the dispensation of that fortune which was mine into the channels of benevolence. Like the sensitive plant, I have shrunk from the touch of man. What! do you really get out at the next station? Then we have only to meet to part. I feel as if this was hardly to be the terminus of our acquaintance, so pleasant upon my side at least. Ah, thanks! you flatter me. You are sure you are the greatest gainer by our meeting? Perhaps you will not object to an interchange of cards; here is mine with my address in full. Providence may again throw us together. If you should be in Newport during the next two weeks, I shall have the pleasure of renewing our delightful intercourse. Ah! the cars progress more slowly—they pause. And must you go? I am much obliged to the protection you have offered a sensitive female. Farewell, till we meet again.

Baggage? Yes, lots of it. S'pose a lady is going to Newport without any baggage? I've six trunks and all of 'em packed tight. Want my checks, do you? Sure you're the check man? I'm not to be imposed on, if I am a female; I've been to Boston before. Oh, I've no doubt it's all right. Here they are in my pocket. But great goodnes, where's my purse? I've lost it, for it isn't in my pocket, and I felt it there only a little while ago—just before that gentleman left me, at the last station. He must have stolen it; nobody else could have done it, for it was on the inside next to him. And he looked so genteel and benevolent! What? A regular swell? Thought I might have known? I didn't—oh, I didn't! I thought he was a clergyman. Fifty dollars gone,

Women Who Suffer

from woman's ailments are invited to write to the names and addresses here given, for positive proof that Lydia E. Pinkham's Vegetable Compound does cure female ills.

These women are only a few of thousands of living witnesses of the power of Lydia E. Pinkham's Vegetable Compound to cure female diseases. Not one of these women ever received compensation in any form for the use of their names in this advertisement—but are willing that we should refer to them because of the good they may do other suffering women to prove that Lydia E. Pinkham's Vegetable Compound is a reliable and honest medicine, and that the statements made in our advertisements regarding its merit are the truth and nothing but the truth.

out and out! Ha! the greatest gainer by our meeting, indeed? I shouldn't wonder. It's a mercy I didn't have all my money in my pocket; I'd sense enough to put the most of it in my bosom, pinned and sewed to my stays. Fifty dollars, hard-earned cash, and all my susceptibilities thrown away besides! Fifty dollars! That'll cut just so much off my stay at Newport, for I sha'n't spend a cent more than I laid out to. It's too bad! I'll renounce him—I'll renounce him to every police-officer in Boston. I'll leave a full description of his person at head-quarters. I'll offer a reward for his reprehension. Yes, I'll give a hundred dollars for the pleasure of confronting him in a court of justice, and being the means of consigning him to the State's prison. I'll make it my first business to go to the telegraph office, and have him telegraphed for. It's a burning and a crying shame when an unprotected female cannot travel upon an American railroad without running the risk of being robbed by genteel-looking men in white cravats. It's bad enough being smashed up pitched down precipices, but to be robbed every step by the nicest-looking— My watch is gone, too! broke right off from the chain! O dear, I believe I shall turn round and go home, I feel so sick and disheartened! I would not have parted with that watch for a hundred dollars. Here we are in the depot. Policeman! policeman! here! show me the telegraph office right away, and take my disposition. I've been robbed—shamefully robbed! O dear, if my journey begins in this way, I don't know what it'll end in! I only hope the detecting officers will secure that villain.

Describe him? Picture to yourself a wolf in sheep's clothing, going about seeking whom he may devour—a—I must be more identical, must I, in my description! Well, then, a black coat and a white cravat, and a large diamond on his left finger, and a pious-looking mole on the left of his nose, and a sanctimonious voice, and a meek look of the eyes, and black whiskers, and a ministerial air, about six feet tall, with small feet and a modest smile. Think you know him, do you? Famous gambler and pickpocket? O my! and to think that I sat beside him, that I confided in him, that I gave him my card! Only to think, me, Miss Slimmens, of Pennyville, giving my card to a gambler and a pickpocket! Humph!

(Continued next issue.)

A Thanksgiving Thoughi.

So much has been said concerning the prosperity of farmers that apparently all has been told, but the farmer's wife is a subject rarely touched upon, and one that is most worthy of mention. She is usually a good-natured, hard-working woman who has spent the best days of her life in a small house with no conveniences, surrounded by half a dozen healthy children who were a constant demand upon her energies and patience. Indoors and out alike, she has ever been at the head, engineering and overseeing less competent heads and hands. So, ever faithful, seldom fretful, rising early and retiring late, she has passed the meridian of life. When she begins to descend the western slope, may her journey become less arduous, and may she taste some of the good things of this life which after years of ceaseless toil have at last fallen to the lot of her prosperous farmer husband. May those boys and girls, now grown to manhood and womanhood, not forget whose hands toiled and persevered that they might become educated and honored citizens of this great country. May they not forget that "mother" herself was once young, and had the same dreams, the same long, long thoughts of youth that now are theirs. May they remember, too, that her dreams never materialized, and that the dreamer's life becomes a stern reality of painfully practical facts, which have hardened the once soft hands and given a tired, careworn look to the once pretty face. And may these children not forget that through it all "mother" has preserved the sweetness and cheerfulness which won the sturdy young farmer's heart and which now makes her doubly dear to those who know and love her.

This good wife and mother has earned a long vacation from hard work and worry, and may she not be deprived of the fruit of her labor. Do not, O prosperous farmer, celebrate your prosperity alone by buying fine stock, building great barns and cowsheds. Let a goodly portion of that wealth fall into the lap of the companion who has stood so faithfully and loyally by your side through dry season and wet, through grass-hopper year and chinch-bug pest. —LOTLIE L. SHELDON in the Farm and Fireside.

Why We Are Stronger.

The old Greeks and Romans were great admirers of health and strength; their pictures and statuary made the muscles of the men stand out like cords.

As a matter of fact we have athletes and strong men—men fed on fine strength making foods such as Quaker Oats—that would win in any contest with the old Roman or Greek champions.

It's a matter of food. The finest food for making strength of bone, muscle and nerve is fine oatmeal. Quaker Oats is the best because it is pure, no husks or stems or black specks. Farmers' wives are finding that by feeding the farm hands plentifully on Quaker Oats they accomplish a double result; the men go to their work with greater vigor and the expense of such feeding is less than with other foods. 2

Many school children suffer from contipation, which is often the cause of seeming stupidity at lessons. Chamberlain's Stomach and Liver Tablets are an ideal medicine to give a child, for they are mild and gentle in their effect, and will cure even chronic constipation. Sold by all dealers.

EATON'S

HANDSOMELY ILLUSTRATED

BIG FALL AND WINTER CATALOGUE

THE LARGEST RETAIL MAIL ORDER BOOK YET ISSUED IN CANADA

VALUES INTENDED FOR YOU

READ HOW TO GET THEM

WE CAN SAVE YOU MONEY, on not only your luxuries, but your necessaries of life as well. Why not give us a chance to demonstrate it? It is easy enough, simple enough and costs you nothing. Send for our Fall and Winter Catalogue to-day. You will get it absolutely FREE and postpaid, as fast as the mails can carry it. Look it over carefully—observe the illustrations—read the descriptions—and last but not least note the prices.

Don't Stop There, however. Make out a list of the things you need, mail it and your money to us. The goods will be shipped with all possible despatch—and when they arrive examine them most thoroughly. If they are not exactly as we have represented them; or if you are disappointed or dissatisfied even in the remotest degree, don't hesitate a moment. Send them back at once and we will exchange them for you, if you so request, or refund your money in full and pay transportation charges both ways.

Isn't this proof positive in itself, that our goods and prices must be right? We know they are right and all we ask is an opportunity of proving it to you.

Our Catalogue will keep you posted on prices

NO REST FOR TERRIBLE ITCH.

Till Oil of Wintergreen Compound Make His Skin as Pure as Ever.

Mr. James Lullock, of the Iron Bridge, Ont., considers the D. D. D. Prescription of oil of wintergreen, thymol, glycerine, etc., a wonderful cure for skin troubles. He has good reason to think so, too, according to his letter of Mar. 27, 1909.

"I have suffered for years," he says, with eczema, and now through using two bottles of your wonderful cure, my skin is as pure as it ever was.

My face was so bad I could not see. I could not sleep. I could not rest at all for the terrible itch.

Thanks to your wonderful medicine I am cured."

As eczema is a germ disease, and as the germs are right in the skin, blood medicines will not cure it. The only effective way is to treat the itch where the itch is. D. D. D. Prescription penetrates the pores of the skin, kills the germ which causes the eczema, gives instant relief from the awful itch and permanently cures.

For free sample bottle of D. D. D. prescription write to the D. D. D. Laboratory Department F. M., 23 Jordan St., Toronto.

For sale by all druggists.

WINDSOR BUTTER SALT
WINDSOR BUTTER SALT
Used by all Prize Winners
The Farmer's Daughter
knows how important it is to use the best salt in butter making.
She knows that WINDSOR BUTTER SALT dissolves quickly and completely, and works in evenly.
She knows that WINDSOR BUTTER SALT makes the richest, creamiest Butter—improves the flavor—helps to make the butter keep better.
At all the big fairs last year, practically all of the prize winners used
Windsor Butter Salt

Agricultural College, Truro, Nova Scotia.

Next Session of Full Course Begins NOVEMBER 2, 1909.

Next Short Course for Farmers and Farmers' Sons begins JANUARY, 4 1910.

Next Short Course in Domestic Science, Dairying, Horticulture and Poultry for Ladies begins JANUARY 4, 1910.

Three hundred [300] students enrolled in the various classes during the past session. A large increase is expected next session.

Tuition FREE to all students from the Maritime Provinces.

A farmer's son attending the College, can take a full course in the various branches of Agriculture, Horticulture, Dairying, Poultry Raising, Veterinary Science, etc., and, at the same time, in English, Mathematics, Book-Keeping, Political Economy, the various Sciences and other lines regularly studied in High Schools and Colleges.

Requirements for entrance are familiarity with farm practice and an ordinary school education. The College is especially adapted to the needs of farmers' sons who have had a poor opportunity to acquire a school education and now wish to improve their knowledge in all lines.

Students completing the two yeer course at Truro can enter the third year at Guelph, St. Anne de Belle Vue or any of the American Agricultural Colleges.

For full particulars apply to,—

DAIRY PRODUCTS.

CLASS 57.—BUTTER AND CHEESE.

Butter—Tub, box or firkin, not less than 50

(Continued on page 44.)

Are you buying your Field and Garden Seeds for 1910, through S. P. GOUDEY, Yarmouth? Read his announcement to Farmers' Associations and Agr. Societies. The best of Seeds suplied at carload prices. Twenty years experience.

POTATOES.

It never pays to rush the fall market in potatoes, especially when Cold Storage is at hand for overcoming the ordinary shrinkage in store. We can quote on straight storage or on bulk receipts, barreled, stored, stowed and delivered to steamer or car, as ordered. Write for our proposition.

The New Brunswick Cold Storage (Limited), 672-690 Main St. ST. JOHN, N. B.

IMPORTANT ANNOUNCEMENT

The subscriber begs to announce that he is in a position to import and supply **FRESH FIELD and GARDEN SEEDS** to any Agricultural Society or Farmers' Association in the maritime provinces, at a small commission.

We import seeds by the carload and have supplied a number of Farmers' Associations for years, giving the best quality of seeds, at carload prices, our commission being only 5 per cent.

Will the Secretaries of Farmers' Associations and Agricultural Societies kindly bring this matter up, at their next meeting and write us for particulars S. P. GOUDEY, SEEDSMAN, YARMOUTH, N. S.

Help for weak aching backs.

Few people reach old age entirely free of Kidney Trouble. That is why so many men and women of 50 and 60 suffer tortures with lame back, aching hands, arms and legs, Rheumatism, irritated bladder and frequent passages at night.

GIN PILLS mean a healthy, hearty old age. GIN PILLS keep the kidneys well and strong. GIN PILLS neutralize Uric Acid, which causes the pain, and soothe and heal the irritated Kidneys.

Here is What Gin Pills Did for One Man, 84 Years Old.

"I am 84, and for 20 years I was in misery from a Lame Back. I tried nearly all the advertised remedies, and household recipes, even sending abroad for medicines, but received no relief. Some months ago, seeing GIN PILLS advertised, I purchased a box from W. H. Stepler, the druggist. The relief experienced after taking one box was so great that I knew that I had found the right remedy at last. I used two more boxes of GIN PILLS, which completed the cure. For twenty years I was compelled to walk with a cane, but now I have laid the cane aside and am as spry on my feet as a cat."

SAMUEL MARTIN, Strathroy, Ont.

Don't run the risk of neglecting your Kidneys. Aching back, swollen hands and feet, sharp, shooting pains through the back and hips, are not "signs of old age." They are signs of weak, irritated Kidneys. They are also signs that you need GIN PILLS.

We have such faith in the curative qualities of GIN PILLS that we will let you try them before you buy them. Write for a sample, which will be sent you absolutely free by return mail.

GIN PILLS are guaranteed to relieve and cure or your money will be promptly refunded. Sold by all druggists and dealers at 50c a box—6 for $2.50.

Dept. M. F. The National Drug & Chemical Co., Ltd., Toronto.

A Strictly Canadian Separator.

It affords us pleasure to draw the attention of the readers of the MARITIME FARMER to the Magnet Cream Separator ad. in this issue. The Magnet is manufactured by the Petrie Mfg. Co., Limited, and is the only cream separator of Canadian origin. There is a great sameness in most separators but the MAGNET is built different than the others. In it you find the bowl supported at both ends, this plan the manufacturers claim prevents it getting out of balance. Its bowl is large with the skimmer in one piece, and is constructed with a view to taking all the foreign matter out of the cream, leaving it perfectly pure. This separator is built on the Spur and Square gear principle and this, together with its original three ball race, makes it easy to operate. The makers claim a boy or girl can turn any MAGNET. The MAGNET has now been on the market for eleven years and its sale has been so large that the makers have found it necessary to increase the factory accommodation four times. The factory (an illustration which accompanies this note) is located in Hamilton, Ont. The main building is 326x90 feet, which, together with three annexes, gives a floor space of nearly one acre, which is entirely devoted to the manufacture of the MAGNET. Warehouse trackage has been secured by the company in nearly every province on which to erect their office buildings. At Regina a fine warehouse was built this year, and the others will be built during 1910. This permanent location in their own warehouse property is a guarantee that all customers will be properly looked after. The company is strictly Canadian and has over half a million dollars in assets. We wish them continued success.

A Fountain Pen for $1.00

This Pen point is solid gold 14k, is tipped with iridum, the hardest metal known, the same as found on the highest priced pens. The pen is the same size that other makers charge $4.00 for. The cut is exact size of pen and holder. We are making a specialty of this pen. It will be mailed to you for a **one dollar bill.** If not satisfactory your money will be refunded. Each pen is fully guaranteed. We refer you to the publishers of this paper.

Farm Problems.

Bloody Milk

F. D., Berwick, N. S.—I have a nice three-year old heifer that calved last October. She is due to calf again in January. She gave bloody milk out of one teat for a few days some time ago. She then got well but a few days ago when I tried to milk her I could not get anything out of this particular teat, until I had manipulated it to some extent, when I finally squeezed out a clot of blood. Then the milk came all right but it was so bloody that it was unfit for anything. She still continues to give bloody milk. What is the cause? What can I do to alleviate the trouble?

ANS.—We occasionally notice a cow giving bloody milk from one or more quarters without apparent cause and without apparent alteration or irritation of the udder. It is not infrequent to notice this occur frequently in the same animal. In such cases it is due to a gongenital weakness of the blood vessels of the udder and while it may be successfully treated its recurrence cannot be prevented; hence an animal subjected to this condition is not valuable as a milker and should be fitted for the the block. Neither is she valuable as a breeder of milkers, as she will probably transmit to her progeny her own weakness. Your heifer may have been injured accidentally, in which case she will get well without treatment. Feed lightly on dry food to check the secretion of milk. Bathe the affected quarter long and often with cold water, and give an ounce of tincture of iron in a pint of cold water as a drench three times daily until blood ceases to flow. Milk regularly. do not allow her to stand in a draughty place or wade in cold water.

How to Train a Collie.

An experienced sheepman and collie owner presents the following excellent advice regarding the training of a collie in a recent issue of the American Sheep Breeder. The suggestions are good and may well be followed by all who attempt the making of a useful dog.

In order to secure the best results with dogs as workers they should be broken by the one who is to handle them. I have one bitch that I have offered to work in competition with any dog in our country, and yet I have never seen her do reasonably good work for anyone else. For some people she will not go a rod. In the first place I would like to know the kennels a puppy was from and would want it when from two or four months old. It should be fed from the hands of its master and should learn to love home.

Never kick or strike a collie. Scold him or pull his ear for punishment. And never call him to you for this. Make him "down" where he is and go to him. If you call him to you, he is liable to suspect you and make a sulky dog. His first lesson should be to "come here." Use it whenever you call to feed him, and he will get into the habit of coming when called. Next teach him to "down" by saying "down" and pressing down with the hand. Be very thorough with this lesson and make him keep his position while you go any distance from him and stay any length of time. He should be taken among the stock from the first and learn to like them.

If you keep him constantly with you he will soon try to help you whatever he sees you doing. By petting and encouraging him when he does right and scolding when he does not please you,

DO not be misled. The only kind of sound-reproducing machine that is perfect is the one that Edison invented and the one that Edison makes.

What you want is an Edison Phonograph

It is the one with the smooth and perfect sapphire point, that doesn't require changing with each record and that doesn't scratch—two points alone that should influence your decision.

Only in the Edison do you find the music-reproducing idea at its best.

Don't take our word for it. Compare the Edison Phonograph with all other instruments side by side, on the same music, if possible, and then you will know better than we can tell you.

Edison Phonographs are sold everywhere in Canada at the same price, $16.50 to $162.50.
Standard Records, 40c. Amberol Records (twice as long), 65c. Grand Opera Records, 85c.
There are Edison dealers everywhere. Go to the nearest and hear the Edison Phonograph play both Edison Standard and Amberol Records. Get complete catalogs from your dealer or from us.

NATIONAL PHONOGRAPH COMPANY
100 Lakeside Ave., Orange, N. J., U. S. A.

"Prince Crawford"
is the most economical range built to-day.
The flues are constructed so that the smoke and heated gases have to travel twice around the oven. All the heat intended for cooking is retained in the oven and cannot escape up the chimney
The "Prince Crawford" requires only one-half the fuel of ordinary stoves.
The tops are polished like glass before being blacked. This will make them easy to keep clean and in perfect order.
All nickeled parts are easily detachable for cleaning. The "Prince Crawford" is made without elevated closet or without reservoir if so desired. We furnish any nickeling you may wish. Ask for illustrated catalogue.

FOURTEEN POUNDS IN TWO MONTHS

Remarkable Gain Made by Terra Nova, Cape Breton, Woman

"Father Morriscy's No. 10" (Lung Tonic) has wrought some wonderful cures. Here is a typical case, as described by the patient herself:

"During the Fall of 1906 I contracted a severe cold, which settled upon my lungs. After being treated by two physicians of high standing my condition was not any better, but in fact getting worse. My friends began to have serious doubts about my recovery.

I had heard of Father Morriscy's remarkable career as a medical adviser, and wrote to him explaining my case. In a few days I received an encouraging letter from him, and some of his "Lung Tonic," and immediately I began to improve, gaining fourteen pounds in two months.

I strongly recommend his "Lung Tonic" for Colds and any form of Lung Disease."

Yours sincerely,
ANNIE McDONALD.

The Song of the Woodpecker.

Running along with a ceaseless song,
The Woodpecker runs the whole day long;
A little gasoline, some water and air
Is all he wants for his bill of fare.

II.

He never complains of a pain or ache,
But labors along for his master's sake;
He will saw your wood and grind your feed,
And thresh your wheat of chaff and weeds.

III.

He will pump your water and run your lathes,
You will count the money he always saves;
He wants no pay, this gasoline knight,
The Woodpecker works because he is right.

IV.

he will soon do as you bid him. But remember "licking" spoils more collies than all the other things combined. Never try to teach but one thing at a time and have that well learned before you try to make him learn another. Patience and perseverance will make a good work dog of any bright and well-bred dog.

Floor for Horse Stable

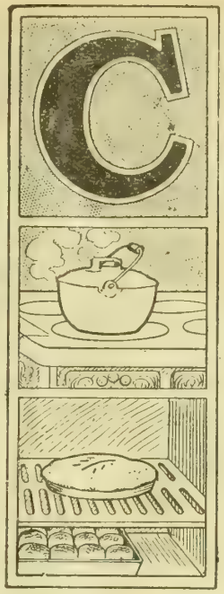
The best floor I have ever seen is one we use in our stable. It is made of clay and gravel, two parts to one of gravel. It is cool, cheap, easy for the horses feet, and will last indefinitely.

To make it, procure the thickest, toughest clay possible; we use blue clay, and clean, rather coarse gravel. Mix together in the proportions named, and wet and pound up until a thick mud, put in not less than six inches thick, and pound or puddle until all the air is worked out, then leave until it begins to dry so as to be hard enough to ram down with a rammar, made of the end of a log, six or eight inches in diameter, and 18 inches long with a handle.

Ram in every day or two until dry and firm. It will then be nearly as hard as cement, but will be more elastic than a plan, and the feet will not dry up when standing on it, as they will when on plank. If well bedded, the horses will not paw holes into it, but if they do the holes can be quickly filled with some of the same mixture; and that rammed down, when the floor will be as good as new.—J. S. WOODWARD.

Fertility in Sheep.

A good many farmers disapprove of the old adage about breeding from twins, holding the opinion that one lamb is as many as a ewe can rear well; but the yearly-increasing necessity to obtain a greater return from their land will compel them to change their practice. The production of twins is not a matter of chance; it is a well-established law of herdity. Sheep breeders who have received the strongest of their lambs, ram, and ewe, for breeding purposes, disregarding this point, have found their percentage of lambs dwindle until it has fallen below par (there are few flocks without a greater or less number of barren ewes). On the other hand, certain English flock-masters who have made a practice of selecting for their breeding flocks sheep which were twins have thereby cultivated the prolific quality to such a degree that they have a regular lambing of 200 per cent, and their lambs and adult sheep are as profitable as those which were "singles." Thus fecundity has been most successfully developed in some of the Down breeds or varieties, and has no doubt assisted in a great measure to gain them the great popularity as profit-earners which they enjoy amongst sheep farmers. Along with the proclivity for "winning," there has been also developed the ability of the ewe to rear her twins well—to convert the food which is provided for her into abundant milk for her lambs. The farmer, too, has acted his part in the scheme of evolution, by discovering and cultivating the crops which will be of the greatest value to his ewes and lambs. In a word, the system of sheep-breeding and sheep-farming has in regard to several breeds made a great advance in the direction of larger returns, and there is evidence that owners of flocks of some of the white-faced breeds are aiming at the same object. Border Leicester breeders, it is pleasing to know, are included in the latter category, and an instance that the quality of this most useful breed is not suffering from the process is found in the 280-guinea ram which Mr. Thos. Little, of Ngapara, bought in Scotland a year ago, and its twin brother, which also came to New Zealand, after winning the highest honors at home. The present owners of those sheep deserve to reap equal success with the breeders, and with the extending use of the Border Leicester in farm flocks there may grow up a more prolific race of sheep than is at present general. On hill country, however, at present, one lamb is as many as a ewe can do justice to, the feed in such situations being as a rule somewhat sparse, but improvement of hill pastures is one of the most important points in the development of the pastoral resources of the Dominion, and as it is attained so can the fertility of the flocks be increased.—Otago Witness.



Cooks on top of the stove, bakes in oven at same time

You can cook over every pot-hole and bake in Pandora oven at same time—and get perfect results. That's because cooking draft is also baking draft. Flues are so constructed that heat passes directly under every pot-hole and around oven twice before passing up chimney. No wasted heat—instead fuel does double duty, saving Pandora owners both time and money. 19

Would you not like to be a Pandora owner?

More bread and Better bread
—And the Reason for it

A STRONG FLOUR can only be made from strong wheat. Manitoba hard wheat is acknowledged the strongest in the world—and that is the kind used for Purity Flour.

But that's not all. Every grain of this wheat contains both high-grade and low-grade properties. In separating the high-grade parts from the low-grade the Western Canada Flour Mills put the hard wheat through a process so exacting that not a single low-grade part has the remotest chance of getting in with the high-grade.

Of course this special process is more expensive to operate but it means a lot to Purity flour users—that's why we use it.

It means that Purity Flour is made entirely of the highest-grade flour parts of the strongest wheat in the world.

It means a high-class, strong flour and therefore yields "more bread and better bread."

Purity may cost a little more than some flours, but results prove it the cheapest and most economical after all.

RATHER STALE BREAD.

"What! a loaf of bread over 1,800 years old? Nonsense!" Well, my friend, there is no nonsense about it. You can see several of them in the Royal National Museum, at Naples burned black like carbon, or charcoal. They were found in the ruins of Pompeii, a city that was buried by an eruption of hot, fiery ashes from Mount Vesuvius in the year 79. No one could eat this bread, although carbon is the element in our food that promotes heat in the body.

When Indigestion prevails, your food does not nourish you and you have headaches, poor blood, constipation, dizziness, and other ills. Mother Seigel's Syrup, the sure herbal remedy cures all these ills. Mr. Burton Shortliffe, Central Grove, Digby Co., N.S., writes:—"I was troubled with Indigestion for a long time and found no medicine to give such immediate relief as Mother Seigel Syrup. For Indigestion and all Stomach Troubles it is a grand remedy."

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad. as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, Sussex, N. B.

SINGLE COMB BROWN LEGHORN COCKERELS—$1.00 each, ROCKWOOD POULTRY YARDS, St. John.

WANTED.—One Chester boar, from 6 to 8 months old, weighing about 160 lbs.—A. J. NICHOLSOM, 205 Kempt Road, N. S.

WANTED.—A capable general servant, fond of children. Wages $12 a month to start with. Apply MR. P. F. BLAUCHET, Rothesay, N. B.

FOR SALE, CHEAP.—One two horse treadpower, slightly used; as good as new. Write J. D. FRIER, Sussex, N. B.

ALL kinds of books on Poultry, Pigeons, Rabbits, Pheasants, Horses, Cattle, Farming Gardening, Bees, Fruits, Flowers, Vegetables, etc. Catalogue free.—MORGAN'S POULTRY SUPPLY HOUSE, London, Ont.

PRINTING.—Letterheads, $2.00 per thousand, up. Envelopes, $1.50 per thousand, up. Special facilities for stock breeders' supplies. Cash with order.—MARITIME PUBLISHING CO., Sussex, N. B.

Don't Judge a Roofing
By Its Looks

On the surface, most ready roofings look the same.

But the weather finds the hidden weakness.

The weather finds the vegetable fibers in the fabric and rots them.

The weather finds the volatile oils which are concealed below the surface. The sun draws these oils, in globules, to the top of the roofing, where they evaporate in the air.

Where there was a globule of air, there remains a hole. And behind each hole is a tiny channel which lets the weather and water into the very heart of the roofing.

When the sun and the wind and weather have sought out the hidden weaknesses, the roofing is porous, instead of solid; watersoaked, instead of waterproof.

You can't tell by looks, which roofing will last twenty years, and which will go to pieces in a single summer.

Seventeen Years of Service

But you *can* do this: You *can* tell the original Ruberoid roofing—the only roofing which *has* lasted seventeen years—from the 300 substitutes which have proven their unworthiness.

Ruberoid was the first ready roofing. Its basis is the best wool felt impregnated with Ruberoid gum.

It is this wonderful flexible gum which no other maker can duplicate.

It is this gum which gives Ruberoid all the flexibility of rubber without containing an iota of it. It is this gum which withstands wind, weather, sun, fire, acid, gases and fumes, where all other compounds fail.

It is this gum, in the Ruberine cement which accompanies each roll of Ruberoid roofing, which makes ours practically a *one-piece* roofing—sealed against leaks—sealed against the weather.

Ruberoid comes plain and in colors. The attractive Red, Brown and Green Ruberoid are fine enough for the costliest home. And the color feature is exclusive—protected by patents.

In the past twenty years we have had experience not only with all ready roofings, but with other roofings—shingles, tar, tin, iron and other roofings.

We Test All Roofings

Each roofing we have exposed to the weather test, on our roof garden at our factory.

The result of these twenty years of tests we have written into a book which will be gladly sent you free.

This book is a gold mine of roofing information, telling about the advantages and disadvantages of each roofing for each purpose. To secure a copy, address Dept 103 The Standard Paint Company of Canada, Ltd., Montreal.

RUBEROID
(TRADEMARK REGISTERED)

Be sure to look for this registered trademark which is stamped every four feet on the under side of all genuine Ruberoid. This is your protection against substitutes which many dealers brazenly sell as Ruberoid. Ruberoid is usually sold by the one dealer in town. We shall tell you the name of your Ruberoid dealer when you send for our free book.

The Standard Paint Company of Canada, Ltd., Montreal, Canada

The Bovine Tuberculosis Problem.

By A. R. Ward and G. M. Haring.

BOVINE tuberculosis is a menace that no stock raiser or dairy man can afford to ignor. There is no problem confronting agriculture to-day of more fundimental importance than that constituted by this disease.

Tuberculosis shortens the life of cows. Exact data on this point is not available, but we have a statement of an experienced San Francisco dairyman that tuberculosis shortens the average productive life of cows by one half. It unquestionably reduces the efficiency of a herd as a machine for producing milk from feed When its existence may be detected, the market value of the animal is obliterated, and the reputation of the breeder of fine stock is injured by general knowledge of its presence in his herd,

Tuberculosis saps the profits of the cattle business by rendering beef unwholesome for human food. The extension of the practice of thorough meat-inspection is gradually closing the avenues for the profitable disposal of animals seriously affected with tuberculosis.

La Chasse Foxey

Champion Jersey bull at the 1909 Halifax Exhibition, owned by Glen View Farm, Sussex, N. B. The various animals in the Glen View herds are annually subjected to the Tuberculin Test. F. G. Hall, V. S., of Amherst, who officially tested the herd recently did not find a single reacting case. This is a good record for so large a herd, nearly fifty head.

The losses to animal industry from bovine tuberculosis are not confined to cattle. Many hogs are fed on skim milk in connection with the dairy business, and in the Middle West hogs "follow" beef cattle. Both result in the dissemination of tuberculosis among hogs to an alarming extent. In 1905 the United States Department of Agriculture inspected 25,357,425 hogs post-mortem, condemning 64,919 carcasses and 142,105 parts.

The importance of bovine tuberculosis, as an economic problem in agriculture, has too frequently been clouded by a discussion of its public health aspects. The incentive for combating the disease has too often come from the health officer. Many dairymen have gathered the impression that the general acceptance of the view that bovine tuberculosis is not a menace to public health would end their difficulties with tuberculosis. The disease will be with us, even if the scientific world does finally agree that the menace to public health from the milk of tubercular cows is slight.

There is no abatement of the demand that milk be produced by healthy cows. Studies of the subject during the past eight years have augmented the evidence that tuberculosis of cattle is transmissible to man. To what extent, is a subject of discussion only. Whether this is eventually shown to be great or small, we shall have the demand, on the ground of sentiment at least, that milk be produced from healthy cows. At the present moment we are witnessing a marked revival of the demand that milk be sold only from cows that have been shown free from tuberculosis by the tuberculin test. The tuberculin-test ordinances in operation are creating a demand for healthy cows. One of the greatest obstacles to their success is the lack of "tested ' cows with which to supply the deficiency brought about by the enforcement of the tuberculin test. This gives tested cows a higher market value.

During the past four years we have made tuberculin tests of dairy cows in the various counties of the San Francisco Bay region and in the Sacramento and San Joaquin valleys. In all, 1,976 tests have been made, of which 453 (22.9%) showed reactions. Only four herds, the largest consisting of 39 cows, were free from tuberculosis. A much smaller proportion of isolated cows were affected than those in herds. Of 71 animals, isolated, or in groups of five or less, only 6 (8%) reacted.

A more accurate statement of the prevalence of tuberculosis, as shown by our experience, would be one compiled from results of the tests of whole herds the first time that they had been tested. In this case the figures show 1,022 animals tested, with 326 condemned (31.9%). Tuberculosis was found in 82% of the herds tested.

Few of the herds were particularly suspected of harboring tuberculosis, and most were tested during routine inspections under the auspices of municipalities. They are in the aggregate representative of the dairy cattle producing milk for city trade in the region designated. It should be emphasized that most of these cows were in dairies supplying market milk. The conditions of this branch of the dairy business require that a uniform amount of milk be put out at all seasons. This necessitates the frequent purchase of fresh cows, with the consequent increase of opportunities for the introduction of tubercular infection.

THE CONTROL OF TUBERCULOSIS.

Unfortunately, but unavoidably, the early efforts to eradicate bovine tuberculosis were undertaken without a full appreciation of the magnitude of the problem. It was thought that after testing all of the cattle in the suspected herds, killing a few, and disinfecting the stable, the disease would be exterminated. Many dairymen, without compulsion, made honest efforts in this direction. When owners began to experience great losses from the destruction of tubercular animals, the scheme of compulsory testing, with indemnification by the State, was introduced. With the funds that it has been possible to get from legislatures the work has made pitiful progress as compared with the magnitude of the task. With few exceptions, tuberculosis has succeeded in keeping pace with the puny efforts directed against it. At present, State effort to control tuberculosis is largely confined to those herds where the owner voluntarily submits to the testing of his herd and agrees to co-operate by taking measures to keep his herd clean.

As long as bovine tuberculosis was considered as a public health problem purely, without regard to the financial interests of dairymen, there was a disinclination on the part of the owners to face the facts. The increase of the disease among the cattle in this country, and the better knowledge of its nature, is resulting in a change of attitude. The more progressive breeders and dairymen are appreciating the fact that tuberculosis is an unnecessary and unprofitable adjunct to the business, and many are inquiring about methods of freeing their herds However, the importance of controlling this disease is as yet inadequately appreciated by the great majority of the owners of live stock. As long as the breeders are content to ignore the presence of the disease and make no effort to combat it systematically, just so long will this plague continue to thrive. We heartily agree with Dr. D. E. Salmon, late chief of the Bureau of Animal Industry, who says, "A disease so widespread can not be controlled unless those most interested in the live stock of the country give active support to the undertaking. It is, therefore, wise to examine the subject in an unbiased manner; study carefully the nature of the disease; to learn as nearly as possible what the losses are; to what extent these losses are liable to increase, and whether measures of repression are or are not advisable. It is not a question of sentiment, but one of fact, and should be examined as a business proposition."

The possibility of eradicating bovine tuberculosis from herds is a fact dem-

onstrated beyond all question. Its successful accomplishment, however, requires the thorough mastery of the principles governing the spread of the disease. We believe that the dairyman must obtain this information and act upon it in the conduct of his business. This is indispensable whether State aid is available or not. To that end we have prepared this circular to describe methods which have been successful in eradicating tuberculosis from dairy herds.

In the application of any methods for the eradication or prevention of tuberculosis, certain important characteristics of the disease should constantly be borne in mind.

ITS SPECIFIC NATURE.—Tuberculosis does not develop spontaneously. The cause of the disease is the bacillus of tuberculosis, which exists only in the bodies of tubercular animals and their excretions, or in substances contaminated by them. In-and-inbreeding can produce it. Dark, filthy, badly ventilated stables, poor food and crowded conditions may contribute to its rapid spread among cattle, but the disease does not originate in an animal, no matter how bad its environments, unless it is exposed to the disease virus.

ITS INFECTIOUS NATURE.—Tuberculosis is most readily communicable. This point, in connection with the first, can not be too strongly emphasized. The disease results from the association of tubercular cattle with healthy ones, and under such conditions will spread in spite of every sanitary precaution. It is a mistake to assume that the disease can not thrive and multiply among dairy cattle kept under ideal conditions. The invigorating influence of fresh air and sunshine, wide, well-watered pastures, well ventilated, ideally constructed, immaculately clean barns, and abundant and well-balanced rations will not stop its spread. It is among some of the best kept herds that the disease has been found to be alarmingly prevalent. Contact, direct or indirect, is the chief way in which the disease is disseminated, but calves frequently contract the disease from the milk. Calves and hogs fed on milk from tubercular cows soon become infected. The disease has become, in the last few years, common among hogs, not only in California, but elsewhere. Many things point to the fact that they contract the disease from the milk and droppings of cattle, and not from one another. In a pig, the disease usually develops more rapidly than in a calf. Professor Russell, of the Wisconsin Agricultural Experiment Station, has pointed out that although the disease is usually spread from herd to herd by the purchase of tubercular animals from which others of the herd gradually become infected, the relative rate of the spread of the disease by association is not as rapid as the rate of the spread produced by the feeding of highly infected milk to calves.

RATE OF DEVELOPMENT.—Different individual animals exhibit the widest variation in the duration of the disease. In the majority of animals the disease pursues a leisurely course, consuming years before causing death. Others develop a rapidly fatal type. Its onset is always unobtrusive, and its progress so gradual that its presence does not inspire apprehension. Losses are so evenly distributed in point of time that they do not excite serious alarm, as do other less destructive diseases of the pestilential type, which kill many suddenly.

RECOGNITION OF TUBERCULOSIS.—The disease is manifest after death by the presence of tumor-like nodules (tubercles) in various parts of the body. These tubercular masses of long standing undergo changes resulting in the formation of purulent, or cheesy material sometimes permeated with gritty particles of lime.

"The presence of the disease is seldom manifest until the development of the tubercles is so great that their presence interferes with the duty of some vital organ. Rough, hard skin, staring coat, emaciation, chronic bloating, roached back, and dropping head only appear in acute or very advanced cases. Coughing is not necessarily an indication. This symptom is usually absent even when the disease is in an advanced stage, and, on the other hand, non-tubercular animals occasionally are troubled by constant cough. Animals in prime condition may be badly infected, and be quite as dangerous in spreading the disease as those which show the symptoms. A very small percentage of the seriously diseased animals can be detected by a recognization of symptoms. In testing a group of about 308 cows, we condemed 64 as tubercular, on the basis of the tuberculin test. Only 9 showed physical signs of tuberculosis. This observation emphasizes the fact that a physical examination is useless in recognizing any considerable percentage of the tubercular animals in a herd.

"Substantial prgress in the control of tuberculosis depends upon our ability to unerringly ascertain the existence of any stage of the disease in an individual, as a guide to measures for the prevention of its spread. The tuberculin test does this, and its discovery opened the way to the successful control of tuberculosis. It is a regrettable fact that the phrase "tuberculin test" in the minds of dairymen stands for various systems of compulsory slaughter of cattle, and that it is not esteemed as a discovery of inestimable value to the dairy industry. Its compulsory use, accompanied by a wholesale slaughter of animals, has given origin to a host of misconceptions and misrepresentations regarding its accuracy that will hardly be lived down in a generation. In answer to various criticisms. Dr. D. E. Salmon has summed up the accuracy and safety of the tuberculin test as follows:

From the investigations and observations that have been mentioned, it may be safely concluded—

(1) That the tuberculin test is a wonderful accurate method of determining it an animal is affected with tuberculosis.

(2) That by the use of tuberculin, the animals diseased with tuberculosis may be detected and removed from the herd, thereby eradicating the disease.

(3) That tuberculin has no injurious effect upon healthy cattle.

(4) That the comparatively small number of cattle which have aborted, suffered in health, or fallen off in condition after the tuberculin test, were either diseased before the test was made or were affected by some cause other than the tuberculin.

The test is simple in its application. It consists in taking the temperature of the animal with an ordinary clinical thermometer several times to determin its normal, injecting the tuberculin with a hypodermic syringe, and then taking the temperature at intervals of two hours between the eight and eighteen hours after the injection. Any one with intelligence enough to run a dairy profitably should be able to psrform the labor of the test in a competent manner. The animals should be kept under favorable conditions, and care needs to be taken to record accurate temperature readings. In interpreting the temperature records a careful consideration of the conditions under which the test is made and a knowledge of the sources of error is necessary.

Picking Cherries at Hillcrest Orchards, Kentville, N. S. Crop for 1909, 13,000 Boxes.

TESTS BY OWNER.—The work necessarily has been and must be carried on by those having some knowledge of veterinary science. However, we do not go to the extreme of insisting that the persons performing certain details of the test shall be trained veterinarians. Any intelligent dairyman who will make a little effort to familiarize himself with the test and its limitations can use it on his own cattle with good results. It is only through the cooperation of breeders, dairymen, and vetrinarians that there is hope of immediately improving the extremely undesirable conditions which at present exist. When the majority of the dairymen understand the use of the test and the importance of isolating diseased animals, there will be far better prospects of eradicating the disease than if skilled veterinarians are considered indispensable. The expense of employing a professional to perform every detail of the test, is not only often prohibitive, but in many localities no qualified licensed practitioner is available.

WHAT IS TUBERCULIN? Tuberculin is prepared from glycerinated bouillon in which tubercle bacilli have been grown from six to eight weeks. The bouillon culture is first boiled for two hours to kill all the living organisms. It is then filtered under pressure through a germ-proof earthenware filter to remove the dead bodies of the germs, concentrated by evaporation, a little carbolic acid added, and it is then bottled for distributation. Its injection into cattle affected with tuberculosis is followed from ten to sixteen hours by a rise of temperature, which lasts several hours, and gradually declines to normal. We find no evidence that it causes an increase in the rapidity of the progress of the disease of animals already affected with tuberculosis, or that it is injurious to them in any other way. It does not even temorarily injure the quality of the milk. It may be obtained through druggists or through the Veterinary Director General, Ottawa.

SYRINGE.—A veterinary hypodermic syringe of at least 6 cc. capacity, such as is commonly used to inject liquid vaccine, is necessary. The same should be provided with a number of short, stout needles, well reinforced at the base.

THERMOMETER.—At least two fever thermometers will be needed, and where more than five animals are to be tested a larger number should be provided. Guaranteed clinical thermometers can be purchased at any drug store. A string should be tied around the thermometer and fastened by a rubber band. At the other end of this string should be attached a small bulldog clamp or wire hook. After inserting the thermometer in the rectum the clamp is fastened to the long hairs at the base of the tail so that if the thermometer is thrown out it will not be broken by dropping to the ground. Thermometers, especially for veterinary purposes, made of thicker glass and with a ring in the end are convenient.

DISINFECTANT.—A small bottle of strong (95%) carbolic acid to be used in disinfecting the syringe before beginning the test, and to disinfect the needle point before injecting each animal, is essential.

VASELINE.—Its use is desirable to facilitate inserting the thermometer, although lard may be substituted. Between the times of taking temperatures the vaseline jar is a safe and convenient place to keep the thermometer.

ORDINARY GREEN PAINT.—This color is convenient for temporarily identifying animals by numbers placed on the rump. If it is desirable to mark them so that the numbers will not become erased for a week or more, rub the paint well into the hair and it will have a slight blistering effect which will cause the hair to stand up for ten days or so.

DIRECTIONS FOR MAKING THE TUBERCULIN TEST.

IDENTIFY THE ANIMALS.—Number them with paint or otherwise. It is not advisable for the beginner to attempt to test too many animals at one time.

TAKING THE NORMAL TEMPERATURES. A convenient way is to take two temperatures, one at the morning milking and one in the evening, but it is preferable to take two more at two-hour intervals from the others. The last one may precede the injection of the tuberculin. Familiarize yourself with the reading of the clinical thermometer, and if trouble is experienced, ask your druggist or doctor to show you how. The largest intervals on the scale are degrees, of which every second one only is numbered. The smaller intervals designate 2-10 of a degree. Readings can be made accurately to half of one of these smallest divisions (1-10). Insert the thermometer full length in the rectum. Smear the bulb of the instrument and

the end of the index finger with vaseline to faciliate the operation. Attach the thermometer to the base of the tail by means of the snap, or a wire hook and rubber band, and allow the thermometer to remain in the rectum three minutes. By the use of this device three or four thermometers may be used, and the temperature of several animals taken in the time that is required to take one. Be sure and shake down the mercury below 99° F. each time before inserting the thermometer in an animal.

TEMPERATURE OF CATTLE.—The usual normal temperature of a milk cow varies between 101° F. and 103° F., but it is not common to find apparently healthy cows that temporarily are even lower or higher than these limits. Excitement may cause a temporary rise, excessive summer heat also increases the normal temperature, while the drinking of cold water may reduce the temperature a degree or two. Most cattle are at their lowest early in the morning and at highest in the afternoon. After exposure to a storm or during severe winds the temperature of the cattle is frequently quite high. The temperature of calves under four months old is much more variable than that of older cattle.

TREATMENT OF ANIMANS DURING THE TEST.—On account of the ease with which variations in temperatures are caused, it is important to keep the animals, that are being tested, under normal conditions. They should be fed, watered, and milked as usual. Avoid as much as possible the violent handling of nervous cows in taking their temperatures.

ANIMALS THAT SHOULD NOT BE TESTED.—Cattle suffering from any disease causing a fever (garget, "fox-tail abscess," retained after birth, etc.) should not be tested until the fever has subsided. If the cattle have been recently injected with tuberculin, a retest within one month will be unreliable, and it is safer to allow six or eight weeks to elapse. Most authorities state that the test should not be applied to cows within four days of calving, or during the period of heat, for fear that these conditions might cause a rise. It is the usual practice to inject all animals, and take the above mentioned conditions into consideration, and retest if a rise in the temperature does occur.

MAKING THE INJECTION.—This is preferably done in the evening, eight hours before the time of milking in the morning. The syringe should be disinfected by drawing it full of corbolic acid, emptying it, and then rinsing in boiled water before beginning the test. In addition to this, just before injecting each animal, dip the tip of the syringe in strong carbolic acid to disinfect it. Fill the syringe through the needle from the bottle of tuberculin, and avoid contaminating it with dirt. Set the burr on the piston rod of the syringe so that no more than the dose intended can be injected. The large numbered divisions of the syringe piston rod stand for cubic centimeters (cc). The size of dose will be stated on the tuberculin bottle. The injection is usually made in the side of the neck where the skin is thin and loose. A fold of the skin is taken in the left hand, and the syringe point inserted in the pocket thus formed and the dose injected. When a cow is restraind in a stanchion the operator should stand quite close to the cow's left shoulder with his arms over the animals neck and back and inject the tuberculin in the skin on the right side of the animals neck. This position insures the greatest security from interference or injury by the movements of the cow.

TEMPERATURE AFTER INJECTION.—Take temperatures at about the 8th, 10th, 12th, 14th, 16th and 18th hours after injecting, and continue in those cases showing a rising temperature. Where an animal shows a rise above 102.5° F., it is well te take the temperature at more frequent intervals. In hot weather it is essential that that the injection be timed so that the 8th to 16th hours will occur in the cool part of the day.

INTERPRETATION OF THE TEMPERATURE RECORDS.—In case of a reaction (indicating the presence of tuberculosis) there must be a rise of 1.5° F. or above the normal temperature as determined on the preceeding day. The interpretation of the temperature record of the animals showing a rise of less than 2° F. requires care. The elevation of temperature usually comes on gradually, although in the more pronounced reactions, where the temperature goes above 105.0° F., the rise is frequently abrupt. This should usually occur between the 8th and 16th hours. It should remain practically at a maximum for two hours or more and gradually subside. When the temperature reaches 104° F. or more, and is maintained for some hours, the animal is certainly regarded as tubercular, if no fever was shown before the injection. Erratic elevations of short duration do not indicate a reaction. The slight variations caused by the weather, the drinking of cold water, or the irregular handling in applying the test are as apparent in the temperature records of the non-reacting cows as in the others, and a comparison of the temperatures of the animals which show no indication of a reaction should be taken into account in interpreting the records. In case of doubt, the animal should be separated from the herd and re-tested not sooner than a month.

If all conditions pertaining to the protection of the animals have been fulfilled, the temperature behavior mentioned is a very sure indication that the animal is suffering from an active, although possibly a small tubercular growth. If there is no reaction, the correct interpretation is more difficult. Dr. V. A. Moore, of the New York State Veterinary College, says that in this case there are three conditions which must be taken into account, viz.

(1) If the animal is extensively diseased it may, in rare instances, not react. In this case the physical condition would show that the animal was at least not healthy.

(2) If the test was made during the period of incubation there would be no reaction, although the disease may soon develop. (By a period of incubation we mean the time elapsing between the exposure to a disease and its actual development. In tuberculosis this period is very variable. In some cases the disease begins to progress at the day of infection; in others, the germs may be lodged for a long time before the disease actually develops.)

(3) It is known that cows which have reacted, may, because of the natural arrest of the disease, fail to react subsequently; but later the disease would start up again, when the animal would react. Great care must be exercised, therefore, in the interpretation of negative results, especially tests made in herds where tuberculosis exists and where it is possible that the animals failing to react have been infected.

RE-TESTING.—A single test of a diseased herd can not be depended upon to detect every tuberculous animal. If any animals are found by the first test to be affected, the herd should be tested regularly every six months. On account of the many chances for the infection of a herd the practice of systematic annual testing is recommended for all dairy herds. Animals purchased subject to the test should be re-tested in four or six months. As has already been mentioned, a re-test within a month is unreliable, and when animals are re-tested within six months it is better to use a double dose (4 cc.) of tuberculin.

PROVING THE TEST.—The one reliable means of ascertaining the accuracy of the tuberculin test is the slaughter of the animal, and the demonstration of the existence of the disease in the organs. This, necessarily, demands the services of a skilled professional man, familiar with the manifestations of the disease, and with the regions in which such manifestations may be located. In some cases animals, not reacting to the test, have been slaughtered on account of serious lung disease with a view to determine if the test had missed a tubercular animal. The manifestations of actinomycosis (lumpy jaw) in the lungs have been mistaken for tuberculosis in such instances.

There is prevalent a popular notion that the failure of an animal to react to the test a second time constitutes a demonstration of the inaccuracy of the test. The falsity of this becomes evident, upon consideration of the facts regarding the result of previous injection of tuberculin, and of the fact that recovery may have occured in the mean time.

Conversely, criticism of the test and of the honesty and skill of the man applying it, has resulted from the observation of cases in which cattle have failed to react once, and then reacted later without further exposure to infection. The matter is explained by the fact that cows may not develop the disease for months after exposure to the germs of the disease; or an old centre of disease, so nearly healed that it would not give a reaction on the first test, may later have become anew the centre of active disease.

HOW A DISEASED HERD CAN, AT A SMALL EXPENSE, BE CHANGED TO A HEALTHY ONE.

First, test the entire herd. Successful methods of eradication are all based on the intelligent use of the tuberculin test. After testing, the question arises, "What can be done with reacting animals?" Of course the reacting animals must be at once separated from the healthy in order to stop the spread of the disease.

IF THE TUBERCULIN TEST SHOWS COMPARATIVELY FEW AFFECTED.—In this case, segregate the reacting animals at once. It is unquestionably good policy to exterminate the disease by removing the infected animals from the herd, with a view of disposing of the same as soon as circumstances permit. The method formerly and most commonly employed of disposing of reacting animals was by slaughter and burial. Where this wasteful method has been employed the results have been discouraging; even when the Government recompensed the owner in part for the loss of his stock, it has been unsatisfactory. A large number of reacting animals are usually but slightly diseased. They readily take on flesh, and can be fattened and used for beef. They must be carefully examined by a veterinarian when killed, and if the disease is found to be extensive, the carcass must be condemned. The Government meat inspection regulations admit the use of meat slightly tuberculous animals for food, for it is recognized that under such circumstances the cooking of meat is an effective safeguard against danger. The zeal of various health officials in demanding the waste of the flesh of every reacting animal has been a great setback to the control of tuberculosis through developing opposition.

Packing and Sorting Cherries at Hillcrest Orchards, Kentville, N. S. Crop for 1909—13,000 Boxes.

THE STABLE MUST BE THOROUGHLY DISINFECTED.—Many of the failures to eradicate tuberculosis by the repeated application of the tuberculin test, and the prompt removal of all reacting animals, are due to the fact that the stables and sheds were not disinfected. The watering troughs should, of course, be disinfected. That bacilli discharged from the tubercular animals in the corrals may remain virulent for a considerable time is possible, although the action of direct sunshine quickly destroys them. The corrols should, therefore, be thoroughly cleared of manure.

(Continued in next issue.)

A sprained ankle will usually disable the injured person for three or four weeks. This is due to lack of proper treatment. When Chamberlain's Liniment is applied a cure may be effected in three or four days. This liniment is one of the best and most remarkable preparations in use. Sold by all dealers.

THE MARITIME FARMER

And Co-operative Dairyman.

Semi-Monthly Journal devoted to the interests of the farmer of the Maritime Provinces.

Official Organ of The Farmers, and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association The Nova Scotia and P. E. Island Fruit Growers' Associations The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers Association, and The New Brunswick Poultry Association.

Subscription Price $1.00 per year. **When paid in advance 80 cts.** Persons taking advantage of the 80 cent rate when subscribing are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definite order for dis. continuance is given.

The date after your name on the little green label on front Page is, in every case, the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser be said :—**"I saw your adv. in the MARITIME FARMER."**

RATES FOR CASUAL ADVERTISEMENTS.

2 inch—First insertion 75 cents; 2 inches—First insertion $1.50; 3 inches—First insertion $2.25.

APPLE SHIPPERS MUST MEET STRINGENT INSPECTION.

Trade commissioner, H. R. Pousette of Durban, South Africa, writing in a recent issue of the Trade and Commerce Weekly report says:—

"Just about this time exporters in Canada will "be preparing their first shipments of apples for "this market. It is to be sincerely hoped that an "honest effort will be made to send out only sound "fruit, owing to the stringent regulations in force "here, to exclude over a certain percentage apples "infected with scab or codling moth. If before "packing all fruit displaying traces of infection be "rigidly rejected, there is little doubt that it will "pass the inspection of Cape, Orange River Colony "and Natal, although perhaps not the Transvaal in "which the percentage is fixed at one in 100. Last "year the inspection does not appear to have been "efficiently enforced, with the result that some con-"signments were admitted that should have been "condemned. But this season such laxity will not "be permitted. Therefore, Canadian shippers who "may be counting upon the same luck as was theirs "last year, may receive a severe shock. Perhaps it "is wrong to speak of 'luck' they doubtless received "cash against consignments, and some of them may "have cared little what happened their shipments or "what loss the consignors may have had to sustain. "If this statement seems harsh, it is beyond a doubt "that it is not made without foundation. It could "well be wished that poetic justice might descend "upon those who so endanger a valuable trade, and "bring discredit upon conscientious exporters.

"Canadian apples come in here at a time when "the fruit market is practically empty, including "the Christmas season. They are consequently "most welcome to both the dealers and the public, "by the latter of whom they are held in high favour. "If this season's operations result in loss, it will of "course deter many next season from taking a risk "which holds out so small a probability of compen-"sating profit. And this matter of profit suggests "a further point, a very large margin is required to "cover avoidable but apparently inevitable losses; "if, however, these latter could, or rather were, "minimized by more careful selection at the other "end, the fruit could be sold at more reasonable "prices, and it follows, in larger quantities. It re-"quires little perspicacity to prophesy that those "Canadian firms who send apples this season to "South Africa, carefully picked and properly packed, "or, in a word, who conscientiously endeavour to "protect the interests of their clients, will the fol-"lowing season reap the result."

THE TRURO AGRICULTURAL COLLEGE COURSE.

The long courses at the Truro Agricultural College opened on November 2nd. While it is always advisable for a student to begin his course on the opening day and thus glean all the information that is dispensed from the very start, yet a student may enter a few days or weeks later and make very satisfactory progress during the remainder of the term. Any young man who could not get away from home to attend the opening session will find that, even now, it is not too late. By industriously applying himself to his studies he can catch up and have as good a showing as the rest of the class at the final examinations If you have any thought of going to the long courses do not delay, but get there as soon as possible.

There are many farmers and farmers' sons who do not see their way clear to leave the farm for a season long enough to attend the long courses, for these provision is made by the short courses which will open for two weeks beginning January 4th, 1910 A large number of boys and men attended the short courses every year since they were instituted. The number is growing larger every succeeding year. Each and every one are loud in their praises of the good they derived from the courses. Some of those who attended in 1908 came back in 1909 accompanied by one or more of their neighbors. They considered their "time well spent" and undoubtedly they will be found traveling Trurowards about the third of January, 1910. Will you be among the number ? The MARITIME FARMER can assure you that you will go back home more alive to your opportunities than ever.

Anyone who purposes attending the short courses should write Professor Cumming as soon as possible and in this way he will be able to know about how many students to expect.

The Ladies' short courses at Truro takes up a study of Domestic Science, Dairying, Horticulture and Poultry. Any lady who can manage to get away from home for two weeks should not miss the opportunities ofiered by the Truro Agricultural College The ladies' course opens on January 4th, 1910. We trust that our lady readers will make a strong effort to attend. Having decided to attend the College do not forget to drop a card to Prof. Cumming. Special arrangements have to be made for the Ladies' classes and it is all-important that the College management know beforehand how many they may expect so that ample arrangements will be made. Lay your plans early and when the opening time arrives be at Truro Agricultural College ready to share in the many good things that have for their sole aim better and brighter farm homes in Maritime Canada.

HEAD WORK.

"A man is worth only about a dollar and a half a day for that part of his body from his head down; there is no limit to what his head is worth." This is what we were told the other day by a farmer who is using brains in connection with his farm work, just the same as he formerly did in his other business. Brains made his business go, and they are making his fanm pay handsomely. Among his neighbors are men who are eternally cursing the country, the weather, and everything in general, and who are not making enough to move themselves and family out of the district. Some men are naturally born leaders, so the neighbors say; everything which they put their hands to seems to go, and people say they are lucky. Their crops miss the frost and the neighbors say it is luck. That is not luck; it is brains. That farmer used his brains the fall before. He plowed his land and got it in condition for seeding and had his grain seeded in the spring two weeks before his neighbors were through plowing. There was no luck about that, but just plain "horse sense." It is the head work that counts. If the work is notproperly planned enough time will be lost to pay the wages of three or four men. That means labor lost, which is money wasted. It could have been saved by the use of brains, and almost any human being has brains, only in some they are in great need of development and exercise.

HAVE A CLEAN-UP DAY.

On the average farm, in spite of any general rules to the contrary, there are almost always quite a number of things that are likely to be taken out of their prescribed places and littered around the farm. So long as open summer and fall weather continues, the inconvenience of this state of affairs is not so great, because of the ease with which anything may be hunted up even if it has been misplaced. But in the winter all this is changed, and unless all small tools are gathered up before the snow comes it is quite likely that a number of them will lie under the snowdrifts untill spring. It is a good plan, at this season of year, to make a well-organized effort to have all scattered tools gathered into place, all lumber piled up, and a general preparation made for the coming of the snowstorm. It gives one a most comfortable feeling to look out of the window at the thickly descending snow flakes, realizing at the same time that all shovels, chains, sacks, pieces of lumber, harrow sets, and all other easily buried things about the farm have been safely stowed away under a good roof.

BOVINE TUBERCULOSIS.

In compliance with the request of several of our readers for informatiou on the subject of "Bovine Tuberculosis" we take pleasure in publishing extracts from a bulletin dealing with this subject recently issued by A. R. Ward and C M. Haring of the California College of Agriculture. It is a long way from California to the Maritime Provinces, but the conditions that exist in the West are also existing in the East and the sooner each and every cow owner gets busy and satisfies himself that tuberculosis does not exist in his herd the better it will be for the producer and the consumer of cow products.

AN OPPORTUNITY TO BUY GOOD DRAFT MARES.

On another page of this issue will be found an advertisement announcing an Action Sale of pure bred Clydesdales. Three stallions and seventy-five mares make up a Scotch-Clydesdale importation by Mr. Wm. Meharey, of Russel, Ontario, who will offer them for sale at St. John, N. B., about the first of December. The mares will be mostly two and three years old and bred the past season to good stallions in Scotland. Realizing the importance of good draft mares to the horse raising industry of the Province the Department of Agriculture for New Brunswick sanctions the importation and sale and furthermore to encourage New Brunswick farmers to buy, the Department will pay the freight from St. John to the purchaser's station. This gives the farmers of New Brunswick an equal chance as far as transportation charges are concerned. No restrictions are made as to residence of purchaser or resale of animals so the Prince Edward Island, Nova Scotia or Upper Canadian buyers may come in and buy what they want, but any New Brunswick

farmer who buys and who accepts the offer to pay the freight on his horse or mare to his station must undertake that the animal or animals upon which the freight is so paid, shall not be sold out of the Province within five years and during that time shall be annually bred, in case of mares, to Clydesdale stallions wherever practicable. The greatest need of the horse raising industry in New Brunswick to-day, is more and better draft mares .While one can raise good mares by judiciously breeding ordinary mares to good draft stallions and found the fillies thus obtained to draft stallions, and so on, still the process is too slow to capture many of the shining dollars that are sent out of the province each year for draft horses. The results come much quicker when one has a good draft mare to begin breeding. We venture to say that these Clydesdale mares will more than pay for themselves in a comparitively short time leaving a margin of profit on the transaction. Lost opportunities are never recalled. Do not miss the opportunity offered by this Clydesdale sale.

Ground Limestone vs. Quick Lime

Great interest is being manifested by the more intelligent farmers over the question of using lime in some form or other to correct the growing acidity of their soils. The difficulty of growing clover and alfalfa in many sections is largely due to the acid condition of the soil and this condition is found more in old lands than in new.

It is important to know in what form we can use lime so it will do the least injury and the greatest good to our land. The Pennsylvania Experiment Station has made some experiments on this matter which are valuable to know and we invite the attention of our readers to them as given below:

Fertilizer	Bus. corn—ear	Bus. oats—grain	Bus. wheat—grain	Hay lbs.
Nothing	42.1	32.3	13.6	2783
Quick lime	35 3	29.9	15 0	2631
Ground lime stone	43.1	34.0	16.2	3127

These results seem to indicate that limestone is much better than quicklime; in fact, the quicklime has shown a decreased yield when compared with the yield where nothing was used.

The following table shows the total pounds produced and value of the crops for each rotation :

	Pounds per acre during rotation	Value per acre during rotation
Lime, 4,000 lbs. every 4 years	11632	$58.82
Limestone, 4,000 lbs. every 2 years,	13572	68 80

It must be remembered that fifty-six pounds of lime is equivalent to 100 pounds limestone in its power to neutralize acid.

In southern Illinois where it was found difficult to grow either clover or alfalfa, the application of ground limestone brought success at once. The main trouble up to the present in procuring the ground article is the lack of enterprize on the part of firms owning quarries where commercial lime is made.

The Maritime Winter Fair

The prize list of the ninth Annual Maritime Winter Fair is now in the hands of the general public. Anyone wishing to receive a copy may do so by sending a card to Mr. F. L. Fuller, Truro, N. S. The fair will open on December 6th and will close on December 9th.

Never in the history of the exhibition has the management been in the position offer to such inducements to both exhibitors and visitors as at the coming Fair. The Departments of Agriculture of Nova Scotia, New Brunswick, Prince Edward Island and the Federal Department at Ottawa as well as the town of Amherst and many prominent citizens have generously contributed of their means towards additions, improvements and the extensive prize list.

The old Winter Fair building, which was inadequate to the rapidly increasing demands has been largely remodeled. A much needed Dairy Building has been erected, which accommodates sixty cows giving the necessary light, ventitation and seclusion indispensable in a proper dairy test.

An eighty foot extension has been added to the old building and the interior arrangements made perfectly sanitary and comfortable giving, as well, a separate judging ring for swine, and other necessary improvements.

The management has made special efforts to increase the prize list, and in addition to former prizes the premiums in the Dairy classes have been extended to fourth and fifth places.

The different breeds of sheep have separate clases and prize lists.

Poultry and Honey classes have also received additional money as well as a number of important specials. The Maritime Poultry Association has generously donated two valuable cups; one for the best exhibit of live poultry and one for the best exhibit of dressed poultry. Mr. M. J. O'Brien a prominent Railway contractor of Montreal, has kindly donated a very valuable cup as a special for Shorthorns. In addition to premiums so generously donated by prominent men in previous years, special prizes have been donated by Barker's Limited, Amherst; Terrace Hotel, Amherst and the Altas Stock Food Co., Amherst.

The public will appreciate the fact, that in addition to the regular prizes donated by public spirited citizens for a competition in judging Beef and Dairy cattle and sheep, open to farmers and farmers' sons, under twenty five years of age, the following additional prizes are offered: A valuable cup donated by Prof. Cumming, principal of the Agricultural College, Truro, for the highest score in the above mentioned competition. Friends of farmers' sons have also donated a valuable cup for the highest score in stock judging to competitors, not students or ex-students in the regular course of an Agricultural College.

Every effort will be made to have the educational features of the 1909 fair attain a higher standard than ever before. Lectures will be delivered by eminent men who are experts in their various lines.

Transportation companies have again offered exceptionally low rates and we are assured that the farmers will avail themselves of the splendid opportunity of exhibiting and receiving instruction from practical demonstrations to be witnessed at this "Great Fair."

Fattening Steers.

Different Amounts of Dry Matter for Fattening Steers (Pennsylvania Station Bulletin 88).—Two lots of twelve steers each were fattened during sixteen weeks with like amounts of digestible matter, but different amounts of dry matter. Both lots were fed with broken ear corn, cottonseed meal and corn silage, with mixed hay at first and corn stover later. One lot received all the ear corn they would eat, and a limited amount of silage, while the reverse was true of the other lot. This second lot, when on full feed, received about twice as much silage and two-thirds as much corn as the first, and were given, therefore, much more dry matter, although the digestible matter was supposed to be the same. The steers given the full silage ration were at a disadvantage during the first two weeks, indcating that the increase in the amount of silage should be gradual when large amounts are introduced into the ration. "After the first period the gains of both lots were comparatively uniform and almost parallel."

Why Waste Hay.

A neighbor came into my barn last winter and on looking through the sheep stable, where I am feeding 200 lambs, remarked that his 20 head of breeding ewes were wasting more hay than all of my lambs. After he left I got to wondering why it was that so many farmers worked hard to put up hay in the summer and then allow their stock to waste in the winter.

I am feeding 200 lambs for market and they are allowed more hay than they will eat up clean, but all that is left in the mangers is taken out twice each day and fed to some colts and idle horses that eat it up clean. Cattle do not like hay left by sheep and will not eat it if they can help it, but horses do well on it. The sheep do not leave enough hay for all of these horses, only about enough for a night feed. I have eight horses and nine cattle in the barn with the lambs and they are all in good thriving condition and a man can carry more hay under one arm than they all waste in a week.

To keep sheep from wasting hay you must have the mangers built so they cannot pull it out. I feed grain and hay in the same manger, so they are always kept clean.—Webster Reeder, in Breeders' Gazette.

Sod Drains

EDITOR MARITIME FARMER.

In some countries sod drains are laid and have met with persons who testify to their great efficiency and long service viz. for 30 years.

The tough sod of our broad-leaf marshes would seem to be an ideal sod for the construction of such drains and would provide a cheap and ready method for underdraining. It is the writer's purpose to lay a few such drains, by way of experiment, but before doing so he would like to know whether any of the MARITIME FARMER readers can give any information as to construction and satisfactory working of such drains.

The method proposed is as follows: Dig drain eight inches wide at bottom. Cut sod two inches thick to fit bottom. Lay on edge a piece of "2 "x4" scantling with a slight taper toward one end. On each side set on edge a sod five inches wide and then place an eight inch sod on top. In every case lay the grass side of the sod toward the center of the drain. Cover the scantling to such a distance, say six feet, as will allow its easy withdrawal, after filling in and tramping and then repeat the process on another six foot section.

W W. ANDREWS,
Westmorland Co., N. B,

Editor's note:—If any of our readers have constructed sod drains or have seen them used we would be pleased to have them send us full particulars as requested by Mr. Andrews. This is one of the many ways in which you can help your fellow man. Let your light shine.

Size of Cow Stalls

Joseph E. Wing gives as the best size to build cow stalls the following: Some stalls I built last fall are 5 feet from manger to edge of trench; the trench is 16 inches wide and 8 inches deep. The manger is 30 inches wide inside and the front board is 20 inches high. Cows never have stepped in the manger. The bottom of the manger is raised 16 inches at the back and 6 inches at the front with concrete so that cows can readily eat all the meal without difficulty. Cows are fastened with neck chains. The stalls are 7 feet wide with two cows in each; one stall is 3 feet 6 inches wide for single cow. These stalls have been ideal from the point of comfort to cows; they have been easily kept clean. The one defect is that for a large cow the stalls are too short. They should be all right if 5 feet 6 inches or 6 feet for Shorthorn cows, measuring from the front of manger back to the edge of gutter. We used stall partitions of boards and concrete floors and gutters. Do not make shallow gutters or your cows will stand in them.

When to Spread Manure

Barn yard manure should never be allowed to remain exposed to the elements until it rots; for by doing so, much of the carbonaceous matter is lost, thereby lessening the manure's humus making power. Manure should be spread upon the land at as early a date as practicable. Every stable should have an arrangement whereby the liquid excrement from the animals can be caught and thus a great fertility substance saved, which, otherwise, might be lost. Experiment stations have discovered that when manure remains in the yard through the spring and summer months it depreciates about one-half in value.

Ploughing Wet or Dry.

Sandy soils are usually not injured by handling when wet, but the case is different with clay soils, says W. J. Spiliman in 'Renovation of Worn-Out Soils.' A fair quality of brick can be made from any heavy clay soil by working it thoroughly when wet and then drying it in the sun. The effect produced by working clay soils wet is known as puddling.

Irrigation ditches in the west are puddled by first flooding them to make them muddy and then driving bands of sheep along in this mud. This makes the bottom impervious to water, and prevents loss from leakage.

If a clay soil is ploughed, or even harrowed when too wet, it is more or less puddled. In this condition it becomes cloddy and impervious to air and water. Old roadways that have been thoroughly puddled from traffic in all kinds of weather may be distinguished in fields many years after they have been ploughed up and put into cultivation.

The proper time to plough land is when it is just moist enough to break up mellow, neither wet enough to leave a slick surface where rubbed by the moldboard nor dry enough to break up in large clods; or, as the southern farmer puts it, when the soil has a good season in it.

If continued rain follows wet ploughing, little harm follows; but hot, dry winds would soon leave only a mass of unmanagable clods. In spring and midsummer ploughing, particularly, it is of the utmost importance to run the harhow immediately after the plough. This prevents the formation of clods. In late fall ploughing the clods are no disadvantage, for they will be broken up by freezing and thawing.

Selecting Breeding Ewes

See to it that the ewes for breeding purposes are not thin and emaciated, for if one has passed through the feeding season and is in this condition there must be something wrong with her. Make sure that there are no broken mouthed or aged ones in your flock; neither should the ewe be too fat. A good frame is essential for the producing of healthy progeny. The open market is the best place to select your stock; unless some neighbor can accomodate you with a surplus from his flock. The beginner should never select his ewes without having along a competent judge of sheep who will advise with him as to selections.

Value of Feeds.

In a ton of bran we have 244 pounds of protein, for which we pay a trifle over 8 cents a pound, and have 838 pounds of carbohydrates and fat thrown in. In a ton of old process oil meal we have 586 pounds of digestible protein, for which we pay 44 cents per pound, and have 794 pounds of carbohydrates and fat thrown in. In a ton of cottonseed meal we have 744 pounds of digestible protein, for which we pay 36 cents per pound, and have 291 pounds of carbohydrates and fat thrown in.

It will pay farmers to look into this Seed proposition of S. P. GOUDEY'S. He has supplied thousands of satisfied customers for years and now offers his services to you. Any Farmers' Association or Agricultural Society can secure a supply for their members for spring of 1910, if they will ask for particulars. He imports by the carload and sells on 5% commission. S. P. GOUDEY, Yarmouth N. S.

HORTICULTURE

Nova Scotia Apples for British Exhibitions.

When the Furness liner Gulf of Venice sailed on the 4th inst. for Liverpool, she had among her cargo a very choice selection of Nova Scotia apples being sent to England for exhibition purposes. It has been the custom in former years to send apples to the Royal Horticultural Exhibition. This will not be done this year, but the apples will be sent to the different County Shows instead. The Gulf of Venice will take ten barrels and a number of boxes for the exhibitions.

Co-operation in Shipping Apples.

EDITOR MARITIME FARMER.

As a direct result of cooperation in packing and marketing fruit comes a saving in shipping expenses. The Furness Withy Co. has had a practical monopoly of the transportation of apples from Nova Scotia to British markets. The freight rate has been for a number of years 90c. per barrel, of this amount from ten to twenty-five cents has gone in rebates to middlemen who stand between the grower and the steamship company. At the instance of the Fruit Growers Association, the Department of Trade and Commerce has this year had a clause placed in the contract of the Furness Withy Co. making it illegal for them to pay rebates, thus putting all shippers on equal terms. In accordance with this policy the rate has been made 80c. per barrel instead of ninty as before; and all shippers are notified that there is no rebate. While nominally such is the case, yet no one but the most unisophisticated expects this to be true. All the middlemen are as active as in the past soliciting shipments and caring for the interests of the fruit growers. Somebody is paying for this, for these men do not work for fun, and eventually the apples must pay the bill. The export of apples from the Annapolis Valley now amounts to about 500,000 barrels annually. The freight on this amount at ninty cents per barrel would be $450,000.00. Ten cents a barrel rebate is $50,000.00 and fifteen cents amounts to the neat little fortune of $75,500.00. This is about the amount some half dozen large operators have been dividing each year. The United Fruit Companies, controlling from 75 to 100,000 barrels this season, had an idea that they should share in this nice little plain. Accordingly their Traffic manager approached the Furness Withy Co., the Allan line and the C. P. R., the same reply come from them all "we cannot do business with farmers they will not stand together." This organization, however, is not loosely bound. It is incorporated under the Provincial Act; the members are united on a common ground; and best of all as a business proposition—they have the apples, 50,000 barrels of them right in the ware houses. The next move was to charter their own steamers. F. C. Whitman of Annapolis is a shipper now, he is also an active member of the Fruit Growers Association. Mr. Whitman knows how to charter steamers and how to load them. So the first steamer sailed from Annapolis on the 18th of October carring 8000 barrels. The second on the 27th carrying 9500 barrels, and a third is chartered for the 25th of Nov. to carry 9000 barrels, the freight is 63c as against 80c via Halifax. The saving of 17c per barrel is a fair profit and this alone is a justification of co-operation. The large dealers were offered the opportunity of coming in with us on a 63c freight rate, but not one of them would break from the old lines, showing very plainly that there was more money for them in standing on the old ground.

Scale of Points for Judging Fruit.

The accompanying scale of points for judging fruit proposed by the Nova Scotia Fruit Growers Association at their annual convention, is submitted by Mr. R. W. Starr, in behalf of the executive of the association who are asking for the approval of or comment on this scale of points by persons interested in fruit growing and exhibiting. The object in view is to introduce a uniform system of fruit judging throughout Canada.

The "explanation of terms" is necessary for the guidance of both judges and exhibitors, especially at county shows, where experts may not be available. We trust our fruit growing readers in various sections of the Maritime Provinces will forward their views for publication. The Association will be pleased to get any suggestions approving, the proposed scale or suggesting any important changes that will be for the mutual benefit of all concerned.

Scale of Points for Judging Fruit Proposed by the Fruit Growers' Association of Nova Scotia, 1909.

Score Card for Single Plates Named.		Score Card for Collections.

EXPLANATIONS OF TERMS

FREEDOM FROM BLEMISH.—Any injury by Insects, Fungus, Bruises, Loss of Stem or other cause, lessening the value of appearance of the Exhibit, may be called a Blemish.

COLOR.—Bright, clear well developed color, characteristic of the variety preferred.

FORM.—Represents the perfect or normal type of the variety.

UNIFORMITY.—Specimens should be as nearly alike in size, form and color as possible.

SIZE.—Indicates care and skill in production, and usually, other points being equal, size wins.

COMMERCIAL VALUE.—Standard, known market varieties, as grown in and suited to the district, preferred.

QUALITY.—To be considered in collections, Seedlings, new varieties on trial, or other sorts in competition.

NOMENCLATURE.—Exhibits must be correctly named according to the nomenclature adopted by the Society, Association or Exhibition at which they are shown.

ARRANGEMENT.—Taste and skill in staging so as to attract attention and add to the general appearance of the exhibit.

KEEP MILK SWEET!

It is important to thoroughly cleanse pans, separators and other utensils with hot water. The microbe that sours milk is inaffected by hot water.

ASEPTO SOAP POWDER

in the water will thoroughly destroy germs We guarantee it to be antiseptic, and it is as cheap as soap.

Sold in 5c Packages by ALL DEALERS

Selection of Fruit for Exhibits.

The following article on "The Selection of fruit for Exhibits" appeared in the November number of American Fruits and as it bears on the subject brought up by the Nova Scotia Fruit Growers' Association in another article on this page we reproduce it for its valuable suggestions:

WHAT CONSTITUTES FIRST CLASS SPECIMEN.

First class fruit for exhibit purposes consists of large specimens typical in shape and color, uniform in size, and free from all blemishes. The specimens should be large but not abnormally so. It is usual for the exhibitors to select the largest specimens he can find regardless of the shape and type. This is a serious mistake since these specimens are enormous because of abnormal development, and, consequently, cannot possess the typical characters of the varieties. A specimen should be large but should still posses the typical character.

It is desirable to know the original types of the different varieties. For example, there are different forms of the Baldwin apple. There is the oblong form, possessing high color, with short stem. Similarly differences are observed in size and marking. This is true not only of the Baldwin, but to a greater or less degree, of the other varieties of fruit. It is important that the grower know and select that type of the variety which most nearly resemble the original.

AS TO HIGHLY COLORED FRUIT.

Every specimen for the exhibit should be free from all blemishes. There should be no funguous spots or insect injuries. A word of caution in regard to highly colored, immature fruit may be helpful here. At fair time apples particularly are not fully developed and effort is made to find the highest col-

(Continued on Page 64.)

Agents Wanted!

We want agents to handle the Acme Steel Ladder. It is by far the best seller on the market today. You can, with horse and rig, make $5 00 to $10 00 a day by simply calling on property owners in your vicinity.

The Acme Steel Ladder affords protection from fire in a greater degree than any other ladder.

The Acme Steel Ladder is made and sold in one foot lengths. These can be fastened in such a way as to make a ladder of any length perfectly rigid.

They can be moved anywhere on the roof, either from the top or bottom of it.

Send for information regarding our selling proposition.

The Acme Ladder is made in one foot links just the same as the old style ladder but with a very simple lock which is fully protected with patents. When the ladder is together the links are held rigid.

If you are thinking of equipping your buildings with steel ladders and there is no agent in your locality and will write us we will have a man call on you.

The Acme Steel Ladder Co.,
SUSSEX, - - N. B.

Rural 'Phones Solve These Every Day Problems.

Problem 1. Bad Roads:—

The old way was to curse nature and idly await sun's return.
The new way is to telephone for what you want and smile because you get information in a thousand part of the time.

Problem 2. Weather Forecasts:—

The old way was to work on belated information, and to excuse the losses with "That's what the farmer has to put up with."
The new way is to telephone every morning to the weather man and overcome much of the needless hustle and bustle of the old way.

Problem 3. Prices Current:—

The old way was to ask a neighbor or trust to the newspapers.
The new way is to get information in the nick of time over the 'phone, thus knowing when to sell and when to hold.

Problem 4. Emergencies:—

The old way of procedure when some one took sick, was to harness up the "driver" and make all haste for the doctor. Effort in this direction often procured as its only result the information :—"doctor is out."
The new way is to call up the doctor on the 'phone, and know instantly what can be done pending the medical man's arrival.

Problem 5. Help:—

The old way was to allow men to go on boy's erranda—waste half a morning walking to Smith's only to find his harrow was already loaned.
The new way is to make the 'phone your errand boy—buy, borrow, beget by means of the "silent partner."

Bitter Pit in Australian Apples.

A disease which is causing serious annual loss to the fruit growers of Australia, and which is puzzling both scientific and practical men, is bitter pit in apples. It has been again this season the chief cause of irregular prices in oversea markets, just as it was last season. Apples in perfect condition when packed, frequently turn out so badly affected with bitter pit at the end of the voyage to Europe that they are almost unsaleable. Shippers are often blamed for forwarding inferior fruit, when they are really blameless, because there was no sign of bitter pit when the fruit was sorted and packed. No one knows the cause of bitter pit or its life history. If its origin were only known, and what conditions promote its development, there would be some hope of a remedy being found for its suppression.

It is prevalent in all the Australian states, so that fruit growers in all the apple growing districts of the Commonwealth have a direct interest in its suppression. Experts, with long experience of growing and shipping apples, estimate that fully 10 per cent. of the crop in the Commonwealth available for the oversea trade is annually ruined, there must be, according to this estimate, fully 60,000 to 80,000 cases destroyed every year by this frightful orchard scourage. It is generally agreed, by scientific investigators, that bitter pit is not a fungoid disease, and, therefore, is not transmitted by germs. The theory generally accepted is that the disease is connected with the circulation of the sap, causing fruit cells to die in spots. These dead cells form the brown bitter-flavored spots or 'pits' which give the disease its name.

Some practical orchardists believe that the stocks on which apple trees are worked has something to do with the virulence of the disease in Australia; but no one can be sure as to what causes bitter pit. All that is known is that some of the very finest export varieties, such as Jonathan and Cleopatra, are extremely liable to this disease, not in one, but in all apple-growing districts of Australia. Conditions of soil, climate, methods of pruning, cultivation, manuring, and kind of stock used must all be carefully tested before any one can speak with certainty as to the cause and cure of the most formidable orchard scourge Australian fruit growers have yet had to face.

Cucasa—A New Fungicide.

The October number of the "Practical Druggist and Pharmacentical Review of Reviews," under the caption of "Latest New Remedies," contains the following article on Cucasa, which will be of interest to our readers:

"Cucasa is a soluble saccharate of copper and lime, coming into use in Europe in place of the rather cumbersome Bordeaux Mixture. Such institutions and authorities as the Royal Institute of Viticulture and Horticulture, Geisenheim, Germany; the School of Viti and Horticulture, Kreuznach, Germany; Comice Agricole, horticole et viticole, Besancon, France, report favorably on its use..

"Cucasa yields a solution of copper that has all the fungicidal properties of the Bordeaux Mixture, but with the added advantages of offering a clear solution in any dilution and of keeping comparatively long. Being a clear solution, it does not clog the nozzle of sprays; furthermore, much less of it need be used than of the Bordeaux Mixture, for efficient protection. A solution of Cucasa is uniformly alkaline; there can, therefore, be no copper sulphate present in it that would injure the foliage.

When sprayed on the trees, the thin layer of the solution is readily changed by the atmosphere, as in the case of Bordeaux Mixture, into the insoluble film of copper compound that has the specific power to kill fungi. The thinness of this film has the advantage of interfering all the less with the important functions of the foliage, and also of sticking very close—which was found in one case to be for three moths after tpraying. It is put on the market ready or easy use, in packages, to make a ated numb er of gallons of solution.

ROCK WALL PLASTER

The Best Wall Plaster.

NO HAIR OR LIME NEEDED—
ANY MASON CAN APPLY IT.

The most convenient wall plaster known for farmers and others living in localities distant from central markets where lime, hair, etc., necessary for use in making ordinary mortar, cannot be procured without delay and expense. Rock Wall Plaster is put up in bags of 100 lbs. each and is ready for applying to walls by the simple addition of sand and water. It is a great time saver as it admits of carpenters immediately following the plasterers. Thousands of tons of it sold annually in the States and Canada. A success wherever used. DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

Cow Testing Thoughts.

DOUBLE THE INCOME PER COW.

Several instances are on record in Ontario and Quebec where members of cow testing associations, who are systematically weighing and sampling the milk from each individual cow in the herd, have been enabled to increase the yield of milk per cow tremendously. Mere weighing and sampling, of course has not increased the yield, but it has been the most important factor in the general improvement; it has shown that lots of cows were not worth keeping, it has shown that others could profitably consume more good feed, it has shown the owners that they must study each cow to make her do her best, it has shown them that most cows will respond readily to better care and attention and will earn more money if given the opportunity. It means good money in any farmer's pocket if he will have a little patience and act on the information gained from the records. One man is now getting from his 20 cows an income of four hundred and eighty dollars per year more than he was 3 years ago. A smaller herd in 1904 brought in only $23.80 per cow, but last year the owner received nearly $58.00 per cow, in other words he is now getting more than double the previous income per cow.

23 COWS OR 60, WHICH.

Some of the September records received from members of cow testing associations show further remarkable variations in different sections of Ontario and Quebec. It is the exception in the Ontario associations to find less than 600 lb. milk or 20 lb. butterfat as an average yield for thirty days. In Quebec associations the average yields are almost all lower though one or two are well up, even to, 700 lb. milk and 26 lb. fat. One association in Quebec has a total production from 23 cows of 17,800 lb. milk and 775 lb. fat, while in another Quebec association just a little less than that is the total production of 60 cows average less than 300 lb. milk. Twenty three cows in one case, sixty in the other, which kind of cow would one rather keep? What glowing possibilities are indicated here! Most likely the 60 cows could be made to give better yields if fed better. The selection of the best individuals as revealed by the records, and their mating with good bulls of decided dairy descent would give certain results, better cows in every way, without such glaring differences as in this case where the yield of two fairly good cows is more than the total yield of five poor ones.

THINKING AND KICKING.

A recent issue of the "Creamery Journal" states that the farmers of Iowa are taking a special interest in cow testing. To quote a vigorous editorial: "An intellectual bomb has exploded, farmers are thinking. Hundreds are kicking themselves for having so long fooled away their time and effort and money, chasing the dual-purpose nonsense phantom. Breeders of dairy cattle are simply swamped with business. Dealers in dairy utensils report whirlwind sales of scales and Babcock testers."

Farmers of Canada, are you going to let farmers of adjourning States beat you in advanced dairy thought given to cow testing, and in resultant business-like action? One main object of testing individual cows is to ascertain what difference there is between the product or profit of a good cow and a poor one. If our poorest cows were known they would quickly be discarded because there can be no object in retaining them. The trouble is that they are not known Often the poor ones are believed to be good. They will be detected only when records are kept. A more careful study of feeding, and some associated plan of breeding from good pure bred sires will work wonders in improving cows on Canadian farms. Cow testing associations should exist by the hundred, every county needs several; they were never more needed than at present. Who owns the best cow in your county?

GOOD FEED, POOR COWS.

At several cheese factories in Eastern Ontario the average production per cow has been conclusively shown to be approximately 2,800 pounds of milk only for the full factory season. In one group of cow testing associations in Western Ontario 450 grade cows had an average yield of 1,050 pounds of milk during June. The is food for thought: as much milk inteon month from one set of cows as in three months from other sets! There is evidently urgent need of more careful selection of the better class of dairy cows, and need of more intelligent care and attention, real dairy sense, in the handling of the one class of farm stock that brings in the regular income. Plenty of choice individual cows in the single month of June gave from 1,800 to 2,100 pounds of milk, or almost as much as the poorer, unselected dairies averaged for the whole factory season. A great many of our farmers need to wake up to the folly of wasting good time and good feed on poor cows, milk records will quickly indicate which to keep as the foundation of the good herd.

TESTED COWS.

Exhibition time will see some of the finest looking cows on the fair grounds that the admiring public could possibly wish to see, Sleek appearance, general thriftiness and show condition will be appraised, conformity to type will be judged, and point by point various characteristics will be valued. Excellent as they may be, these cows on exhibition must submit to a further examination before the ordinary factory patron is prepared to award them first place in his estimation. He will ask and rightly so, can these cows give a large yield of milk and butterfat at a low cost? He cannot afford to accept just a two days high record, he needs a cow that will attend strictly to business, the business of making money for him, three hundred days in a year. The one vital point for him to ascertain is, does it pay me to keep this cow, is her profit sufficiently large? To this end he keeps records of each individual cow in the herd; records of feed consumed, and milk and fat produced, so that no doubt may lurk in his mind as to each cow's capacity. Cow testing associations make this as easy as possible at a minimum expense; the dairy division at Ottawa, bears the cost of testing, and supplies blank forms free. Several hundred cows in July had over 850 lb. milk and 28 lb. fat to their credit. Many individual records total 5,000 lb. milk this season, while a few choice specimens are already up to 7,000 and 8,000 lb. milk, and 280 lb. fat.

TIME WELL SPENT.

McCALLUM'S Limited,
Truro, N. S.

ing associations organized by the dairy division, Ottawa, the inspectors are sometimes met with this statement by those farmers who are inclined to drop weighing and sampling, "I haven't got the time."

In scarcely any instance can this be considered correct; evidence from farmers the whold Dominion over shows cow testing to be one of the best time saving organizations ever introduced. Why? because it shows definitely that many men have wasted precious time on cows that do not produce enough milk and fat to pay the cost of feed. Thus, the very men who say they have "no time" to take up cow testing are the very men who unconsciously waste thousand of valuable hours. There is time, apparently, amongst the unthinking class of farmers for attending to thousands of profitless cows. With a herd of 20 unselected cows (out of which probably 3 are not making any profit) it would take the small total of 20 hours during the whole year, spread over three days each month, to keep such simple records as would enable the owner to select with certainty the most economical producers. Why waste time year after year on cows that average only about 14 lb. of milk per day for seven months, when a few minutes per month, plus a little brain power, will materially assist in building up a profitable herd.

EVERY MICKLE MAKES A MUCKLE.

In one cow testing association the average production of 126 cows was 520 pounds milk and 20 pounds fat, not very much below the average of exactly 126 cows in another association close by, which was 609 pounds milk and 26 pounds fat. But notice how tremendously that comparatively small difference affects the total yield; for in one case the 126 cows gave, in the month, 86,845 pounds milk and 3,267 pounds fat, but the other lot of 126 cows gave only 65,546 pounds milk and 2,510 pounds fat; or allowing butter fat to be worth 25 cents per pound, actually a difference of $189.25 in one month. Why are not thousands more of our dairy cows made to earn an extra dollar and a half per month for their owners? When the owners are perfectly certain, through having tested each cow in the herd individually, which animals are bringing in a good profit, then the average yield and the total income can be largely increased.

Another contrast shows that 100 cows in one association produced just twenty-seven pounds of fat less than 72 cows in another association 10 miles away; there were thus 25 cows more to be milked, and to have capital locked up in, and to tramp round on the pastures eating good feed that the other cows could have used to better advantage, for twenty-seven pounds less fat. Weighing and testing is the quickest and surest way of detecting those that are below par value.—C. F. W.

Observations

H. H. Wing, professor of dairy husbandry, has reached these conclusions after a year's observation with the dairy herd at Cornell University, and they are worth considering by every man who milks:

1. With a fairly good herd, carefully fed and kept, milk can be produced for 65 cents per cwt., and fat for 16 cents per pound for the cost of food consumed.
2. That individuals of the same breed vary more widely in milk and butter production than do the breeds themselves.
3. The large animals consumed less pounds of dry material per 1000 pounds live weiget per day than did the smaller animals.
4. That in general the best yields of fat were obtained from cows that gave at least a fairly large flow of milk.
5. In general, the cow consuming the most feed produced both milk and fat at the lowest rate.
6. For the production of milk and fat there is no feed so cheap as good pasture grass.

LIVE STOCK.

Buying Rams.

GOOD AND BAD METHODS.

We have now arrived at a time when most of our flocks will be made up. Broadly speaking, they are divided into two sections, those used for ram breeding purposes and those used for ordinary commercial work in breeding shape for mutton for the market. Watching, as the writer has done when purchasing sheep for stud purposes during the coming year at the different ram sales, many breeders of both classes, it has struck him more than once how strange are the methods of many of these breeders in making their selections. In one case one will observe a breeder going through most carefully each consignment of sheep, noting different points, and when the sale ring is visited this breeder will be found to be purchasing certain sheep with certain characteristics clearly defined, and of certain strains of blood.

On the other hand, the vast majority of ram buyers pay little or no attention to the individual pedigree of the sheep, and only equal attention to the type or conformation. Such breeders will be found to be bidding away indiscriminately all through the sale, and taking rams or ram lambs for service which can be purchased at a figure under the price beyond which they will not go.

This method of selection can only lead to one result—the production of an uneven and unmatching lot of lambs. The uniformity of type and symmetry so essential both for the ram breeder and for the ordinary market can only be obtained by breeders who use sires of the same type.

One often hears, "We must have a change of blood." This is an all-important factor in successful management, but to obtain this change of blood does not necessitate going to a flock formed of sheep having for their most prominent characteristics qualities entirely antagonistic and opposite to the flock for which the selection is being made.

There is a saying that "you cannot mix chalk and cheese," but this is really what a great number of our flock masters endeavor to do. The writer overheard this year on one occasion: "I must get a dark-faced sheep, as dark as I can, for my sheep's faces are too light." The particular breeder was successful in his efforts in getting a dark-faced sheep, and probability will be that when his lambs arrive their faces will be more mottled than otherwise. To mate two extremes is wrong, it can never be successful. If a desired object is in view the way to obtain it is to breed gradually towards the desired end. Do not mate extremes, but do it by degrees.

Then, again, one finds many men running after fashionable strains of blood. This is all very well for the owners of those fashionable strains of blood, but it is not judicious, neither does, it, in many cases, lead to success. The fashionable strain of blood represented by winning sires is doubtless a good strain of blood, but to be successful in the flock it is all important that such a strain of blood should be mated with strains for which it is suitable. Without this, to purchase any fashionable strain of blood is to attempt a new experiment which may or may not be successful. No matter what may be the general opinion, the actual result of a lengthy experience has shown that the mating of any two strains of blood is always more or less an experiment. Until such strains of blood have been mated and the result seen, no one can for certainty rely upon it being a success.

The variation in the prices paid for stud sheep has not perhaps been quite so marked this year, for somewhere about £200 represents the top price.

One cannot fail to realize the difference in the position of those who breed and sell the better as compared with those who breed and sell the poorer. What is the reason for this difference? Simply because the former is a man who conducts his business in a thorough and practical manner, and is what may be termed "a ram breeder." He makes it his business; he studies the details, and prepares his sheep for the market in the manner in which they will attract the attention of the buyer, and by his careful breeding and selection of sires and dams, sells to his purchasers year after year stud rams that transmit to their progeny the merit and quality they have themselves, and thus give satisfaction to the purchaser. The breeder at the other end of the list is a speculator, who thinks that the breeding of stud sheep can be indulged in by anyone who owns a flock. It is true all flock owners can, and do, breed ram lambs, but this does not in any sense means that they breed stud sheep.

The ram breeder's business has to be learned, like all other businesses; it is one that has to be managed with as great care and probably greater judgment than many others, and it is certainly one that no man, unless he has great experience, can ever hope to be successful in.—Farmer and Stock Breeder.

are three important operations that each and every sheep owner should not neglect at this season of the year.

RIDDLING THE RAM.

It is a good plan to make a moduately stiff mixture of lampblack and oil and smear the ram with it between the forelegs and almost as far back as the penis. Keep the ram confined during the day and feed him well, for he will not feed much during the mating season if allowed to constantly run with the ewes and thus his vitality will be much impaired for breeding purposes. By confining him during the day he will eat all the food that he needs. Turn him out with the sheep at night in a small field or yard. Take a record of the ewes that have black markings on their rumps each morning and in this way you will know when they have all been bred. After a lapse of about a week after the ewes have been bred the ram should be riddled with red ochre and oil, so he may serve and mark any sheep that have turned. Ewes carry their lambs from 142 to 150 days or roughly speaking 5 months.

FLUSHING THE EWES.

This term "flushing the ewes" is applied to putting the ewes in extra good condition at time of mating, with the expectation that a crop of lambs will be strong and vigorous, though the latter will depend on the management of the flock throughout the period of gestation, it is believed that many more twin lambs will result if the ewes are thrifty and gaining in general condition when exposed to the ram. Cases are on record in which a shepherd by giving his flock extra good feed for a time before breeding raised twins from each and every ewe in his flock. Twins are much more common with our improved mutton breeds than they were a generation ago, largely because of better care of the flock.

Flushing consists in simply giving the flock suitable and plenty of feed before breeding time. A few weeks before it desired to mate the ewes put them in a fresh pasture where good and fresh grass is abundant and the lamb crop will prove the wisdom of the measure. When dry weather has existed recently, unless there has been a change of pasture probably the flock is not gaining. If a pasture is not available that will afford plenty of good grass, if no rape or other supplementary feed is to be had then some oats fed regularly each day will help the condition. Where farms are sufficiently fenced the stubble fields afford excellent places for the flock after the grain is harvested. This is a way of getting "something for nothing," as near as can be suggested.

Get the flock gaining; do not overtax the ram and care for the flock well during the winter and profits will richly pay the extra cost.

DIPPING THE FLOCK.

Be sure to dip every individual in your flock, before winter sets in, in order to eradicate any ticks or other vermin that may be harbored on the sheep. Unless such vermin are destroyed they will multiply very rapidly during the winter months and will so pester the flock that they will not do well. We have come in contact with some cases where ewes and lambs were so sapped of their energy by vermin that they became so weak that they could not stand. Who has not seen lambs, and ewes, too, with hardly any wool on their bodies before shearing time came around. A close investigation would show that those animals were so pested that they constantly kept rubbing themselves against any and every object they came across or bit at the affected parts in order to allay the irritation. In this way much of the wool was pulled off; you cannot expect a strong crop of lambs from ewes kept under these circumstances.

Dip your ewes now to increase your own profits and to save the dumb brutes from much agony.

Our Free Catalogue will tell you more about our can't-slip lock, and about the superior English high-carbon, hard-drawn steel wire from which Maritime Wire Fence is made. Address the card to

New Brunswick Wire Fence Co., Limited, Moncton, New Brunswick

THE HORSE.

The Old Horse.

So it has come to good-bye, old friend! With the best will in the world you can't go a step farther; you have reached the end of your tether. You lie there, spent and patient, waiting for the unknown. Thank God, there is no one to interfere with your repose, to goad you with rough voice and gesture, into making a last frenzied effort to work.

Your latest memories have been those of green pastures and pleasant autumn skies; leisured freedom in the open, such as a tired horse loves, untrammeled by saddle, bridle or stall.

Have you mused with temperate regret on the old rousing days, when together we galloped over moor and heath and down, while the rush of the strong, keen air quickened our blood and went to our heads like new wine, and the swift hoof strokes echoed in the beating of our hearts?

Have you pricked your ears in fancy to the sound of the horn, and the sight of the busy, eager hounds, waiting for the signal to start and away, over field and fence, with no thought but to get ahead—all your life concentrated like your master's, in the joy of fleetness, with youth and strength and pleasure throbbing high in every pulse, and a southerly wind blowing in your teeth?

Then the short, sharp race down the hillside, at the finish, and the easy saunter homeward, with the remembrances of a day lived and a fatigue well earned to stimulate your flagging vigor toward the welcome haven of rest?

Do you mind the day, old horse, when you landed a bit too short on the farther side of the brook, and had to scramble out, rideless, though you had the grace to turn and wait for your master, who was in a worse plight than yourself; but you made up for your slip gallantly before the end of the run? Those were cherry days!

Did you wonder when you missed your stable companions what fate lay in store for you, and whether you would follow them to the hammer, and be sold for just what you would fetch, with the chance of finding yourself between the shafts? Was there any room in your philosophy, friend of my best days, to speculate on the gratitude of a man to one who has served him well, rain or shine? to dread that your shares in his life would end with his prosperity and that dark days for him meant darker days for you?

Could you picture yourself over-driven, over-bitted, with a heavy weight at your back and a heavy hand on your rein, threading your way through city streets, pulled here and there, with never a straight course, or a free mouth, or a will of your own, to give you breathing time?

Or did your understanding of your master's moods, never at fault before, guide you to the pre-knowledge of this restful paddock where twilight might deepen into night or peacefully that the transition was a tranquil gliding into slumber?

"It would be kinder to end it at once," says the vet., contemplatively; "he might suffer at the last otherwise. His life will be no more pleasure to him now." "If it were not the truest kindness I would shoot myself first."

"A shot is sure enough, but there's an easier way," continues the vet., stooping to pick up a straw. His reputation for sympathy with animals is as great as that of his skill in ministering to their sufferings; one can trust him implicitly. "Do you give the word, sir?" he asks. A gesture of assent answers him.

He takes a little sharp penknife from his pocket, and stooping quickly over the horse gently presses one of the large neck arteries between his finger and thumb. Then he makes a small incision, and deftly slipping one end of the straw into the aperture places his mouth to the other and blows down it once. A short space of undisturbed serenity and then my old friend, who has not changed his attitude of repose, quivers slightly and lies more still than before.

"There is absolutely no suffering, says the vet., stepping back to me. "The instant that bubble of air reaches the heart it is over. You can rest assured that your old friend felt no pain."

I shake his hand in gratitude and turn away, while through my mind the recollection of some words of dear old Adam Lindsay Gordon's float idly:

"We labor to-day, and we slumber to-morrow,
Strong horse and bold rider! And who knoweth more."

—W. R. GILBERT, in Rider and Driver.

Work the Stallion.

We believe in the working of the stallion. We believe that there is nothing worse for a breeding horse than to be cooped up in a stall and small lot for weeks and months at a time. It is far better to put the stallion to work and make him earn his oats in that manner. We have had a great deal to do with breeding horses during a quarter of a century, and we have never known working stallions to be excelled in prolificacy by idle ones, says Farmers' Tribune. A stallion, as a rule, makes a pleasant worker. There is no reason why a stallion should be restive or annoyingly boisterous in the harness. It is all a matter of breaking, and most stallions take kindly to the harness. We do not think there is ever any real reason why a draft stallion should not do his share of the farm work when he is not travelling. A coach or trotting-bred stallion makes the finest kind of a runabout horse.

We all know that development has meant much to the trotter and pacer. Most of the great trotters of speed have fast records. Dan Patch does a big season each year, and gets his preliminary training at the same time. He is thus in the very prime of his vigor in his success in the stud. The draft stallion should have as much good muscle on his frame as can be put there. There is no reason why he should not be worked in a team with a gelding, but as a rule, he will work somewhat better with a mare. At first it is usually well to use a guide stick between the inside bit ring of the stallion and the halter ring of his mate. Then he cannot be nipping or bothering his mate. Later the guide stick may be dispensed with. A big, heavy draft stallion is usually somewhat heavier in the mouth than an ordinary work horse, and allowance must be made for this. A stallion makes a fine middle horse in a trey team for fall plowing, and if he is used in such a place, two guide sticks should be fitted between the rings of his bit, and the inside bit rings of the two outside horses. Perhaps the handiest way to make these guide sticks is to get a common bamboo fishpole, which will cost ten or fifteen cents. Take two cuts of the right length from the thickest end, and bore holes in them.

In the hole in each end of each stick, splice a loop of half-inch rope with a common barrel snap in it. These may then be hung on the hames of the stallion when not in use, and then they are handy to snap into place when the hitching up is done. By all means, put the stallions to work during the eight months of the year in which they are not travelling. It will pay for the feed and care, keep the horse in a better condition and add materially to the number of foals begotten.—B. S.

Horse Notes.

Be sure that the collars are comfortable and fit well.

Never feed a horse more than it will digest readily.

There is no better way to give a horse a fine disposition than to treat him kindly.

The training of a colt should commence with kind handling from the very first.

Write for a Free Sample of GIN PILLS.

Let Them Prove That They Will Help Your Sick Kidneys and Bladder.

First of all, read these three letters—

34 John St., Hamilton, Ont.

"Being a sufferer from my Kidneys and dizziness, I saw in the papers what good Gin Pills were doing, so wrote for a sample. They did me so much good that I bought three boxes. They worked wonders with me. I can recommend Gin Pills to any sufferer."

GEO. A. BROWN.

Hensall, Ont.

"The sample package of Gin Pills came to hand and we were so much encouraged by their use that we obtained a full size box from our druggist, Mr. Hooper, which relieved me from all pain and has apparently made a perfect cure. We would highly recommend Gin Pills to all sufferers from Kidney and Urinary Troubles."

R. J. DRYSDALE.

Skipness, Bruce Co., Ont.

"I have seen the sample of Gin Pills and received great relief. Enlosed find P. O. order for $2.50 for 6 boxes."

RICHARD WEBSTER.

These gentlemen felt just as you do about Gin Pills—they wanted to try them before they spent any money on them. So they took advantage of our liberal offer and sent for free samples.

DO THE SAME. Sit down, right now, and write us for a sample of Gin Pills. We will send them, by return post, free of all charge.

We know that Gin Pills will help you—and will cure you—if your trouble is the Kidneys, Bladder, Pain in the Back, Rheumatism, Sciatica or Lumbago.

Gin Pills are sold by all dealers at 50c a box—6 for $2.50—or sent direct on receipt of price.

POULTRY.

The Prince Edward Island Poultry Association's Annual Show.

The second annual show, under the auspices of the Prince Edward Island Poultry Association, will be held in the Market Building, Charlottetown, on January 5th, 6th, 7th and 8th, 1910. L. G. Jarvis, of Grimesby, Ontario, will place the awards. The show will be conducted under the rules of the American Poultry Association. Copies of the prize list will be sent to those desiring them on addressing the Secretary, H. E. Miller, Charlottetown. All classes are open to members of the P. E. I. P. A. and to members of any regular organized Poultry Association in the Maritime Provinces. Entry to be in before December 15th, 1909, accompanied by certificate of membership, signed by the Secretary. The cash and special prizes are worth going after. The introduction to the prize list reads as follows :

"In presenting the Prize List of the Second Annual Exhibition of the P. E. I. Poultry Association, to be held in the Market Building from the 5th to the 8th of January next, we take this opportunity of thanking the merchants of Charlottetown for the generous support they have extended to the Association, both in the way of advertising, and in the presentation of valuable special prizes, thus demonstrating in a most practical way their interest in the breeders of the Little Hen, which is such an economic factor in the welfare of every community.

"To all others also, who have assisted by the presentation of prizes, or in other ways, we wish to extend our thanks, which we feel will be re-echoed by every breeder of poultry in P. E. I.

"The Poultry Products of P E. I. are worth a million dollars a year and where is the man who does not receive some benefit ? Perhaps in the past you only realized the benefit after a good dinner of roast chicken, but if you will go into the matter from another point of view you may be able to figure out how much of that million dollars is in your bank account. Make no mistake, you have some of it.

"The Farmer is the greatest wealth-producer in the world and everything tending to improve his facilities, in any direction, is a public good, and it is in the interest of every farmer and poultry-breeder in P. E. I. that he join the Association at once and make an exhibit. A thoroughly qualified judge will explain to you the defects, as well as the good qualities of your birds, and you will go home with a determination to make a study of the breeding of stock, and thus enlarge your knowledge and raise the standard of your ideals. Don't go through the world looking upon your work as drudgery, but put intelligence into it and become a real farmer. It has been said that anybody can scratch the ground and keep from starving to death, but it takes brains to make a successful farmer.

"There are those, even to this day, who will ask "what is the value of breeding standard-bred stock ?" and to them we will answer "that from $500 to $2,000 is being paid for single birds in the United States, and the Americans have developed the poultry industry through their Associations until the product now exceeds six hundred million dollars a year in value."

" "What have our farmers done along the line of stock improvements?" This will be answered at the annual show in January, and it will astonish you to see what some of our progressive farmers are doing."

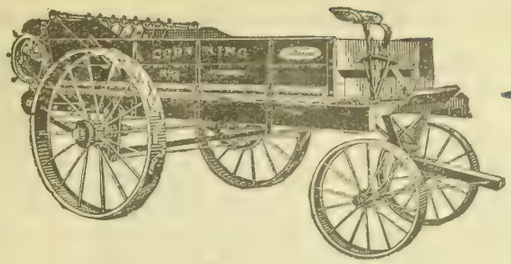
A Reliable Dusting Powder for Pouling.

Insects may be driven from poultry by means of a powder made as follows : Sulphur, 4 ozs.; tobacco-dust, 6 ozs.; oil cedar, 1-4 oz.; crude naphthalene, 3 ozs.; insect powder to make 2 pounds.

The Farmer's Friend—the Hen.

Comparatively few farmers realize how profitable the keeping of hens on the farm may be made. The old-fashioned farmer considers the hens as something for the 'women folks' to look after; as not worthy of a man's time and attention. He thinks they are a 'kind of nuisance anyhow,' and, although he does not object to good, fresh eggs for breakfast or fried or boiled chicken for dinner, he grudges all the money spent for feed, and absolutely will not clean out the poultry house, or take any pains to make the hens happy and comfortable, which has so much to do with their being also profitable. With reasonable care and attention the ordinary hen will lay a net cash profit of a dollar and a half a year. Estimating the hen's value at 75 cents, she pays a net profit of 125 to 200 per cent. This is where all the grain and feed is bought. If the farmer had to buy all the hay and grain he feeds his cows, how many herds would pay even 50 per cent. profit ? And yet the farmer is contented to keep cows. The farmer has greater facilities for profitable poultry keeping than the ordinary man;—a field adjoining his poultry yards can be sown with wheat, oats and barley, and as soon as it ripens, the growing young chicks turned into it will save him all the trouble as to harvesting, and all care as to feeding at the same time. The writer of this article has made a good living for himself and family for fifteen years from poultry keeping, and has never kept over 500 hens to do it. And this has been done from commercial poultry keeping; that is, eggs and poultry sold at market prices. The prices obtained and the profits of 'fancy' poultry are beyond the belief of the average farmer. When Mr. Northrup, in New York State, obtained $1,000 for a rose comb Black Minorca cock, it was then the top notch as to price, but since then the wife of Paderewski—the pianist—paid Mr. Kellerstrass, of St. Louis, $7,000 for a half dozen White Orpingtons, and Mr. Chas. Brundage, of Danbury, Conn., has a Golden Wyandotte cock that he values at $20,000, because the chicks sired by that bird in one year has actually sold for an amount equal to 6 per cent. interest on $20,000. But only a few men are skilful enough as breeders to obtain such prices, the statement above is made to show what is possible. People are realizing more and more that poultry keeping is a business that needs special knowledge and most of the agricultural colleges now give a short course in poultry keeping for the benefit of those who cannot attend the regular college course. Attendance at one of these courses will show the farmer where he is all wrong in his housing and feeding poultry, and will teach him methods whereby the profits may be materially increased.

There are seasons when the farmer finds the market glutted with milk or butter, and it is almost impossible to dispose of his products; but there is never a time when good, fresh eggs are not salable, and the equivalent of cash almost anywhere. On the farm all the green food for winter—cabbage, mangels, beets, etc , may be easily raised, and an acre or two of oats, tied in bundles and stored in a rat-proof house, makes an ideal "litter" to throw in the scratching sheds, in which to scatter the wheat and cracked corn, and thus compel the exercise which is so necessary to the production of eggs in cold weather. No fear that any of the oats will be wasted, the hens will prove most excellent thrashing machines. Among the points in favor of poultry keeping are the small capital on which a start can be made, and the fact that the chick becomes a producer in six months from the time it is hatched, while the sale of the young cockerels for broilers usually pays the expense of raising the pullets to the laying age.—GEO. A. COSGROVE.



Barnyard Manure is the ONE PERFECT FERTILIZER

BARNYARD manure contains all the elements of plant food. Every ton of stable manure is worth from $2.00 to $4.00 or more, based on the commercial value of its fertilizing content. But, based on the increased crop yield, it is worth much more—just how much depends upon how you care for it and spread it over your land.

Get full value—not half value—out of the manure. There is only one way. Spread it with a machine which pulverizes all of it, and spreads it uniformly, and as you want it, broadcast over the land or in rows.

Your farm will maintain its own fertility if you give it a chance. You don't need patent fertilizer which only contains a few of the necessary plant elements. Save the manure and spread it with an

I. H. C. Spreader

You make the wisest possible investment when you purchase a a Cloverleaf or a Corn King spreader.

These machines differ in many features of construction and operation, but they are right-working, and that is the essential point. They avoid the waste of manure, greatly reduce the time and labor of handling, and rob manure spreading of its disagreeable features.

You may have a large farm; you may have a small farm. No matter what the size, you will find an I. H. C. spreader to suit your requirements.

Join the ranks of Soil-Builders. It will pay you big money.

Call on the International local agent—see him about a spreader for your own use. He will cheerfully give you catalogues and complete information; or, if you prefer, write nearest branch house for further information.

CHAPTER XVIII.

EPISTOLARY FROM NEWPORT.

DEAR DORA: As I am confined to my apartment by a very unfortunate accident, so also by being too indisposed to go out, I have plenty of time in which to write you, as I promised. This is the eleventh day of my arrival in Newport, and about time for me to be starting for home, for two reasons, one of which is, my means are giving out, owing partly to being robbed, and the other is the accident to which I referred in the beginning. I suppose you are curious to know what kind of a time I have had; and though much of it has equalled my most sanguinary anticipations there have been a few drawbacks to that unallowed happiness which is never ours on earth, and which I will confide to you, Dora, on accouut of your uncommon discretion for a woman, never talking about what'll make other folks trouble—so different from that Green and those Pea-Podds, whom I detest, as well as many other Pennyville people. For a mean, gossiping, scandalizing place, I think Pennyville will hold its own with the best. I never bought a little innocent box of pearl-powder, or dropped a remark about a neighbor, that it wasn't scattered to the four winds all over that village.

"One sickly sheep infests the flock,
And poisons all the rest."

Mehitable Green is that "sickly sheep," to speak in a meteor—a talking old maid, a pest to the whole community. But what on earth I'm writing about her for, when I've got other topics for my pen, is more than I know. Yes, Dora, I was robbed; before I had even reached Boston, I was robbed of my beautiful watch that I bought the time I expected to marry "A. de M.," and fifty dollars, good bills, which were in my purse. If you'd see the man that did it, you'd have no more confidence in mortality. I was certain he was a minister of the gospel. He was one of the most respectable-looking person I ever met; and, although being a stranger, I of course endeavored to keep him at a distance, yet, when he offered me his protection in the cars, I did not feel the least hesitancy in accepting it. We even exchanged cards at his earnest soliciation. But he'll suffer for it! I've the consolation to know that he is safe in jail, and I've got my watch back, too; the money will have to go. He'll have the comfort to find that some women cannot be imposed upon with immunity—not only robbing and deceiving them, but taking their cards to keep in the vest-pocket of a gambler and pickpocket. I acted with my usual promptitude in immergencies. I didn't rest till I'd got the police on the track, and telegraphed to New York and other places, and they knew him by the graphical description I gave of him, and he was arrested with my watch, and my name engraved on it, in his possession, so they sent me the watch by express; and I shall be very careful, going home, to keep all my money in my bosom, and not to let anybody, not the bishop himself, or the President, sit in the same seat. It was one of the sweetest moments of my existance when I heard of his arrest. If there's anything I pride myself upon, it's my descrimination, and I hate to be fooled. A person that can wind other people around their finger as easily as I can, don't relish getting tricks played on them, 'specially by sharpers and impositors upon the community. I've made some capital out of that fifty dollars besides, total loss as it was, for it is currently reported in Newport, and especially at the hotel where I am staying, that I lost a thousand dollars in money and a set of diamonds worth fifteen hundred, besides a draft for a large amount, upon which I have ordered the payment stopped It has served as a very good subject for a great many persons introducing themselves to me. I had the advantage of appearing upon the stage as a lioness immediately, besides the falicities it afforded for circulating the rumor of my being an heiress. Just how it got started that I lost so much, I of course can't say, but I have not contradicted it. The old agate that "a rolling stone gathers no moss" ain't true with regard to stories; they roll up faster than a ball of snow, and I shouldn't wonder if, before I left this place, it was currently reported to be ten thousand dollars and enough jewelry to set up a jewelry store. You know I never was troubled with diffidence, and being used to doing business for myself, I wasn't a bit embarrassed to arrive here without an escort. I thought it fallacy to take just as good a room as I durst to, which I did. The very evening of my arrival at this house, there was a hop, as they term it, and I made up my mind to attend, if I did have to enter the ball-room hanging, meteorically speaking, upon my own arm. I wore my new w--g—don't let George read this letter—and the curls were beautiful. I used a quarter of a box of Mean-Fun and spent just an hour on my eyebrows and cheeks, besides taking a tablespoonful of cologne-water to make my eyes bright. I took out all my dresses and looked them over and over. My choice hung between the white satin and the white flounced mull with the rushes. I finally decided upon the mull. I wore five starched petticoats over a full-sized Douglas & Sherwood, and the flounces set out sweetly. My waist didn't look bigger than a churndash, and was encircled by a blue festus. Your pearl set capped the climax I am certain I never appeared so well, which imparted an airy gayety to my spirits, and enabled me to enter the ball-room with a fairylike vivacity. I was conscious of becoming the "sinecur of neighboring eyes;" everybody looked at me and whispered, and looked at me again. I overheard some of their commentaries. She doesn't appear at all depressed by her loss; she must be very wealthy, to bear it with such composure," said one. Those pearls are quite pretty; I suppose she wears them because all her diamonds were stolen. Did yot hear about it ?" said another. "Whom can I get to introduce me ?" I heard a lovely young gentleman inquiring, in the most agitated manner. "Oh, she's so exclusive she knows nobody, and so independent she goes wherever she's a mind to," was the answer. "I know we should have a game time, if I could only get introduced," he said again. Just then he met my eye, and I had a good notion to bow and smile, but concluded I'd better seem more reversed at first, even if I didn't feel so. I was just wishing, with all my heart, that I did know some one that would ask me polka, when I saw the ladies hopping and flying around like a parcel of robins learning to use their legs and wings, now on one foot now on t'other, and then fluttering round and round so delightfully, supported by the elegantest men I ever beheld, with moustaches, and gaiters, and spy-glasses suspended around their necks—I was just wishing and feeling as if I could not remain in my seat another instance, when—oh, Dora, whom should I behold at the other side of the ball-room but—guess who. You never could guess if you should strive for a week. I actually turned faint and thought I should go over, when I realized who it was. Everything got dark, and the music buzzed like a spinning-wheel; but I got over it in a minute, and then my, how mad I was! My blood boiled in my veins! I forgot the heavenly part, everything except that horrid letter; you remember it, Dora—"dear old girl!" Yes, Dora, it was actually Adonis de Mountfort that I saw standing and conversing with the very young gentleman whom I had overheard wishing to be introduced to your humble servant! They had been looking at me, I know, though Adonis turned his eyes in another direction as quick as he could—but his name isn't Adonis, or De Mountfort either, but Albert D. Morton—and pretty soon he looked back again, and stared right straight at me; and I presume he saw how mad I was, and that I was going to have him arrested for embellishment, false pretences and breach of promise. I looked him straight in the eyes—oh, Dora, do you remember what beautiful eyes he had? without flinching, and said to myself, "'Old enough to know better ?' Ha, young man, you'll get your pay for that, now!' when what should he do but just take that other gentleman by the arm, and come across the room, and hold out his hand to me with a smile, and say, as cool as a cucumber, "My friend Miss Slimmens, is it possible this is you ? I am delighted to meet you here, in this congenial scene. How are you ? Not married, I suppose ? Never been able to meet a suitable spirit yet, ah, in this etherial world ? Allow me to take the liberty of presenting to you my particular friend Mr. Bowser. He was dying to make your acquaintance, and was very much pleased when he learned from me that you and I were old friends, my dear Miss Slimmens." I felt as if I should choke with surprise and rage; and I couldn't hardly be mad at him either, he looked so innocent and unconscious, so I just bowed, and was wondering what on earth to do or say—whether to rise up there and cry out "Thief," or pass it by till to-morrow, which would give him a chance to escape—when he bent over and whispered in my ear: "My dear friend, let bygones be bygones ? You don't want it understood here that you are a retired milliner, nor just how you came to lose seven hundred dollars by me; you've come here to make a match; I'll help you. I know everybody and everything, and all about them. The young gentleman I just introduced to you is a rich young Southerner; all the girls are dying for him. You'll be the most envied of your sex. You say nothing and I'll say nothing, and it'll be just the thing. I can get you a large circle of admirers in less'n two days." Before I could reply, Mr. Bowser was pressing me to dance, and I was standing on the floor before I knew it. He danced splendidly. I enjoyed it excessively, in spite of my rheumatiz, and after it was over, I was introduced to several others, and before the evening was ended, I had the gratification of feeling, Dora, that Miss Slimmens, of Pennyville, was the bell of the ball, the observed of all observers. I retired to my room without a single regret for the robbery, and in such a state of flustration that sleep did not visit my pillow till broad daylight.

The next day I made more acquaintances. Some of the ladies were very polite, and consoled with me for my loss, which I told them, carelessly was of no censequence, as my jewelry was not the gifts of friends, except the watch which I should be glad to get back. I found myself getting along so well, and had already the case of the pickpocket to attend to, I made up my mind it was fallacy to let Mr. Morton (alias de Mountfort) go and not have him arrested for a swindler—at least for the present; and, on the whole, I'm rather glad I took the course I did. With so many chances thrown right in my face and eyes, as it were, I preferred keeping it a profound secret that I'd ever bleached bonnets for a living. You know I always had a remarkable genteel air, which has been in my favor; and the way I've pulled and hauled Susan and Caturah around has been of advantage to me in ordering the waiters, who are killingly attentive, in expectancy of what I'll give 'em, which won't be much, if they only know it. I go to the table after almost everybody is there, and I never fail to create a sensation. I see it out of one eye, though I don't purtend to. In the early part of the day, I generally pass my time in the reception-rooms; and I always have a book, and generally a gold pencil and a piece of paper with me, and I adopt a pensile air, suitable to a literary person, as well as something peculiar in my dress, as singularity is a mark of talent. The gentlemen are very fond of conversing with me on intellectual topics. However, as you are not literary, Dora, I suppose you don't care to hear. The politest person in the house to me has been Mr. Morton; he treats me with the greatest reverence before everybody, and says and does the nicest things. He's taken me out to ride twice, and we've been down on the beach every day to see the feminine portion of the visitors bathing; but I won't go in the water myself, for reason's—you know Dora.

Don't think, from what I've said, that I've forgiven him; I haven't and I never shall! I am only acting from fallacy, and so is he, and we understand each other. The acquaintance I think most of is quite another person. He's a widower. I should say about thirty-five; rather small, but dressed more sweetly than any other man in Newport; his dress is exceptionable, from top to toe, and he handles his spyglasses like a person "to the manger born." The only imperfection in his appearance is a slight, a very slight limp, which I suppose is rheumatiz, and which prevents his dancing, which is a great pity. I've understood he has no child-

AFTER SUFFERING TEN YEARS

Cured by Lydia E. Pinkham's Vegetable Compound

MARLTON, N.J.—I feel that Lydia E. Pinkham's Vegetable Compound has given me new life. I suffered for ten years with serious female troubles, inflammation, ulceration, indigestion, nervousness, and could not sleep. Doctors gave me up, as they said my troubles were chronic. I was in despair, and did not care whether I lived or died, when I read about Lydia E. Pinkham's Vegetable Compound; so I began to take it, and am well again and relieved of all my suffering."—Mrs. GEORGE JORDY, Box 40, Marlton, N.J.

Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs, contains no narcotics or harmful drugs, and to-day holds the record for the largest number of actual cures of female diseases we know of, and thousands of voluntary testimonials are on file in the Pinkham laboratory at Lynn, Mass., from women who have been cured from almost every form of female complaints, inflammation, ulceration, displacements, fibroid tumors, irregularities, periodic pains, backache, indigestion and nervous prostration. Every suffering woman owes it to herself to give Lydia E. Pinkham's Vegetable Compound a trial.

If you would like special advice about your case write a confidential letter to Mrs. Pinkham, at Lynn, Mass. Her advice is free, and always helpful.

and is worth thirty thousand dol-
I suppose he reckons I'm worth
as much, and I sha'nt take any par-
lar pains to undeceive him. He
't actually declared himself yet,
'm expecting every day when he
; at least, as soon as he learns that
about to leave, which I must do
t away, Dora, for it costs even more
I reckoned; what with impudent
mbermaids that won't hook up a
lady's dress without they get a half a dollar a time for it, and a quarter for a glass of ice-water, and a dollar a day to the hair-dresser who differs the arrangement of my w-g (burn this, when you get through, if you ever do which is doubtful), each time, and makes it just like a real head of hair. It takes money, and nothing but a good match can repay my outlay. However, I think the sea air is doing me good, and I trust soon to get over the lingering remains of that exterminator. If he don't declare himself before I leave, I shall invite him to visit Pennyville; though I'd rather the matter would be settled before, as he would see then, just what I was worth. What would you say, Dora, to my coming home a bride? Poor Timothy Bethuen would scarcely stand the shock. Be prepared for the best; and tell Susan to bake some pound-cake.

(To be Continued.)

YOU'LL feel better for work, play or rest if you eat Quaker Oats at least once a day.

Cowan's

Cake Icings

If you had trouble with prepared Cake Icing, it was not Cowan's.

Even a child can ice a cake perfectly, in three minutes, with Cowan's Icing. Eight delicious flavors. Sold everywhere.

MERIDEN BRITA CO.

Better than Spanking.

Spanking does not cure children of bed wetting. There is a constitutional cause for this trouble. Mrs. M. Summers, Box W. 309 Windsor, Ont., will send free to any mother her successful home treatment, with full instructions. Send no money but write her to-day if your children trouble you in this way. Don't blame the child, the chances are it can't help it. This treatment also cures adults and aged people troubled with urine difficulties by day or night.

If you are suffering from biliousness, constipation, indigestion, chronic headsche, invest one sent in a postal card, send to Chamberlain Medicine Co., Des Moines, Iowa, with your name and address plainly on the back, and they will forward you a free sample of Chamberlain's Stomach and Liver Tablets. Sold by all dealers.

The Art of Being a Wife.

"I was a wife before I was a mother," remarked a woman who has a remarkable husband and remarkable children. "My children never drove my husband out of my mind for a moment. He has always been first." "And the result?" asked her friend with a skeptical smile. "Well," remarked her companion with a happy little laugh, "it has been most satisfactory, as I will show you. I have a place of honor a queen might envy. Think you my children love and revere me less in consequence? Not so. I am the first in their hearts and thoughts. I am the centre from which all draw their inspiration, or think they do. Why? Because I simply kept my first place as the wife and sweetheart of my husband. Our children have always been accustomed to see their father first in their mother's thought, their mother first in their father's thought. They learned instinctively that this love was first, and the love for the children second. Our home is run for the family. But if one person must take precedence, it is the father, because his place and work are of first importance to the home and the world.

"Our children, as you will observe, are well-mannered, because never for a moment do they think themselves of first importance. This has not restricted individual liberty. They have been allowed to choose individually or collectively, where choice affected them only. Never in our home has any important decision affecting the welfare of one or all of our children been the decision of one parent. And in matters of discipline it has been the same. We have always consulted when the welfare of the child demanded it. It is the unity of thought and common interest which has made our family life so satisfactory and happy.

"The greatest mistake a woman can make is to thrust her husband in the background of her thought, or give him a second place in the home. She makes the most serious blunder if she permits him to take the attitude that the children are hers. The wise woman, without contention, compels recognition that the children are theirs, and that the children's best interest can be promoted only when the moral intelligence of father and mother is directing their training.

"The woman who has the fine art of being a wife has usually the fine art of motherhood. But she who first, last and always busies herself with her children, pushing her husband more and more into the background, as the demands of the family increase, is neither wife nor mother to perfection."—R. Winchester.

Honey Cooking Recipes.

SOFT HONEY-CAKE—1 cup butter, 2 cups honey, 2 eggs, 1 cup sour milk, 2 teaspoonfuls soda, 1 teaspoonful ginger, 1 teaspoonful cinnamon, 4 cups flour.

HONEY-JUMBLES—2 quarts flour, 3 tablespoonfuls melted lard, 1 pt. honey, 1-4 pt. molasses, 1 1-2 level tablespoonfuls soda, 1 level teaspoonful salt, 1-4 pint water, 1-2 teaspoonful vanilla.

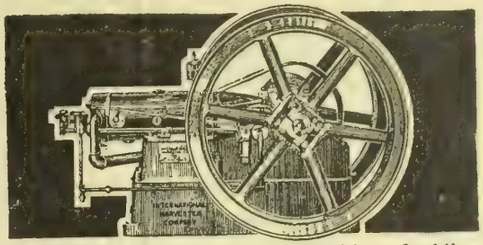
These jumbles and the gems immediately preceding are from recipes used by bakeries and confectioners on a large scale, one firm in Wisconsin alone using ten tons of honey annually in their manufacture.

HONEY-GEMS—2 qts. flour, 3 tablespoonfuls melted lard, ½ pint honey, ¾ pint molasses, 4 heaping tablespoonfuls brown sugar, 1½ level tablespoonfuls soda, 1 level teaspoonful salt, 1-3 pint water, ½ teaspoonful extract vanilla.

HONEY-CAKE OR COOKIES—without sugar or molasses. Two cups honey; one cup butter; four eggs (mix well); one cup buttermilk (mix); one good quart flour; one level teaspoonful soda or saleratus. If it is too thin, stir in a little more flour. If too thin it will fall. It does not want to be as thin as sugar-cake. I use very thick honey. Be sure to use the same cup for measure. Be sure to mix the honey, eggs and butter well together. You can make it richer if you like by using clabbered cream instead of buttermilk. Bake in a rather slow oven, as it burns very easily. To make the cookies, use a little more flour, so that they will roll out well without sticking to the board. Any kind of flavoring will do. I use ground orange-peel mixed soft. It makes a very nice gingerbread.

GINGER HONEY-CAKE—1 cup honey, 1-2 cup butter, or drippings, 1 tablespoonful boiled cider, in half a cup of hot water (or 1-2 cup sour milk will do instead.) Warm these ingredients together, and then add 1 tablespoonful ginger and 1 teaspoonful soda sifted in with flour enough to make a soft batter. Bake in a flat pan.

A RELIABLE POWER IS A FARM NECESSITY



You can do twice as much farming without doubling your force of helpers, by adding an I. H. C. gasoline engine to your equipment of implements and machines.

Your men will be able to turn out twice as much work. They will save time and you will save money, energy, worry and delay.

With an engine, the hired-help problem is simplified—you will be freed from the worry of unreliable, inefficient and dissatisfied help. The efficiency of your other farm machines will be more than doubled. You can operate, at minimum cost, your grinder, fanning mill, cream separator, churn, pump, thresher, huller, cutter and other farm machines without the need of even one helper. You can also have a power-house on your farm, where you will always find a willing power to do your work. You can have electric lights for your home—just belt your engine to a little dynamo. There should be no difficulty about an adequate water supply for fire protection, for general use about your premises, or for irrigation if you find that necessary.

Sit down and figure the price of labor by the year; calculate what it costs to feed a man; include your losses when you could not find help in busy seasons; and it won't take long for an International agent to sell you an

I. H. C. Gasoline Engine

one of the farmers' own line. When he explains its varied uses; its simple construction; how cheaply it can be operated; and how long it will render service, it won't be a question as to whether you can afford one, but how you ever got along without it.

Go to our local agent and look over the line. It includes an engine for every section and every problem; of all sizes and all costs, for all farm uses—vertical and horizontal (both stationary and portable): engines on skids; sawing, pumping and spraying outfits. It also includes I. H. C. gasoline tractors—first-prize-gold-medal winners—the best all-around farm tractor by test. Information regarding I. H. C. engines will be cheerfully given by the local agent; or, if you prefer, write nearest branch house for catalogue, prices and details.

Let Me Tell You How to Save Money

'METALLIC'

will make your house and barn ABSOLUTELY FIREPROOF and WEATHERPROOF—reduces your insurance rates and practically eliminates the annual repair bill.

A Fireproof Roofing

"EASTLAKE" METALLIC SHINGLES are made from the finest quality galvanized steel—only the BEST and TOUGHEST will hold the bold, clear "Eastlake" pattern. The patented telescopic side lock and gutter make it the EASIEST and QUICKEST to lay, and the COUNTERSUNK CLEAT insures a PERFECTLY WEATHERTIGHT roof.

For the Ceiling and Walls

"METALLIC" is the BEST interior decoration. It gives a handsome appearance to any room—is SANITARY and WILL LAST a lifetime—never cracks like plaster and wood. Unequalled for offices, stores and residences.

The Best Siding for the House

"METALLIC" ROCK FACED SIDING in either brick or stone design gives a house a genuine brick or stone appearance. It is WEATHER and FIREPROOF and very durable. An artistic, economical siding for implement sheds.

Protection for a rns and Elevators

Our CORRUGATED IRON, galvanized or painted, is of the HIGHEST QUALITY material. The corrugations are PRESSED, one at a time, not rolled, thus insuring a PERFECT FIT. Our "MANITOBA" Steel Siding for large buildings, elevators, mills, store-houses, etc. Over 900 elevators in the Western Provinces are sided with MANITOBA SIDING and roofed with "EASTLAKE" Shingles—a proof of the superiority of "METALLIC."

Our illustrated booklets "Eastlake Metallic Shingles" and "Interior Decoration in Metal" will interest you. Write for them. 1984

Selection of Fruit for Exhibits.

(Continued from page 53.)

ored specimen. Such specimens often contain a worm, although no indication of its presence is visible on the outside, and, a few days later, when the apple is on the exhibit table, the worm crawls out.

The fruit should be picked so careful that no bruise will show. Care in picking, handling and packing cannot be emphasized too strongly. A small bruise may not be noticed at the time of packing but will show plainly a few days later. Many a plate of fine fruit has failed to win first prize because of bruises.

FRUIT SHOULD NOT BE POLISHED.

Fruit for the exhibit should never be polished. It is the belief that a polished speciment is much more attractive. To the casual observer this may be true but to the grower such is not the case. Every fruit is covered with a light bloom which is just as much a part of that fruit as is the color or any other character. Polishing removes that bloom and detracts just so much from the appearance. Judges usually discount for polished fruit.

NUMBER OF SPECIMENS.

The various associations differ as to the number of specimens required for a single plate. The Horticultural Societies and the large State Fair Associations however, are agreed and these regulations should be made general. They require for apples, pears and peaches, five specimens to a plate. For plums, the bottom of a six inch plate covered. For grapes, three bunches to a plate.

PACKING.

The fruit should be packed carefully so that it will not bruise in transportation. An excellent method is to put the five specimens for a single plate and the

A Crayon Enlargement, 18 by 24 inches, of one of the best photographs of the late Rev. Father Morriscy, the renowned priest-physician, has been prepared for admirers of the priest himself or of his wonderful prescriptions. Better even than the small reproduction above, it is a very handsome picture, worthy of framing. The Father Morriscy Medecine Co., Ltd., of Chatham, N.B., will be glad to send an enlargement, absolutely free, to each one who writes for it. 73

FREE TO YOU—MY SISTER

FREE TO YOU AND EVERY SISTER SUFFERING FROM WOMEN'S AILMENTS

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from women's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is a safe and sure cure for Leucorrhœa or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors or Growths, also pains in the head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete 10 days' treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember that it will cost you nothing to give the treatment a complete trial; and if you should wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer, if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all, old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhœa, Green Sickness and Painful or Irregular Menstruation in Young Ladies. Plumpness and health always result from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all woman's diseases and makes women well, strong, plump and robust. Just send me your address, and the free ten days' treatment is yours, also the book. Write to-day as you may not see this offer again. Address:

Dates to Remember.

Maritime Winter Fair, Amherst, N. S., December 6, 7, 8 and 9th, 1909.

Annual meeting of the Maritime Poultry Association, Winter Fair Building, Amherst, N. S., Dec. 8th at 1 A. M.

Prince Edward Island Poultry Show, Charlottetown, P. E. I., January 5, 6, 7 and 8th, 1910.

Dominion Exhibition, St. John, N, B, September 5th to 14th, 1910.

Charlottetown, Exhibition, September 20th to 24th, 1910.

Halifax Exhibition, September 28th to Oct 6th, 1910.

Many persons find themselves affected with a persistent cough after an attack of influenza. As this cough can be promptly cured by the use of Chamberlain's Cough Remedy, it should not be allowed to run on until it becomes troublesome. Sold by all dealers.

iety label in a Manilla sack. It is necessary to wrap the individual ecimens, although this is some times ie with the tender fruits, and where eat care must be taken to prevent iises. The sacks cotaining the varie- s are packed firmly in barrels of ckages, which are well lined with shions of paper or other flexible terial.

How Fruit is Judged.

Until recently no systematic methods judging has been followed. The ige would carefuily examine the dif- ent competing plates and then award e prizes, basing the decision on his n opinion of the points of merit. iese decisions were unsatisfactory to e exhibitor. An effort to secure uni- rmity in the work resulted in the lection of important characters to nich relative values were assigned. though these characters and values ay vary slightly in the case of differ- t associations they may be of some lp to the exhibitor in selecting his uit.

These characters and values are as llows:

orm	15	15	10
ze	10	10	15
olor	20	15	15
niformity	20	20	20
uality	15	20	20
reedom from Blemish	20	20	20
	100	100	100

Sign Your Name.

We frequently receive letters containing small sums of money and other communications to which no signatures are affixed. Be sure and sign your name and address when writing the Maritime Farmer as it is impossible for us to credit any amounts received unless the sender's signature is affixed. We have several small sums on hand now that we cannot credit until we hear from the senders.

How May Tattoo Marks be Removed?

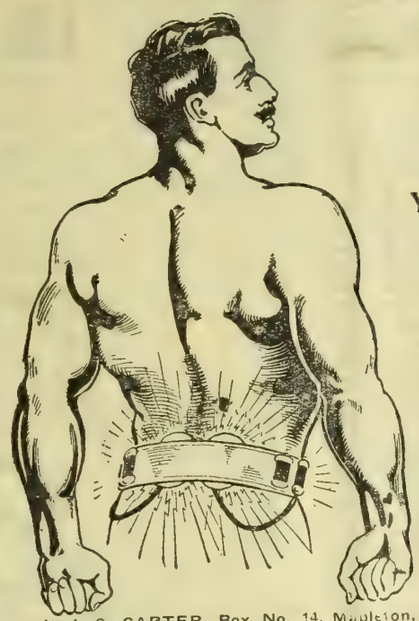
Dr. Variot adopts the method of pouring on the marks a concentrated solution of tannin and work it into the skin by a series of pricks just as in tattooing proper. A certain quantity of tannin is thus introduced beneath the skin. He then rubs the part with nitrate of silver and allows the solution of the salt to remain in situ until the prick marks show out as black points. The caustic is then wiped off and the result is the formation of a black stain of tannate of silver. Inflammation is set up, and in the course of a fortnight scabs form, on the disappearance of which no trace is left of the original design, the only souvenir being a reddish scar, which in time becomes less visible. Various other methods have been tried with more or less success, as scarification, the introduction of opaque powders and caustics into the skin, etc., but the author quoted says that none of them produce satisfactory results. The tannin, in his operation, acts as a mordant, and in no case did he have to deal with troublesome suppuration, although if the area be large it is well to do a piece at a time.—Practical Druggist.

Fumigating Powder.

Frankenceuses, 3 ozs; benzoine, 3 oz; amber 5 ozs; lanvender flowers 1 oz; mix. This is designed to be ignited upon coals, a stove, or hot iron to diffuse an agreeable aromo in an apartment, and incidentally to destroy noxious effluvia.

Aikin's Honey-cookies—1 teacupful extracted honey, 1 pint sour cream, scant teaspoonful soda, flavoring if desired, flour to make a soft dough.

"ELECTRICITY IS LIFE"



If you want to get up in the world and make your mark; if you want to be pointed at as a successful man; if you want to be a Man among men, you must be full of electricity—magnetism.

Brooding over your trouble—spending hours and hours regretting your past follies and mistakes—despairing of help will not add to your capital of nerve power—will not help you down the shadows and get you into the sunlight of happiness and success.

You aren't the only fellow after the plums—the high places. Thousands are in the strife, and the prizes go to the wide-awake—the men of courage and energy.

Life is made of hurry and worry, hard knocks and excitement.

You Have Heard it Said That Opportunity Knocks But Once in a Lifetime

The fact is, she makes several calls, but she docsn't come with a brass hand to wake you up

Nature carved you in the image of a man, a man you can be, as we can show you the way.

If you have fallen by the wayside, if you have succumbed to temptation and folly, if you have exhausted your vitality through excesses, overwork or worry, use your God-given brains and judgment for a few moments.

Take an inventory of yourself. Seek the truth. Study your weakness. Don't further wreck your nervous system and befuddle your brain with drugs, stimulants, but use that great wondrous power. **Electricity,** as I apply it with

Dr. McLaughlin's Electric Belt

I can point to hundreds of men to-day who came to me broken in health and spirit—absolute physical wrecks, hopeless, despondent who followed my advice, used my Belt, regained their strength and vitality, and are now getting on in the world. Many of them say that my Belt saved their lives.

Wm. S. Carter, Box No. 14, Mapleton, Ont., says: "I have worn one of your Electric Belts for three months as directed, and am very much pleased with it. It has done more for me than I expected, and I feel that I am perfectly cured. I cannot speak too highly of it, and hope that it will do as much for others as it has done for me. I will strongly recommend it to all people suffering from aches and pains."

J. Harry Denton, Trenton, Ont., says: "I used your Belt for nervous debility and rheumatism in 1903, and it cured me. I wrote at that time to this effect, and what I said then I can verify now. I am enjoying better health at the present time than I have done for many years. I would recommend the Belt to any one suffering from rheumatism or from any form of nervousness."

J. Largess, Box 53, Vankleek Hill, Ont., reports: "The lameness in my back is all gone, the Varicocele is better, and I am getting better health generally, and have gained a good deal in weight."

Jas. Hatt, Beach Hill, N.S., says: "The pains in my chest and back are all gone, and I have gained fifteen pounds in weight. It is a pleasure to say that I have at last found a remedy that would cure me of my aches and pains."

A DOCTOR'S GIFT TO THE SICK AND WEAK

To the people who want to be strong, who want to feel like they did when young, I offer a book which will show them the road to happiness—a book of 80 pages, which is brimful of the things they like to read, which will give them courage and enlighten them as to the cause and cure of their troubles. It will point out the pitfalls and guide them safely to a future of strength and vitality. It is beautifully illustrated. It tells what other people have suffered and how they have cured themselves. It is free. I will send it, closely sealed, without marks, if you will mail me this coupon. If you are not what you ought to be, send for it to-day.

FREE

BOOK FOR WOMEN
BOOK FOR MEN

Get my 80-page book describing my treatment, and with illustrations of fully developed men and women, showing how it is applied.

This book tells in plain language many things you want to know, and gives you a lot of good, wholesome advice for men. I'll send the book, in plain wrapper, prepaid, free, if you will inclose this coupon.

I want to convince every sufferer that he can get benefit from my treatment. Nobody should be without it, for it is cheap enough, far cheaper than a course of doctoring, and I want everybody to try it. Let every sufferer who can do so call at my office and make a full test of my battery free of any charge.

If you can't call, send this coupon for my book.

Office hours: 9 a.m. to 6 p.m. Wednesday and Saturday till 8.30 p.m.

Help for Those who Have Stomach Trouble.

After doctoring for about twelve years for a bad stomach trouble, and spending nearly five hundred dollars for medicine and doctors' fees, I purchased my wife one box of Chamberlain's Stomach and Liver Tablets, which did her so much good that she continued to use them and they have done her more good than all of the medicine I bought before.—Samues Boyer, Folsom, Iowa. This medicine is for sale by all dealers. Samples free.

DIP YOUR SHEEP

Stockmen and farmers who use the Cooper Dips have healthier animals—get more wool and better prices. More than half the cloth and flannel of the world is made of Cooper dipped wool. Tanks supplied at cost to all users of the Cooper Dips.

COOPER'S POWDER DIP

The leading sheep dip for 65 years. Used on 250 million sheep every year. Kills ticks, lice, nits and eggs in one dipping. Does not stain the wool, but increases the yield and improves the quality.

Prices 25 gal. pkt. 50c., 100 gal. pkt. $2.00.

COOPER'S FLUID DIP

for all animals. A highly concentrated, non-poisonous fluid dip of marvelious strength Mixes readily with cold water, whether hard, brackish, or salty. The only pure liquid dip—no sediment. Goes farther than Coal Tar dips and, therefore, cheaper. Positive remedy for scab, mange, ticks, lice, ringworm, eczema, sores, bites, stings etc. One gallon makes 200 gallons for general dipping, or 300 gallons for disinfecting.

Price—Qt. can 75c. 1 gal. can $2.00, 5 gal. can $8.50.

COOPER'S WORM TABLETS

A sure remedy for intestinal worms in Horses Sheep, Cattle and Hogs. These tablets offer the great advantage of correct doses and certain results. Dose—one tablet for lamb or shoat, two for sheep or hogs, three for horses and cattle.

Price—10 tablets 20c. postpaid, box of tablets, 200, $1.00, postpaid.

COOPER'S "LAVENE"

The most effective skin dressing for Horses, Cattle and Dogs. Cures worst cases of Mange and Ringworm at one dressing. Searches the skin and attacks the disease at its root. Improves the coat and renders hair soft and glossy. Is used by many of the best breeders in preparing animals for show.

Price Qt. can $1.00, Gal. can $3.00. CANADIAN DRUG CO., LTD., ST. JOHN, N. B.

NO LONGER TROUBLED.

A Sergt.-Wheeler in R. C. Finds Cure from Agonizing Skin Disease.

Sergt. Wheeler Thos. P. Bennett, R. C. A., who lives at 705 Albert St., Ottawa, describes the relief which he got from D. D. D. Prescriptions :

"It give me pleasure to commend D. D. D. to sufferers from skin diseases For three years I suffered intensely from a skin disease which I developed on the back of my neck. It grew continually and sometimes cast off scales. Neighbors' advice, prescriptions, salves and expensive blood medicines were lavishly used.

At last I found relief in D D. D., used acording to directions. It required just one bottle to effect a cure. I am no longer tortured so I have no hesitancy in acknowledging to the world the worth and great virtue of D. D. D

Blood medicine cannot kill the germs in the skin which cause eczema and other skin diseases. Salves fail because they cannot penetrate. D. D. D. goes right into the pores, kills the germs and cures.

For free sample bottle of D. D. D. Prescription write to the D. D. D. Laboratory, Department F. M., 23 Jordan St., Toronto.

For sale by all druggists.

FLORICULTURE.

Mrs. A. T., of Chipman, N. B., writes: Please tell me what the best variety of ferns would be for a parlor? There would be no sunlight, but the rooms are warm and large windows admit plenty of light. I have tried the Scotch Fern with indifferent results. Will the Boston Fern thrive under such conditions. I am told they require sunshine to succeed.

Ans. You should have good results with Boston Ferns under conditions named. This class of Ferns do not require much sunlight, in fact I have seen some fine specimens in this city that have never seen the sun. If you desire a large fern get the old Boston or any of the piersoni barronsi or any of the so called Ostrich Plume type. On the other hand, if a short, compact bushy plant is desired, the new Scott Boston Fern is best, but remember, that where there is heat, plenty of moisture about the foliage is absolutely necessary, or washing at least once a week, also a good drainage is imperative.

A., of St. John, writes :—Is it proper to cut down Paeony tops at this season of the year or is it necessary to cut them down at at all? Is straw or brush the best protection for them, and when should it be applied? I planted a number of small roots last spring, they have grown fairly well, but have not bloomed. Is that right?

Ans. It is not necessary to cut the tops, but doing so makes it more convenient to cover the roots with strawy manure, which is better than either straw or brush as it fertilizes, as well as protects. Cover the roots about the first of November. Newly planted Paeonies seldom bloom the first season. If you have had good growth it is all you can expect.

Primrose, of St. John, writes :—I have a small Primrose plant, lilac shade, it grows well, but I find the underside of the leaves covered with little white flies that are very agile. I also find these flies on some little Geraniums in the same window. Will they hurt the plants and if so how can I destroy them? One of my neighbors complain of these same flies and think that they are injuring a Calla Lily.

Ans. The white fly is a most persistent pest and one not easily killed. Their damage is, however, not so great as their number would imply. Dust the plants thickly with Pyrethrum insect powder and kill all you can of those that fly about, wherever you find them. They are usually more troublesome in the spring when, if you put the plants out of doors, they will immediately leave the plants for the more tender weeds. In this manner you can easily get rid of them. We seldom have a complaint of these pests in the fall.

Now plant bulbs and hardy plants or the hardy varieties of shrubs. The heavy frosts of the last few nights have hardened such up nicely and early planting will enable them to become nicely set in the ground before the soil freezes. Every little garden should have a few clumps of little blue flowering Scilla. It is as hardy as a dandelion and the flowers come with the Crocus the first thing in the spring. If you once get them in the ground you can depend on them blooming year after year without any attention whatever.

Mr. R., of Chatham, writes :—Would it be advisable to plant a Lilac hedge this fall and should manure be put in the trench in which they are planted? Is the Crimson Rambler a hardy rose tree and would it grow well against a verandah? Does it require a rich soil? What would be a safe covering if planted, this fall?

Plant the Lilac hedge at once. Do not put any manure in the trench unless thoroughly rotten, better put on top of ground after the shrubs have been planted.

Ans. Crimson Rambler is certainly very hardy and does well nearly everywhere. It makes an ideal climbing rose for our climate as it grows quickly. It would be a good plant for a verandah post. The richer the soil the faster it grows,

Pays for itself in fuel saved

Don't allow a few extra dollars to prevent you from taking the perfect-cooking, sure-baking, easily-regulated Pandora in place of a cheaper stove. In a season or two Pandora will pay the difference in the fuel it will save—and it will keep on saving until it has paid for itself. 20

Pandora special flue construction makes fuel do double duty. Wide fire box is another fuel-economizer. The steel oven heats quicker than a cast oven, thus saving still more fuel. Further economizing features will be explained by the McClary Agent.

but I would not have the ground too rich as you sacrifice bloom to growth. After planting this rose, cover thoroughly with brush, I think it makes the best protection for the tops.

STOCK NOTES.

PURE BRED CLYDESDALES.—We wish to call the attention of our readers to the advertisement on another page announcing an auction sale of pure bred Clydesdale mares and stallions The Advertisement is self explanatory and we trust as many of our readers as wish to procure a Clydesdale mare or stallion will take the opportunity of visiting St. John on the day of the sale. We feel confident that there will be some excellent stock offered and one will have a good opportunity to secure his choice out of such a large number as will be offered. The New Brunswick Department of agriculture approves of the importation and sale and is ready to pay the freight from the sale ring to your home on your purchases as will be seen by the announcement on another page. Read the ad.

THE HAMPTON STOCK FARM has a neat printed list ready, giving a description of a few pure bred Ayrshire bulls, which they are desirous of selling to make room for wintering their stock, and consequently will offer this stock at a very low price before the season closes, They are close to Hampton station and the stock can easily be inspected.

The PUBLISHER'S DESK.

FREE SAMPLE OF AMATITE.—Many of the readers of this paper may not know that the makers of Amatite Roofing distribute free samples for the information of prospective purchasers. Some of our readers have probably doubted that a roofing could be made which would need no painting, and the sample of Amatite is convincing evidence that the practical mineral surface has been invented. Sending for the free sample does not entail any obligations and there is no charge—not even for postage. With the sample is sent a little book telling all about Amatite and showing pictures of roofs in all parts of the country where Amatite has given protection without painting for many years. Just drop a postal card to the nearest office of the Carritte-Paterson Mfg. Co Ltd., St. John, N. B., Halifax, N. S.

HUNTING FOR BIG GAME.—The Highlands of Ontario is an ideal spot for the sportsman during the open hunting season for big game. In the Temagami region moose are plentiful and may be killed during the period from October 16th to November 15th This territory is a forest preserve of vast expanse, and in addition to being the hunters paradise, its waters abound with game fish of many species. The home of the red deers is located somewhat to the south of Temagami, particularly in the districts known as "Muskoka Lakes," "Lakes of Bays," "Magnetawan River," "Lake Nipissing," and "Kawartha Lakes," territories. Write to A. Quinlan, Depa., Montreal, for copy of "Haunts of Fish and Fame" issued by the Grand Trunk Railway System which only describes the hunting territories reached by this line, giving game laws, maps and all information.

EDITOR MARITIME FARMER—We recently finished considering a report made by Inland Revenue Department of Dominion Government on the very important subject of Cream Tartar. Realizing that this article is one which is used universally throughout the Dominion, and one that can very easily be adulterated and tampered with, we have made it our special business to see that all goods of this kind put out by this Company have been chemically pure. Report referred to shows that an improvement in the quality of this article is gradually being made, and this of course means that concerns in the business are not carrying on their adulteration methods to as great an extent as formerly. Any of your readers interested in this question can see, however, that the present state of affairs is bad enough if they will consult Bulletin No 180 of Inland Revenue Department, and at the same time can see at a glance that goods with this Company's name on are chemically pure, as represented, and the only samples of all the tests reported as being 10%. A very large number of samples were collected by the Government Inspectors, and over 20% were found to be composed of alum, lime, phosphoric acid, etc., and containing no cream of tarter at all. As the subject of this letter should be of interest to a large number of your readers, we hope you may find space to publish it. E. W. GILLET CO. LTD.

During the past month a party of editors representing some of the most important agricultural papers in the United States have been touring Western Canada, and on reaching Winnipeg on their return trip from Edmonton over the line of the Grand Trunk Pacific Railway, writes Mr, Chas, M, Hays, President of the Grand Trunk Pacific, at Vancouver, who is also in the West on a tour of inspection of the new line in company with Sir Charles Rivers Wilson, President of the Grand Trunk Railway System and party as follows. We believe that every foot of the land traversed by the road is eminently adapted to grain growing, mixed farming or the keeping of livestock, and that it must soon develop into a region of prosperous homes. We also unite in expressing our admiration of the high character and the completeness in the construction of the road and road-bed, which must soon give the road high

FEEDSTUFFS—Bran, $1.30; short $1.40: corn meal, $2.00.

LIVE STOCK.—Stockers, $30.00; milch cows, $35 to $45.

DRESSED MEATS—Beef (carcass), 5c to 7c; beef, (retail), 8c to 14c; mutton, 8c to 12c; veal, 5c to 8c; lamb, 10c to 12c; pork, 9c.

HORSES.—Drafters, $125 to $150; roadsters, $125 to $150.00

DAIRY PRODUCTS.—Creamery butter, 21c; dairy butter, 19c to 20c; cheese, 13½c.

POULTRY AND POULTRY PRODUCTS.—Eggs, 22c to 24c; fowl, 10c lb.; chickens, 10c to 12c lb.; ducks, 10c to 12c lb.; geese, 10c to 12c lb.; turkeys, 15c

FRUIT.—Apples, $2.00 to $2.50 bbl; pears, 75c basket; cranberries, 8c qt.; honey, 15c lb.

VEGETABLES.—Carrots, 50c bush.; potatoes, 20c to 22c wholesale; turnips, 13c wholesale; beets, 50c bush.

MISCELLANEOUS.—Hay, $45 to $50; straw 30c; wool, 18c; beef hides, 11c per lb; calf skins, 9c per lb; sheep skins 75c; lamb skins, 75c.

St. John Prices.

GRAIN,—Oats, 49c.

LIVE STOCK—Milch cows, $28.00 to $40 00; sheep, 5c to 7c per lb; lambs, 8c to 9c; hogs, 9c to 10c.

DRESSED MEAT.—Beef, (carcass), 4c to 7½; (retail), 8c to 18c; mutton, 5c to 7c; veal, 5c to 9c; lamb, 8c to 9c; pork, 9c to 10c.

DAIRY PRODUCTS—Creamery butter, 25c to 28c; dairy butter, 22c to 23; cheese, 13c to 14c.

POULTRY AND POULTRY PRODUCTS.—Eggs, case, 23c, fresh, 32; fowl, 40c to 80c; chickens, 40c to $1.00; ducks, 70c to $1.40; geese, 70c to $1.25; turkeys, 18c to 20c lb.

FRUIT,—Apples, $1 50 to $3 50

VEGETABLES.—Carrots, $1.00 to $1.10; potatoes, $1.00 per bbl. turnips, 50c to 75c; beets, $1.25.

MISCELLANEOUS.—Beef hides, 11½c to 12c; calf skins, 18c; sheep skins, 40c to 60c; lamb skins, 40c to 75c.

Market well supplied and prices dropping owing to the continual rainy weather and the rush from the river boats before navigation closes.

POTATOES.

It never pays to rush the fall market in potatoes, especially when Cold Storage is at hand for overcoming the ordinary shrinkage in store. We can quote on straight storage or on bulk receipts, barreled, stored, stowed and delivered to steamer or car, as ordered. Write for our proposition.

The New Brunswick Cold Storage (Limited), 672-690 Main St. ST. JOHN, N. B.

Jersey Bull For Sale.

I have a pure bred Jersey bull 2 years old for sale, which was first at Sussex, Fredericton and Halifax this year. Write for price, etc.

ROBERT ROBINSON,
Sussex, N. B.

Gold River Farm Poultry Yards.

We are offering choice birds for immediate shipment as follows:

Houdans—One Cock and two Cockerels of good type and show room quality

Silver Grey Dorkings—We can furnish yearling Hens Pullets and Cockerels singly or in pairs and trios, not akin. Our Dorkings are exceptionally good layers.

R. C. Rhode Island Reds—Yearling Hens, Cockerels and Pullets, singly, in pairs or in trios, not akin.

Write for our prices.

W. J. M. MacLEOD,
"Gold River Farm."
LOCH LOMOND, WEST, N. S.

CEPHAS NUNN,
Winsloe Road, P. E. I.

Breeder and Importer of Shropshire, Southdown and Hampshire Sheep. Can sell some of the above breeds, either sex. Inspection invited.

Meadow Brook Farm
SHROPSHIRES!

We have a few Shearling Ewes and Ewe Lambs and several pairs of Aged Ewes (ages from 3 to 5) for sale, in addtion to the balance of our Ram Lambs.

ANDREW McPHERSON,
Rocklin, N. S.

FOR SALE!

Ayrshire Stock Bull of St. Anne breeding for sale, also one 12 and another 16 months, from well bred cows.

Taylor Brothers, Antigonish,
"Willowdale Farm," Nova Scotia.

SPECIAL SALE!

To prevent overcrowding we quote the following prices on all our high-class Poultry. White Rocks and S. C. R. I. Reds, Hens or Pullets, $5.00 for six; six Reds and good Cockerel, $6.00; Single Cockerels, $2.00 to $5 00; some excellent Red Cockerels of Tompkins' Strain, Red to the skin. Tompkins' $25.00 quality for $5,00; no better stock to be had in Eastern Canada.

The Burley Poultry Company,
46 Princess Street, - ST. JOHN, N. B.

Breeders Director

Our charge for inserting names in this Directory is $1 per year for each line under each head. Money must be paid strictly in advance. Names taken out promptly when time is up. Standing taken.

Pure Bred Ayrshire Stock!

We still have a few **young bulls,** which we will sell at entirely low prices, to make room for winter.

Catalogue now ready. You can have one for the asking.

HAMPTON STOCK FARM CO.,
HAMPTON, - NEW BRUNSWICK.

THE MARITIME FARMER

AND

CO-OPERATIVE DAIRYMAN.

Official Organ of The Farmers' and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association, The Nova Scotia, New Brunswick and P. E. Island Fruit Growers' Associations, The Maritime Stock Breeders' Association and The Maritime Bee-Keepers' Association.

Volume 15. Sussex, N. B., November 23, 1909. Number 4.

Manufacturing and Other Interests are Bonused.

Why Not Bonus the Dairy Cow?

By Hampton Stock Farm Company.

WE have many times wondered if the farming community of New Brunswick has ever noticed the great success that has attended, and seems at the present time still more likely to attend, the many applications made to the Government of the day, both Provincial and Dominion :

For subsidies to owners of steamship lines.
For guarantee to railway promoters.
For guarantee to cold storage promoters.
For bonusing of steel production.
For bonusing of iron production.
For guarantee to builders of dry docks.
For guarantee to steel ship building.

And the lates, twe notice the Dominion Government is asked to guarantee a sum of $2,500,000 to a grand exposition to be held at Winnipeg in 1912.

Then, again, all our towns and cities seem to be only too willing and anxious to bonus in one way and another, or relieve from taxation, etc., any industrial enterprise which may make known the fact that they might locate in their midst.

All that seems to be necessary to obtain these concessions is for some good talkative promoter, who makes his living in that way, to bring the matter up—or a representation of some influential body of business men to appear before the Government and inform that body "that they are sure such and such an expenditure will be successful" and after due consideration, or lobbying around the House of Parliament, the subsidy, bonus, guarantee of the bonds, etc., is put through, and you and I and all of us have to "pay up and look pleasant."

We do not, for a moment, wish to find any great fault with all this, as we realize much of it is necessary for the development of the country at large and we are also sure to feel the benefit of the expansion.

The thought, however, comes to us, why should not the agricultural community of the country promote a claim for assistance of a similar nature ?

Why should not the business men assist us in that claim ?

The business of every wholesale and retail merchant, professional man, tradesman, transportation, manufacturer and all depends almost entirely on the development of the natural resources of their country and this, agriculture, is, perhaps, the most important, at least one of the very greatest of importance, in the Maritime Provinces.

We are almost too far away from the centre of the market to successfully compete in the larger markets of Canada with our manufacturing, but we have our natural resources in agriculture, lumber, mines and fishing.

Being interested in the first named, agriculture, we feel compelled to draw your readers' attention to a few facts, which we crave space in your columns to produce, at the same time stand ready to be corrected if we err.

We understand our Provincial Government grants $25,000 per year to agriculture at the present time and has been doing so for some time.

Are we progressing under the expenditure ?

Is it and has it been well spent ?

In comparison with other lines of trade and commerce can we not rightly and justly demand a larger sum or more expansion ?

Being particularly interested in the dairying and live stock branch of agrculture, and it probably is the largest branch, we would like to discuss that part first.

As your readers will all know, the Government of the day appointed a commission to look into the industry throughout the whole province and make a report. Their report has been made and is printed, and we presume many of your readers have seen it.

This commission, we understand, has cost the province about $6,000 and in our humble opinion it has been money well spent, so far, at least, as it has revealed the true state of affairs and its report and figures will, we think, answer any business man's or platform speaker's oft repeated query as to

Why we have so many abandoned farms ?

Why so many of our young men leave the farm ?

If you will turn to the Commissioners' Report, page 183, you will see there an estimate made up for the year 1909 of

The cost of the feed, growth and production of live stock for that year	$5,712,606
To which is added interest on the estimated value	524,416
And you have a total of	$6,237,022
Read further and you will find that the value of the product from those resources estimated at	$4,354,341
Leaving a loss on the transaction of	1,882,681

Now, while we realize these figures must be in error, yet we submit it would be a mighty hard proposition to twist them around enough to show any profit which is so absolutely essential to any business and especially would this be so when those of you interested in dairying will notice in the report the average cost to feed the dairy cows is made up at $17.00 per head.

Turn also to pages 178 and 179 and you will observe they further report finding "an absolute decline in cattle and live stock generally."

In the face of all this, after all these years, is it not time some change was made in our agric ultural policy, or, at all events, in the expenditure of the money voted, if after all these years "we show a decline ?"

Let us go further and look at the agricultural report of New Brunswick on page 65, relating to dairying, and you will see our production of butter and cheese in in 1903 was $387,639.42

While in 1908 it was 298.970.61

A decline of $ 88,668.81

While the average market price of butter in 1909 was 25.20, as compared to 1903 at 20.38, that of cheese in 1908 was 12 cents, as compared to 1903 at 10.10.

Turn also to page 64 and you will see the total number of creameries in operation in 1908 was only 23 as compared to 46 in 1906.

Why should this be ?

If you turn again to 1908 report of the annual Winter Fair at Amherst you will see on page 140 that Prof. Cumming, an authority on the subject, states that the average production of the dairy cow in the Maritime Provinces is 3,000 lbs. of milk per year. The greater quantity of this product has to be sold to the butter factories. Let us assume that the 3,000 pounds were of a good big average of richness and say it contained 4% of butter fat, this then would produce, in round figures, 120 pounds butter, which, at the extra high average price of last season, would return 25.20 cents per pound or a total of $30.24 from this machine, to which might be added, say $5.00 in by-product and say $5.00 from manure, or a grand total of say $40.00. Bear this sum in mind, $40.00 for total income. Now turn to page 143 in same report and you will find Mr. R. S. Stevenson, a practical feeder and breeder of Ancaster, Ont., and one of long and careful experience, and you will observe he says it costs them in Ontario from $35.00 to $40.00 to feed a cow for 12 months, (and Ontario is more of a grain producing country than this is) and in this we cannot be far wrong, for if you take a few items, which you will all realize must be used, such as, say

½ ton mill feed per cow per year at $27.00=	$13.50
2 tons hay per cow per year at $5.00=	10.00
100 bushels of roots, or its equivalent, per cow per year at $0.10=	10.00
And you have a total of	$33.50

To say nothing of any concentrated feed at all. According to these authorities, then, the average cow machine was producing, last year, value to the extent of $40.00. At a cost for feed alone of say $35.00, to which must be added the full keep of the herd bull, some of the raising of the young stock, at least three-quarters of the cost of the horses to haul out the manure to put in the crops to raise this raw material for these machines,

Three-quarters of the labor to raise the material.

The interest on the capital of almost the entire plant to produce this finished product.

The wear and tear of this machinery, including the cow herself, and we fear your $40.00 for production will sink into oblivion.

Certainly, it will not interest much capital.

The foregoing, we think, answers the earlier question submitted, as to our progression under the present expenditure.

Regarding the second question, as to its being well spent ?

One ot the largest items we notice is Imigration office at St. John, something over $6,000, and we further read of another recent appointment of an official to represent us in England and lecture on New Brunswick's agriculture—we presume this will add at least another $5,000 to this department. It is very nice for a lecturer to paint a glowing picture from the platform over night, but is it a business proposition for us to be spending $6,000 and perhaps doubting that now with these facts before us?

Will this $10,000 to $12,000 not immediately be confronted with our $6,000 Commissioner's report, showing the true condition ?

We do not say this in any pessimistic spirit at all, as we stand ever ready to do anything possible towards assisting this business, believing, as we do, that this section of our fair Dominion is quite capable of taking its place with the older provinces if the business can once get on its feet.

But we submit, it is like putting the cart before the horse, to spend any such money to bring new people in before using every possible dollar to bring our present production or output up to a paying basis.

If we can put our presently engaged capital on to an income earning basis, the news will not be long in being heralded abroad and the intending settler wi l be only too anxious to come to our midst, as he is going to the West to-day to share in the profitable returns from a wheat market, which shows a profit.

When a settler can come here and make money, he will not be long in inducing friends and relatives to follow. But when he investigates and finds the cold facts, which our Commissioner's report sets forth, and we believe, truly, will it not take a good many thousands of lecturers to induce many to follow their friends? Our own people, already used to our climate and conditions, are the best ones to put on their feet first. Surely some more practical way can be found in expending this money.

When most businesses, in which large numbers are employed, find they cannot meet the markets of the world successfully, the Government is usually easily brought to see the value of assistance in a practical way.

Take the steel industry in Cape Breton, for example, or the newly promoted iron mines in New Brunswick. The steel industry gets a bonus on its production. WHY NOT BONUS THE PRODUCTION OF THE DAIRY COW ?

If the average production could be made 6,000 pounds of milk per cow per year and the income thereby doubled, while the cost to produce would remain almost the same, we would not be long in getting to a flourishing condition.

We are told many times by institute speakers that we must not keep any cows producing less than 6,000 pounds—that we must send them to the butcher. All that may be true, but is it practical? We don't suppose anyone who has 6,000 pound producers in New Brunswick could be induced to part with them, therefore, where are we to get our manure to produce the crop to pay for even the small wages we get to-day ? It is also true that seemingly no matter how often the majority are told how important it is to weigh the individual production, they do not seem to do it and keep on raising stock from low producing animals. Would it not stir that dairyman up, think you, to be told that if that certain cow produced a certain quantity of milk in 12 months, she would earn an extra bonus ? Would not this convince him at once to start weighing and thus educate him to the importance of being able to produce from one what he had been feeding two to produce from before ?

We do not doubt for a moment but what a vast number of merchants and others, especially in the cities, believe that the majority of farmers in New Brunswick must be making money, as one continually hears it from the platform, at exhibitions, etc., and the first words almost any one hears, if discussion starts, is "Look at the prices the farmer is getting nowadays." A few moments on this point will, perhaps, not be out of place. There are two sides to the farm ledger, the same as every other business, and it will not take any other business long to explain to you how its cost to manufacture or produce has greatly increased, hence it is absolutely necessary for him to get more for his goods. Do you think for a moment this is not so with the farmer ?

Let us take the dairyman, for instance. Our memory serves us some 20 to 25 years back, at which time probably 18 to 20 cents per pound would be a good averege price to get for our product. The butter, which last year reached the top notch for many years and averaged 25 1-5 cents, made an advance say of 25% to 38 1-3%. Now let us look at the "cost to produce" side of the ledger. Twenty years ago we could turn help away from the farm at $12.00 to $15.00 per month, whereas it now costs from $25.00 to $30.00 per month, and only a year or two ago $32 00, an advance of 50% to 100%. Feed that now costs $27.00 to $28.00 (after a little coaxing and begging to get at all) could be bought 20 years ago for $15.00 or $16 00 per ton, an advance of 70 to 80 per cent. Assuming these figures to be correct, and any one of your readers can verify them, is it then any wonder that our Commissioners found evidence of a decline? Is it any wonder our boys, and many beside the boys, leave the farm at the first opportunity ? But why should this be so, especially in this great development that is going on in many parts of Canada? Simply because, Mr. Intelligent Farmer, we don't awaken the business community and our representatives in Parliament to get down to some practical aid to this—one of the greatest natural resources of our fair province.

Could not the Farmers' and Dairymen's Association take up the discussion of this at their meeting this winter and see if some way of assisting the industry, in a practical way, to bring it to profitable basis, cannot be evolved and then bring it before the Legislature and if it cannot be put in effect all over at first, let something be tried in one or two counties first and if such a scheme found workable and of a practical value extend it to the province ? Almost no matter what the cost, if it will make work for our boys at home and bring some profit eventually to the agriculturist, our country will then attract the settler—then induce the much needed capital to invest, which, in turn, will create an increase in our rural population, a doubling of our transportation and a life of energy in our business of all kinds, which would be new to it. Let us be up and doing.

Let us have the views of all. We know the FARMER will open its columns gladly. Our idea of a practical aid would be in the following :

Let us take one county for a trial and say each cow making 3,000 pounds of say 3 1-2 per cent. of a butter fat test, or if higher test, reduce the quantity, or if lower test, increase the quantity, but each one making

3,000	lbs.	be bonused	say	$3.00	per cow
4,000	"	"	"	4.00	"
5,000	"	"	"	5.00	"

The second year drop off the 3,000 pound producer and take on the 6,000 pounds. The third year drop off the 4,000 pounds and take on the 7,000 pounds. Run this for five years and at the end of that time let the Government select good heavy producing dairy cows, as far as would be obtainable from the provincial breeders and beyond that from wherever they were obtainable, apportion them to each county and sell at auction.

Inspectors would have to be appointed to inspect the weighing, recording and testing of each lot entering, the same as is being done in our Advanced Registry class in pure breds to-day, and even if this proposition did no more than attract our dairyman to weighing his product itself, it would be worth all it cost.

The above is only our idea and many details would have to be worked out. Let us hear from others.

Butter Making During the Winter.

In many parts of the Maritime Provinces the earning season of the dairy cows is far too short. Cows are made to freshen in the spring and are allowed to dry off by force of habit and sometimes by mismanagement in feeding almost as soon as the breath of winter sets in. The following article in a recent issue of the Charlottetown Patriot from the pen of Water M. Lea, the prominent breeder and exhibitor of Holstein cattle should give all those, who have been following this wasteful plan, some food or thought and should be the means of instigating a revolution along more modern methods of dairying:

"As our cheese factories are now about closing down for the season, I think it would be in the interest of dairying that some arrangement be made for the factories to take up the manufacture of butter.

"It is hardly profitable to feed dairy cows for twelve months to get the milk of five, and once the patrons keep the milk at home the cows are liable to be neglected.

"And as hand separators are now used by many patrons it would be well for every cheese factory that is not already equipped to at once get in a churn and butter worker and encourage the patrons to keep on sending cream, and, in this way, the earning season of many cows would be extended several months. Any dairy cow worthy of the name should milk ten months of the year. It would also tend to relieve the marked of a quantity of indifferent dairy butter now being made in the fall.

"The patrons who are still trying to make dairy butter by the old gravity system, would receive one-third more for their milk, as it is impossible to separate milk clean (from cows that have milked all summer) in the cold weather by any method except centrifugal force, as anyone who has used a separator well knows. And whatever can be said against using hand separators during the summer months, it is decidedly the best system of handling milk in the winter season.

"Our creameries that operate during the winter season receive milk once or at most twice a week in the coldest weather.

"And new milk that is held for three or four days (with whatever may happen to drop in it during milking) can not have the favor that newly separated cream has; the patron has then warm sweet new milk to feed his young stock and only a small quantity of cream to look after properly.

"Where patrons are getting three or four huudred pounds a day having to hold it around for days, and, in case of storms, often a week, is a nuisance that there is no good reason for doing.

"The hand separator is an indispensable machine on the dairy farm, and unlike any other farm machine is used every day of the year, and if cream is accepted by the creamery managers in a business-like manner will do much to advance the interest In dairying, by the fact that it cheapens the cost of manufacture ten or twelve cents per hundred pounds, and nets the patron that much more money for his milk over the whole milk system.

"Any "new" method of handling farm produce, be it milk at the creameries, hogs at the packing houses, potatoes at our starch factories, or the canning of fruit and vegetables (must show to the patrons that it pays in hard cash), better than the old system, before it can prove a success, and while it cost 5 1-2 cents a pound to manufacture butter at our creameries many farmers continued to make dairy butter, as it usually commanded within three cents of the creamery, and they could have warm, new milk for their young stock. This was the reason that for years our creamery make has practically been at a standstill. But with 2 1-2 cents a pound struck off the cost of manufacturing creamery butter, by the introduction of the hand separator, the man who continues to put up dairy butter does his work for nothing, and loses the cost of tubs extra at least.

A great deal of opposition was given the introduction of the hand saparator in this Province, as was the case in the other Provinces of Canada, where it has proven a great success, and the "abuses" of the system were held up to be just what the system really was.

The Farmers' Advocate called for the experience of prominent inspectors in creamery work in Ontario, and the reply of Instructor George Barr, whom many of our Island dairymen will have remembered hearing at a late dairy convention in Charlottetown, and whom there is none more qualified to judge, has the "following to say" when asked what influence farm separators had on the price of creamery butter:—

MUST TAKE CARE OF CREAM.

"The only influence I know off that "farm separators have had on the price "of gathered-cream butter is that, unfortunately, for a number of years, "patrons did not know how to properly "handle separator cream, and the "quality of the butter was affected. "This condition has been to quite an "extent overcome during the last four "or five years, by general dairy education and the good work of the creamery instructors in teaching patrons "how to take care of their separators "and cream properly, and the cream "gathering creameries are making "better butter today than they ever did "before the introduction of the hand "separator.

"In some cases there is no difference "in price between whole-milk creamery "butter, and cream-gathered creamery "butter, but often it is from 1-2 to 1 1-2 "cents per pound. There is more difference in price for export butter than "there is for local market.

"My opinion is that manufacturing "butter on the farm has more influence "in lowering the price of creamery "butter than sending the cream to the "creamery. Generally speaking, people "will not eat as much dairy butter as "they will creamery. Any condition "that lessens consumption reduces "prices.

"I do not believe there is any use "trying to fight the cream-gathering "system of butter-making. Cream "producers see so much difference between the creamery skim milk and "that from the hand separators, that "they are decidely in favor of the "latter. With manufacturers adopting "the best methods of gathering the "cream, and the patrons taking proper "care of it at the farm, as good butter

"can be made from it as is made in a "whole-milk creamery.

"The chief cause of a depreciation in "price of butter from the hand sepa- "rator is that many of the separators "are not properly cleaned, and the "cream is not cooled immediately after "skimming, and kept cool until de- "livered at the creamery. The produc- "er of the cream is therefore responsi- "ble for the lower price, and he is the "only one who suffers from it, so it is "up to him to remedy the trouble. "Many skim too thin a cream, 20 to 25 "per cent.; it should not be less than "30 per cent. Lack of cooling is the "greatest defect in handling the cream "at the farm."

Crapaud Creamery was the first to accept cream from hand separators in this Province, and, as a patron and shareholder of that creamery, I thought it might be of interest to others about to start the cream-gathering system to give our experience. A proper scales was at once secured for weighing the samples of cream for testing, and our butter-maker was careful to instruct all new beginners in the importance of send- ing a heavy cream and the proper caring for the separator. The result was that whereas the seventy odd cream-gather- ing creameries in Western Ontario had an average test for the season of 22 per cent., Crapaud cream averaged 30 per cent fat. The inspector classed it as the best butter Crapaud ever made in winter. The results of the first sum- mer's work have been very satisfactory, both to the management and to the patrons sending cream, and the increase in make (due directly to the introduction of the cream-gathering system) most gratifying, totalling some 90,000 pounds of butter, an increase of 40,000 over two years ago.

"I think it would be a great boon to dairying if our cheese factories would now arrange to churn cream. Every- thing possible should be done to induce farmers to have their butter made at the creamery, as that is the only way we can have an uniform article and hold our splendid market. And the factories that first take this up are going to get the business. This is what has taken place all over the United States and Canada. The factory that refused cream lost its patrons; the big ones simply absorbed them, for no man who has ever sold cream to the creamery, and had sweet warm milk fresh from the cow to raise his calves with, will ever go back to the old system again. The hand separator is here to stay, and the wise thing for the creamery man to do is to cheerfully accept cream (it's all they can use in the making of butter anyway) and instruct patrons in the proper handling and care of cream on the farm, and, as Instructor George H. Barr says of the Ontario cream-gather- ing creameries, they will make better butter than before the introduction of the hand separator."

Fighting the Canker Worm.

EDITOR MARITIME FARMER:

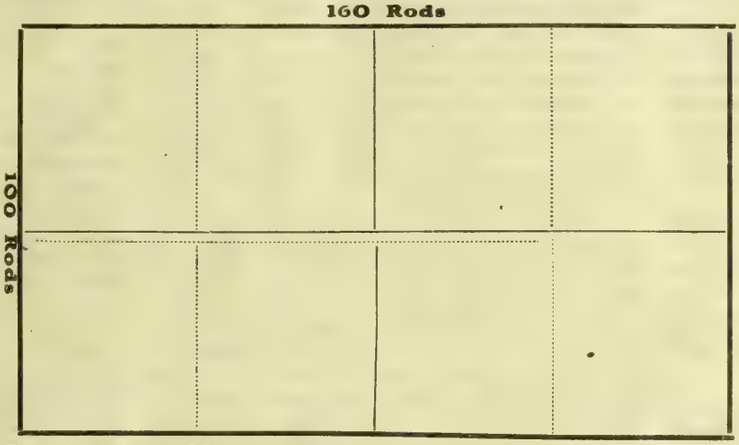
It is quite generally considered by growers of apples that it is impracti- able to exterminate the canker worm by spraying with arsenical poisons. Some of our most careful men have tried thoroughly and failed in the at- tempt. Experience, however, has shown that no pest is more easily con- trolled than this, when taken in time. Banding the trees in the fall with a sticky substance, if properly done will destroy every moth that lays canker worm eggs.

Castor oil and resin, equal parts by weight is the standard remedy. This combination may be melted (not boiled) in any metal dish and applied with an ordinary paint brush. A band four inches wide around the trunk of the tree is a positive preventitive. No crawling moth can get over it, and all female canker moths crawl. this re- medy is being largely used in the in- fected districts and many thousands of the moth are being thus destroyed. In- cidintly a Yankee concern introduced a "tangle foot" this season guaranteeing it would do all kinds of wonderful things, and always remain sticky. Hundreds of pails were bought by fruit men who are always looking for something easy, the result was that in every instance when used the tangle foot hardened in a few hours so canker moths could skate on the tree trunks. The Yankee fraud cost $2.50 per pail, while home mixed real sticky stuff will cost about $1.25 These lessons are salutary but expen- sive.—S.C.P.

Planning the Fields.

In dividing a farm up into fields the size of fields will depend on the rotation of crops that is to be followed. Mixed farming will require a greater number of divisions and in some cases it may be necessary to provide fields of less than ten acre areas. The general princi- ple may be laid down that the fields should be large in order to lessen the expense of maintaining fences. It is cheaper to plough and cultivate in large fields where there is little turning. If a hundred acre farm of the shape indi- cated by the accompanying diagram be divided into eight fields, it will require 1,320 turns with a twelve-inch furrow to plough one of the 12 1-2 acre fields disregarding the waste along the fences. If each turn can be made in thirty seconds the time consumed will be 660 minutes, or eleven hours.

If the farm is divided into four parts, by halving in each direction, as sug- gested, one of the twenty-five acre fields can be ploughed with 1,650 turns,



Fencing for a 100-acre farm. The dotted lines show where fencing may be removed or portable fence used

requiring 13 3-4 hours of time. This effects a saving of 8 1-4 hours over the time required in ploughing the two fields separately. If two of the fields lying end to end are ploughed together no more turns are required than in ploughing one, and eleven hours would be saved in turning. A square field of 12 1-2 acres requires 1,500 turns with a twelve inch furrow, which will con- sume 12 1-2 hours in turning.

If the furrow is only nine inches wide instead of twelve inches, it will require only about one-third more turns, with consequent increase in length of furrow, in time consumed in making turns, and in time lost from inconvenient shape of fields.

A strong team, able to do the full amount of work required trained to walk at a brisk pace, with implements of the largest size consistent with effi- ciency, and also well arranged fields, are important factors in the economy of time.

The shape of the farm itself may be an important matter. In some locali- ties long, narrow farms, with a short frontage on the highway and extending a long distance back on the hills, are the rule. Such a farm is much more expensive to work than one which is more compact, with buildings more centrally located. The additional cost of going to and from work at the fur- ther end of such a place, and especial- ly of drawing in crops and drawing out manure becomse a decided handicap to the business.

As striking illustrations of the loss of time which may occur from incon- venience on the arrangement of the farm, or as a result of conditions which exists, John Hamilton, in one of the reports of the Pennsylvania Depart- ment of Agriculture, has called atten- tion to the fact that the man who has driven his stock one-fourth of a mile to water twice a day for forty years, has travelled 14,600 miles in doing so.

Preserving Ensilage.

Many different plans have been tried to prevent ensilage from spoiling after it is put in the silo. The first plan was to cover with boards or plank and weight heavily with stone. The second plan was to make the covering air tight by putting on fine chaff, then a layer of boards covered with tarred paper and then another layer of boards with hay to hold the boards in place. For a dozen years or more, many farmers have used water with no covering. In a re- cent issue of this paper the editor ad- vocates putting 20 or 30 bbls. of water on top of the ensilage. Last year a man living a few miles from me cover- ed the ensilage with a foot of sawdust but even then he found 8 inches of spoiled ensilage.

None of these methods has been per- fectly satisfactory to me on account of the amount of labor envolved. If a man has a force pump, hose and windmill, there may be but little work in putting 20 bbls. of water on the ensilage, but if the silo should be several hundred feet away and the farmer must buy a new pump and hose there is considerable ex- pense. Again, if there is no wind for a few days, some other power must be used.

When helping one of my neighbor fill a silo, I told him I wanted to try a new trick. At my request, he made eight gals. of strong brine and we put it in milk cans and drew up 4 gals. at a time. We used a common sprinkler and put it on the top and reported 1 inch of spoiled ensilage. The cost was 5c. for salt and the time of two men for 20 minutes. The silo was round and 14 feet in diam- eter. If ensilage is rather dry use more brine.

A farmer built a stone silo last year and was surprised to find that the en- silage spoiled aronud the sides. I offer- ed to furnish him a remedy for $1. He said that was cheap enough. If the en- silage spoils around the sides or around the doors, use strong brine when filling. The question noturally arises "Is there any danger in using salt in the silo?' I reply there is danger in carrying a lantern to the barn, but any man who can be trusted to carry a lantern, can be trusted to use salt, for in taking it out a small quantity of salt ensilage be- comes mixed with a large quantity of fresh.—N. B. White in Hoard's Dairy- man.

Improvement Gained by Plant Breeding.

What can be doue by a careful choice of seed and plant selection is shown clearly in the last report of the Cana- dian Experimental Union.

The Agricultural College of Ontario has introduced into the variety tests on its experimental farm about 2,000 varie- ties of field crops. This testing has been followed by the persistent improve- ment by seed selection of those varie- ties proving best, and by the yearly dis- tribution through the Experimental Union of the latest and best improved stocks. The following table shows how these improved stocks have compared under the conditions of these experi- ment station tests with some of the leading standard varieties used in the Province. Here no factors entered to give differences in yields save the here- ditary powers of the respective varie- ties. The experimenter's skill intro- duced, discerned, and improved those which through a long series of years proved to yield the largest value per acre.

Comparative Results in plots at On- tario Agricultural College of some new and old varieties.

Varieties.	Years tested.	Per Acre bush.	Increase per cent.
Siberian oats	16	88.2	23
Black Tartrain	16	71.6	—
Mandscheuri barley	16	69.8	19
Mensury barley	16	58.7	—
Dawson Golden Chaff W. W.	10	57.3	11
Early and Red Clawson	10	51.6	—
Empire State potatoes	16	231.0	13
White Elephant	16	203.7	—

The practical result of these improve- ments is demonstrated by the average increase in bushels per acre in Ontario, calculated for periods of ten years, thus :—

The yields per acre of Ontario's en- tire area of winter wheat, barley, and oats for the first ten years of this work, before these varieties had been much improved, and for the second ten year period, just closed :—

Average yields in bushels per acre for Ontario.

	10 Years 1887-1896.	10 Years 1897-1906.	per cent. of Increase.
Winter wheat	19.2	21.7	13
Barley	24.8	30.6	24
Oats	32.2	33.3	19

It will be easily understood what this increase means in the agricultural pros- perity of the country, and nothing could demonstrate more clearly the wisdom of liberal expenditure on scientific re- search and experimental stations.

The Value of Feeds.

EDITOR MARITIME FARMER :

In your issue of Nov. 9, page 51, appears a statement headed "Value of Feeds" which appears to me to be very misleading, yet the subject is one of the most important that can come before the feeders of stock in this province where so much feed is bought. We buy bran, linseed and cotton seeds, chiefly for the protein they contain. Our home grown feeds containing as they do a large percentage of carbohy- drates require the addition of protein from these sources to balance the ration. The prices of these feeds here at present are about as follows: In wheat bran at $25.00 per ton, we have about 244 lbs. protein costing about 10 1-4c. In O. P. linseed meal, contain- ing 34% protein we buy at $30.00 per ton 680 lbs. protein at about 5 1-2 c. per lb. In cotton seed meal contain- ing 41% protein at $36.00 per ton we buy 820 lbs. protein at about 4 1-2 c. per lb.

Cotton seed meal, our cheapest source of protein is very variable in quality and large quantities of poor adulterated meal have been imported and sold in this province, and the purchaser never looks at the analysis which should be attach- ed to every bag, and very possibly he does not know what the analysis should show. No greater imposition is pra- ctised on the unsuspecting farmer than the sale of some brands of cotton seed meal at possibly $1.75 per bag.

Yours truly

Kings Co., N. S. J. RUFUS STARR,

EDITORS NOTE:—We are glad Mr. Starr called our attention to this matter. By typographical errors we were made to say 44 cents and 36 cents instead of 4.4 cents and 3.6 cents.

THE MARITIME FARMER

And Co-operative Dairyman.

Semi-Monthly Journal devoted to the interests of the farmer of the Maritime Provinces.

Official Organ of The Farmers, and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association The Nova Scotia and P. E. Island Fruit Growers' Associations The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers Association, and The New Brunswick Poultry Association.

Subscription Price $1.00 per year. When paid in advance 80 cts. Persons taking advantage of the 80 cent rate when subscribing are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definite order for dis. continuance is given.

The date after your name on the little green label on front Page is, in every case, the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said :—**"I saw your adv. in the MARITIME FARMER."**

DIFFERENCE BETWEEN SUCCESS AND FAILURE.

In no line of business or industry are there more failures to record than in those associated with land, soil, crop growing, live stock production, etc. The public mind is now filled with the idea that land ownership means success, money making in its operation. It is true that there have been fortunes made in recent years, in the advancement of land values, whether improved or unimproved, and whether operated intelligently, skillfully, economically or without system and method. This, however, is a condition that will pass away after a while, land values will come to a standstill, and the land owner will have an investment that means something more definite than at present. The owner who cannot make the land pay expenses, keep up repairs, pay a reasonable interest on the investment or its appraised value, will not be called a success, nor the land under his management a successful business venture.

Thousands of persons are each year becoming land owners, some on a large scale and some on a small scale. A large per cent of these new land owners are not practical or skilled operators in land management, in the economical use of land for its best results in crop prodoction. Many of them became land owners through speculative influences, others through the belief that they could follow in the footsteps of the successful farmer, fruit grower or gardener, and produce the large yields and fine crops that seem to be the unaided work of the hand of Providence.

It is not an uncommon thing to hear of some suburban fruit grower or gardener on a five or ten acre tract of land producing $500 worth of crop per acre. To the unskilled, the person of little or no real knowledge of the industry, this seems easy, only the matter of placing himself in the other man's position. "What man has done man can do," is the ambition that too frequently prompts young manhood to efforts that are only successfully attained after years of study and diligent labor.

The examples of failure are more readily observed where large things have been attempted on high priced lands and small holdings. The little fruit farm and the poultry farm, when thrown on their own resources, and poorly managed, display a lamentably meager revenue for the operating expenses and the maintenance of a family. It has been questioned by good authority, and is now under careful test, whether or not there can be anything made in the keeping of common poultry for egg production on small yarded and confined quarters where all the feed must be purchased to carry on the business. This test implies a full and complete cost of all buildings, fixtures, labor and expense of handling the business.

It will be observed that there is quite a difference between this poultry work and the farm poultry industry, where a few dozen or a few hundred fowls have the unrestrained run of the barn yard, stock lots and near-by fields to gather their living without cost to the business. In the latter case al receipts from sales are practically profit and figures up in the interest of poultry raising, without explanation. The same principle of estimate, in cost, applies in the dairy business. On the farm where there are tons of waste products consumed by the cows that have really no commercial value; straw fodder and grasses, in waste places. The greatest source of failure in this feature of farm operation lies in the keeping of poor quality cows. A cow is a cow, with many land owners, whether she furnishes six quarts of milk per day or eighteen, and whether it tests 3 per cent. butter fat or 6. The same lack of system is found with the fruit grower—he trusts to Providence to ward off insect pests and produce for him a crop without the usual vigilance and persistency that has brought success to the wideawake, and industrious orchardist.

There are today on adjoining farms, land owners who are as widely apart in their management and methods of handling their lands as profit is from loss. A land owner is not necessarily a money maker, neither are all lands of equal producing value. There is a difference in lands as well as in land owners. There will never be a time, baring crop failures and accidents, when the systematic, energetic, up-to-date farmer will not be able to make a fair profit, from his land; and there never will be a time when there will not be failures and disappointments to record from among the careless, indifferent and lazy land owners.

BACKING UP.

It't a mighty hard thing sometimes to back up and start over when we find we are on the wrong track. We can go ahead all right, but when it comes to backing up, "there's the rub."

A few years ago in one of the Western states, a man of considerable prominence fell heir to a large estate involving 8,000 acres of good farm land. This land is now worth $100 an acre. He started in farming, and at the same time started a "hobby." His general methods for carrying on his farm operations proved a failure, but he would not back up. he refused to listen to his more practical neighbors and insisted on going ahead along the lines he had laid down. He was too proud to acknowledge that he was wrong. He just couldn't back up. Well, he lost his farm, but fortune smiled upon him again and he fell heir to another estate and started again. He got another idea into his head and he stuck until he lost his all. He is now an old man. The other day he was obliged to write back to his old friends and ask for assistance to keep him out of the poor house. A sorry picture but true. A life tragedy on a large scale but quite applicable to many in the humble walks of life.

Somehow we are apt to get a certain idea into our heads. Just where we get it we can't tell, but it is there. We stick to it faster and tighter than a "dog sticks to a root." We hang on with "might and main." It fights back at us and we strike back, but continue to stick to our idea and resolve to fight it out along a certain line, and al the while we are making a mistake. We just can't back up. It isn't our nature. Then when too late we can only think of what "might have been" and of the "barren regrets."

How often do we see a farmer who has run out on the sidetrack and all the while thinks he is on the main line, refusing to stop and back up, which is the sure way to get out without much loss.

A good share of the real work of this life consists in trying to learn how to back. True it is not always an easy task, when we have spent much time and money on a pet idea, to stop and start over again, but friends, is it not better to do so than to go on and meet failure in the end.

Few, if any of us, have learned all there is to be known about farming, although we may think we have. Every season brings up new problems. If our neighbors across the way has a better way of handling his crops than we have why not give him the credit and try his way. If it requires a little backing up let's do it. If we are not settled in our minds as to whether we are doing things exactly right or not, let's stop and think the matter over, and if necessary, back up and start again.

If we have not been conducting our farming operations along the right lines, let's get right even if it is a little humiliating.

THE COURAGE OF HER CONVICTIONS.

Mrs. A. C. B., in a recent issue of the New England Homestead says :

"If encouragement exists anywhere it is on the farm. Here the man may live a reasonable independent life and receive a fair reward for the work of his hands. My sons will never be anything else but farmers if they listen to their mother. I wish all five of them could own farms near enough to visit them. Four of them are grown and show no inclination for another calling, but I am trying hard to arouse an ambition in them to be land owners instead of renters. I want my daughters to marry farmers because they are well fitted to be farmers' wives. They can milk cows when the men are off threshing and have helped their brothers break colts, and this does not detract from their womanly appearance and their home-keeping qualities. My husband has given the boys only a common school education, but I still hope that one or two of them may yet have a chance at an agricultural college. It may be that I am a benighted being, but I would not send a farm boy to any other lest it educate him away from the farm."

Mr. Farmer, where are you going to send your boy to school this winter? Are you going to send your boy to a school that will have the tendency to draw him away from the farm or are you going to send him to the "Truro Agricultural College" which opened on November 2nd and which will lead him to see the possibilities of farm life and attract him to the farm.

Send him to the Truro College where his inclinations will be bent towards the farm and where he will be taught to remain and develop the resources of his own native place instead of going to assist by his brains and energy in the development of some other place. We want more of our brainy young men on Maritime Province farms.

ENCOURAGE THE DAIRYMAN.

There is gunpowder in every man if you can only get the spark to it. There is talent power in every dairyman—often more than he himself dreams he possesses. All that is necessary is to light the flame of the enthusiasm by showing him his own opportunities and possibilities and the hidden gunpowder within him will make him explode into sudden and irresistible action. On other pages of this issue will be found an article on the Dairying Conditions in New Brunswick and a plea for more encouragement to the dairy industry. A bounsing system is suggested. Let us have a full discussion by our readers re this matter. It may be the means of igniting the irrisistible actions and achievements that are so essential to success in the dairy business.

The Worn-Out Farm.

A long-abandoned farm is not so difficult to restore to fertility as one that has been worn out by successive cropping by a man who does not understand his business, or who is hiring the place from another and does not care how much the soil is robbed. Many farms that have been left idle for several years have to a certain extent restored some fertility to the soil by the natural process. That is, leaves, vines, stocks and even weeds will add a certain amount of humus and nitrogen matter to the soil each year. If such land is plowed twice a year, so that the soil can digest and assimilate the plant life that has accumulated there, it will be found to be in a fair way to recuperate.

It is not such a difficult matter to restore a run-down or a worn-out farm as some people imagine. It simply requires a little practical and scientific knowledge put into operation by a man who is not easily discouraged. Many a poor man has made his mark in farming on just such worn-out farms. It is possible to-day for a farmer to take a worn-out farm and build it up to a paying basis, supporting himself meanwhile. Farms of this character can be purchased reasonably cheap in many parts of the country, or they can be rented for a long term of years, with renewal clause attached.

The first thing to do in restoring such a farm is to get a crop of some green stuff. It is easy to start a crop of rye by fall plowing, scratching the ground just enough to cover the seeds a little. Then by the following spring when the rye is up, it should be plowed under. This makes a good starter and then by adding crops of grass and clover to the rye the soil will soon get the nourishment that it has so long lacked.

In most worn-out farms the soil is stiff and hard and during dry weather the surface bakes so hard that it is difficult to force a plow through it. There are two remedies for this. One is to work more plant manure into the soil, which makes it porous and the other is to underdrain it. If the soil does not respond to the former treatment of the course in time underdraining must be resorted to anyway. Too little attention is given to this on most old farms, especially where the soil is a tough clay.

Plowing is one of the best methods of restoring the lost fertility of the soil. It works well whether the soil has too little plant food in it, or when it is over crowded with humus. It enables the soil to digest the food, releases much that is imprisoned in it and stores up nitrogen from the air. Not only fall and spring plowing, but summer plowing too, is required on some farms that have been allowed to run down. Such work will often take the place of commercial fertilizers and barnyard manure, although all of the latter that one possibly can secure should be mixed up with the soil at every plowing.

Loss on Farm Implements by Exposure.

EDITOR MARITIME FARMER :

This is a machine age and we of the Maritime Provinces are a machine using people, but we have not, as a people, learned to care for machinery so as to lengthen its life. Every man who has driven through the country and seen machines and implements standing in the fields, on the roadsides or in open lots, knows that the loss from this lack of care is tremendous. While there are no figures on the subject to show the extent of this loss, yet it is plain to the observer that the deterioration from exposure is greater than the deterioration from wear, and that if machinery had perfect protection from the weather it would last twice as long as it does.

It matters not whether the machine or implement is mostly wood or iron and steel, the weather is about as bad on one as on another. It peels the paint off, decays the wood, rusts the iron and steel and rusts the nuts on the bolts so that it is often impossible to twist the nut off without twisting the bolt in two. With such treatment as this the best machinery goes to pieces in two or three seasons.

The careful farmer avoids this loss. He has dry sheds under which to store his machinery and protect it, not only against the weather, but against chicken roosting all over it, and the careful farmer always is able to run his machinery for years; perhaps 10, 15 or even 20 years with slight repairs.

What would the farmer think of the manufacturer if he allowed his roofs to become faulty and his machinery to be damaged by rain ? What would he think of the MARITIME FARMER if they allowed it to rain on their presses ? He would call it careless and slip-shod, yet he is careless and slip-shod in allowing rain and wind, frost and sun, to eat away the newness on his machines and make them old before their time.

The lumber to make dry sheds in which to house machinery will be quickly paid for in the lengthened life of the machines. It is expensive not to provide shelter not only for machinery, but for live stock. There is not a part of the Maritime Provinces but what it pays to provide adequate shelter.

The loss of machinery, from exposure, is duplicated in the loss of vehicles from the same cause. Farm wagons and even pleasure riding vehicles are frequently left out to take the weather as it comes. First, the varnish goes, then the paint and then the whole vehicle becomes ramshackle. Such carelessness helps to keep the owner poor and it is a discredit to the farmer that such carelessness exists.—TIDY FARMER, Pictou Co., N. S.

Absorbents.

When selecting an absorbent to use for bedding in the stables it is often the case that no account of the manurial value of the material used is taken. Some use sawdust as an absorbent, never considering that the sawdust of itself contains very little fertilizer material, and whaat is contained in the sawdust is so locked up that it does not become available for years. The straws of different cereals are much richer in plant food and they rot quicker, rendering the plant available. The result of using sawdust is that there is a large bulk of material to be removed to the field which contains very little food plant.

According to a bulletin issued by the Virginia Experiment Station, sawdust contains only 2 pounds of nitrogen, 4 pounds of phosphoric acid and 8 pounds of potash per ton. Giving the nitrogen a value of 12.5 cents, phosphoric acid and potash a value of 5 cents per pound, one ton of sawdust of itself is worth only 85 cents per ton for the plant food which it contains. We find that wheat straw contains 11 pounds of nitrogen, 4 pounds phosphoric acid and 12 pounds of potash per ton; calculating at the same rate as we did the sawdust we find that wheat straw is worth $2.18 as a fertilizer. Oats straw contains the same amount of phosphoric acid, is one pound richer in nitrogen and 8 pounps richer in potash per ton, and valued as the others, it is worth $2.70 per ton as a fertilizer. Buckwheat straw contains 26 pounds of nitrogen, 12 pounds of phosphoric acid and 4 pounds of potash per ton, worth $6.25. Barley straw contains the same amount of nitrogen as buckwheat straw, 6 pounds of phosphoric acid and 41 pounds of potash, and is worth $5.60 per ton for its plant food. Forest leaves are often used as bedding; they are not as good absorbents as the straws of cereal grains, but are preferable to sawdust, considering everything. Forest leaves on an average 12 pounds of nitrogen, 6 pounds of phosphoric acid and 6 pounds of potash, which are worth at a conservative estimate $2.10 per ton.

These may seem small things, but they are worthy of consideration, especially when we are contemplating using sawdust in bedding and allowing straw to lie out on some waste place and rot where there will not be any

(Continued on page 87)

DON'T BE LED INTO SIDE-SHOWS.

THE MAGNET.

The MAGNET Skimming Perfectly sitting on the rough PRAIRIE
THE SQUARE GEAR AND DOUBLE SUPPORTED BOWL DOES IT
STEADY AS A ROCK

The BEST SIGHTS in the circus are all under the main tent. They are the big show, but the road to the big show is lined by low priced side shows, of minor attractions with wily barkers outside, ceaselessly striving to draw the passing throng off the main thoroughfare.

It is just this way with Cream Separators in Canada. "THE MAGNET," CANADA'S ONLY CREAM SEPARATOR, is in the BIG TENT in a CLASS BY ITSELF, with its LARGE STEEL BOWL, SUPPORTED AT BOTH ENDS, (MAGNET Patent.) ITS ONE PIECE SKIMMER TAKING ALL the BUTTER FAT OUT OF THE MILK and AT THE SAME TIME removing the IMPURITIES FROM BOTH.

Its complete set of SQUARE GEARS, cut from SOLID BLANKS—LAST FIFTY YEARS.

MAGNET BRAKE circling the bowl (MAGNET Patent.)

CAPACITY CHANGE to any size IN THE ONE MACHINE.

EASY TURNING operated BY CHILDREN.

Easy cleaning, can be cleaned in less than half the time of any other separator.

Steady as a Rock.

The WILY BARKERS FROM EVERY COUNTRY are here TRYING TO KEEP the dairy farmer FROM GETTING TO THE BIG TENT. Do not be misled by their LOUD CRIES but GET INTO THE MAIN SHOW WITH THE MAGNET. Study its CONSTRUCTION and ITS ELEVEN YEARS' record IN OUR COUNTRY.

When once inside the main tent the MAGNET solves the separator problem for you for fifty years.

HORTICULTURE

Fall Cultivation.

I have been advocating for many years the system of fall cultivation of orchards, believing it to be the best method. I will give a few reasons why orchards should be cultivated and fertilized in the autumn, whenever possible.

By plowing, say five or six inches deep, after the leaves have fallen, and harrowing to a fine tilth, you have an "earth dust mulch," which is one of the best protections from frost. You will have buried all the spores of the black-spot which may be deposited on the leaves, which is, undoubtedly, the main source of propagation in the spring. You will also have disturbed, and buried deeper, any cocoons of canker worms, codling moth and other insect pests that may harbor on or near the surface soil. And you will have placed the cover-crop or other vegetation, with the leaves, where it will be converted into plant food, and made ready for the early growth of the trees in the spring.

If you apply such fertilizers as barnyard manure, ground bone, muriate of potash, or others of those partially insoluable commercial manures and harrow in, you will assist nature to provide the trees with an early spring breakfast and enable them to commence the season with vigor and pass the period, of what is sometimes excessive bloom, without the exhaustion that we frequently observe, and that is followed by failure to set fruit, or by excessive dropping after it is set.

If this system is properly carried out in the fall, the disk is all that is required in the spring to get a mellow surface, until the time has arrived to sow the cover crop, the orchardist may congratulate himself when the latter is in, that his work for the season, so far as cultivation is called for, is done.

As there can be no rule without exceptions, it may be found impracticable to follow this system on side hills or where the soil washes badly in the winter. There you may have to leave the cover crop to bind the soil until spring; if so, then do your cultivating and manuring at the earliest possible date, for it is the early and vigorous growth in the spring, and the mature, well ripened wood and buds in the fall, that ensures the health of our fruit trees, through our changeable winter weather.—R. W. STARR, Wolfville, N. S., in Canadian Horticulturist.

The annual meeting of the Nova Scotia Fruit Growers' Association will be held in Kentville on Wednesday, Dec. 1st and two following days. Among the topics for discussion will be Co-operation in Packing and Marketing, Cold Storage, Summer Sorting, Control of Moisture in Orchard Soils, Orchard Fertilizers, etc. Profs. Cumming and Shaw, of Truro; Frank T. Shutt, of the Ottawa Farm; Robert Thompson, of St. Catherines, Ont., and many others will address the meeting. Kentville is the heart of the fruit district and a charming place to visit, so a record meeting is anticipated.

S. C. P.

Profit in Apples.

Three recommendations were made by Alexander McNeill, Chief of the Fruit Division of the Dominion Department of Agriculture, in the statement which he made before the Committee of Agriculture at the last session of the House of Commons. These recommendations were in effect :

(1) That orchards of early apples be planted for the purpose of supplying the expanding market of the West.

(2) That the co-operative principle already applied to apple growing be further extended.

(3) That evaporating plants be put up by co-operative associations.

Even if a million early apple trees were judiciously planted in the Lake Erie district now they would not, Mr. McNeill said, come into bearing soon enough to supply the demand for early fruit from Great Britain and the Canadian West. We have not the fruit required to supply the present demand, he said, and the prospects are that the requirements of the markets named will still more greatly exceed supply in the immediate future.

In speaking of co-operation, Mr. McNeill referred to the well knowu case of the Forest Association, of which Dan Johnson is manager. In 1907, when the average grower did not realize over $1 per bbl. for his apples, and in a year in which private apple operators experienced losses in selling their stock, the Forest Association, by its effective organization, and the quality of the fruit put up realized fully 50c. per bbl. for its members above current prices. In 1908 they secured over $2 per bbl. for the 7,000 or 8,000 bbls. handled.

In speaking of the advisability of extending the business of evaporating apples, Mr. McNeill pointed out that while Canada exported, last year, nearly a million and a half barrels of green apples as compared with a million exported by the United States, our exports of evaporated stock on the other hand, were less than 7,000,000 lbs. as compared with 35,000,000 lbs. exportrd by the neighboring country. Evaporators should, he said, be erected in connection with the operations carried on by all the co-operative associations. In support of this statement he pointed out that Chatham Association increased its returns by one-third by means of an evaporator.

and if it or the harrow are used, say once a week to conserve the moisture,

Speaking of the returns from apple growing, where the work is intelligently carried on, Mr. McNeill said, there are cases, in which land, that would not be worth more than $50 or $75 per acre for ordinary farm purposes, has, by an expenditure of $100 per acre for trees and the care of the same, been increased four hundred per cent. All, however, depends on the extent of the care given to orchards. In Norfolk County, for example, the product of five acres of comparatively uncared for orchard sold six years ago for $180. Next year the title to the land passed to A. Gilbertson. Mr. Gilbertson at once began to cultivate, prune, spray and thin the fruit. Last year this same orchard yielded a revenue of $1,500, while the expenses of the year were only $200. Another fruit grower in the same neighborhood made a profit of $10 per tree from his orchard.

The Maine Fruit Marks Act.

It is suggestive to find that our competitors in apple growing are adopting some modifications of the Dominion Fruit markets Act to regulate the grading of their apples. The state of Maine is a competitor with us in the English market. Maine Baldwins are quite an important factor in the market, coming in the same class as the Nova Scotia Baldwin. The State Legislation has passed an Act defining "the grading and marking of apples." At a meeting of the Maine State Pomological Society held at the Experimental Farm. Prof. Gardener of the State University defined the grades according to the new law as follow:

No. 1—99 per cent. at least, above 2 1-4 inches in diameter, free from blemish and well colored. No 2—90 per cent. at least, about 2 inches and free from blemish and well colored. If over 2 1-4 inches and having a single blemish from worm or scap, an apple would pass as a No. 2. Unclassified—All falling short of these requirements. Fancy—90 per cent. at least above the average size for the variety, better than the average in color and free from blemish.

It will be seen that our friends in Maine have adopted an arbitrary classification by measurement. This method was proposed in the early stage of the Fruit Markets Act, but the clause was dropped out in the final revision. The Dominion Fruit Inspectors use a standard to settle disputes as to size for No. 1 and No. 2, but the former is placed at 2 1-2 inches in diameter and the latter at 2 1-4, thus making our No. 2 equal in size to the Maine No. 1. The Standard adopted by the Canadian Act is none too high, and in the opinion of most reputable packers it is advisable to pack above the requirements of the Act.—S. C. P.

Judging Fuuit.

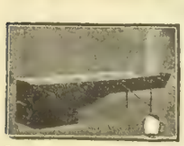
The subject of having an established recognised scale of points for the guidance of judges in placing awards at our various provincial and county shows is one in which all fruit growers should be very much interested. I have a young orchard that will begin to bear returns for my expenditure in the course of a year or two. I expect to follow the soundest advice I can get in apple growing and packing. I have been at various exhibitions and was rather baffled at times to note that the various judges

DEAFNESS CURED

By New Discovery

"I have demonstrated that deafness can be cured."—Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by that famous Physician-Scientist, Dr. Guy Clifford Powell. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness This Marvelous Treatment is so simple, natural and certain that you will wonder why is was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell 5555 Bank Building, Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.



Perfect Maple EVAPORATOR.

Price low—quality high—product, the best possible—the kind you like—syrup retains its maple taste—all unnecessary and middlemen's profits cut out—sold at a price the poorest man can buy. Every one guaranteed—Write for pamphlets and recommends. Do it now. Special discounts allowed to cover freight to the Maritime Provinces. Order early, very important.

Dealer in Meat, Poultry, Produce, etc. All consignments carefully attended to and returns are promptly made as soon as goods are sold.

Croup is most prevalent during the dry cold weather of the early winter months. Parents of young children should be prepared for it. All that is needed is a bottle of Chamberlain's Cough Remedy. Many mothers are never without it in their homes and it has never disappointed them. Sold by all dealers.

seemed to have a personal standard rather than any one fixed standard whereby the judging would be kept in a consistent groove.

I am glad to note that the N. S. F. A. is now taking this matter in hand and I trust their efforts will be crowned with success.

Following are a few suggestions regarding Fruit Judging which I clipped frome a recent issue of the Maine Farmer and which may be of interest to your readers:

MARKET STANDARDS FOR THE SHOW ROOM.

In connection with our recent visit to the New England Fruit Show, we had the pleasure of riding on a train for some little distance with the noted orchardist, J. H. Hale, of Glastonbury, Conn. We were feeling somewhat disgruntled by what we had seen of the the judging at the show, and naturally made the most of an opportunity to get the opinion of one who is an acknowledged authority on fruit, from the business standpoint especially. In reply to sundry questions Mr. Hale said:

"To my mind the proper man to judge fruit, is the man who makes a business of buying it. When a man puts his money into apples, rest assured that sooner or later he will know apples. His knowledge may cost him something, but he gets it in good practical working shape."

"What do you think of the judging of fruit at the Fall Fairs?"

"As a rule they might just as well toss the ribbons up in the air and let them stay where they fell so far as benefiting the fruit industry goes. They asked me to judge one once, and before I had gotten far the managers came to me and said, 'Why Mr. Hale, you must give these people some premiums. They have brought their fruit, and if we don't pay them something they won't come next year.'"

"How would you get around that? It's a practical question that confronts every fair manager.

"I should say give a small gratuity to every exhibitor, and then have a few good prizes to go to the one who deserved it."

"Would that be practical when we have so many different varieties and classes?"

"Too many varieties is one of the fundamental troubles with New England orcharding. We have only a few commercial varieties, and I believe these are the ones to encourage, as well as a small select family list."

"So you would manage a fruit show with reference to market conditions?"

"Yes sir, I would make the unit for commerce in the choicest grades, the bushel box."

"Well, I would put the judges up on a low platform where everybody that wanted to could watch and see what they were doing. Then let them call for the entries of a certain class and have these brought in and put before them. Expert buyers could tell at a glance the two, or at most three boxes that were really in the competition. These they should carefully unpack, examining every specimen. Then a blue ribbon would really mean something."

"As to the judging at the recent New England Fruit Show the judges of plate exhibits apparently let size count for too much in the scale of points, while uniformity, color and style, so valuable in home and market, were apparently not so fully considered. I am confident if three judges were desired, a committee made up of one wholesaler, one retailer, and an appreciative consumer of apples had judged that plate show, most of the blue ribbons would have gone in other directions than they did, while the apple and box judging in the commercial exhibit, as done by Prof. F. C. Sears of Massachusetts and Pres. Charles L. Gold of the Connecticut Pomological Society, was the best work of the kind I have ever seen anywhere in the East and should be a great stimulus to future exhibits."

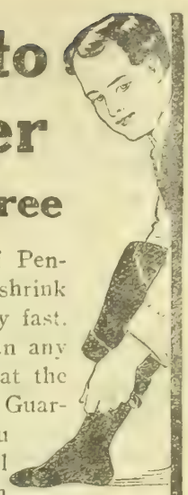
Guaranteed to Wear Longer

or you get 2 pairs free



We guarantee the following lines of Pen-Angle Hosiery to fit you perfectly, not to shrink or stretch and the dyes to be absolutely fast. We guarantee them to wear longer than any other cashmere or cotton hosiery sold at the same prices. If, after wearing Pen-Angle Guaranteed Hosiery any length of time, you should ever find a pair that fails to fulfill this guarantee in any particular, return the same to us and we will replace them with TWO new pairs free of charge.

Let us again remind you that we guarantee the following lines of Pen-Angle Hosiery to outwear others. That means the best wearing hosiery sold anywhere.

The reason why they will wear longer is because of the exceptional quality of the cashmere and cotton yarns we use. And because we knit them on Penmans' exclusive machines. We have the sole rights to use these machines in Canada.

They're Seamless

These machines form-knit the hosiery to fit the form of the leg, ankle and foot perfectly, without a single seam anywhere to irritate your feet or rip apart.

They reinforce the feet, heels and toes—the places that get the hardest usage—without you ever being aware of any extra thickness.

You see, these machines increase the wear resistance of Pen-Angle Hosiery and at the same time make them more comfortable—your ideal hosiery.

Make up your mind right now that you will never again buy hosiery with horrid seams up the leg and across the foot—hosiery less serviceable—but get Pen-Angle 2 for 1 guaranteed hosiery.

For Ladies

No. 1760.—"Lady Fair" Black Cashmere hose. Medium weight. Made of fine, soft cashmere yarns. 2-ply leg. 5-ply foot, heel, toe and high splice, giving them strength where strength is needed. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1020.—Same quality as 1760, but heavier weight. Black only. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1150.—Very fine Cashmere hose. Medium weight, 2-ply leg, 4-ply foot, heel and toe. Black, light and dark tan, leather, champagne, myrtle, pearl gray, oxblood, helio, cardinal. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1720.—Fine quality Cotton hose. Made of 2-ply Egyptian yarn with 3-ply heels and toes. Black, light and dark tan, champagne, myrtle, pearl gray, oxblood, helio, sky, pink, bisque. Box of 4 pairs, $1.00; 6 pairs, $1.50.

No. 1175—Mercerized. Same colors as 1720. Box of 3 pairs, $1.00; 6 pairs, $2.00.

For Men

No. 2404.—Medium weight Cashmere half-hose. Made of 2-ply Botany yarn with our special "Everlast" heels and toes, which add to its wearing qualities, while the hosiery still remains soft and comfortable. Black, light and dark tan, leather, champagne, navy, myrtle, pearl gray, slate, oxblood, helio, cadet blue and bisque. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 500.—"Black Knight." Winter weight black Cashmere half-hose. 5-ply body, spun from pure Australian wool. 9-ply silk splicing in heels and toes. Soft, comfortable, and a wonder to resist wear. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1090.—Cashmere half-hose. Same quality as 500, but lighter weight. Black only. Box of 3 pairs, $1.00; 6 pairs, $2.00.

No. 330. — "Everlast" Cotton Socks. Medium weight. Made from four-ply long staple combed Egyptian cotton yarn, with six-ply heels and toes. Soft in finish and very comfortable to the feet. A winner. Black, light and dark tan. Put up in boxes. Box of 3 pairs, $1.00; 6 pairs, $2.00.

Instructions

If your dealer cannot supply you, state number, size and color of hosiery desired, and enclose price, and we will fill your order postpaid. If not sure of size of hosiery, send size of shoe worn. Remember, we will fill no order for less than one box and only one size in a box.

Catalog Free

If you want something different than the styles and shades listed send for handsome free catalog which shows an extensive line in colors. 44

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

Quality of Butter.

The quality of butter depends to a great degree upon the food and drink of the cow. She should have clean, pure water and wholesome food. Much care should be taken in the selection of the ration. The individual cow has much to do in this regard. But with respect to the part that is played in handling the product of the cow, too much carelessness is evident in the process of butter-making. After churning is finished, the butter and milk mixture should remain quiet for about ten minutes, in order to let the butter come to the surface. A cup of cold water will hasten the process. An old recipe says: The butter should then be carefully skimmed off into a wooden bowl, half full of water. The water should be repeatedly changed until it shows no indication of milkiness. It is important that the butter should not be pressed or worked during the process of removing the milk from the butter. After this the butter may be pressed into a mass and salt to the extent of one-fortieth its weight worked into it. The water should be well pressed out, but the less worked, the more perfectly its granular character is maintained.

If butter is pressed firmly into earthen jars or wooden firkins, and kept at a temperature of 50 or 60 degrees it may be preserved in fair condition for six or eight months.

A Balanced Ration.

The manner of figuring a balanced ration for dairy cows puzzles many who attempt it.

Bulletin No. 127 of the New Hampshire college of agriculture sums the methods up in a very conscious way, and in words that will enable anyone who has learned to multiply and devide, to figure out a ration according to the concentrates and roughage available in his locality, which will be the best and cheapest as a milk producer. At this time when protein feeds are so high, as it is of great importance to find out which can be fed for the least cost and maintain a full flow of milk.

Bulletin No. 127 says: "The term 'nutritive ration' is so generally used by the students of feeding problems, farmers', institute speakers and the agricultural press that a thorough understanding of its meaning is necessary for all farmers who are trying to feed on a rational scientific basis. By 'nutritive ratio' is ment the raito or proportion of the digestible carbohydrates and fat in any given feed or mixture of feeds. It is found by multiplying the amount of digestible fat by 2.25 and adding the product to the amount of digestible carbohydrates and dividing the sum by the amount of digestible protein. The reason for multiplying fat by 2.25 is because it has two and a quarter times the fuel value of the carbohydrates and before adding must be brought to a carbohydrate basis. For example, let us find the nutritive ratio of clover hay, which has been found to contain 6.8 per cent. digestible protein 35.8 per cent digestible carbohydrates, and 1.7 per cent. digestible fat.

1.7x2 25=3.82.
3.82 plus 35.8=39.62.
39.62 divided by 6.8=5.8.

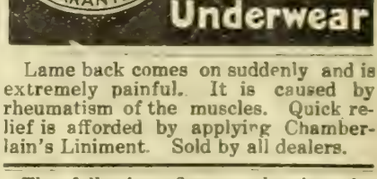
"This nutritive ratio of clover hay then is 1 to 5.8, the protein being expressed as 1.

"When the proportion of carbohydrates and fat is large, the variation is said to be 'wide' and when it is 'small' the ration is 'narrow.' Timothy hay, for example has a ratio of 1 to 16.7, which is wide; gluten feed has a ratio of 1 to 2.6, which is narrow, while clover hay has a ratio of 1 to 5.8, which is medium The feed or rations with a narrow nutritive ratio are as a rule more expensive than those with a wide one, because protein or nitrogen, whether purchased as a feed, a fertilizer or as a beef stake, always demands a high price."

Having the method of figuring made plain and a table showing the composition of the different feeds (which can be obtained at your experiment station) you are in a position to make up a good ration. It must be remembered that unless your table specifies "digestible" nutrients, you need to reduce it to that basis. For convenience I give below the per cent. "digestible," of common foods, taken from the same bulletin No. 127.

	Protein	Carbohydrates	Fat
Timothy hay	48	59	57 p.c.
Clover hay	55	57	53
Mixed hay	58	59	48
Oat hay	54	49	62
Oat and pea hay	76	65	68
Hungarian hay	60	67	64
Rowen (mixed)	69	66	67
Rowen (clover)	65	56	60
Oat straw	30	55	38
Corn stover	2	57	52
Corn silage	52	70	85
Clover silage	65	56	60
Corn meal	68	96	92
Corn and cob meal	56	84	84
Bran	78	56	68
Middlings	80	81	86
Oats	78	68	83
Wheat	86	94	81
Gluten feed	86	87	84
Hominy chop	77	94	81
Brewers' grain	79	56	94
Malt sprouts	80	62	100
Linseed meal N. P.	85	85	97
Cottonseed meal	88	'60	93
Sugar beets	91	100	50
Turnips	90	98	98
Pasture grass	70	74	63
Skim milk	94	98	100

As the feeding of different feeds materially affects the value of the exertions from the farm animals, it is of considerable importance to take this into consideration when making up a ration.



Lame back comes on suddenly and is extremely painful. It is caused by rheumatism of the muscles. Quick relief is afforded by applying Chamberlain's Liniment. Sold by all dealers.

The following figures showing the total fertilizing value of one ton" of feeding stuffs is taken from Farmers' Bulletin No. 21, U. S. Dept. of Agriculture by W. H. Beal:

Corn meal	$5.66
Corn silage	1.24
Crimson clover (green)	1 80
Crimson clover hay	9.71
Red clover hay	7.55
Gluten meal	15.53
Cottonseed meal	26.16
Linseed meal	19.36
Wheat	8.49
Oats	6.70
Skim milk	2.11
Timothy hay	4 60
Wheat bran	12.30
Wheat straw	2.18
Turnips	.96

It will therefore be seen that gluten, cottonseed and linseed are the most valuable in fertilizing elements, with bran fourth in the list.

Locally, at present prices, one pound of digestible protein can be purchased at the following prices:

In gluten feed	6.8c
In cottonseed meal (best)	4.0c
In bran	.96

There is no doubt that there is much more bran fed than is really profitable, as far as the actual food constitutents are concerned, but a certain amount is very beneficial to the health of our animals, and it is possible it would be a

McCALLUM'S Limited, Truro, N. S.

mistake to reduce bran in the ration, especially where no silage or roots are fed.

A common ration here is two quarts of bran to one of gluten. I think there is much less cottonseed fed than formerly, as the quality is much less satisfactory, and a good many believe it is injurious to their cows. The cottonseed offered locally this fall is very dark in color, instead of quite golden or yellow as it formerly was. Dealers claim it is hard to obtain prime cottonseed.

Authorities differ considerably as to the amount of protein necessary to maintain the milk flow.

If I have figured correctly a ration of two quarts bran and one quart gluten feed fed twice a day, and 25 pounds of good mixed hay would give the following digestible protein :

	Lbs.
2 1-2 lbs. gluten feed	.56
2 lbs. bran	.24
25 lbs. mixed hay	1.45
Total digestible protein	2.35

Two and one-fourth pounds is no doubt quite ample for a cow producing under 25 pounds daily. Above that amount no doubt an extra quart of gluten could be added to each feed with good results.

If a cow goes naturally to milk and is losing flesh corn meal may be added to the ration to keep the cow in condition, for we do not want our cows poor at the end of the milking period, for nowadays most cows are milked to within a few weeks of the freshening and have little time in which to recuperate. A cow need not be kept in "exhibition flesh" but we all know a cow will give a much better flow of milk if in good "milking" condition when she freshens, and is more apt to come through the freshening ordeal in prime condition.—Hoard's.

Rockefeller Herd Profitable.

EDITOR MARITIME FARMER.

Perhaps there is no state in the union more often spoken of than wealthy New York. Three miles out of Tarrytown, a beautiful little village, situated along the banks of the Hudson and twenty five miles northwest of New York City, lies the farm of William Rockefeller, known as the Rockwood Hall Farm, now superintended by Mr. B. M. Hawks, who from all appearances has proved himself a competent manager.

Mr. Rockefeller has taken upon himself to equip this farm with the best utilities and finds that a splendid profit can be made by keeping fine stock. Profitable stock must be given proper attention and for this reason Mr. Rockefeller has all of the conveniences possible for the welfare of his entire herd of cattle. The stables are well built and well kept, care having been taken in planning same so that there would be no danger of the animals housed therein receiving an insufficient amount of fresh air and sunshine.

Owing to the fact that this dairy herd of cattle which have been imported during the last twenty-five years, directly from the Jersey Islands, where the contagious disease known as tuberculosis is unknown among cattle, and owing to the fact that these animals have never been in contact with any other cattle, caused Mr. Rockefeller very little alarm as to the condition of his herd, nevertheless as system has been his method along all business lines, he deemed it advisable to secure the services of a veterinarian to apply the tuberculin test to the herd in question, the test having been applied by the writer and which test showed each and every animal in the herd to be free from tuberculosis, thus not giving the owner the satisfaction of positively knowing that his herd was free from this disease but actually increasing the value of each animal in the herd.

The above illustration is a splendid proof that the germs of tuberculosis do not originate in a herd but are usually introduced by an infected animal.—Dr. DAVID ROBERTS.

Improved Roller Gear OF THE

"Puritan"

Reacting Washing Machine

This special feature alone, makes the "Puritan" the easiest running washing machine made. And the "Puritan" has several other improvements that are almost as important, to the woman who is going to use the "Puritan".

"Favorite" Churn

Is the favorite. There are more "Favorite" churns sold in Canada than all other makes combined. Patent foot and lever drive. Made in 8 sizes to churn from ½ to 30 gallons of cream.

If your dealer does not handle these household favorites, write us.

LIVE STOCK.

Indigestion in Cattle.

The stomach of a cow is quite a different organ from the stomach of a horse. Cows are said to have four stomachs, but that is not strictly true; a cow has only one stomach divided into fours. We will just speak of these apartments as first, second, third and fourth stomachs. You all know the function of the first part which we call the paunch. It is simply a receptable for holding the partly masticated food, a kind of store-house where the animal lays up food that it will chew at leisure.

So far as disease is concerned, there are just two portions of the stomach that are of any particular interest to the farmer, that is the paunch and the third stomach, so we will just talk about the first and third stomach and say nothing at all about the second and fourth, because from the standpoint of disease they are of very small interest to the ordinary farmer. We may have a diseased condition in all the paunch if the animal gets a very large meal of some dry food and the process of digestion ceases. You will then likely have an impact condition. If the animal has had a large meal of some succulent food, for instance, clover or turnip tops, and then the process of digestion ceases, you are going to have in all probability a case of bloading, because that succulent food ferments rapidly, and when the process of digestion ceases, gases will be thrown out and the cow will bloat. A case of bloating in a cow may be serious or not; sometimes it is very serious and at other times not very much so. If your cow is only bloating in an ordinary way, tie a stick across her mouth having it around her horns, and turn her out for exercise and very often she will relieve herself in that way. Sometimes it is a very serious condition, and if the animal is bloating very extensively, and if the skin seems to be blown out just as tight as possible, and you have difficulty in finding out where the hip-bone is, then you have a bad case of bloating on your hands. I believe as a rule a man with a sick animal is acting wisely and in his own interests when he sends at once for a veterinary surgeon. Occasionally however, there is a case where there is not time to send for a veterinarian, and then you have to act for yourself when a case of bloating to that extent. The only way to successfully treat that animal is to puncture right through the skin into the stomach and allow the gas to escape.

More animals die from impaction of the third stomach than from any other digestive trouble. If you had a bloated animal suffering from the impaction of the rumen you will know it at once; but this attack of the third stomach comes on very insidiously, and the farmer does not realize that he has a sick animal until it is very far advanced in the disease. The first symptom of that would be what we call a capricious appetite. It will take its dinner all right, but does not care for supper, will possibly be ready for breakfast the next day, and then would care for no dinner. The animal does not show its usual inclination for food. Whenever you are feeding an animal, and that animal shows an indisposition to eat anything you are justified as a rule in coming to the conclusion there is something wrong with that animal's digestive system. If that be the case, if the stomack be tired and wants a rest, skip two or three meals and give good purgative doses, and the chances are that animal will be restored to its former digestive strength again. Many farmers prepare something nice and tasty and give to the animal, and in all probability that will increase the trouble; the disease will develop, and in the course of two or three days you will find the animal has no appetite at all. You will often find the contents of the third stomach become so dried out that it is hardly possible for medical treatment to restore it to its normal functions, and they cannot perform any operations to relieve that condition.

When the stomach is digesting there is the peristaltic action of the muscles, relaxing and contracting, and when the animal gets an attack of that kind its muscles are paralized, and we have to administer purgative medicine and also a nerve tonic in order to stimulate the action of the stomach. We administer strychnine in all cases of that kind in order to stimulate the vermicular action of the stomach. A careful feeder need seldom have a case of any impaction of the manyplies. A man who watches his animals can see this trouble in the beginning, and I don't think there is any trouble more easily removed if taken in time.

Feed your cattle carefully, and in order to do that you must have good, healthy, clean feed. When you begin to harvest your hay, see that it is cut in proper time, cured properly, and housed properly. Then feed it carefully, and you will never have an injury to your cattle from that hay. Then be careful when you are harvesting your

HEALTH, WEALTH, AND WORK.

So long as Nature's laws require that mankind shall work, the necessity of keeping one's self in health and strength is of first importance. Many people believe that men of great wealth do nothing. That is a mistaken idea. They may not work with hammers or shovels, but they work with their nerves, brains and minds. Scores of millionaires have worked themselves into nervous prostration in their efforts to control, *to avoid losing*, their millions. But it is the humble workers who suffer most.

Mr. Arvez Berten, of Robertville, Gloucester Co., N.B., is a sturdy man of 65, who works in the lumbering districts in winter, and who, therefore, must have good health. Some years ago, he suffered much from Dyspepsia, with headaches, dizziness and rheumatism. In a statement, dated June 24th, '09, he says he used only Mother Seigel's Syrup and four bottles cured him completely.

Regular Habits
An Absolute Necessity For Good Health

You might as well expect to find a man or woman healthy with constipated bowels as to find a city healthy when its sewers are blocked with refuse.

Nature demands that the indigestible food and waste matter which collects in the lower bowels shall be got rid of at least once in twenty-four hours. If this is not done it decomposes, filling the bowels with poison, which is taken up into the blood and carried all through the body.

Naturally, this poison affects the work of every organ. *The liver is deranged, digestion is upset, and biliousness, headaches, lassitude and dizzy spells follow.*

Literally millions of people suffer these results of constipation without realizing the cause, or doing anything to remove it. Yet it can be removed, easily and with certainty, by using **Dr. Morse's Indian Root Pills.**

Take, for example, the case of Mr. George Andrews, Halifax, N.S., as he himself describes it:

"For many years I have been troubled with chronic constipation. This ailment never comes single handed, and I have been a victim to the many illnesses that constipation brings in its train. Medicine after medicine I have taken in order to find relief, but one and all left me in the same hopeless condition. At last I read about these Indian Root Pills. That was indeed a lucky day for me, for I was so impressed by the statements contained therein that I determined to give them a fair trial. They have regulated my stomach and bowels. I am cured of constipation and claim they have no equal as a medicine."

Dr. Morse's Indian Root Pills were first taken to cure constipation nearly a hundred years ago, and during the last half century they have been very extensively and very successfully used throughout the world. *They are entirely vegetable in composition and do not sicken, weaken or gripe like mineral purgatives.*

For Sale Everywhere at 25c. per Box. 21

ROCK WALL PLASTER
The Best Wall Plaster.
NO HAIR OR LIME NEEDED—
ANY MASON CAN APPLY IT.
The most convenient wall plaster known for farmers and others living in localities distant from central markets where lime, hair, etc., necessary for use in making ordinary mortar, cannot be procured without delay and expense. Rock Wall Plaster is put up in bags of 100 lbs. each and is ready for applying to walls by the simple addition of sand and water. It is a great time saver as it admits of carpenters immediately following the plasterers. Thousands of tons of it sold annually in the States and Canada. A success wherever used. Write for particulars to
ALBERT MANUFACTURING CO.,
HILLSBOROUGH, N. B.

straw, because straw is fed to a greater extent to the cattle than hay and quite properly so. Even if you have both hay and straw give straw, it is more easily digested than hay and it makes a nice part of the well balanced ration. Straw does not get the consideration and attention that it should, for it deserves just as mach attention as does the hay. It is just as important to have your straw cut at the proper time as it is to have your hay cut properly Our duty in this thing is to prepare our food and give it to the cattle in a good common sense way, and the they will not suffer from indigestion.—H. G. Reed in Weekly Witness.

Salt for Sheep.

Different owners of sheep, says the Farmer's Review, have different opinions as to how much salt should be given sheep. Some of our best shepherds furnish salt to their sheep so that it can be secured at all times. They believe that sheep should have salt just as certainly as any other animals.

When salt is kept before sheep at all times, it should be supplied in the form of large lumps of rock salt that can be licked rather than eaten. The feeding of fine salt to sheep is not to be advised if it is to be given in bulk and more than enough for one feeding.

On the other hand, some sheep herders on the western ranges never feed salt to their sheep, and say that they have excellent results. But in these cases they depend on the sheep finding alkali licks where they can satisfied their craving for minerals. But this practice is not commended by other sheep men who declare that the loco disease is most deadly where the sheep are allowed to frequent the alkali licks. They declare that the feeding of salt to the sheep in such localities greatly reduces the losses from the presence of the loco weed.

But this must depend on the constitution of the alkyli, which differs materially in different localities. Where it is the safest to use, it contains as high as 85 per cent of common salt. As a rule, it is safer to salt the sheep regularly or else give them a supply of rock salt, which they may lick as they crave it.

Where sheep are given ground grain and like condensed feed, it is better to properly salt the food. Some farmers sprinkle salt water over the hay given the sheep and find it a help to the digestive processes of the sheep.

Sheep are not different from other animals in their craving for salt. It is perhaps unfortunate for sheep that they have come to be looked upon as animals having characteristics entirely different from other farm stock.

Sheep Notes.

One good sheep will usually bring in more profit than two poor ones. Usually the poor ones are kept at a loss.

The best fleece will ever be the marke of the best sheep, provided, of course, that it has a good thrifty form.

The fleece and the carcass make up the sheep and if either is inferior, the sheep is inferior, no difference how good the other may be.

The end in view in keeping sheep is profit, and the question is how best to conduct the business to obtain a profit from the growing of wool or mutton.

Keep the best animals in the most economical manner and so breeding and manipulating the flock and fleece as to secure the best price for what is sent to market.

As far as can be done, the flock should be selected and culled so that there will be but one grade of wool—well-treated fleece—as no matter how meritorious each may be, the best prices cannot be realized.

To know how to care for sheep so as to make them grow the largest and finest fleeces and the most vigorous lambs is the most important part of flock management.

with strong rigid Wringer Stand

This new Wringer Attachment is "head and shoulders" above any other.

The entire stand is absolutely rigid —always in position—never in the way —and the water drains right into the tub.

THE HORSE.

Feed the Colt.

While every colt starts off with an inherent tendency to grow to a given size, this tendency may be hindered or helped by the feed and treatment the colt gets during its growing period, and more particular during its first year. Generally a colt starts off well enough on its mother's milk and fresh grass, but along in September when the milk flow dwindles and flies get bad, and the grass dry and short, the inherent tendency to grow gets a set back. It is at this time and later when weaning that extra feeding will help the inward 'urge' to keep on building up bone and tissue.

A colt that is weaned without a setback, whose milk flesh is kept on his ribs, and comes through the winter on good clean hay, straw or grazing, and some oats and bran, is more than half made. Generous feeding not only keeps the colt growing, but by keeping his system in good order develops a good capacity and a natural tendency to make the proper use of food. If a colt is brought along steadily and surely until maturity, he will carry a firm flesh, strong muscles and rugged constitution through life.

Neglect of a colt at weaning time means a runt with wobbly legs, humped back, bowed neck, and generally woe-begone appearance. Size and weight is what is demanded in horses now, and there is no easier way to get it than by helping nature keep what she gives.

Fitting Horses for Market.

Many farmers, though fully appreciating what 'fitting' means when appiled to cattle, sheep or swine, fail to realize its importance in the marketing of horses. No animal sold off the farm will pay better in fitting and feeding for market than the horse. Large horse dealers lay special stress on how a horse is fitted. If a horse is thin, when offered, they become suspicious and are inclined to believe that the animal is naturally unthrifty. Because of this the farmer who markets a thin horse, even though the horse is healthy, usually has to sacrifice much more than it would cost to properly fit the animal.

In fitting a horse for market several things must be kept in mind. If he is to be marketed during the winter it is an excellent plan to handle him in such a way as to prevent his hair from growing shaggy. This may be done by keeping him in moderately comfortable stables or by the use of a blanket early in the winter. A fair amount of exercise is always necessary to keep an animal in good form, more especially to keep his legs right under high feeding. It is never advisable to feed a ration consisting of corn alone to a horse that is being fitted for the market, it being much better to feed a mixture of such foods as corn, oats and bran, and so much the better if to these is added a little oil cake. Not but what a horse may be made fat by the use of corn, but rather that he is much more liable to take on good form if he is fed a variety of foods.

As to the amount of grain that should be fed per day to a horse that is being fitted for the market much depends upon conditions. Some animals will stand much heavier feeding than others, and the man in charge must use good common sense. The heavy horse will invariably eat fifteen or eighteen pounds a day of a mixture composed of corn, oats and bran. Unless the animal is obliged to perform heavy labor it is seldom advisable to feed more than this during the winter. Lighter horses, if just given enough work to properly exercise them, will usually make good gains on twelve or fifteen pounds of grain per day. After one has gone to the trouble to feed a horse properly for a time it is never advisable to market too soon, it being more profitable to bring the animal into high flesh before placing him on the market. While it is possible to overload the draft horse, yet this is seldom done, and mistakes are more frequently made by marketing such animals too soon rather than feeding them too long. A sound draft horse, weighing 1,600 pounds, while in moderate flesh might be worth from $125 to $150, but if the same animal is made to weigh 1,800 pounds the chances are he may realize $175 to $225 for his owner.

Value of Carrots.

Carrots are best fed whole to horses, which can well tackle a whole carrot, and there is no necessity whatever to cut them up into slices or pieces. Carrots are very useful for feeding to horses which have a cold or cough, as they have a soothing and emollient effect upon the mucous membranes of the throat, this being largely due to their succulent character It is, therefore, a good plan to include a liberal allowance —say, up to eight pounds—in the diet of horses suffering from cold or cough. On account of their great wholesomeness, their digestibility, and their palatability, carrots make an especially good food for sick and convalescent horses. When owing to sickness a horse is off its feed, it frequently relishes a few carrots in preference to other food, and the appetite of a sick horse can often be tempted in this way. Finely chopped up carrot from a useful kind of appetizer for mixing with other food when a sick horse does not eat his food properly.

Feeding Crushed Oats.

Some diversity of opinion prevails as to whether it is desirable to crush oats in feeding horses or not. It is frequently held that the crushed oats are better and more digestible for horses than whole ones. Speaking in a general way, practical experience does not support this opinion, and as a general rule whole oats are to be preferred to crushed ones for horse feeding purposes. The molar teeth of a horse possess great grinding powers, and horses are able to masticate oats with perfect ease and without any trouble, so there is certainly no call to crush the oats with the view of facilitating their mastication under ordinary conditions. It is only when a horse's teeth are defective owing to old age, or to some other cause, that it may experience some difficulty in dealing properly with whole oats, and in that case it is advisable, if not absolutely necessary, to crush the oats. In the case of young horses under four or five years old, teething troubles sometimes temporarily interfere slightly with their powers of mastication, and when this is so it is expendient and desirable to feed the oats in a crushed state.

To sum up the whole subject, feeding of crushed oats, instead of whole ones, to horses is not to be recommended and is inadvisable under ordinary conditions. The only cases in which it is advisable or necessary are, firstly, when a horse's powers of mastication are impaired or deficient, so that it can not properly chew whole oats; secondly, when a horse is a greedy feeder, and in the habit of bolting unchewed oats wholesale, despite the admixture of plenty of chop to the corn; and, thirdly, when a shy feeder or bad one, evinces a partiality for crushed oats, preferring them to whole ones. Oates fed to foals should be given in a crushed state. Although foals can eat whole oats, and soon learn to do so, yet the latter are hardly suitable for them, being too hard, seeing that the masticating power of a foal is undeveloped and comparatively small. After they have been crushed, oats soon lose their freshness and quickly become stale. It is, therefore, not advisable to store crushed oats for any length of time, and they should always be fed in a freshly crushed state. When crushed oats become stale, they lose some of their palatability, and are not properly relished by horses.

Most Canadians Have Catarrh

Our Changeable Climate is Responsible.

Where the atmosphere is damp, with sudden changes in temperature, almost everybody has Catarrh, in some form or other. The ordinary cold in the head inflames and weakens the membranes lining the nose and throat, and starts a discharge. The next cold is more easily caught, and soon the patient is never quite free of it.

As Catarrh develops the discharge increases—drops into the throat, especially at night—and takes on an offensive odor. Besides being exceedingly disagreeable, there is great danger of the disease extending to the lungs, stomach, or bowels.

Though it is very difficult to cure, Father Morriscy devised a combined internal and external treatment that has cured thousands. The Tablets tone up and invigorate the system, and assist Nature in throwing off the disease, while the salve, applied up the nostrils, clears out the discharge and heals the membranes. Combined treatment, 50c at your dealer's, or from Father Morriscy Medicine Co., Ltd., Chatham, N.B. 20

POULTRY.

Wounded Pride's Reply to an Ungallant Rooster.

EDITOR MARITIME FARMER :

"An Ungallant Rooster," in the last number of the Maritime Poultryman has so deeply wounded my feelings that I seek a little space in your poultry columns, not for "re-dress", for I have now a lovely new suit, but to show the chanticleer that he knows not everything about hens' clothes and poultry management.

In September I was sent to Halifax with every stitch of my wardrobe complete. True, it was a little dust bedrimmed after so much wear and tear, but not enough tarnished to shake the vanity introduced into my little head a few months before, when I was "the cynosure of neighboring eyes," the envy of my sisters and the recipient of the bouquet, "the sweetest shaped thing in the show," from one of the foremost Canadian poultry judges. I was ambitious for new compliments and the metropolis I sought.

Presto, change. Humiliation was my reward for carrying so high a head. The second morning after my arrival here I became the subject of strange sensations. My strongest desire was to wallow in a sand bank to subdue the stinging and itching irritations all over my body. I became, too, intolerably sore and desired to avoid the company of my male consort, who, like my critic, proved none too kind. The following morning my disgrace was complete. When every button, safety-pin and device, known to female ingenuity for making things stay, gave way and I was left in chicken nakedness—not even having down to conceal my angles. Upon enquiry among my sisters, I found that this sudden disrobing is not uncommon; that it is induced by too liberal feeding after short rations and often by freight and over heating. Of the latter I had much experience on my way to the fair.

There is compensation, however, for the sudden bereavement, in knowing that in my new vestments I shall excel my sisters in the uniformity of my new dress, while theirs, in its long drawn-out growth, will look like shreds and patches. The first opportunity I have I shall arrest Mr. Poultryman by my perfect symmetry and handsome gait and tell him he is too callow in the poultry business to condemn Exhibition commissioners, managers and an indulgent owner for my singular misfortune.

GALLINA NUDA.

The Article That Wounded Gallina Nuda's Pride.

The foregoing letter is in reply to an article in the Maritime Poultryman, re the poultry show at the Halifax Exhibition. The article reads as follows :

"One specimen which we think deserves special mention was a Barred P. Rock hen that missed the money, and judging by her "hump" missed her feathers also, as she drew herself up in one corner of her coop perfectly nude, except for a neck boa or ruffle. This hen was a disgrace to the show and her owner, and a slight to the Exhibition Commmissioners and visitors, and a direct insult to the variety and breed that she would represent had she more than a few feathers.

"While viewing this poor hen we thought how anxious its owner must be to win all the money; also how any one could even think of exhibiting such a bird. Still, after all, one could almost expect to win somewhere in the money at this season with a nude hen, when two out of the three winning hens at a winter show need be only half feathered. Such happened last winter at a large show.

"It is high time that the management of various shows took a hand and debarred such birds from the show room. It would be one step to advance the interests of good poultry and more of it."

Fighting Red Mites.

In former years, early in the season, I have soaked the roosts of my hen house with crude oil, and have had but little trouble with lice or mites. This year, however, has been an exception. Through carelessness, or laziness, before I was aware of it, my houses were literally alive with the little red pests.

First, I tried my old remedy, kerosene, crude oil and crude carbolic acid. It did not seem to be of any benefit. I inquired of my poultry friends and found they were all in the same boat. I was advised to smoke the house with sulphur. I did that, and the lice only seemed to grow fat on that treatment. The next advice was to whitewash, and, with my spray pump, I literally soaked all the parts of the house, removing roosts, drop boards, and all movable things. The next morning the lice seemed to be just as thick on the roosts as ever.

I then tried smoking again with sulphur with the addition of tobacco dust. The lice seemed to increase on the roosts. Next, with a torch I burned the roosts every morning until the wood seemed to be all charred, and again they were just as bad as ever. I was advised to try boiling water, which I did a few mornings with the same results.

I looked in my poultry books, and they said to keep up a constant warfare, or something to that effect, but they didn't say what to fight with—shot gun or arbitration. I concluded the authors didn't know. Then as an experiment I dusted a bunch of lice with a little tobacco dust, and I was surprised to see them all die immediately. I tried the spray pump and whitewash again, and while the perches were still wet I sprinkled them liberally with tobacco dust, and the next morning the perches were all covered with lice—all dead. So I think I have solved the problem of red lice, as I haven't seen one since.—H. U. DURFEE, in "Farm Journal."

Effect of Feed on Character of Egg.

In extreme cases the flavor and the odor of the feed has been imparted to the egg. Onions have been fed in sufficient quantity to bring about this effect Feeds of high and objectionable flavor should not be fed by those who desire to produce a first-class article In no case should tainted feed be allowed to enter into the ration. Feed also has an influence on the color of the yolk. Corn fed exclusively will give a deep yellow or highly colored yolk, while wheat fed alone will produce a much lighter-colored yolk. A fairly high-colored yolk is usually preferred and can generally be obtained by feeding a moderate amount of corn. Plenty of green feed also enriches the color of the yolk.

Steel Oven
Heats Quicker—Saves Fuel

Pandora has a sheet steel oven, because steel is more sensitive to heat—absorbs it faster—than cast iron does. Pandora oven thus heats quicker—less time required to get oven ready for the baking—which also means less fuel-expense. ∴ ∴ ∴ ∴

Make sure your new range has a steel oven, and "Pandora" name-plate on the door. Go, at once, to nearest McClary Agency and pick out size desired.

McClary's Pandora Range

"Prince Crawford"

is the most economical range built to-day.

The flues are constructed so that the smoke and heated gases have to travel twice around the oven. All the heat intended for cooking is retained in the oven and cannot escape up the chimney

The **"Prince Crawford"** requires only one-half the fuel of ordinary stoves

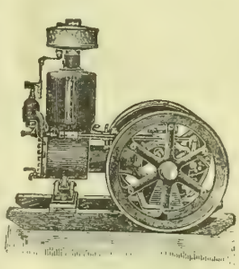
The tops are polished like glass before being blacked. This will make them easy to keep clean and in perfect order.

All nickeled parts are easily detachable for cleaning. The **"Prince Crawford"** is made without elevated closet or without reservoir if so desired. We furnish any nickeling you may wish. Ask for illustrated catalogue.

A. BELANGER, Montmagny, Que. 20

Essence of Simplicity
IS OUR
Stickney Gasoline Engine

No Frills. No Knick-Knacks.



Made to Grind Out Power.

You can learn to operate it in 5 minutes—No separate tank and pipes always in the way.

We Guarantee Power of Every Engine.

Send for our little booklet No. 57. After reading it you will know something about Gasoline Engines.

Ontario Wind Engine and Pump Co., Ltd., Toronto, Ont.

G. J. Barrett { Sales Agent } 82 Dock St. St. John, N. B. Branch at Fredericton, N. B

When a cold becomes settled in the system, it will take several days' treatment to cure it, and the best remedy to use is Chamberlain's Cough Remedy. It will cure quicker than any other, and also leaves the system in a natural and healthy condition. Sold by all dealers.

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage. Address all communications to EVANGELINE, Port Williams Station, N. S.

Miss Slimmens's Boarding-House.

(Continued from last issue.)

But speaking of the hairdresser, and my w-g, and Mr. Morton, and bathing, brings me to the accident which I spoke of in the beginning, and to the most serial misfortune which has befell me since I left home. Oh. Dora, it makes me sick to think of it. Just when I was getting along so swimmingly. If I'd have stuck to my first resolutions, it never would have occurred. I said you would understand that I had reasons for resisting all inducements to go a bathing in the tuft. Of course, you, being acquainted with the little secrets of the feminine toilet, know it would have a very dilatory effect upon paint, false ringlets, etc , to get them wet. I didn't think I should come out of the trial quite as glowingly as the young girls, with red cheeks and plenty of their own hair blowing about, that laughed and frolicked, as independent as fishes, all around. Mr. Morton often solicited me to venture, and I always told him I was too much of a coward. Well, yesterday, we was standing watching the rest, and he said to me, so persuadingly : "Come, my dear Miss Slimmens, do try it. There's nothing like it for renewing the blood and making people get fat--good, substantial flesh. Sea-bathing is famous for fattening folks; it is the only charm in which you are lacking. Allow me to whisper that I understand something of feminine objections, and that I will insure you against accident. We will venture in but a little ways; I will support you; the bloom of your cheeks and the beauty of your curls shall not suffer in the least. I will take care of them. Go, prepare yourself; you will look charmingly in a Turkish bathing costume." I wanted to try it so much that I allowed myself to be persuaded. I entered one of those shanties, or camps, or whatever they call 'em, and got ready. My mind misgave me as I set foot in the water; but he assured me so firmly of his protection that I allowed myself to be led on. There was hundreds of people all about as, giggling, and shivering, and frolicking, and some of 'em ducking and letting the turf roll over them as if they were so many fishes. We only went out a little ways, for I wasn't very firm on my feet, and I was afraid one of those big waves would come up too close to us; but either Mr. Morton is very deceitful, or else the ocean is, for, just as I was standing there looking at the rest, and feeling the pressure of his arm about my waist, and only a little over knee-deep in water, along came a monstrous roller—and the next thing I knew I was gasping, and floundering, and smothering. I thought I was drowning. I never had such a fright but once previously, and that was when I took that arsenic. When I came to my senses a little, Mr. Morton was wiping my face with his handkerchief, and, of course, taking off every speck of artificial there was on it. "I'm very sorry, Miss Slimmens," said he, "that you've got wet. I'd no idea that breaker was so extensive. It almost took me off my feet, and I'm an old bather." But I didn't realize a word he said. I felt a cold sensation about my head; I put up my hand—oh, Dora, imagine my emotion—my w-g was gone. At the instance I made the discovery, the turf came rolling back again, and there, upon its foaming crest, floated my beautiful, my beloved, my expensive w-g. "Save it!" I shrieked. Adonis made a lurch for it—but it was too late: it was gone—forever ! Doubtless at this moment it is wildly tossing upon the cruel Atlantic, saturated with brine, its glossy ringlets torn nto a million separate hairs, while I sit here writing to you and deploring its loss. That isn't the worst of it, either. I looked about—horror of horrors !—every one was looking at us and laughing, even the children. I know that I must be a ridiculous figure. "Take me out; get me back into the camps, quick !" I exclaimed, and Adonis—it's second nature to call him by that name—assisted me ashore, looking as grave as a judge. I dressed as quick as I could; but when I came to tie that charming hat, so becoming to my long curls, upon my head, I felt that my glory was departed. Yet I was impelled to go to my hotel, and enter it in broad daylight in the face and eyes of a hundred staring men. If ever I realized the worth of a veil, it was then. I would have given all the money in my trunk for a yard of brown barege, but I had nothing of the kind along with me. The fright, and the embarrassment, and everything, has made me fairly sick; besides, I can't stir from my room until my hairdresser has completed another, which he is doing as fast as he can. Several ladies have knocked at my door, to enquire after my health, but I have not admitted a soul My only consolation under this afflicting dispensation is that my admirer, Mr. Hopkins, the widower, was not among the spectators—at least, I do not think he was. He was not on the beach, and from the hurried glance I cast at the windows and piazzas, as I entered our hotel, I concluded he was taking his noon nap. I trust I shall be myself again to-morrow, and that something decisive will then take place. I must leave here by the day after, as my funds will be exhausted by that period. So you may expect me to follow my letter up pretty close. If it should be a Mrs. Hopkins, instead of a Miss Slimmens, you are called upon to welcome, do not be surprised; curiouser things have happened. Pull Caturah's hair if she don't mind you. Tell Mr. Bethuen I'm convinced there's a great deal of sin and wickedness at watering-places. And be sure that Susan bakes that cake and frosts it. Don't let George see this letter. For a brief space yet, your affectionate friend, ALVIRA SLIMMENS.

P. S. Don't tell Mr. Bethuen about my dancing the polka; it's scarcely consistent with my position as a professor, and I suppose I hadn't ought to; but the temptation was irresistible, and if the folks at home don't get to talking and scandalizing about it, there'll be no great harm done I'm going to repent of it as soon as I get married, and settled down, and get things off my mind a little, so's I can have an opportunity to compose my reflections. I intended to be sorry for it when I done it, as soon as I had a good chance.

P. P. S. I hope Caturah hasn't got into them purserves on the top shelf of the pantry. Keep an eye on her, please.

CHAPTER XIX.

A COUPLE OF WALL-FLOWERS.

A wall-flower ? O no, I'm sitting here just to rest myself. I've danced and promenaded till I'm tired out. I don't think there's a young lady in the room been asked oftener than I have, this evening; but my health's rather delicate, and I don't desire to overexert myself. 'Tain't for want of solicitations to do otherwise that I'm resting myself, Mrs. Granger.

How does sea-bathing agree with my health ? Oh, first-rate. Jest observe that Mrs. Sullivan waltzing with that furriner; she flies around like a flounced top. If I was her husband, I'd put a stop to her conduct, or I'd shet her up in a convent. What conduct ? Oh, I don't know. Watering-places are awful things to spread talk, and all I know is what I've heard, and of course I don't purtend to believe all I hear. Anybody can see for themselves that she's a dreadful flirt, but that isn't proving that she's a bad woman. It's silly and vain of her to gallavant around the way she does, but that isn't saying I believe what I've heard, common talk as it appears to be. Oh, nothing; I'm not a-going to repeat scandal. Her name's mixed up with another person's oftener than is safe for her; but you must use your own eyes and ears, if you want to satisfy yourself. They say it was just the same way last summer, when she was here, only worse, if possible. Her husband bought a horse-whip one day, I've understood, and that a certain dashing old villain sought safety in flight, the same afternoon; but it's probably dreadfully exaggerated; see things commonly are. He's so generous to her, too—allows her two thousand a year, pin money; and she's always in debt, they say, for all. Anybody can see how fond he is of her, and she ought to be ashamed, going on and breaking his heart. If she'd make herself as pretty to him as she does to other men, she'd be doing a little more as she ought to. But don't breathe a syllable of what I've told you, Mrs. Granger, for I'm not certain it's true: and if it is true, it's none of my business.

Jest throw a look back over your shoulder at that couple standing by the window. Oh, nothing, nothing at all—only, if we stay here many days longer, maybe we sha'n't have to inquire. A body would think they wasn't conscious there was a soul but themselves in the saloon, they're so absorbed in each other. She needn't break her fan, if he does whisper to her in that killing style. There ! she's shivered it all to atoms, and now she's laughing and blushing about it. Probably he'll present her with another equally expensive and she'll accept it, if she is a married woman, and hadn't ought to. I never

Ask Her This Question

"Do you know of any woman who ever received any benefit from taking Lydia E. Pinkham's Vegetable Compound?"

If any woman who is suffering with any ailment peculiar to her sex will ask her neighbors this question, she will be surprised at the result. There is hardly a community in this country where women cannot be found who have been restored to health by this famous old remedy, made exclusively from a simple formula of roots and herbs.

During the past 30 years we have published thousands of letters from these grateful women who have been cured by **Lydia E. Pinkham's Vegetable Compound,** and never in all that time have we published a testimonial without the writer's special permission. Never have we knowingly published a testimonial that was not truthful and genuine. Here is one just received a few days ago. If anyone doubts that this is a true and honest statement of a woman's experience with Lydia E. Pinkham's Vegetable Compound write and ask her.

Canifton, Ont.—"I had been a great sufferer for five years. One doctor told me it was ulcers of the uterus, and another told me it was a fibroid tumor. No one knows what I suffered. I would always be worse at certain periods, and never was regular, and the bearing-down pains were terrible. I was very ill in bed, and the doctor told me I would have to have an operation, and that I might die during the operation. I wrote to my sister about it and she advised me to take Lydia E. Pinkham's Vegetable Compound. Through personal experience I have found it the best medicine in the world for female troubles, for it has cured me, and I did not have to have the operation after all. The Compound also helped me while passing through Change of Life."—Mrs. Letitia Blair, Canifton, Ontario.

Any woman who is sick and suffering is foolish surely not to give such a medicine as this a trial. Why should it not do her as much good as it did Mrs. Blair.

saw him before to-night. Do you know his name? Her husband? Oh-h-h, that makes a difference, of course; but I should think they'd better keep their love-making for their own private entertainment. If there's anything really sickish, it's this billing and cooing between married people in public.

O dear, did you ever? That dress takes the rags off the bush! If it was a little shorter at the bottom, and a little longer at the top, it would be improved. Sweet, did you say? Oh, it's pretty enough, and too pretty. They say she's ruining her husband by her extravagance. That's the twentieth dress I've seen her have on since I came. But anybody with a pair of shoulders like them must set 'em off, at any price, if their husband is ruined, and their character, too. Black eyes and white necks are very nice, but they don't make good wives, as some men know to their sorrow.

What a sweet young man! Do you know him? I feel sure he is a poet—he has such a pensile appearance, and such a high white forrid. I wish I was introduced to him. It's pleasant to meet a congestive breast in a scene like this. O yes, I sometimes woo the Muses, simply for my own pleasure. I've published a few pieces, but I don't purtend to be an authoress. The most of my suffusions slumber in the retiracy of my portfolio. If the world chooses to claim them after I'm dead, it can have them. I shall leave them copied out in a clear, eligible hand, simply for the benefit of my friends. I've been solicited to publish a volume of my fugitive productions, but have ever hesitated. Of course, "filthy lucre" would be no inducement to a person of my means, and I'm indifferent to the bugle voice of fame.

You don't say so? Worth a million dollars? Of course he married her for her money, for she's as humbly as a mud fence. Silks and satins can't make her handsome. Isn't she dreadful yellow? She looks like a piece of white silk that's been washed and ironed. Got a high temper, too, I'll bet, by the turn of her nose and the look of her eyes. Her husband seems utterly subdued; I'll bet she snubs him. He looks as if she was continually telling him how much money she had brought him. It's good enough for him, though; shouldn't have made such a fool of himself. If anybody should marry me, and I should have reason afterwards to suspect it was my means they married, they wouldn't lead a very easy life of it; I'd keep 'em as uncomfortable as a kernel of corn on a hot griddle. If I ever do make up my mind to except any of the male sex as a husband, I shall wed from love alone.

See them young chits, dancing and talking, and flirting like so many young ladies. They ought to be spanked and sent to bed! I don't know what their mothers can be thinking of, to let 'em carry on so in a public house. Anxious to get 'em married off, I suppose; mothers'll go any length, nowadays, to get rid of their daughters. If I'd went and gone, and had children, I think I'd take care of 'em till they was of age, and not put 'em up in market, and show 'em off to the best advantage, like a milliner the bunnits in her show-window. Puts you in mind to ask if I was ever a milliner? Do you intend to insult me? Oh, you'd heard; well, people shouldn't believe all they hear, 'specially at watering-places. I've heard you used to be a vest-maker before Mr. Granger married you, and that you made a vest for him the way he came to fall in love with you. Of course you'll deny it, but people that live in glass houses sheuldn't throw stones. For my part, I consider one honest person as good as another, whether they ever did anything for a living or not; but low people, that have got up in the world suddenly, generally put on airs. If I ever had been a milliner, I shouldn't be ashamed of it.

(To be Continued.)

They Didn't Have to Change.

During the years in which our pure food laws have been put into effect there has been a great hurrying and scurrying on the part of the food manufacturers to change their methods to make them conform to the law.

The Quaker Oats Company is a conspicuous exception. It was admitted that Quaker Oats was as pure and clean as possible and that it was an ideal food. The purity and cleanliness of Quaker Oats is familiar to every one who has compared it with other brands of oatmeal.

It is so cheap that any one can afford it and so nourishing that everyone needs it. The result of last year's experiments at Yale and other points where food values were tested is that Quaker Oats has been adopted by many persons as their food on which they rely for adding vigor and endurance of muscle and brain. 4

Cowan's "Perfection" Cocoa

is made from the finest carefully selected cocoa beans, roasted by a special process to perfect the rich chocolate flavor. Cowan's is most delicious and most economical.

One of the Causes of Defective Teeth.

The reason why our teeth decay so early in life is because the enamel is too thin and soft; it gets worn through by the acids formed in the mouth, and then the dentine quickly decays. One of the chief causes of defective teeth-enamel is the artificial feeding of infants. Mother's milk contains all the elements necessary to build up every portion of the body, which the most scientifically prepared drink does not. After weaning, plenty of cows milk and a little cream are the best tooth builders. Of course, later in life our soft and highly mixed diet is detrimental to the teeth, but the mischief really begins in infancy and childhood when the teeth are forming.

How Weather Changes Bring Death to Roofing
The life of Roofing is Saturation and Coating. Yet this vital part is sorely neglected by nearly every Roofing maker.
The Basis of most Roofing, except Brantford, is wood pulp, jute or cotton-cloth—all short fibred.
When it passes through "Saturatory Process," it does not become actually saturated—merely coated.
This "Coating" is of refuse and quickly evaporates—wears off—exposing foundation to savage weather. It absorbs water and moisture, and becomes brittle, cracks, rots and finally crumbles.
Even when new it softens under heat, sagging and dripping. But the Foundation of Brantford Crystal Roofing is a heavy, evenly condensed sheet of long-fibred pure Wool, saturated with Asphalt, which is forced into every fibre—not merely dipped. It is heavily coated with time-defying, fire-resisting Rock Crystals, which require no painting. This special Coating cannot evaporate and protects insides. Brantford is indestructable, pliable, tight, water, weather, spark, acid, alkali, smoke, fire-proof
Brantford Roofing
cannot absorb moisture, freeze and crack in cold weather, or become sticky and lifeless in hot weather. Brantford Crystal Roofing is not the kind all manufacturers care to make, because it costs extra money, yet it costs you no more than short-life Roofing.
Roofing Book and Brantford Samples are free from dealer or us. Brantford Asphalt Roofing, Nos. 1, 2, 3. Brantford Rubber Roofing, Nos. 1, 2, 3. Brantford Crystal Roofing, one grade (heavy) Mohawk Roofing one grade only

Sturdy Elasticity

The wire for "Maritime" Wire Fence is imported direct from England. We have found that this English wire is distinctly superior. While stiff and hard it is not brittle, or as easily broken when subjected to a severe strain as the ordinary hard steel wire. It is real "live" wire, pliable and springy, capable of withstanding hardest usage and unaffected by any degree of temperature recorded in this country.

Will you let us mail you our **free catalogue** which tells more about Maritime Fence and its absolutely secure lock?

The Bovine Tuberculosis Problem.

(Continued from last issue.)

If a LARGE PROPORTION OF THE HERD IS FOUND TO BE DISEASED.—In this case if the reacting animals are valuable breeders, they may be isolated and kept for breeding purposes by removing the calves at once and feeding them on milk of healthy cows, or on the sterilized milk of their mothers. This is called the Bang method, a procedure devised by Professor B. Bang, of the Compenhagen Veterinary College. The method is as follows:

(1) Test every animal in the herd with tuberculin.

(2) Remove the reacting animals, and keep them isolated so that the disease cannot be transmitted to the healthy animals, either by contact, by attendants, or by the same feeding or drinking utensils.

(3) Disinfect the stables to prevent transmission of the germs left by the infected animals.

(4) Test the healthy herd with tuberculin regularly to detect any case that may develop and remove such animals before they spread the disease. Disinfect again.

(5) Remove the calves from the diseased herd at birth and feed them milk from the healthy cows or milk from the diseased cows which has been thoroughly pasteurized (heated to 185°.).

As the sound herd is replenished, the isolated cattle may, if desired, be fattened and killed, under proper inspection, for beef.

Bang's method, as carried on in Denmark, proves that the disease can be weeded out in a practical manner. But in many of the herds in which the method was tried, a varying number of animals were found that afterward reacted positively to subsequent tests. These partial failures, amounting in all to about 12%, he attributes to carelessness in maintaining complete separation of reacting herds from healthy ones, and incomplete disinfection. The method has been followed by good results in Norway and Sweden, and also Hungary. The reports show that many highly infected herds have been absolutely freed from the disease in four to six years. Several experiment stations have applied the Bang method in this country. Professor Russel of Wisconsin, has been especially successful. The New York Agricultural Experiment Station, Geneva, N. Y., has issued a bulletin reporting complete success in the eradication of tuberculosis from the station herd. The method offers a remedy which safeguards health, while giving the stockman a chance to perpetuate valuable strains of blood and mitigate his financial loss.

The problem of obviating the transmission of infection from the reacting herd to the healthy is very important. The two herds must not be permitted to mingle in any way while at pasture or elsewhere. A partition in the stable and new fencing are the chief features in accomplishing the separation. Instances have been reported where the disease has been apparently transmitted to cattle in adjourning pastures. It is possible that this was done by the cows licking one another across the fence. When applying the Bang system the same drinking trough must not be used for the two herds, even when it is divided by a partition. In highly infected herds the possibility of a continuation of infection in stables, corrals, and pastures, after all the reacting animals have been removed, is relatively greater than when only a few have been diseased. This is especially marked in stables that have been in constant use for a number of years. Where new buildings are erected in introducing the system, it is advisable to place the non-reacting animals there rather than the reacting ones. Remove the healthy from the diseased, rather than the diseased from the healthy.

PREVENTION OF TUBERCULOSIS.

Those dairymen who have been doing business in a small way, and have unfrequently or never purchased animals, may have herds free from tuberculosis.

IT MADE A MAN OF ME!

Read What Nelson Rose, of South Bay, Ontario, Says:

Dear Sir,—One year ago last February I was taken with Nervous Exhaustion (the Doctors pronounced it). I suffered all the tortures of that disease; was all run down, so weak I could hardly do anything at all. Since I began to use your Belt there has been a marked improvement in my condition in the different ways mentioned. I have slept good every night since wearing your Belt, which is one of the greatest blessings of mankind. I have a great deal more ambition; work used to seem such a mountain, now it seems more a pleasure; more strength and vim; memory better; digestion better; constipation about gone, which I was bothered with a great deal; head feels better and I feel far better in every way.

Give me a man broken down from dissipation, hard work or worry, from any cause which has sapped his vitality. Let him follow my advice for three months and I will make him as vigorous in every respect as any man of his age.

M. F. McLaughlin:

Dear Sir,—My case has certainly been a very serious one, and one of long standing. I had latterly been unable to do any work at all. Your Belt has worked wonders in my case, as I am working steady now. It is well known here that it is your Belt that has put me on my feet again, and no doubt will be the cause of other sales to you.

WILLIAM J. BYERS, Nipissing, Ont.

Dear Sir,—I am writing to you to-day to tell you the good your Belt has done me. I can say in this letter that I am a well man, and have worked every day from the time I gave up wearing the Belt. The sharp pains I had in my back and chest are all gone, and I need not walk with my nose on the ground now. I am in good health, and feel as strong as I want to be, and more than pleased with the Belt.

JAMES HATT, Beech Hill, N.S.

Letters like that tell a story which means a good deal to a sufferer. They are a beacon light to the one who has become discouraged from useless doctoring. I get such letters every day.

My Belt has a wonderful influence upon tired, weak nerves. It braces and invigorates them and stirs up a great force of energy in a man.

Are you weak or in pain? Are you nervous or sleepless? Have you **Varicocele, Rheumatism, Weak Back, Kidney Trouble, Weak Stomach, Indigestion, or Constipation?** Are you lacking in vitality? I can give you the blessing of health and strength. I can fill your body with vigor and make you feel as you did in your youth. My Electric Belt is worn while you sleep. It gives a soothing, genial warmth into the body. This is life—vigor.

After you have read the above, write to me, explain your case, and I will at once tell you if I can cure you or not.

To prove to you the confidence I have in the curative power of my Belt, I am willing to accept your case, and after I have cured you then pay me. All I ask is reasonable security. You may then use my Belt at my risk.

Tell me where you are and I'll give you the name of a man in your town that I've cured. I've got cures in every town. That's enough. You need the cure. I've got it. You want it. I'll give it to you or you need not pay me a cent. Come and get it now. The pleasurable moments of this life are too few, so don't throw any away. While there's a chance to be husky and strong, to throw out your chest and look at yourself in the glass and say "I'm a man," do it, and don't waste time thinking about it.

CALL TO-DAY—Come and see me and let me show you what I have, or if you can't, then cut out this coupon and send it in. It will bring you a description of my Belt and a book that will inspire you to be a man among men, all free. My hours, 9 a.m. to 6 p.m.; Wednesday and Saturday to 9 p.m.

Put your name on this coupon and send it in.

M. A. McLAUGHLIN,

214 St. James Street, Montreal, Canada.

Send me your Free Book, closely sealed, and oblige.

ALED TENDERS addressed to the Post- r General, will be received at Ottawa until on Friday, 10th December, 1909, for the con- ice of His Majesty's Mails, on a proposed act for four years 6 and 3 times per week way, between CODY'S and COLE'S ISL- from the Postmaster General's pleasure. ited notices containing further information conditions of proposed Contract may be nd blank forms of Tender may be obtain- the Post Office of Cody's, Cole's Island and offices and at the Office of the Post Office ctor at St. John.

G. C. ANDERSON,
Superintendent
OFFICE DEPARTMENT
MAIL SERVICE BRANCH,
wa, 23rd October, 1909.

The trouble of making a test is so slight that one should never neglect ascertaining the facts. Early discovery will enable the owner to forestall serious trouble later. In purchasing cattle a man can not assume that there is a slight risk of purchasing tubercular animals. On the contrary, he must regard every animal as tubercular until the contrary is proven. This will become all the more necessary as the use of the tuberculin test increases. Well-bred animals are particularly liable to show tuberculosis on the test. The herd from which they come have been built up by many purchases from far and wide, with no precautions, which assures the introduction of tuberculosis. An animal purchased on the test should preferably be isolated for three months, and then be tested again before exposing the clean herd to possible infection. As previously explained, one test can not be implicitly relied upon.

The most common method of introducing tuberculosis is probably by the purchase of diseased animals. Next to "buying in" the disease, the feeding of raw skim milk from the creameries is to blame. Do not feed skim milk that comes from another herd to calves without first sterilizing it. Prevention is simple. The disease is produced by tuberculosis germs, and if we keep the bacteria away from the cattle, they cannot possibly develop tuberculosis. Although, experimentally, cattle can sometimes be infected by injecting the virus from tuberculous human beings, it is a question if infection ever takes place naturally.

Vaccination, or the immunization of cattle against tuberculosis, is now being advocated by some scientists. The methods are as yet in the experimental stage, and the effectiveness of vaccination can not be predicted at this time.

A. R. WARD & C. M. HARING,
Berkley, Cal.

Absorbents.

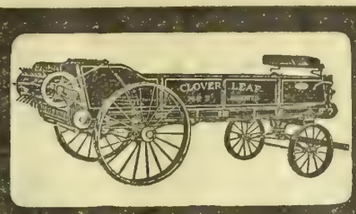
(Continued from page 75.)

benefit derived from it as a manure, The fertilizer value as shown by analysis is not the only consideration, since the straw will furnish humus to the soil, which will likely benefit the land as much as the actual plant food added will do. I have often been asked whether it will pay to draw the straw to the field and apply it? Certainly it will if there is more than can be utilized as bedding for the cattle to pick over of cold winter days. Straw is worth applying to the field at any time it can be done.

A New Potato Sorter.

The improved potato sorter, fitted with a sorting platform, which is being placed on the market by Messrs. Cooch & Son, of Commercial Street, Northampton, will be interesting to colonial readers. It is a simple, strong and cheap machine, easy to work and readily moved from place to place. It separates the potatoes into three sizes at the rate of from 30 cwt. to two tons per hour, and effectually removes the soil. The tubers are divided into 1 cwt. bags, and these are arranged so that the machine can be worked continuously, one bag being removed while another is being filled. The seeds and chats are delivered at the side, the soil falling underneath. The sorter can be adapted for onions, bulbs, chemicals and many similar purposes. The sorting platform consists of a canvas with laths attached, which travels slowly and conveys the potatoes along, thus enabling the user to remove all blights or badly shaped potatoes. It is driven by gearing direct from the crank spindle. —Commercial Intelligence.

Many school children suffer from constipation, which is often the cause of seeming stupidity at lessons. Chamberlain's Stomach and Liver Tablets are an ideal medicine to give a child, for they are mild and gentle in their effect, and will cure even chronic constipation. Sold by all dealers.



ARE YOU SATISFIED WITH A 20 ACRE CROP FROM A 40 ACRE FARM?

YOU know it costs as much in time, labor, seed and implements to raise a poor crop as it does to raise a good one. You know also that unless your land is kept constantly supplied with lime, nitrogen and phosphates and the ingredients of barnyard manure it becomes worn out and loses its fertility.

You know further that it costs more, and trebles your labor, to spread manure by hand than it does to use a well-made manure spreader.

Maybe you don't know that one load of manure evenly spread by a mechanical spreader is worth four loads scattered by hand—

And that your crop, whether rotation or continuous, will be increased from 20 to 40 per cent by the use of an

I. H. C. Manure Spreader

Made in two styles as follows:

The Corn King, Return-Apron Spreader.

The Cloverleaf, Endless-Apron Spreader.

I. H. C. spreaders are made of the best material—wood and steel. They have powerful steel frames and steel-bound boxes, which damp manure cannot rot.

I. H. C. spreaders are easily drawn. They can be adjusted to spread a thin or heavy coat with equal evenness.

I. H. C. spreaders are so simple in operation that a boy can do the work which used to require a strong man.

An I. H. C. spreader will save in time and labor more than enough to pay for itself in one season.

Your increased income from better crops will be clear profit.

Scientific experiment has proved that this profit will vary from $4.00 to $20.00 per acre.

You cannot afford to be a half-crop farmer and there is no reason why you should be one.

An I. H. C. spreader will give you the full return from your land, whatever the size of your farm.

Call on our agent in your town and talk the spreader over with him, or, if you prefer, write nearest branch house for catalogue and other information.

Last Call to the Winter Fair.

The Ninth Annual Winter Fair will be held at Amherst, N. S., on December 6th, 7th, 8th and 9th. An excellent prize list has been presented and the management informs us that the entries in the various classes exceed that of any previous year. His Excellency, Earl Grey, Govenor General of Canada, assisted by the Lieutenant Governors of the Maritime Provinces and the Hon Minister of Agriculture will perform the opening excercises. Interesting lectures will be delivered each evening by competent speakers on agricultural questions. Come one come all.

STOCK NOTES.

H. S. Pipes, Amherst, N. S, Writes: The Annual meeting of the Canadian Jersey Cattle Club will be held on December 8th at 2 o'clock p. m. in the Winter Fair building, Amherst, N.S, Jersey breeders of the Maritime Provinces, please take a note of this date as it is to the interest of all Jersey Breeders to support the C. J. C. C. this meeting we want to appoint a delegate to represent the Maritime interests at the annual meeting at Toronto of the Jersey Club.

PUREBRED HORSES FOR NEW BRUNSWICK.—At the sale of Clydesdales in St. John on 14th December, three young stallions will be among the offerings. No. 1 Ace of Spades is a grand, thick, good-sized, blocky horse of choice breeding. He is sired by the renowned Wooden Hartley. He is thoroughly sound and has proved a very sure foal getter his stock showing up among the best. No. 2, Southwick is an extra good three year old, large and smooth, brown in color, is perfectly sound and has shown his ability as a sure breeder. He was sired by Benedict by Baron's Pride, his dam by Prince Sturdy. No. 3, another three year old is a choicely bred stallion particulars of breeding are not yet received. Of the 65 fillies which will be offered great care has been taken in the selection. Most of them are strongly bred in the Baron's Pride strain and the majority of them were served in Scotland by good stallions.

POTATOES.

It never pays to rush the fall market in potatoes, especially when Cold Storage is at hand for overcoming the ordinary shrinkage in store. We can quote on straight storage or on bulk receipts, barreled, stored, stowed and delivered to steamer or car, as ordered. Write for our proposition.

The Stay-Satisfactory Kind of Stove

will fill the heart of an ambitious housewife with joy. Steel frames and plates and firm rivetting result, in the NATIONAL, in an oven that is, to all intents and purposes, hermetically sealed. It will stay that way for ten years, for twenty years, and even longer.

All the time it will cook more quickly, more perfectly, and will burn less fuel than any other stove manufactured. It is air tight and dust tight. If you have fire enough to heat the top of a National for cooking, the oven is ready for baking too—no special "firing up," no wasteful piling on of fuel. You cannot make a more complete mistake than to buy an inferior Stove which seems to be cheap, but for which you will have to pay three or four times its first cost on repairs and wasted fuel.—Buy the **National** and buy the **best.**

FIRST COST IS THE ONLY COST OF THE NATIONAL.

It will give us pleasure to show you the advantages of the National line it you will write us or call at one of our stores.

MADE ONLY BY

The MOFFAT STOVE CO., Weston, Ont., Calgary, Winnipeg

If NATIONAL Ranges are not for sale in your town, send direct to Our Weston office for Circulars and Prices delivered safely to your nearest station.

A cold is the "open door" for consumption and must be taken seriously from the start.

Soothe the delicate tissues of the throat and fortify the system with

SIMSON'S-FLAXSEED-EMULSION

and the danger can be easily avoided. You'll enjoy taking it too—it has such a pleasant taste and is perfectly harmless even to the most delicate stomach. Twenty-five cents a bottle at all dealers.

THE NATIONAL DRUG & CHEMICAL CO., OF CANADA, LIMITED, HALIFAX, N. S.

Near Skowhegan, Me.

200-acres, potato land, cuts 50 tons of hay, machine worked fields; 20 cow pasture. 1500 cords wood. 100,000 timber, 40 rods to saw mill, 150 bbls. apples in season, splendid house, barn, stable all clapboarded and painted, value of buildings over $4000, running spring water. To close immediately will include farm tools for $2500. In the spring $5000. or $6000. would be a fair price. For traveling instructions see page 126 "Guide 28," copy free. E. A. Up-to-Date Specialties For Farmers And Gardeners.

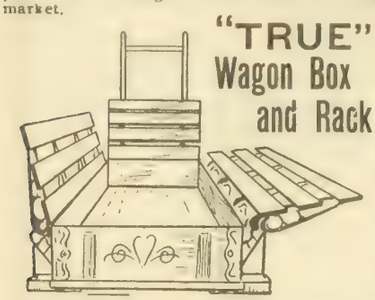
Things you need—implements and tools that should be on every truck garden and farm. Our way of making these specialties assures adaptability, strength and service at the minimum price for the best goods of their kind on the market.



"TRUE" Wagon Box and Rack

Without wings and ladder, it is a perfect wagon box. With them, it is the best Hay, Stock, Wood, Poultry, Corn or Fruit Rack ever invented. Adjusted to any position in a minute without wrench, hook or rope

"EureKa" Churn

Barrel of finest stoneware—top of clear pressed glass. Churns by hand lever. The only sanitary churn made. 3 sizes—8, 10 and 12 gallons.

"EureKa Root Cutter

will slice or shred from 1 to 2 bushels per minute. Fastest machine made—easiest running. Tapering cylinder—10 best steel knives.

"EureKa" Combination Anvil

Best iron anvil, with vice, pipe vice and drill attachment, and saw clamps. Just what you need for repairing tools and machinery. Weighs 60 pounds.

The "Bacon" Seed Drill

will handle the most delicate seed without bruising or breaking, and will sow evenly to the last seed.

Write for Catalogue

Every farmer, who wants to make money out of his farm, ought to have our new catalogue. It shows our TOOLS, Rakes Hoes and Machines as they are, and describes their construction in detail. Write for free copy.

The EureKa Planter Co., Ltd., Woodstock, Ont.

Agents Wanted!

We want agents to handle the Acme Steel Ladder. It is by far the best seller on the market today. You can, with horse and rig, make $5 00 to $10 00 a day by simply calling on property owners in your vicinity.

The Acme Steel Ladder affords protection from fire in a greater degree than any other ladder.

The Acme Steel Ladder is made and sold in one foot lengths. These can be fastened in such a way as to make a ladder of any length perfectly rigid.

They can be moved anywhere on the roof, either from the top or bottom of it.

Send for information regarding our sellling proposition.

The Acme Ladder is made in one foot links just the same as the old style ladder but with a very simple lock which is fully protected with patents. When the ladder is together the links are held rigid

If you are thinking of equipping your buildings with steel ladders and there is no agent in your locality and will write us we will have a man call on you.

The Acme Steel Ladder Co.,
SUSSEX, N. B.

FLORICULTURE.

All inquiries in this department will be answered by H. E. Goold, Florist, Sussex, N. B.

Do not delay potting all spring blooming bulbs you wish to force and plant at once all these classes of bulbs you intend to put in the open ground. If these bulbs are kept in the air much longer the crown is apt to gum and refuse to bloom.

Those who have room for forcing hardy plants for Easter should, before the ground freezes up, dig and pot Spireas, etc., and keep them cool and in darkness in a dry position until mid winter when they can be brought to heat and light.

Do not cover your out side beds of bulbs until the soil is frozen two inches deep over them. If your hardy shrubs have made a late sappy growth cut it back to sound ripe wood as such growth will surely winter kill and injure the plant. Look over your house plants see to the condition of the roots aud drainage, repotting any that need it or washing off the soil from root bound plants and repotting in same pot if more pot room cannot be afforded.

Such classes of plants as Palms, Dracinas, etc., are better repotted in spring and if in a root bound condition now, can be easily carried over the winter months by careful watering. Keep down red spider and green fly, which will now become active in warm close houses. Give your house plants all the air you can and such plants as can be treated with water give them a spray or wash them every sunny day.

B. B., of St. John, writes: Would you tell me how to grow Century Plant from a small partly rooted off spool. Will the removal of these little plants hurt an old one, if the roots are not disturbed? Is charcoal a good thing to mix with potting soil to make it light? Our soil is very heavy and soggy in the garden. How long should Hyacinths be kept in the dark? What will kill white cottony bugs that get on the under side of Azalea leaves?

Pot the small century plant in a small pot using a soil about half sand with good drainage, keep fairly moist and in a warm corner. The removal of small plants will not injure the parent plant, rather the opposite, if care be taken that the roots are not injured.

Charcoal makes an excellent thing and drainage will have a tendency to sweeten acid soil. Sand, however, is the best to lighten soil with. The Hyacinth should be brought from the dark when the sprout is about an inch or so high, they usually require from six to nine weeks to make their roots according to the temperature of cellars.

For the mealy bug spoken off kerosene, emulsion or whale oil soap is best, however, if there are only a few you can destroy them with lightly touching each insect with a camels hair brush dipped in alcohol. Be careful that no alcohol gets on the foilage.

Fern growers should try the new Scott Fern. It is a Hybrid from the Boston Fern, possessing all the strength of constitution of its parent. It grows much quicker and very dwarf and compact, making an excellent table fern, growing rapidly under the ordinary house conditions. Is is a most valuable jardinere fern and is being widely used for that purpose. It requires plenty of pot room and it quickly makes a fine specimen.

Twenty-five Cents is the Price of Peace.

The terrible itching and smarting, incident to certain skin diseases, is almost instantly allayed by applying Chamberlain's Salve. Price, 25 cents. For sale by all dealers.

The old, old story, told times without number, and repeated over and over again for the last 36 years, but it is always a welcome story to those in search of health—There is nothing in the world that cures coughs and colds as quickly as Chamberlain's Cough Remedy. Sold by all dealers.

The Price of the Edison Phonograph

An Edison Phonograph can be bought for your price whether it is $16.25 or a higher price up to $162.50, all playing both Amberol and Standard Records.

But you cannot measure the Phonograph by money. Whether the price is $16.50 or $162.50, it is not much to pay for an instrument that will last a lifetime, which will furnish you good music every day, which will furnish you better entertainment than you can buy in any other way, which will teach your children to love the best music, which will bring into your own home what other people pay large sums and go a long distance to hear.

Edison Standard Records . . . 40c
Edison Amberol Records (twice as long) 65c
Edison Grand Opera Records . . 85c

There are Edison dealers everywhere. Go to the nearest and hear the Edison Phonograph play both Edison Standard and Amberol Records. Get complete catalogs from your dealer or from us.

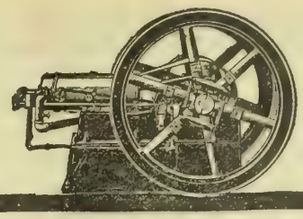
The PUBLISHER'S DESK.

TURKEYS.—A new and enlarged edition of the book Turkeys, their care and management has just been completed by the Reliable Poultry Journal Pub. Co. The new book has been revised to meet the standard requirements for Turkeys and anticipates the American Standard of Perfection which is to be published in 1910. An article on Score Card Judging with special charts by Franklane L. Swell is especially timely and will prove valuable to the turkey fancier in selecting winners for the winter exhibitions. Particularly valuable to the breeder for market are the articles telling how to condition the turkeys, when to sell, how to kill, dress and pack to bring the highest prices. Some of the other subjects dealt with in this new book are: How the Turkey got its name, Description of the Seven Standard varieties, The care of Breeding Stock, Mating the Breeders, Hatching the Eggs, Coops and Houses for Turkeys and Poults, Remedies for Poultry Diseases Well known breeders have contributed special articles on their favorite varieties including the Bronze, White Holland, Narragansett and Wild Turkeys, with special illustrations. In these they tell why they prefer the variety and how it is handled to secure best results. The book contains seventy-two illustrations, including a front piece in natural colors of a pair of Bronze Turkeys, by the world's greatest poultry artist, Franklane L. Sewell. Send us your order for a copy, price 75 cents postpaid, 96 pages, 9x12 inches. Address MARITIME FARMER, Sussex, N. B.

I. C. R. PICTURES PROVE POPULAR.—New York crowds see them with election returns. At one of the principal Bulletin Stations of the New York Herald on election night, the waiting thousands on the street, eager for the election returns, had also an opportunity of viewing some very beautiful pictures of the scenery along the line of the Intercolonial Railway. It is the custom at the Bulletin displays to entertain the crowd, during the period between bulletins, with a series of pleasing and instructive views, the New York Herald management never permitted anything in the nature of low comedy, or any direct advertising. On this occasion the operator decided on the Intercolonial pictures which had been gladly furnished at his request. Twenty-four views were flashed upon the screen, these being selected from every portion of the line. In a letter thanking the I. C. R. authorities for the use of the slides, the operator observes that the pictures proved most interesting, and were viewed by no less than 50,000 people. Several noted lecturers will use Intercolonial railway views to illustrate their lectures this winter, and the attractions of the "People's Railway" will thus be displayed to the audiences of a refined and cultured class.

Below is shown a cut of a house that was erected on the Iowa State Fair Grounds by the Chicago house Wreckinv Co. During the progress of the fair it was visited by thousands of persons who were surprised at the high grade material and general appearance of the design. This house is what is known as No. 117 in this Company's catalogue. It is 27 ft. in width by 36 ft. 6 inches in length, exclusive of porches Considering the fact that they furnish the material complete for the exact duplicate of this house for $550 00 it is certainly an astonishing proposition and a remarkable bargain offering'

It contains six rooms and bath, which are as follows: Living room, dining room, kitchen, pantry, three bed rooms and a bath room and is in every way a complete modern house on one floor. The fire-place in the corner of the living room adds cheerfulness to the surroundings. All the rooms are of easy access from the living room of the house. There are no waste spaces where not needed and the whole plan has been developed not only for convenience and beauty but in harmony with the general character of the bungalow pattern. For a summer or suburban home, this class of house offers many advantages not possible in designs of different construction, and they especially recommend this design to people of good taste and moderate means as an ideal home at a comparatively small cost. The Bungalow pattern of construction was at first employed only in houses intended for temporary use, but their beautiful outlines and great convenience soon brought them rapid favor as suburban and city homes. In this design they show one of the most pleasing examples of this deservedly popular style. The material they furnish is all brand new stock as described in their material specifications. They also furnish free plans, specifications and list of material for the construction of this design. They will furnish a complete Plumbing outfit for this house for $97.50 Paint for the entire job, including hard oil finish for interior, two coat work (including porch floor paint but no other floor or roof paint) $19.70. This building can be heated with furnace, steam or hot water as desired. The hot air furnrce they quote at $83.05. The steam heating plant would amount to $147 84. Or, if you prefer the hot water heating plant, which is by far the best it would cost you $176.21. The Chicago House Wrecking Co., 35th & Iron Sts., Chicago, Ill., will furnish the design for this house, together with brand new stock for use in erecting it for $550.00. More information that will interest builders of not only dwelling houses, but barns, etc., can be obtained absolutely free of charge, when writing them advise that you saw this design described in this publication. They advertise continually in this medium and a careful study of their "Ads" are confident will prove of interest to you.



GET AN I.H.C. GASOLINE ENGINE TO WORK FOR YOU

I. H. C. engines and prosperity are going hand-in-hand on thousands of farms. I. H. C. gasoline engines are the farmers' willing workers that do not ask for wages or days off or refuse to work when the weather is bad.

Just give the wheel a turn—and a whole string of your other machines will get busy. You can run half a dozen of them at once, if you like—sawing, grinding, churning, separating cream, pumping water, etc. Your simple, powerful I. H. C. gasoline engine will furnish power for them all.

One great advantage of these engines is their ever readiness. They enable you to do your hardest jobs faster, better and easier than ever you have been able to do them before.

There are hundreds of places where you would like to use a power—sometimes for just a little while, other times for a long, steady run. Many a time you can have the job done with your I. H. C. gasoline engine before you could even get ready with your old-style power. If it's a long, steady run, like a day's job of sawing wood, the engine will keep your saw going steadily hour after hour. The engine will take care of itself—all you have to do is to just 'saw wood.

The expense is only a few cents for gasoline for the whole day's work. There's no waste of time and fuel in starting up. And all expense stops the instant the work stops.

You need an I. H. C. engine to take the short cut on your work. Figure on the matter—see how soon it will pay for itself by getting full service for you out of your other machines. The engines are simple and easy to understand. You will have no trouble in learning to operate one of them.

Go to our local agent and look over the line. It includes an engine for every section and every problem; of all sizes and all costs, for all farm uses—vertical and horizontal (both stationary and portable); engines on skids; sawing, pumping and spraying outfits. It also includes I. H. C. gasoline tractors—first-prize-gold-medal winners—the best all-'round farm tractor by test.

Call on our local agent in your town and talk the matter over with him. He will supply you with catalogues and all information. Or, if you prefer, write nearest branch house for catalogue and full particulars.

Piano News.

We know that other dealers have some good pianos. But we know, after long experience, that the lines that we control are the best as regards durability and fineness of quality and are pre-eminently the best in the market.

Why not come and see us or write us a line so that we may talk over piano purchasing?

Piano purchasing is made easy in this store as we have sold 15,000 pianos and or organs since we went into business. This means a lot.

The W. H. Johnson Co., Ltd.

157 Granville St, cor. Buckingham, HALIFAX,
also SYDNEY ST. JOHN, and NEW GLASGOW.

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad. as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, Sussex, N. B.

The Ninth Annual Maritime Winter Fair.

USHERED in by mild, balmy weather the ninth annual Maritime Winter Fair opened its doors to the general public on Monday morning, December 6th. The experience of the previous years showed the management that in order to accommodate the ever increasing number of entries in the respective classes, more space must be provided, so during the early part of the year they succeeded in inducing the thriving town of Amherst to make extensions and improvements to the old building. An addition of eighty feet has been made to the old building which makes the total length three hundred and fifty feet with a width of one hundred and thirty feet. This additional space, with the new cattle shed at the side one hundred and thirty feet long by thirty-two feet wide, gives ample room to show every department to the best advantage. The front, which is mainly of glass gives a much better appearance from the outside and greatly increases the light inside. This, with an addition of eight large skylights in the roof adds greatly to the light during the day, while the Electric Light Co. have installed a most efficient lighting system. New and more convenient offices have been installed and separate rooms provided for special demonstrations so that those not interested in any one department may remain in the auditorium while the demonstrations, which formerly had been made on the main floor are going on. The large ventilation shaft which occupied the main floor up stairs has been removed, giving much more space and light and an unobstructed view in the poultry department while a separate room for the seed display which hitherto has been greatly cramped, has been provided. Honey exhibitors, too, have a space to themselves, while the dressed poultry department is exceptionally convenient. The fruit room is also much improved and the fruit can be much better looked after than in the past. A large room has been set aside up stairs at the front of the building for the use of the various associations affiliated with the Winter Fair and which plan to hold their conventions during the Fair season. The Commissioners have spared neither pains nor expense in their preparations for the comfort of both exhibitors and visitors and it is gratifying to note that they had both classes in such an abundance as would lead one to suppose that in the near future further additions and extensions must be made.

THE FORMAL OPENING.

For several months the citizens of the Maritime Provinces had been talking about the coming Winter Fair, it was seemingly a foregone conclusion with everybody that the fair was going to be the best in its history, "they felt it in thoir bones," as it were, and towards Amherst all roads led on December 6th. The fact that His Excellency Earl Grey was to be the guest of honor and would formally declare the fair open was of itself a great attraction to people who wished to honor His Majasty's representative and also Lieutenant Governor Fraser of Nova Scotia and Lieutenant Governor McKinnon of Prince Edward Island. Lieutenant Governor Tweedie of New Brunswick was unavaidably absent. After the Stock Breeder's banquet which took place in the handsomely decorated dinning room between the hours of 6 and 8 p. m. Monday evening and which was catered to by the ladies of the Hospital Aid Society of Amherst, Mr. E. B. Elderkin, President of the Maritime Stock Breeder's Association took the chair in the large auditorium where upwards of 3000 visitors had gathered to listen to the speakers. On the platform with President Elderkin were theiGovernors already referred to Hon. Sidney Fisher, Minister for Agriculture and other prominent gentlemens. Mr. Elderkin outlined the progress of the fair since its organization in 1901. He was pleased that the minister for agriculture who had said "go on and my department will assist with the funds" was present to see what the nine year old child had accomplished. He was pleased to see such a large audience and thanked all present for their attention.

Mayor Lowther of Amherst, who is suffering from a broken arm, was present and said he would not miss being present even if both his arms were broken. He spoke of the additions to the fair building, which involved an outlay of about $7000. He was glad to see the building so well filled and invited all strangers to visit the Amherst industries.

Warden Pipes of Cumberland in a short but appropriate address welcomed visitors to the county of Cumberland.

Dr. D. V. Landry, Commissioner of Agricultural for new Brunswick was he next speaker. He was pleased to see the chief men of our country taking so much interest in the class he was proud to represent. It was an encouragement for the farmers to have the hearty co-operation of such people as visited the Winter Fair. Present conditions in agriculture pointed to a bright and prosperous future. He spoke very highly of the quality of the exhibits in the various classes. The poultry business was making such strides of progress in New Brunswick that his department had decided to appoint an expert to still further the industry by timely advice and instruction.

The exhibit of New Brunswick fruit was a revelation to a great many visitors to the fair and he trnsted the future would see some active advancement along the fruit growing line. He would like to see a well equipped experimental farm in his province, where farmers could see the most modern methods of performing agricultural operations practised. He concluded by conveying to His Excellency Earl Grey, the statement that among the many races of people in Canada there are none more loyal to King Edward and his causes than the race from which he himself had descended, the French.

Telegrams from Sir Wilfred Laurier, Hon. Wm. Pugsley and others were read expressing their regret at not being able to be present at the formal opening of the fair.

His Excellency Earl Grey appreciated the hearty manner in which he had been received. The interest taken in the fair was an evidence to him that the people of the Maritime Provinces are anxious to better their agricultural position There was no class that had his warmest sympathy in their work than the agricultural class. He advocated more attention to "the God made country and less to the man made town" so that country life will have so much added to its charms that "back to the farm" will be the watchward of the surplus population in our cities and thus help to solve one of the greatest problems of modern statemanship, viz. to make farm life so pleasant and profitable that the present exodus of our young men citywards will cease. The ratio between producers and consumers is rapidly decreasing and the state must eventually sole the amelioration of those conditions. He anticipated a pleasant visit to the Agricultural College at Truro and spoke of the benefits accurring from the teaching of nature study in our schools. The two wings that are destined to bring the present age to higher plane are education and association. He had noticed that the Agricultural Communities of the world were the most prosperous and in conclusion he urged for more individual energy and co-operative union.

Hon. Sidney Fisher, Minister of Agriculture was pleased to note that during his regine the people were getting together for the advancement of their agricultural interests. He thanked His Excellency Earl Grey for his interest in matters agricultural and in economic social conditions. He referred to our King's interest in Agriculture and was pleased that his representative in Canada, England's greatest dominion, was interested in the agricultural development of the country.

As Minister for Agriculture he had watched the development of Canada from balmy Pacific stopes to the shores of the Atlantic. "There is" said he "an East as great as the West and it is growing apace." There was nothing more conspucious in the upbuilding of the West than our eastern boys who are always leading in every walk of life. We are therefore one homegenous mass and the East must help the West on to its fruitition. While the West is increasing in wealth the East is also increasing in prosperity.

The drift from country to city or town was one of the most acute problems of the day. The East was progressing along industrial lines and our ports are increasing owing to the productiveness of the west. Conditions in the East were not conductive to wholesale farming but ample room is provided here for more intensive farming. The export of our products is decreasing rapidly owing to increased home consumption. The cry of the city consumer is that the producer's prices are too high but he hoped to see them go higher still until the only remedy for the city deweller will be to leave the town and go back to the country, grow the respective commodities and thereby cease their grumbling. The Minister's closing remarks urged for patriotism to our respective provinces.

His Honor D. L. McKinnon, Lieutenant Governor for Prince Edward Island paid a fitting tribute to prominent citizens who were wont to take an active part

in Winter Fair matters and who had been called to rest from their labors. He would like to see more industrial development in our respective cities so that our producers could have better markets for their goods. He proved by statistics that the interest that is being taken in agriculture is proving beneficial to our farmers and all concerned and that we are fast forging ahead. He spoke of the ample room for further development. He expressed appreciation of the good work that is being done at the Truro Agricultural College and concluded his address by quoting a patriotic ditty from Burns.

His Honor Lieutenant Governor Fraser of Nova Scotia, referred to agriculture as the foundation of all wealth, and made the statement that not more than ten percent of arrable Canada had yet been tilled. Canada could never suffer so long as sixty percent of her citizens remain on the farm. The farmer is Canada's truest citizen, because he works for himself and others. The whole of our country is bound up in agriculture. As a rule, farmers do not clamour for their rights as other classes do. He was satisfied that more of our young men were now settling down on our farms, by the fact that he had signed more marriage certificates during his term of office than any two of his predecessors. He referred to the thrift of Scotch and North of England farmers. He had visited both Scotland and England and one of the most prominent features he had noticed in rural districts, was that early or late the plowman could be seen at work in the fields. He concluded his address by saying, "hand your farm down to your son or successor better than you received it from your fathers."

The programme for the other evening meetings was as follows :

Tuesday evening, Chairman, Col. H. Montgomery-Campbell, Vice President for New Brunswick.

Address by Mr. E. D. Eddy, Seed Dept., Ottawa, subject: "Field Crops."

Address by Mr. Duncan Anderson, Ottawa, Ont., subject: "Beef Products."

Address by Hon. Sydney Fisher.

Wednesday evening, Chairman, Mr. C. A. Archibald, Vice President for Nova Scotia.

Address by Mr. John Campbell, Woodville, Ont., on "Sheep the Farmer's best Friend.

Address by C. M. McRae, Ottawa, on "Why Farmers Should Raise Hogs."

Address by W. F. Stevens, Huntingdon, Quebec, on "The Relation of the Dairy Industry to Maritime Agriculture."

Thursday evening, Chairman, Mr. E. B. Elderkin.

Address by D. V. Standish on "The Necessities and Advantages of Producing Agricultural Horses."

An address on "Bees a Necessity to Plant Life" by Mr. J. E. Stocker, Oromocto, N. B.

The presentation of prizes by Mr. Hans Logan of Amherst. After which the Ninth Annual Maritime Winter Fair was closed by "Singing God Save the King."

Extracts from the various address will be given in future issues.

THE JUDGES.

We have yet to visit a fair where there was more general satisfaction in regard to the judges' awards than was evidenced at Amherst.

Following is a list of the judges:

Beef—Mr. Duncan Anderson, Ottawa.

Sheep—Mr. John Campbell, Woodville, Ont.

Swine—C. M. McRae, Ottawa.

Poultry—Mr. E. C Elford, McDonald College, Que. and Mr. A. C. Smith, Waltham, Mass.

Seed—Mr. L. H. Newman, Ottawa and Mr. E. D. Eddy, Ottawa.

Fruit—Mr. R. W. Starr, Wolfville, N. S.

Apiariyan products—J. E. Stocker, Oromocto, N. B

Milking contest—Mr. Harvey Mitchell.

Dressed carcasses—Mr. Duncan Anderson and Mr. John Campbell.

THE BEEF CLASSES.

There were 130 entries in the various sections of the beef classes. The stock was out in excellent show condition. Mr. C. A. Archibald and his competent herdsman, Mr. Douglas Bridges, were over from Truro with some of Bellevue Farm's best Shorthorns and made a most creditable showing. Every animal shown by Mr. Archibald was bred on his farm at Truro. Other exhibitors in the pure bred Shorthorn classes were: Harold Etter, Westmorland Point, N. B.; Edwin Forrest, Amherst, Point, N. S.; Geo. M. Holmes, Amherst, N. S; Cecil T. Coates, Nappan, N. S.; Hazen Etter, Westmorland Point; Chas. W. Forrest, Amherst Point; Samuel C. Lane, Pownal, P. E. I.; Donald Freeman, Amherst; Laurie M. Anderson, Sackville, N. B.; J. McCully Pipes, Nappan, N. S. and Demont Freeman, Amherst.

W. W. Black was on hand with everything shown in the Hereford class. His herdman, Mr. Wm. Robertson, as usual had the stock in the pink of condition and the broad level backs of the sleek looking white faces were much admired and formed a pleasing attraction in the beef stalls.

In the class for grades of any breed, Shorthorns predominated. Laurie M. Anderson, W. W. Black, Chas. W. Forrest, Amos Fowler, Amherst Point; C W. Pugsley, Barronsfield, N. S.; Albert Anderson, Sackville; Hazen Etter, Chas. W. Forrest, Edwin Forrest, Cecil T. Coates, Thos. J. Etter, Westmorland Point; Amos Patterson, Sackville and Courtney Lusby, Amherst were the principal exhibitors.

Laurie M. Anderson, W. W. Black, Thos. J. Etter, Chas. W. Forrest, Amos Fowler and Edwin Forrest had entries in the dressed beef contest.

Number of entries in the various sections of the Shorthorn class were as follows:

4 steers, 2 years old and under 3 years.

4 steers, 18 months and under 2 years.

2 steers, 1 year and under 18 months.

3 steers, 6 months and under 1 year.

4 steers, under 6 months.

5 cows, or heifers 3 years old and over.

7 heifers, 2 years old and under 3 years.

3 heifers, 18 months old and under 2 years.

7 heifers, 1 year old and under 18 months.

6 heifers, under 1 year old.

There were 10 entries in the Sweepstakes class for best animal any age, but the coveted prize went to Merry Maid V, a junior yearling heifer shown by Mr. C. A. Archibald. The special prize offered by the Terrace Hotel, Amherst, for best Shorthorn female, any age, was also captured by Merry Maid V, which was also the champion last year as a calf. Further honors were also crowned on Merry Maid when she carried off a valuable silver cup donated by Mr. M. J. O'Brien, Railway Contractor, Montreal.

HEREFORDS—All the prizes in this class were won by W. W. Black who had from one to three entries in each class. The Sweepstakes prize went to George, the winner of the first prize in the two years old steer class. George also carried off the Silver cup donated by Sir Frederick Borden, Minister of Militia, for the best pure bred beef animal, any age. This cup was also won last year by Mr. Black and in 1907 by Mr. R. S. Starr, Port Williams, N. S. The Giles cup for the best beef animal under two years was also won by W. W. Black for the third time, having won it previously in 1904 and 1905. This cup now becomes the property of Mr. Black as he has captured it a third time.

GRADES OF ANY BREED.—In this class there were 6 steers and 7 cows, 3 years old and upwards; 6 steers and 6 heifers, 2 years old and under 3 years; 6 steers and 6 heifers, 18 months and under 2 years; 6 steers and 5 heifers, 1 year and under 18 months; 5 steers, 6 months and under 1 year; 5 steers, under 6 months, and 6 heifers, under 1 year.

The Hon. Wm. Pugsley's (Minister of Public Work) silver cup for best grade beef animal, any age, which was won in 1907 and 1908 by Mr. W. W. Black, went to Wm. Fowler this year on a two-year-old grade Shorthorn.

48 HOURS' DAIRY TEST.

The new dairy stables are a decided improvement over the old ones, but a proper system of ventilation is badly needed. Much interest was evidenced in the milk test by the general public. A tabulated record of the 48 hours' milking test will be found on another page.

The grand championship cup, donated by Henry Birks & Sons, Ltd., Montreal, for the highest scoring cow in the dairy test, of any breed or grade, went to one of Logan Bros.' Holsteins.

SHEEP.

There were 178 entries in the sheep classes and each and every breeder had come forward with his best.

Leicesters were shown by Albert Boswell, Pownal, P. E. I., and Samuel C. Lane, Pownal.

Albert Boswell, Jr., French Fort, P. E. I., and Charles Symes, Minudie, N. S., were the only exhibitors in the Lincoln classes.

H. B. Parlee, Sussex, N. B., had everything his own way in the Cotswold class.

Charles Symes was the only exhibitor of Cheviots.

There was a strong competition in the Southdown classes with Jas. E. Baker & Sons, Cephas Nunn and Oliver C. Saunders in the ring.

George Boswell, Logan Bros., Cephas Nunn and Jas. I. Stewart were out in battle array with excellent Shropshires. The prize list tells the winners' tale.

J. E. Baker & Sons, Burder Goodwin and A. H. Boswell were out with as good a lot of Oxfords as can be found anywhere.

Cephas Nunn had an excellent lot of Hampshires and no competition.

Albert Boswell, Jr., met no competition in the Suffolk class.

There was a large number of entries in the class for grades and crosses.

Geo. Boswell, Logan Bros., Samuel C. Lane, Cephas Nunn, Jas. I. Stewart, Oliver C. Saunders, Albert Boswell, Jr., and Burder Goodwin were on hand to match the merits of their respective animals

The grand championship silver cup, donated by Senator Mitchell, Montreal, for the best pen, including one ewe lamb, one yearling ewe and one ewe, two-year-old, having been won in 1907 and in 1908 and again this year by Logan Bros. becomes their permanent property and retires from future competition. The Boswell Leicesters gave the Logan Shrops a chase for this valuable trophy.

Twenty sheep were but entered for the block test.

SWINE.

The various swine classes were well filled with carefully fitted stock. Yorkshires were shown by W. H. Pope Cook, Wm. Holmes, A. A. McBeath, Albert Anderson and Roper Bros.

Tamworths had W. J. Gibson and Roper Bros. as their Champions

In the Berkshire class, Peter Brodie had the largest number of entries, J. R. Semple, James I. Stewart, Wm. J. Gibson, Wm. Holmes and Geo. G. Lowther, were the other exhibitors.

Chester Whites and Poland Chinas shown the former by Leonard Court. "W. H. Pope Cook and A. H. Boswell and the latter by Chas. Symes, competed in the class for" any other pure breed. It would not be amiss to have a special class for Chester Whites as they are rapidly gaining in popularity.

There was a large number of entries in the class for grades and crosses.

The grand championship silver cup donated by J. E. Wood, Esq., Halifax, N. S., for the pen of three, including sow under 6 months, sow 6 months and under 1 year and sow over 1 year, which was won in 1908 by Roper Bros., was captured by Peter Brodie who held it in 1907. Mr. Brodie is planning to come back next year and claim it as his permanent property. Forty-five hogs were butchered for the dressed carcass competition.

APIARY PRODUCTS.

A very creditable display of Apiary products was made. The quality was high grade and showed expert knowledge in the handling of the bees. The flavor was all that could be desired. Judge Stocker said the comb honey would stand competition at any of our larger shows and expressed great satisfaction with the whole exhibit.

THE SEED EXHIBIT.

The exhibit of seeds, seed grain and potatoes would be a credit to any show in Canada. Although a special room was provided in the new portion of the building, it proved scarcely large enough to accommodate the splendid turnout of seeds from all parts of the Maritime Provinces.

The Canadian Seed Growers' Association put up a very handsome show of grain, both in the straw and threshed. Mr. E. D. Eddy, who judged the grain, remarking that he had never judged a better quality anywhere in Canada. The demand for seed, produced by members of this Association, is steadily growing and their exhibit shows that the work is steadily gaining in favor and proves the efficiency of their methods.

The veteran, Donald Innis, was wearing "the smile that won't come off," for he won the Steele Briggs' cup for the third time. It is seldom that one person is able to take all the first prizes offered, but that is what Mr. Innis did in the group exhibits, shown by the Canadian Seed Growers' Association. He won with White Fife wheat and Early Blossom oats of the ninth year's selection and Mensury barley and White Marrowfat peas of the second year's selection.

Mr. Robert MacKay, of Millsville, N. S., showed very nice group exhibits of White Marrowfat peas, Mensury barley, Manitoba oats and Red Fife wheat of the first, third, ninth and tenth years' selection, respectively.

Richard Creed, Albion, P. E. I., was present again with White Russian wheat, Mensury barley and White Egyptian oats, the product of from three to ten years' continuous selection.

T. J. Wiggington, the next largest exhibitor, showed White Egyptian oats, Mensury barley and White Russian wheat of from one to nine years' selecting.

The following exhibitors showed sheaves and samples of good quality :

R. D. MacKay, Balmoral Mills, N. S., Red Fife wheat.

Wm. E. Palmer, Scotch Lake, N. B., Banner oats, ninth year selection.

Gordon MacMillian, Cornwall, P. E. I., White Fife wheat, selected nine years.

Wm. H. Moore, Scotch Lake, N. B., Red Fife wheat.

Wm. O. Wright, Dalhousie East, N. S., American Beauty oats, third year selection.

E. E. Arsenault, Urbanville, P. E. I., White Russian wheat and Old Island Black oats.

Harry R. Brown, Wallace Bay, N. S., Banner oats, seventh year selection.

Exhibitors of sheaves of grain with fine representive plants were :

Wm. E. Palmer, Scotch Lake, Red Fife wheat.

H. R. Brown, Wallace Bay, Regenerated Abundance oats.

R. Creed, Albion, Twentieth Century oats.

The following showed selected potatoes from breeding plots :

H. R. Brown, Green Mountain; R. Creed, Early Harvest; R. MacKay, Beauty of Hebron.

An interesting exhibit was made in the beginner's class by Mr. C. Fred Fawcett, Upper Sackville, N. B., who is commencing the selection of Green Mountain potatoes, and placed on exhibition the product of three individual hills, consisting of thirteen, nine and eight marketable tubers each.

The competition for the gold medal, presented to the boys and girls of New Brunswick by Dr. Jas. W. Robertson, made a very nice showing. The contestants were :

James R. Moran, Doaktown; Pearl Patterson, Sussex; James Phillips, Up-

per Kintore; Arthur Moore, Scotch Lake; Nettie Moore, Scotch Lake, and Guy Patterson.

The medal for hand selected wheat went to Miss Nettie Moore and a similar prize for best sheaf of oats went to Miss Pearl Patterson.

In the general class a very fine showing was made and a decided improvement over last year was apparent throughout.

While there was not as large an entry of potatoes as last year, both quality and selection were better.

Rumor has it that several special prizes will be offered next year in the seed classes. If this should be the case there should be even a larger and better showing than there was this year. Get busy boys.

The various departments of the fair were efficiently surperintended. Exhibitors were satisfied and visitors were delighted and many expressions approving of Mr. Fuller's effeciency was heard on every hand.

The fair is over and will go down in history as one of the most educative fairs ever held in Eastern Canada.

REPORT OF FRUIT JUDGES AT WINTER FAIR.

MR. PRESIDENT AND GENTLEMEN OF THE COMMISSION:—

I found a large, and for the most part, a very fine exhibit of apples from each of the Maritime Provinces. Some of the exhibits from what may be called the non-fruit producing counties had, for their credit, better been kept at home as they only served to accentuate the difference between good fruit and that which is comparatively worthless. I must say, however, that had those exhibitors known more of the proper methods of selecting specimens and chosen them direct from the trees, then carefully storing them, in cool cellars until wanted, they could have made a much better showing.

Commencing at the south end of the table with the Nova Scotia collections, Hants, Kings and Annapolis each had two collections of what are recognized as known commercial or standard varieties, well grown, well colored, and well selected.

PICTOU showed three collections of handsomely grown apples, mostly of which are well known standard varieties and a credit to the county.

CUMBERLAND showed three collections of really well grown fruit. Some of the specimens did not show the best of care in handling and some of the varieties were mis-named showing that nomenclature has not been made a study by the growers.

QUEENS had one very good collection of correctly named sorts six of which are standards, the others good, well-known winter varieties.

COLCHESTER showed three collections each having six standard sorts, the others are new or not well-known varieties but seem to be fairly good.

ANTIGONISH had one collection. I am sorry to say it was not a good show. I have seen much better fruit shown from that County.

HALIFAX had two good collections of bright, well-selected fruit, not as large as the same varieties from the Valley County, but clean and well colored.

PRINCE EDWARD ISLAND.

QUEENS COUNTY sent three collections of correctly named, carefully handled fruit.

PRINCE COUNTY had two collections equally good, perhaps better.

KINGS with two collectione following very closely in a race for the first place on the Island.

NEW BRUNSWICK made an extraordinary effort this year and showed collections from eleven of her fifteen counties. The Provincial Government added two prizes of $3.00 and $2.00 to each of the Commissioners County prizes of $6.00 and $4.00, making four prizes as in inducement to their farmers to compete, and this has been successful in bringing out some 24 collections beside a large general collection made by the Government to show the capabilities of the Province for fruit growing.

ALBERT showed three collections of good, well grown fruit, but required more care in selection and handling.

KINGS showed four collections of well grown, fairly well selected and mostly correctly named sorts.

SUNBURY had two very good, correctly named, carefully handled, well selected collections of well known varieties.

QUEENS showed five collections of very good fruit generally correctly named, well selected specimens and fairly well handled.

WESTMORLAND had two collections. One was well grown, correctly named, and selected and well handled. The other was correctly named but did not show as much care and skill in selection and handling.

YORK had only one collection but it was very good, well grown, correctly named, well selected and carefully handled.

GLOUCESTER showed one, passably well grown collection, but showed careless handling and selection.

CHARLOTTE showed one collection, a little better grown and selected than that shown last year.

RESTIGOUCHE had two collections. Fruit quite inferior, not correctly named, Famuese duplicated as Baldwin. Try and do better next year.

ST. JOHN had two collections of small, poorly grown, carelessly selected and handled fruit.

VICTORIA had one collection of only fair fruit, not as good as that shown last year.

The growers of apples in the Counties of Gloucester and Charlotte, Restigouche, St. John and Victoria in New Brunswick and Antigonish in Nova Scotia, should be more careful in the selection and care of the fruit which they exhibit, if they wish to advance fruit growing in their different localities. Many of the other Counties are advancing rapidly and if we may judge by the fruit shown at these exhibitions, they are capable of supplying their local markets and may soon have samples for export.

R. W. STARR,
Judge.

The Clydesdale Auction Sale.

The auction sale of Clydesdale mares, imported recently from Scotland by Wm. Meharey, Russel, Ontario, was held as advertised in these columns on December 14th, at West St. John. A good, useful lot of fillies was offered. The attendance was very large and comprised farmers and others from all parts of the Maritime Provinces. Following is a list of the mares sold, the purchase price and purchaser's name :

Lady Hodgson, Can. No. 20034, $370.00; Sheriff O'Brien, Nothumberland Co., N. B.

Darling of Wetheriggs, Can. No. 20018, $235.00; James A. Gallop, Victoria Co., N. B.

Dollar Princess, Can. No. 20017, $265.00; Chas. deMerchant, Perth, N.B.

Countess of Cree, Can. No. 20020, $265.00; Richard, Patterson, Sussex, N. B.

Mollio, Can. No. 20107, $305.00; J. W. S. Black, Sackville, N. B.

Jeanie Wallace, Can. No. 20012, $265.-00; John M. Hopper, Woodstock, N. B.

N. Igella, Can. No. 20040, $300.00; McLaggan Bros., Blackville, N. B.

Jenny Johnstone, Can. No. 20096, $305.00; Wm. N. Johnson, Nelson, N. B.

Cowie Darling, Can. No. 20019, $275.-00; George Maddox, Florenceville, N. B.

Bessie Weir, Can. No. 20022, $300.00; R. W. Menzie, Springfield, N. B.

Auchentroig Jean, Can. No. 20027, $255.00; Elias Daigle, Edmunston, N. B.

Patrician Maid, Can. No. 20041, $245.-00; Geo. Eccles, Westfield, N. B.

Jess of the Guards, Can. No. 20097, $335.00; D. W. Pickett, Andover, N. B.

Cherry Blossom, Can. No. 20092, J. T. Prescott, Sussex, N. B.

Trim of Bampton, Can. No. 20114, $240.00; W. H. Moore, Scotch Lake, N. B.

Attractive Baroness, Can. No. 20028, $240.00; Thos. Harrahan, Woodstock, N. B.

Lady Thornton, Can. No. 20036, $355.-00; Mr. Pickett, Andover, N. B.

Miss Minto, Can. No. 20038, $280.00; J. Sutton Clark, St. George, N. B.

Lady Ann Carleton, Can. No. 20119, $285.00; John M.Keith, Havelock, N. B.

Baroness de Gay, Can. No. 20025, $365.00; Mrs. C. E. Rigby, Hartland, Carleton Co., N. B.

Lady Belle Mitchell, Can. No. 20031, $290.00; O. M. Melanson, Shediac, N. B.

Bardess, Can. No. 20026, $225.00; G. C. Murray, Fredericton, N. B.

Poetess, Can. No. 20042, $255.00; Austen Broom, Annagance, N. B.

Lady Sensation, Can. No. 20035, $245.-00; J. C. Bishop, Harvey Bank, N. B.

Johann Donnan, Can. No. 20098, $275.-00; Sedge Armstrong, Honeydale, N. B.

Nellie of Mosshead, Can. No. 20109, $295.00; J. K. Pinder, Millville, N. B.

Ellen Irving, Can. No. 20015, $335.00; J. A. Irving, Buctouche, N. B.

Beryl Craigie, Can. No. 20024, $295.-00; Chas. Peters, Elmhurst, N. B.

Lady Aeronaut, Can. No. 20029, $365.-00; C. H. Beardslen, Berwick, N. S.

Lady Aviator, Can. No. 20030, $285.-00; H. W. Brownell, Amherst, N. S.

Jenny Barbour, Can. No. 20011, $220.-00; Blake Clark, Cambridge, N. B.

Miss Blacon, Can. No. 20106, $275.00; Jas. A. Gallop, Victoria, N. B.

Jean Blacon, Can. No. 20014, $275.00; Geo. A. Chapell, Westmorland Co., N. B.

Norah's Pride, Can, No. 20110, $305.-00; Edward Keys, St. Stephen, N. B.

Mary Finnie, Can. No. 20104, $255.00; H. C. Masters, Berwick, N. S.

Nancy Mitchell, Can. No. 20108, $290.-00; H. C. Masters, Berwick, N. S.

Eva Ronald, Can. No. 20096, $255.00; David Barber, Harvey, N. B.

Bessie Ralston, Can. No. 20023, $265.-00; Edward Keys, St. Stephen, N. B.

Wilhelmina, Can. No. 20116, $180.00; Thos. Davis, Keohan, N. B.

Virgin Metal, Can. No. 20115, $320.00; A. S. Maxwell, Richmond, Me.

Blossom's Pride, Can. No. 20021, $250.00; Sege Armstrong, Honeydale, N. B.

Maggie Morrison, Can. No. 20103, $305; Norman P. McLeod, St. John West, N. B.

Lady Leslie, Can. No. 20100, $175.00; H. W. Smith, Canterbury, N. B.

Jean Hunter, 2nd, Can. No. 20013, $250.00; S. C. Hayward, Port Elgin, N. B.

Milton Quality, Can. No. 20105, $250.-00; Norman Copp, Albert County, N. B

Palnure Lily, Can. No. 20111, $255.00; J. W. Coates, Havelock, N. B.

Jessie Morrison, Can. No. 20010, $240.-00; Alex. Murray, Kingston, N. B.

Mall of Borgue, Can. No. 20037, $295.-00; J. M. Harper, Woodstock, N. B.

Dolly O'Neill, Can. No. 20094, $280.-00; J. N. Harper, Woodstock, N. B.

Cuckoo, Can. No. 20093, $275,00; C. E. Rigby, Hartland, N. B.

Queen of Spades, Can. No. 20112, $280.00; W. F. Woods, Welsford, N. B.

Starling, Can. No. 20113, $295.00; Obdurs Shaw, Middle Simonds, N. B.

Winsome Bessie, Can. No. 20117, $260.00; John B. Barton, Armstrong's Corner, N. B.

Lady Fortuna, Can. No. 20033, $250.-00; Stanley White, Wicklow, N. B.

Lady Gavina, Can. No. 20099, $280.-00; N. P. McLeod, St. John.

Nancy Leaston, Can. No. 20039, $300.-00; Obdur Shaw, Middle Simmonds, N. B.

Lady Radnor, Can. No. 20102, $295.-00; F. C. Ebbett, Gagetown, N. B.

Beli Scott, Can. No. 20091, $295 00; David Aiton, Sussex, N. B.

Lady Crawford, Can. No. 20032, $220-09; G. H. Legere, Shediac, N. B.

Rosie Ronald, Can. No. 20043, $245.00; J. M. Harper, Woodstock, N. B.

Woodend Pearl, Can. No. 20119, $345.-00; C. H. Rasmussen, Grand Falls, N. B.

Lady McCall, Can. No. 20101, $305.00; John M. Harper, Woodstock, N. B.

Dore Sproat, Can. No. 20016, $240.00; Jas. Russel, St. Andrews, N. B.

La Belle Electra, Can. No. 20009, $290.00; Kenneth Raymond, Bloomfield Station, N. B.

The stallion Ace of Spades, Can. No. 7234, was withdrawn at $800.00.

Maritime Beekeepers' Association.

The seventh annual meeting of the Maritime Beekepers' Association was held in the Board Room of the Winter Fair building on the 8th day of December 1909.

I. C. Craig, President, in the chair. Besides the President the following Beekeepers were present: Mr. I. Corbell, Amherst St.; Rev. P. S. McGregor, Kingston, N. S.; Mr. I. E. Stocker, Fredericton, N. B.; W. B. Wallace, Newport, N. S.; G. C. Chappell, Northport; W. M. Lillan, Falmouth; E. J. Johnson, Georges River, C. B.; C. A. Fawcett, Memmamcook, N. B. and B. W. Baker.

The minutes of the previous year's meeting were read and approved.

The Treasurers report was audited found correct and passed. The balance to credit of the Association was found to be $11.74.

On motion it was decided to have Glowing in bee cullion sent to each member of the Association for another year.

Moved by Rev. R. S. McGregor, seconded by G. C. Chappell and carried that Mr. McLeod of the MARITIME FARMER be a committee to draft and present to the Minister of Agriculture at Ottawa and to the Legislatures of N. B., P. E. I. and N. S. resolution requesting a grant of money to the Maritime Beekeepers' Association to be used for the encouragement of the Beekeeping industry in these Provinces.

On motion the following officers were elected for the ensuing year:

I. C. Craig, president; J. E.Stocker, director for N. B.; R. Donaldson, director for N. S.; Theo. Ross, director for P. E. I.; Geo. Cheppell, auditor; B. W. Baker, Sect. treasurer.

B. W. BAKER, Amherst, N. S.

Capacity of Silos.

The capacity of silos of different size is a question of interest to everyone contemplating building a silo. When silos first came into use, square and oblong structures were built, but in recent years these shapes have gone out of use and nothing but circular silos are now constructed. In a table below we give the capacity of silos having diameters varying from 12 to 24 feet. The figures are also according to King of Wisconsin and are considered standard:

Dia. of silo.	Depth of Silo			
	29	30	31	32
12	64	68	70	73
14	88	93	96	101
16	114	119	125	131
18	144	151	158	166
20	178	187	195	205
21	195	206	215	226
22	215	226	236	248
23	235	247	258	271
24	265	270	282	295
25	278	292	305	320

In figuring the size to build a silo, one must take into consideration the number of cattle that are to be fed from it. A dairy cow will consume from 30 to 40 pounds of silage a day, the latter figure being usually considered a maximum amount. Your stock will, of course, eat less. It is not only essential to build a silo large enough to accommodate a given herd, but the diameter of the structure must also bear a certain relation to the size of the herd. In other words, it is necessary to feed a layer of silage at least one and one-half inches in thickness every day, in order to keep the top from scouring. For this reason there is such a thing as getting the diameter of the silo too large for a herd of given size. Knowing the average weight of a cubic foot of silage, as indicated below in this article, and the number of cattle to be fed, one can readily calculate what the diameter of the silo should be in order to remove one and one-half inches of silage per day.

THE MARITIME FARMER

And Co-operative Dairyman.

Semi-Monthly Journal devoted to the interests of the farmer of the Maritime Provinces.

Official Organ of The Farmers, and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association The Nova Scotia and P. E. Island Fruit Growers' Associations The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers Association, and The New Brunswick Poultry Association.

Subscription Price $1.00 per year. When paid in advance 80 cts. Persons taking advantage of the 80 cent rate when subscribing are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definite order for dis. continuance is given.

The date after your name on the little green label on front Page is, in every case, the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said :—**"I saw your adv. in the MARITIME FARMER."**

LAST CALL TO THE SHORT COURSES.

Before the next issue of the MARITIME FARMER reaches our readers, the Christmas holidays of 1909 will be past and gone and the short courses at the Nova Scotia Agricultural College, Truro, will be in full swing. Each succeeding year sees an increasing interest, among our farmers and their sons and daughters, in matters pertaining to agricultural education. Not every one can afford the time or means to take a full course at the college, but few, if any, of our farmers, are in such circumstances that they can afford to miss the opportunities offered by the college short courses. Present indications point to a very large class when the courses open on January 4, 1910. Will you be one of the number? We know from experience that you can see a great deal of work ahead of you if you stay at home—you can possibly see enough work to keep you busy for months even if you were inclined to work twenty-four hours each day. No matter how busy you may be we can candidly tell you that it will pay you well to cease operations for two weeks, or get some one to do the work for you, and go to the short courses at Truro. Satisfied clients are the best advertisements any firm can have. The boys, and girls, too, who have attended the college in previous years are satisfied that their time and money were profitably spent. The ideas gleaned at the college come to their assistance and help them do their work in a more systematic, businesslike way than they had been accustomed to before entering the college. There, one can glean high ideals that tend to raise the student above the narrow sphere in which too many of our people are prone to walk contented with merely eking out an existence. Some of our farmers and their sons have been so well satisfied with the short courses that they have cast aside all barriers and have come back year after year. Is not that a tribute to the good work done for them by the college? The instructors are well known as experts in their respective classes. What they have done in former years for others they will do for you if you give them the chance. Plan your work ahead now and when the early days of January comes along you will go to Truro where you will meet as good a crowd of boys as ever lived and where by social intercourse with students from all parts of the Maritime Provinces your intellectual horizon will be broadened and you will go home after the classes are over with higher ideas of your profession and of the noble body of men which it comprises. Just one other thought and we will leave you to think this matter over; it is this: After deciding to attend the short courses, which you should do right away, drop a card to Professor Cumming, Truro, telling him you will attend the the 1910 short courses.

A SEASON FOR NEW RESOLUTION.

Perhaps there is no season of the year when so many people settle down to plan and make new resolutions as the present. The last days of the old year, in almost every case, finds people planning on "turning over a new leaf," as they say, or determining to do better in the future than in the past, and going forward into the new year with a determination to bring their resolutions to a successful culmination. Let the resolutions be tempered with reason and just aim of principle and purpose, lest "Thou Fool" be the answer. Some go forward with their resolutions ever in view and looking forward to higher ideals, and consequently success follow them sooner or later; others forget their resolutions as soon as they are made, and as a result, each succeeding year finds them plodding along in the same old groove. Let us no longer belong to the latter class, but rather choose the plans exemplified by the former class, and with stubborn persistency aim to make the year 1910 a profitable one. Following are a few resolutions that are worthy of consideration:

Resolved to attend the short courses at the Truro Agricultural College.

Resolved to be more up-to-date in my farming operations.

Resolved to help supply the demands of the home market.

Resolved to attend as many institute and farmers' meetings as possible.

Resolved to feed and care for my stock better than ever.

Resolved to test my cows and to get rid, by the shortest possible route, of each and every animal that does not pay for its keep.

Resolved to feed, weed and breed my herd of cows so that I may bring them up to an average of at least 8000 pounds of milk per year, and by systematic selection, aim for even higher individual production.

Resolved to sell nothing from the farm except as a finished product.

Resolved to be more carefel in the handling of dairy products.

Resolved to keep a strict account of all my transactions so that I may know my financial standing at any time.

Resolved to store enough ice to last for all household and dairy purposes for one year.

Resolved to be more careful in the housing of my farm machinery.

Resolved that whenever I appear in public I shall strive to do so in clean, respectable attire and thus help to uplift my vocation.

Resolved to read all I can about my chosen calling and take a deep interest in matters that require the attention of all good citizens.

Resolved to secure, at least, one new subscriber to the MARITIME FARMER, knowing the more agricultural literature that is read by my neighbors, the the more rapid will be the progress of advanced agriculture.

THE TWILIGHT OF 1909.

Christmas is almost here and the twilight of 1909 is rapidly stealing upon us. Soon Father Time will have pulled up the anchor of the year and 1909 will be allowed to drift off into history. Like an influence it can never die. It will have a silent place in the foundation of future history. Like a word let slip, it will never be recalled. The use we have made of it can never be changed, 1909 has given us a fairly good season. There is noticeable prosperity on every hand. Many difficulties have been encountered and met. Filled with hopes for favorable seasons next years you do not feel sorry as you watch the twilight gather. You look forward to awakening activities, after a brief rest from field work. If you have spent your time and energies well during 1909, you will feel at peace with the world and welcome the young, untiring 1910.

To those who are despondent over past failures, past blunders or over the little progress made, we ask that you sit down in the twilight of 1909 and think over, with those dear to you, the whole situation. Try and find out why things were not better. Hold a session of retrospect and introspect with yourself. If your disappointments are due to faults of your own, face the fact bravely and resolutely say you will profit by the mistakes of the past year. If it is not your fault that things have gone against you, know this, that a cheerful and hopeful disposition will overcome obstacles more readily than a sullen, discouraged one. Just as surely as there has been a twilight to the day and year, so there will be a twilight to every hope, every ambition, every effort, a time when things are not as bright as you have seen them. But these twilights need not disconrage you. Gather yourself together for another honest, persistent effort, lacked by strong, sincere resolutions in the dawn of 1910.

COUNSEL TO YOUNG MEN.

A New York banker in a recent address to young business men, said :

"Young men in any business should always maintain a cheerful disposition and pleasant demeanor under all circumstances and conditions, and cultivate the happy faculty of making everyone who comes in contact with them feel perfectly at ease. The young man whose desires to succeed and advance in his chosen calling should also be an unceasing student of system and be willing to devote some of his time to reading and the study of improved methods calculated to make him more valuable to his employers."

EDITORIAL NOTES.

Before you receive another visit from the MARITIME FARMER we will all be ushered into the new year. We desire to thank all hands for their hearty co-operation and good words in 1909 and solicit a continuance of the same in 1910.

* * *

A Merry Christmas and a Happy and Prosperous New Year to all our readers is the hearty wish of the management and editors of the MARITIME FARMER.

* * *

No better proof of the value of the short courses at Truro can be found than that industrious, intelligent, young farmers who would not spend money or time foolishly, who have been induced, perhaps through curiosity to attend the courses during the first and second years of their inception at Truro, have been going back each succeeding year to glean more knowledge. We know several young men of this class who are preparing to attend again this year. Tuition is free and board may be secured at $3.50 to $4.00 per week. A seed fair will be held on January 11th. Be with the rest of the Maritime Provinces, progressive farmers and farmers' sons and daughters, at Truro on January 4th. You will assist the principal very materially by sending him a card telling him you expect to attend the courses.

Prize List Maritime Winter Fair 1909.

BEEF CATTLE.

Class 1—Shorthorns.

Steer two years old and under three, 1, Edwin Forrest, Amherst Pt.; 2, Harold Etter, Westmorland Pt., Jack; 3, Geo. M. Holmes, Amherst, N. S., Jack; 4, Harold Etter, Westmorland Pt., Bob.

Steer 18 months and under two, 1, Hazen Etter, Westmorland Pt., Ernest; 2, Chas. A. Forrest, Amherst Pt., Cecil; 3, Harold Etter, Westmorland Pt., Royal.

Steer 1 year and under 18 months, 1, Cecil T. Coates, Nappan, N. S.; 2, Geo. M. Holmes, Amherst Pt., Jim.

Steer 6 months and under 1 year, 1, Harold Etter, Westmorland Pt., Red Feru; 2, Geo. Holmes, Amherst, N. S., Bobs; 3, Hazen Etter, Dan.

Steer under 6 months, 1, Harold Etter, Snowdrift; 2, George H. Holmes; 3, Harold Etter, Bill.

Cow or heifer 3 years or over, 1 and 4, C. A. Archibald, Truro, N.S., Roan Lady and Duchess of B. V. XI; 2 and 5, Harold Etter, Lady Joan VII, Lady Minto; 3, Donald Freeman, Amherst, N. S., Roan Strathallan.

Heifer 2 years old and under 3, 1, 2 and 4, C. A. Archibald, Roan Katrina of B. V., Rosabella XIV and Lady Roan; 3, Hazen Etter, Pansy Blossom; 5, Laurie M. Anderson, Sackville, M. B., Snowflake; 6, Harold Etter.

Heifer 18 months and under two years, 1, Harold Etter, Lady Ruler; 2, C. A. Archibald, Heronia, 3, J. McCully Pipes, Amherst Pt., White Princess.

Heifer 1 year and under 18 months, 1 and 5 C. A. Archibald, Merry Maid V and Lady Woodland III., 2, J. McCully Pipes, Jessie; 3, D. Freeman, Amherst, N. S., 4, Harold Etter, Queen Marie.

Heifer under 1 year, 1, 3 and 4, C. A. Archibald, Mermaid, Duchess of B. V. V and Red Maid; 2, Geo. M. Holmes, Red Rose.

Heifer, under 6 months, 1 and 2, C. A. Archibald, Merry Maid VI and Gilt of B. V.

Sweepstakes, best animal any age, 1, C. A. Archibald, Merry Maid V.

Class 2.—Special Prize.

Donated by the Terrace Hotel, Amherst, best female any age, C. A. Archibald, Merry Maid V.

Class 3.

Donated by R. L. Ralston, Barrister, Amherst, best steer any age, Cecil T. Coates.

Class 4.

Donated by M. J. O'Brien, railway contractor, Montreal, silver cup for best Shorthorn animal any age, C. A. Archibald, Merry Maid V.

Class 5.

Everything in this class went to W. W. Black.

Championship in Classes 1 and 5.

Silver cup donated by Hon. Sir Frederick Borden, Minister of Militia, for best animal any age in classes 1 and 5, won by W. W. Black, Amherst N. S.

Class 6.—Grades of any Breed.

Steer 3 years old and upwards, 1, W. W. Black; 2, C. W. Pugsley, Barronsfield; 3, Amos Fowler, Amherst Pt., 4, Charles A. Forrest, Amherst Pt., 5, Laurie Anderson.

Steer 2 years and under 3, 1, W. W. Black; 2, Hazen Etter; 3, Albert Anderson, Sackville, 4, Edwin Forrest; 5, Charles A. Forrest; 6, Amos Fowler.

Steer 18 months and under 2 years, 1, W. W. Black; 2, Albert Anderson; 3, Laurie M. Anderson; 4, Edwin Forrest; 5, C. W. Pugsley; 6, Cecil T. Coates.

Steer 1 year and under 18 month, 1 and 2, W. W. Black; 3, T. J. Etter; 4, Chas. A. Forrest; 5, Cecil T. Coates; 6, Laurie Anderson.

Steer 6 months and under 1 year, 1, Laurie M. Anderson; 2, H. Etter; 3, 4 and 5, Albert Anderson.

Steer under 6 months, 1, W. W. Black; 2 and 3, Albert Anderson; 4, Amos Fowler; 5, Harold Etter.

Cow 3 years old and upwards, 1 and 3, W. W. Black; 2, Laurie M. Anderson; 4, Harold Etter; 5, Thos. J. Etter; 6, Amos Patterson.

Heifer 2 years old and under 3, 1, Amos Fowler; 2, W. W. Black, 3, Laurie M. Anderson; 4 and 5, Chas. A. Forrest; 6, Amos Patterson.

Heifer 18 months and under 2 years, 1, Chas. A. Forrest; 2, Amos Fowler; 3, W. W. Black; 4, Laurie M. Anderson; 5, Hazen Etter; 6, Albert Anderson.

Heifer 1 year and under 18 months, 1, Albert Anderson; 2, H. Etter; 3 and 4 Chas. A. Forrest; 5, Amos Patterson.

Heifer under 1 year, 1, W. W. Black; 2, Albert Anderson; 3, Cecil T. Coates; 4, Laurie M. Anderson.

Best steer any age, forty rods of wire fence, donated by the N.B. Wire Fence Co., Ltd. Monoton, W. W. Black.

Best female any age, goods valued $12.00, donated by the Amherst Foundry Co., Amherst, 1, T. J. Etter; 2, Courtney Lusby, West Amherst; 3, Laurie M. Anderson.

Championship in Class 6.

Class 10

Best female, any breed or grade; not having won a prize. The Frost Wire Fence Co., Ltd., Hamilton, Ontario, Harold Etter.

Class 12.

Donated by the Blatchford Calf Meal Co., Waukegan, Ill., represented by A. A. Archibald, Truro, for best calf under 1 year, any breed or grad, fed on Blatchford Calf Meal, C. A. Archibald.

Donated by the Blatchford Calf Meal Factory, Waukegan, Ill., represented by A. A. Archibald, Truro, for best beef animal any breed or grade, W. W. Black.

Class 13.

Donated by the Atlas Stock Food Co., Amherst, for the best beef animal, any breed or grade, under 18 months, fed on Atlas Stock food, $10 00. Exhibitor must show at least one empty package, W. W. Black.

DAIRY CATTLE.

Shorthorns.

Cow 4 years and upwards, 1, George M. Holmes.

Class 15.—Ayrshires.

Cow 4 years old and upwards, 1 and 2, McIntyre Bros., Sussex; 3, F. S. Black, Amherst, and McIntyre Bros.

Cow 3 years old, 1, C. A. Archibald; 2, 3 and 4, McIntyre Bros.

Heifer 2 years old, 1, Fred. S. Black, Amherst; 2, 3 and 4, McIntyre Bros.

Ayrshire Specials.

Cow 4 years old and upwards, 1 and 2 McIntyre Bros.

Cow 3 years old, 1, C. A. Archibald; 2, McIntyre Bros.

Heifer 2 years old, 1, F. S. Black, 2, McIntyre Bros.

Class 16.—Holsteins.

Holstein Cow 4 years old and upwards, 1, Logan Bros, Amherst; 2, R. L. Hicks, Dalhousie Jct.; 3, Samuel Dickie, Central Onslow, N. S.; 4, Logan Bros; 5, Arthur E. Dickie.

Cow 3 years old, 1, Arthur E. Dickie; 2, Logan Bros; 3, Samuel Dickie.

Heifer 2 years old, 1 A. E. Dickie; 2, S. Dickie; 3 and 4 Logan Bros.

Holstein Specials.

Cow 4 years old and upwards, 1, Logan Bros,; 2, R. L. Hicks.

Cow 3 years old, 1 A. E. Dickie; 2, Logon Bros.

Heifer 2 years old, 1, Arthur Dickie; 2, Samuel Dickie.

Class 17.—Guernseys.

Guernsey cow 4 years and upwards, 1, 3 and 4, Roper Bros., Charlottetown; 2, Arthur W. Roper, East Royalty, P. E. I.

Class 18.—Jerseys.

Cow 4 years and upwards, 1 and 2, J. E. Baker & Sons, Barronsfield, N. S; 3, 4 and 5, H. S. Pipes & Sons, Amherst, N. S.

Cow 3 years old, 1, 2 and 3, H. S. Pipes & Sons.

Heifer 2 years old, 1 J. R. Semple, Brule, N.S.; 2, J. E. Baker & Sons; 3, H. S. Pipes & Sons.

Class 19.—Grades.

Cow 4 years and upwards, 1, W. W. Black; 2, J. R. Semple; 3, W. N. Boomer, Amherst Pt.; 4, T. W. Keilor, Amherst Pt.; 5, Roper Bros; 6, A. W. Roper.

Cow 3, years old, 1, F. S. Black; 2, McIntyre Bros; 3, J. R. Semple.

Heifer 2 years old, 1, F. S. Black; 2, J. R. Semple; 3, L. M. Anderson; 4 and 5, T. W. Keilor; 6, Roper Bros.

Grade Specials.

Cow 4 years and upwards, 1, W. W. Black; 2, J. R. Semple.

Cow 3 years old, 1, F. S. Black; 2, McIntyre Bros.

Heifer 2 years, 1, Amos Fowler; 2, J. R. Semple.

Donated by the T. Eaton Co., Ltd., Toronto, for the best herd of milch cows, to include one aged cow, one three-year old cow and one two-year-old heifer, 1, E. A. Dickie; 2, Arthur Roper.

Grand Championship.

Silver cup donated by Henry Birks & Son, Ltd., for the highest scoring cow in the Dairy Test of any breed or grade, Logan Bros.

SHEEP.

Class 20.—Leicesters.

Ewe 2 years or over, 1, 2, 3 and 4 Albert Boswell, Pownal.

Ewe 1 year and under, 1, 3 and 4, Albert Boswell; 2, Samuel C. Lane, Pownal;

Ewe Lamb, 1, 2, 3 and 4, Albert Boswell.

Yearling Wether, 1, Albert Boswell; 2, 3 and 4, Samuel C. Lane.

Wether lamb, 1 and 3, Samuel C. Lane; 2 and 4, Albert Boswell.

Class 21.—Lincolns.

Ewe 2 years old or over, 1 and 3, Albert Boswell Jr.; 2 and 4, Chas. Symes, Minudie, N. S.

Ewe 1 year and under, 1 and 3, Albert Boswell; 2 and 4, Chas. Symes.

Ewe lamb, 1 and 3, Albert Boswell; 2 and 4, Chas Symes.

Class 22.—Cotswolds.

Everything in this class went to H. B. Parlee, Sussex, N. B.

Class 23.—Cheviots.

Everything in this class went to Chas. Symes, Minudie, N. S.

Class 25.—Southdowns.

Ewe 2 years old and over, 1: J. E. Baker & Son; 2 and 4, Cephas Nunn; 3, Oliver C. Saunders, Triby.

Ewe 1 year old and under 1, Oliver C. Saunders; 2 and 4, Cephas Nunn; 3, J. E. Baker & Son.

Ewe lamb, 1 and 3, J. E. Baker & Son; 2, Oliver C. Saunders; 4, Cephas Nunn.

Yearling Wether, 1, Jas. E. Baker & Son.

Wether lamb, 1, Oliver C. Saunders, 2, J. E. Baker & Son.

Class 26.—Shropshires.

Ewe 2 years old or over, 1 and 3, Logan Bros.; 2, Cephas Nunn; 4, George Boswell.

Ewe 1 year old and under 2, 1, Geo. Boswell; 2, 3 and 4, Logan Bros.

Ewe lamb, 1 and 4, Logan Bros, 2, James Stewart, Amherst Pt.; 3, Geo. Boswell.

Yearling Wether, 1 and 3 Logan Bros.; 2, Jas. Stewart.

Wether lamb, 1 and 2, James Stewart, 3, Logan Bros.

Class 27.—Oxfords.

Ewe 2 years old or over, 1 and 2, J. E. Baker & Son; 3 and 4, Burder Goodwin, Baie Verte.

Ewe 1 year old and under 2, 1, Burder Goodwin; 2, 3 and 4, J. E. Baker and son.

Ewe lamb, 1, 2 and 4, J. E. Baker & Son; 3, Burder Goodwin.

Yearling Wether, 1, J. E. Baker & Son.

Wether lamb, J. E. Baker & Son.

Class 28.—Hampshires.

Everything in this class went to Cephas Nunn.

Class 29—Suffolks

Everything in this class went to Albert Boswell.

Class 30.—Grades and Crosses.

Ewe 2 years or over, 1, James Stewart; 2 and 6, Logan Bros; 3, Cephas Nunn; 4, Geo. Boswell; 5, Samuel C. Lane.

Ewe 1 year and under 2, 1, Jas. Stewart; 2 and 4, Logan Bros; 3, Samuel C. Lane; 5, Oliver C. Saunders; 6, A. H. Boswell.

Ewe lamb, 1, 3 and 4, Jas. Stewart; 2, Logan Bros.; 5, Oliver C. Saunders.

Yearling wether, 1 Jas. Stewart; 2 and 5, Samuel Saunders; 3, Logan Bros; 4, Oliver C. Saunders.

Yearling wether, 1, Jas. Stewart; 2 and 5, Samuel C. Lane; 3, Logan Bros.; 4, Oliver C. Saunders.

Wether lamb, 1, Jas. Stewart; 2 and 3, Oliver C. Saunders; 4, Logan Bros.

Class 31.—Dressed Sheep Carcasses.

Dressed sheep to be shown from any sheep over 1 year old exhibited in foregoing classes, 1 and 2 J. E. Baker & Son; 3, Samuel C. Lane; 4, Cephas Nunn; 5, Logan Bros.; 6, Oliver C. Saunders.

Dressed carcasses to be shown from any sheep under 1 year old exhibited in foregoing classes, 1, 3, 4 and 5, Jas. Stewart; 2, Oliver, C. Saunders; 6, Logan Bros.

(Continued on page 142.)

HORTICULTURE

Nova Scotia Fruit Growers' Association.

The forty-sixth annual meeting was held in the Court House at Kentville, on Dec. 1st, 2nd and 3rd. Kentville is the centre of the fruit belt of the province, the shiretown of Kings County, with all its people thoroughly interested in fruit growing. F. M. Chipman, of Annapolis County, was President for the past year and in his opening address said, in part :

"We extend a cordial welcome to the members, friends and guests, who may be with us to-day from other provinces, and hope our meeting together will be of mutual benefit, and will awaken within us new ambitions, stronger hope and greater determination to make our horticultural life even a greater success.

"The spring of 1909 opened rather cold and backward, retarding the growth of vegetation and causing the apple trees to bloom some days later than usual in the fruit district. The weather during the blossom season was all one could desire for pollenization, giving an abundant set of fruit.

"The summer and early autumn months being unusually dry, caused the fruit to make very little growth, until the latter part of September, from which time to the close of the fruit season, we were blessed with ideal weather for the growth and harvesting of the abundant crop of fruit, estimated by our best authorities at 700,000 barrels, 250,000 of which have already been shipped from the port of Halifax.

"In the early part of the season there was a good demand, with fairly good prices offered, and in some cases a keen competition arose between buyers, as to who should get the fruit, which at a later date began to wane, until some buyers refused to handle any more fruit at all.

"Various causes have been assigned for this decline in the fruit market. One is that the fruit was shipped too early in the season, especially the Gravensteins. Another, that the transportation facilities are not suitable for soft fruit, and, therefore, it arrived on the market soft and in a wasty condition.

"Another, that all apples, both early and late varieties, have been and are now ripening unusually early. Whether the reasons I have named or any other, or all combined, may have caused the decline in the apple trade, there is one fact we must not overlook, one which I want to particularly emphasize and call to your serious consideration. It is this: unless there are better methods adopted in the handling, on this side, and in the transportation across, our foreign trade in Gravensteins is done forever, with any degree of satisfaction and remuneration, to the producer and speculator as well.

"The usual insect pests have not been very destructive this year, excepting the canker worm in some localities, owing largely to the fact that intelligent and thorough spraying has been adopted and fruit growers are realizing more and more the necessity of adopting the most approved methods of treating their orchards to insure success. We have a reasonably cheap and effective means for destroying the canker worm, and it is greatly desired by fruit growers that such means be thoroughly applied in order that the pest be completely exterminated from our orchards which we believe to be possible.

"The Provincial Exhibition at Halifax this year, being held on a later date than previous ones, afforded an opportunity for fruit growers making a very creditable show of fruit, but on account of unfavorable weather, did not prove a financial success.

"The County, or District Exhibition, which was held at Middleton early in October, for the display of fruit, vegetables and poultry, compared very favorably with former exhibitions and proved a great success.

"I wish to call your attention to the question of "Summer Sorting" or "Thinning of Fruit in the Early Summer Months," which was discussed at our last annual meeting. At that meeting there was quite a large committee appointed, composed of some of our most progressive fruit growers, who, I am happy to say, have done something along that line, and no doubt will be able to report good results from their efforts.

"The long-sought for and much-desired Fruit Experimental Farm has not, as yet, materialized. It is a custom of our Government, when matters of importance are brought to their attention, to promise it their serious consideration. In the case of the Experimental Farm, we have two Governments interested, and will, therefore, require lengthy consideration before the matter can be properly adjusted. Our dying hopes are revived once a year by having an Upper Province man sent down, we presume, by the Minister of Agriculture, to look over the situation, examine a number of properties and report.

"We are entering the 46th anniversary of our Association, with the assurance that the same energy, ability and cordial co-operation of all the officers and members will, as in the past, enable us to overcome all difficulties and increase the usefulness of this noble institution.

"We have every reason for giving thanks to kind Providence for the abundant blessings bestowed upon the labors of our hands, thankful for the goodly heritage we have been permitted to enjoy, ever proud of the land of our birth and loyal to the flag that protects our homes."

Frank T. Shutt, M. A., Chemist of the Dominion Experimental Farm, Ottawa, was first on the program. Mr. Shutt is a prime favorite with the Valley fruit growers. His work is appreciated by all. His subject was "The Control of Moisture in Orchard Soils." He had numerous diagrams in illustrating and was heartily received. He spoke of his delight in coming to Nova Scotia, where he had so many warm friends. He began by speaking of the importance of controlling moisture in an orchard, the advantage of a cover crop, in so far as it controls moisture in the orchard soil. The old plan of not cultivating the orchard did not meet with Mr. Shutt's approval. Nor did he approve of raising a grain crop on orchard soil. Moisture is more than half the battle in raising fruit.

The question is what to do with the land in a young orchard. It may be solved by what is termed a "hoe" crop. This means liberal cultivation of soil, plenty of fertilizer, all of which the young trees need. However, he had no hard and fast rule—so much depended on soil and climate conditions. The paper was interspersed with most interesting and valuable questions and answers, and all present expressed themselves delighted. If they gathered nothing else of interest at the meeting, the afternoon's session was sufficient payment for their coming. The paper gave the benefit of the practical work done under Prof. Shutt's observations. His charts showed the moisture from cultivated orchard and orchard in sod. The first gave most gratifying returns.

L. D. Robinson introduced a discussion on "Winter Spraying". He enumerated the enemies of the farmer blights and bugs and the many varieties of worms and moths. One might cultivate and improve but if one doesn't kill the bug, their work is more than useless. He prescribed Bordeaux mixture, in small doses, and judiciously applied, what is known as the 3-3-40 mixture is what has given universal satisfaction and is used by all the largest growers. He advised the farmers to avoid getting any prepared mixture from the man who wanted to sell it.

Prof. Shutt followed with some interesting remarks re the chemistry of certain materials used in spraying, and later the discussion became general. Capt. C. O. Allen had a lot of information on the use of lime and sulphur as a spray—and the matter was thoroughly discussed at length.

A feature of the meeting was the presence and talks of Robert Thompson of St. Catherines, Ontario. Mr. Thompson is manager of the S. H. Catherine Storage and Forwarding Co. He is a hard headed practical business farmer and talks not from theory but from practice. Mr. Thompson is thoroughly at home on all questions concerning fruit, from growing to selling. This was his first visit to the Annapolis Valley and he was greatly impressed with the possibilities of the country.

The following officers were elected for the ensuing year:

President—E. E. Archibald, Wolfville.

Senior Vice-President—R. J. Messenger, Bridgetown.

County Vice Presidents:—

Annapolis County—G. C. Miller, Middleton.

Kings County—J. S. Bishop, Auburn.

Hants County—Mrs. Wm. Sangster, Falmouth.

Halifax County—G. N. McKeen, Gays River.

Lunenburg County—W. A. Hebb, Lunenburg.

Digby County.—H. M. Rice, Bear River.

Yarmouth County—S. A. Porter, Deerfield.

Shelburne County—C. S. McGill, Shelburne.

Queens County—Josiah Smith.

Colchester County—P. T. Shaw, Truro.

Pictou County—C. R. B. Bryan, Durham.

Cumberland County—Sandford Purdy, Westchester.

Antigonish County—F. R. Trotter, Antigonish.

Guysboro County—J. A. McMasters, Boyleston.

Victoria County—Mrs. Alex. Anderson, Baddeck Forks.

Cape Breton County—Dr. Kendall, M. P., Sydney.

Inverness County—Walter McDonald, Glendyer.

Richmond County—Donald Urquhart, West Bay.

Secretary—S. C. Parker, Berwick.

Assistant Secretary—M. H. Ellis, Port Williams.

Treasurer—George M. Munro, Wolfville.

Auditors—W. M. Black, J. Elliott Smith.

Executive Board:—The President, Vice President, Secretary, J. N. Chute, Berwick; W. O'Brien, Windsor; F. H. Johnson, Bridgetown; Col. S. Spurr, Melvern Square.

Exhibition Committee:—A. C. Starr, Arthur Johnson, Col. Spurr, F. H. Johnson.

Publication Committee:—The President, ex-officio, the Secretary, ex-officio John Donaldson.

Delegates to Farmer's Association:—P. Innis, Dr. Johnson.

Mayor Dr. H. B. Webster gave an excellent address of welcome referring in a flattering way to the work the Association had done for the province. Vice President R. J. Messenger replied expressing thanks to the town and citizens for their hospitality.

"Champion" Evaporators Make the Best Maple Syrup.

They make the kind that win the Blue Ribbons, and bring you fancy prices.

Instead of a dark colored syrup, you will get a clear amber colored syrup, full and fragrant of maple flavor.

The catalogue tells you all the newest ideas in Sugaring, and will show you how a "Champion" Evaporator will greatly increase your profits on your sugar bush.

The Grimm Mfg. Co., 58 Wellington Street. MONTREAL.

The Expermintal Orchard Station.

It was intimated by Prof. Cumming at the Fruit Growers meeting at Kentville last week, that if the Executive of the Association would agree in recommending a location to the government that such a recommendation would probably be accepted by the government and the station established. With this suggestion the committee lost no time in getting to business. Before the session closed they had unanimously agreed that the advantage of Kentville as a location were pre-eminent and if a suitable place could be secured complying with the conditions, they would recommend the same. On the 8th inst the committee again met in Kentville, and spent a day in looking over the locality and unanimously agreed to recommend the Sharp Farm as the most suitable place for the object in view. This farm is about one half mile from Kentville station, is composed of 350 acres of land, including 25 acres of dyke lands and 150 of standing timber, much of it virgin forest. The place has been in chancery for twenty years and has not been cared for in a way to improve it any. The possibilities are unlimited and time and money will make a fruit station second to none in Canada.

The Home Orchard.

SOIL SHOULD BE WELL DRAINED.

We often hear people say it does not pay to plant trees; that there are so many pests to destroy either the trees or the fruit that the return does not compensate one for the time and labor expended in trying to grow an orchard. These statements are made in all sincerity, but before being able to decide the matter impartially it will be necessary to first consider what is meant by compensation. When the orchard is planned for home purposes only there can be no money return looked for from the sale of fruits, and our compensation consists of the enjoyment and gratification derived from the consumption of the fruit and the pleasure of always having it at hand when wanted. The same may be said of raising wheat just for home consumption. And when we go to great expense to build a house to shelter us from the storm we do not look for any money return, and yet we think it pays for the comfort and enjoyment we get out of it. In fact, nothing pays except as it bring us lasting peace and joy, for money in itself is worthless except as we may use it to add to our happiness or peace of mind. In this connection we will say that there is not one thing connected with the home that brings a greater return for the money and labor expended than the orchard. When once started it is there for what is usually considered a life time, and, with a variety, one is nearly always sure of a partial crop at least. Without the trees, no fruit is expected; with them, there is always a possibility of a crop, and one crop will more than pay for the cost of the trees,

About 35 trees, properly selected, should furnish all the apples an ordinary family would care for, even with a light crop, while on an apple year there would be many more than could be used In choosing the varieties, one of course desires those that ripen continuously from the earliest to the latest.

In selecting a cite for an orchard, one close to the house is preferred, if the soil is at all suitable. One of the most important considerations is the preparation of the soil for planting. It should be well manured, and drained if necessary, as trees will not thrive on a cold, clammy soil that is constantly saturated with moisture. It should be plowed deep. Apple trees should be planted about 30 feet apart each way; pears and cherries about 20 feet, and peaches and plums about 18 feet each way. They should be in straight rows, which will make cultivation more convenient. The holes thould be dug a little deeper that the trees are set, and then partially filled in with loose dirt. Then while one person holds the tree in position another should fil in the finest earth pressing it firmly about the tree and being careful not to put in any sods or stones. A bucket of water should then be poured on the loose earth, and it is a good idea to stake the trees, inclining them slightly to the southwest. This should be done in a way, however, that the bark will not be injured. The holes should be of sufficient diameter that the roots need not be twisted but may assume their natural position. All broken roots and twigs should be carefully pruned off and trees should not be planted any deeper than they were in the nursery. Apples may be planted either in the fall or spring, but I much prefer to plant in the spring. Other fruits I would not plant at any other time. The ground should be kept well cultivated, and we have found it very profitable to spread coarse manure around the trees every spring, extending it as far as the branches reach, but care should be taken not to pile it against the trees. Where this plan is carried out the resnlt can hardly be other than a fine home orchard, which will be a source of great delight to the family.—Home Orchard, Cumberland Co., N. S.

ARE YOU SATISFIED WITH A 20 ACRE CROP FROM A 40 ACRE FARM?

YOU know it costs as much in time, labor, seed and implements to raise a poor crop as it does to raise a good one. You know also that unless your land is kept constantly supplied with lime, nitrogen and phosphates and the ingredients of barnyard manure it becomes worn out and loses its fertility.

You know further that it costs more, and trebles your labor, to spread manure by hand than it does to use a well-made manure spreader.

Maybe you don't know that one load of manure evenly spread by a mechanical spreader is worth four loads scattered by hand—

And that your crop, whether rotation or continuous, will be increased from 20 to 40 per cent by the use of an

I. H. C. Manure Spreader

Made in two styles as follows:

The Corn King, Return-Apron Spreader.

The Cloverleaf, Endless-Apron Spreader.

I. H. C. spreaders are made of the best material—wood and steel. They have powerful steel frames and steel-bound boxes, which damp manure cannot rot.

I. H. C. spreaders are easily drawn. They can be adjusted to spread a thin or heavy coat with equal evenness.

I. H. C. spreaders are so simple in operation that a boy can do the work which used to require a strong man.

An I. H. C. spreader will save in time and labor more than enough to pay for itself in one season.

Your increased income from better crops will be clear profit.

Scientific experiment has proved that this profit will vary from $4.00 to $20.00 per acre.

You cannot afford to be a half-crop farmer and there is no reason why you should be one.

An I. H. C. spreader will give you the full return from your land, whatever the size of your farm.

Call on our agent in your town and talk the spreader over with him, or, if you prefer, write nearest branch house for catalogue and other information.

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

The Care of Composite Milk Samples.

A composite sample of milk is a sample made up of two or more smaller samples of milk taken from the same source of supply, but taken at different times and from milk produced at different periods. On the farm these small samples represent different milkings from the same cow and the samples in this mixed condition are to represent the milk of that cow for a given period. In the creamery the small samples are to represent the daily delivery of a patron and the combined or composite sample is to represent the daily deliveries of that patron for a given time. This period of time usually extends from seven to fourteen days and the pint or so of milk collected in small amounts during this time forms the composite sample.

This method of collecting samples of milk to be tested is to be recommended, because it has been shown that by its use accurate determination of the fatty contents of milk or cream can be made with a smaller expenditure of time and money.

The per cent. of fat in the milk produced by individual cows varies greatly. The mixed milk of individual cows, or the milk of a herd does not vary so greatly in its composition because the higher per cent. of fat in the milk of one cow may for a day offset the lower per cent. of fat in the milk of some other member of the herd, and vice versa, but even under these conditions the variation in the per cent. of fat in the milk of a herd may be considerable from day to day.

It is, therefore, unsafe and unjust to assume that the product of any one day will accurately represent the product of any other day. When a small portion of each day's milk is taken and carefully mixed with similiar samples representing the product of other days, and the mixed milk is tested, we may expect to accurately determine the per cent. of fat in the milk which a cow is producing at that period of lactation, or the per cent. of fat in milk which a dairy farmer may be furnishing a creamery.

In securing and preserving composite samples of milk or cream, it will be well to observe the following points: The milk or cream must be thoronghly mixed by pouring from one pail or can to another several times to evenly mix the butter fat with the milk serum. A small dipper may be used to further agitate the milk. This dipper should have a solid metal handle for convenience in cleaning and the capacity shonld be about one ounce, or just large enough for measuring the desired sample into the jar in which it is to be preserved. By using the same dipper an approximately equal amount of milk may be taken at each milking, for at each delivery, until the composite sample is complete. Several cans or jars may be successfully used for composite samples, but naturally some are better than others. The first essential is that the jar be practically air tight, otherwise a small amount of water may evaporate or be taken up by the atmosphere, thereby slightly increasing the per cent. of fat in the milk or cream that remains in the jar. The second essential is that the jar be as simple as possible, that it have few parts, and preferably no parts of metal or rubber. The third essential is that the jar have a wide mouth, which can be easily and quickly opened and closed, to admit of rapid work in handling samples. The ideal jar for this purpose has a glass stopper.

It is necessary that the milk be kept in its natural liquid condition until the composite sample is complete and ready for testing. Changes in milk are due to the presence of development of bacteria. To prevent these changes all, or nearly all, bacteria in the milk samples must be killed. For the purpose of destroying bacteria very inexpensive chemicals or preservatives may be employed. Among the liquid preservatives that may be used for this purpose, a 40% solution of formalin may be recommended. The same amount of formalin placed in different jars of milk taken from the same supply, and the milk kept under the same condition of temperature will not always produce exactly like results in a given time. Information obtained in preserving several hundred composite samples of milk warrants the following statement.

FORMALIN.

Under ordinary conditions of temperature, varying from 50 to 80 degrees F., four or five drops of formalin will keep a pint of ordinary milk or cream in a good liquid condition for from nine to eleven days. Six or seven drops will preserve a pint of milk from ten to fourteen days. Eight to ten drops will preserve same amount of milk for a period of from fourteen to 20 days. A larger amount of formalin may be successfully used for preserving milk or cream for a longer period.

POTASSIUM BICHROMATE, OR "BICHROMATE OF POTASH.

Among the dry or powdered preservatives to be recommended for preserving milk and cream samples, Potassium Bichromate has proved to be very satisfactory in every instance. This chemical possesses great power as a destroyer of germ life and only very small quantities need be used. One tenth of a gram, or an amount of the preservative that could be piled on an area one-fourth inch square, is sufficient to preserve a pint of milk in good condition for testing for a period of from two or three weeks. The color of the milk is changed by this chemical to a reddish yellow. Potassium Bichromate is inexpensive and, like formalin may be purchased of the local druggists.

CORROSIVE SUBLIMATE TABLATS.

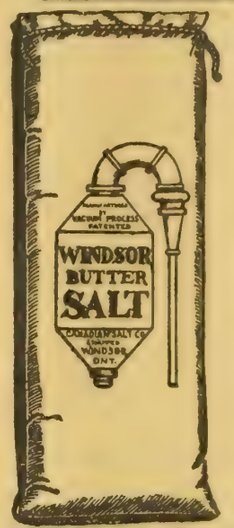
Tablets composed of Corrosive Sublimate combined with coloring matter for preserving samples of milk to be tested have recently been placed on the market by some of the dairy supply houses, and when used according to the accompanying directions produce satisfactory results. Undoubtedly a preservative in the tablet form possesses a distinct advantage over others for general purposes, as the proper amount of preservative can always be had without measuring.

In using preservatives, the entire amount should be added to the first lot of milk placed in the sample jar.

The preservative should be completely dissolved at once and thoroughly mixed with the milk.

Every time a new lot of milk is added to the sample the same should be thoroughly mixed with the old milk. Bottles and contents should also be shaken often enough to prevent the fat in the milk rising and forming a thick, tough layer of cream on the surface.

IVAN COMINGS WELD,
New Hampshire Agricultural Experimental Station.



There is hardly a farmer's daughter in Canada who does not know Windsor Salt.

It has been the universal standby for years.

Practically all the prize winners at the fairs have used Windsor Salt—last year, 95% of those winning cash, medals and premiums, made their prize butter with Windsor Salt.

If you have not been using Windsor Salt for butter making, get a sack and try it. You will then see why the prize butter makers use it.

7

Developing a Cow.

EDITOR MARITIME FARMER:

As with men, the parentage is of great value, and we look for and have a good reason to expect cows to be better cows from a long line of productive ancestry; so this then is the stepping stone in the developing of the dairy cow.

A profitable cow in my estimation is one that can produce in a year, or still better a series of years, a good maximum yield of butter at a cost that will yield a good profit to her owner and also produce a strong, healthy calf each year. This should be one of the requisites in securing a sire for the head of the herd; not only see that he is from a productive strain but from a family of regular breeders, because he not only reproduces his good qualities, but often intensifies his weak points as well. See that he is as near perfect in conformation and dairy makeup as possible, for with all the care we may exercise in the mating of our animals some falty ones will develop that we had not figured on; so if we have looked well to the end, to see that the size is right and that the dams we are to use for foundation are right, we have gone a long way toward their development.

Calves should be fed in such a way as not to impair either growth or digestion, for later on we are going to ask them to take care of a lot of feed so they mav develop and be profitable animals, but if fed and cared for in a careless and harmful manner their digestive faculties have been impaired, and they simply say, "we can't do it."

I am still a believer that heifers should not freshen too young. If allowed to drop their first calf at from 28 to 30 months of age, they will get a little more growth and strength, and we believe their digestive capabilities are also strengthened.

We have come to believe that a large part is due to the feed end of

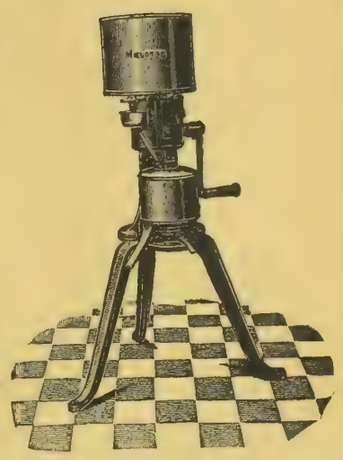
GOOD LIVE AGENTS WANTED.



R. A. LISTER & CO. Limited, 62 Stewart Street, TORONTO.

Agents Wanted!

We want agents to handle the Acme Steel Ladder. It is by far the best seller on the market today. You can, with horse and rig, make $5 00 to $10 00 a day by simply calling on property owners in your vicinity.

The Acme Steel Ladder affords protection from fire in a greater degree than any other ladder.

The Acme Steel Ladder is made and sold in one foot lengths. These can be fastened in such a way as to make a ladder of any length perfectly rigid.

They can be moved anywhere on the roof, either from the top or bottom of it.

Send for information regarding our selling proposition.

The Acme Ladder is made in one foot links just the same as the old style ladder but with a very simple lock which is fully protected with patents. When the ladder is together the links are held rigid

If you are thinking of equipping your buildings with steel ladders and there is no agent in your locality and will write us we will have a man call on you.

The Acme Steel Ladder Co.,
SUSSEX, - - N. B.

the question. The organs of digestion like the other organs and muscles of the body, are developed best by constant use; the breeder who, through neglect, has not provided in some way for the emergencies that always come is short sighted. We all know that when a cow once shrinks in her milk how hard it is to get her back, and quite often it is impossible, even with the best of feeds, so it stands us in hand to provide in some way for these times and either have some soiling crops growing, or enough silage stored up to supplement the short pastures of summer, also to supply succulent feed for the winter use.

I believe there is such a thing as compelling success. Every breeder should have a complete understanding of his business and the individual needs of each animal, so that there is no time in the year when she may not have abundance of good rich juicy, foods best suited for milk production.

F. H. SCRIBNER.

The Science of Milking Cows Clean.

It is well known that the average milker gets less milk than he who does a thorough job; that incomplete milking means not only direct but indirect loss, not only an immediate lessening of the fat yield, but tends towards drying the cow. A Danish scientist has recently developed a special system of udder manipulation, a sort of massage of the mammary gland, as it were, which it is claimed augments the flow. The Hegelund method, as it is called, involves three manipulations, each thrice repeated or until no more milk is obtained. First, the pressure of the quarter on each side against each other thrice repeated, followed by removal of the milk; second, the pressure of the glands together on each side, the fore quarter being first manipulated and then the hind quarters, followed by removal of the milk; and third, the fore quarters are pressed between hand and body, with hands holding the teats loosely, then the hind quarters also, followed by milking.

Trials of the schemes made at the Wisconsin and New York stations afford a daily average increase per cow of a pound of milk and two ounces of butter. The after milk was very rich in fat, testing above 10 per cent. This after milking takes not to exceed five minutes' time, often only two or three minutes. The two ounces of butter may be held at a low estimate to be worth two cents. This would be a fair pay for two minutes work, 24 cents an hour and the skim milk thrown in. Not only is more milk and butter made, but the sections is stimulated and the lactation period prolonged. It may be remarked, however, that the differences in milk and butter yields between this method and careful stripping are not great. The Danish method emphasizes more perhaps than has hitherto been done, the actual and potential losses due to incomplete milking.—Prof. J. L. Hillis, Vermont Experimental Station.

Cost of Producing Milk.

After a year's observations with the dairy herd at Cornell University, Prof. H. H. Wing reached the following conclusions regarding the food cost of producing milk:

1st. With a fairly good herd, carefully fed and kept, milk can be produced for 65 cents a cwt,, and fat for sixteen cents a pound for the cost of food consumed.

2nd. That individuals of the same breed vary more widely in milk and butter production than do the breeds themselves.

3rd. The larger animals consumed less pounds of dry material per 1,000 pounds live weight a day than did the smaller animals.

4th. That in general the best yields of fat were obtained from cows that gave at least a fairly large flow of milk.

5th. In general, the cows consuming the most food produced both milk and fat at the lowest rate.

Easy Terms —ON— Dairy Farm.

50 acre farm near Shubenacadie. 15 acres cultivated, 10 in pasture and 25 acres in woods.

LIVE STOCK.

Butcher Hogs.

In the meat trade the term "Butcher Hogs" is commonly used to designate stock best suited for the fresh-meat trade, says Professor Wm. Deitrich in a recent discourse. They may be slaughtered and consumed at home, may be shipped and slaughtered in the East, may be slaughtered locally and the most consumed locally, and may be shipped East, or even to foreign countries. About 25 per cent. of the hogs coming to Chicago market annually are of this class.

They range in age, with good care and heavy feeding, from about six months for the light butchers to one year for the heavy butchers. With less intensive feeding the age will be greater for hogs of the various weights. The class of butcher hogs is subdivided into three subclasses, as follows:

Heavy butchers, 280 to 350 pounds.

Light butchers, 180 to 220 pounds.

Except in wight, these three subdivisions are practically the same. Hogs of this class are graded on the market as follows:

Hogs that will grade as prime butchers, either heavy, medium or light, must be perfect in quality, ideal in form and must show much evidence of ripeness in condition as well as maturity. The term "prime" in a general way means the best of the class, but in a more specific way in stockyard vernacular it has a meaning of its own. To grade as prime, a hog must show marked evidence of ripeness and maturity. The two must go hand in hand.

A hog may be mature without having been fed so as to show that bloom of condition that is necessary for a prime hog, or he may have been as well fed as possible and not be sufficiently mature; consequently he would not grade as prime. The high state of finish required for a hog of this grade is brought about by liberal grain feeding to maturity. Maturity in general means that condition at which development is complete.

In a more specific sense in the realm of swine feeding it may have an additional meaning, namely, that stage in the process of feeding where growth ceases under a given system of feeding and the animal takes on the form and appearance as well as the high state of finish of an ordinary well-fied mature animal. This may be at different ages and weights, thus giving us prime heavy hogs and prime, heavy, medium and light butchers, ranging in weight from 500 down to 200 pounds.

By quality is meant the characteristic that is indicated by a medium-sized, fine, clean-cut head without any surplus fat or wrinkles of skin; medium sized ears of fine texture; hair that is fine, straight and silky and lies close to the body; skin that is smooth, pliable and free from wrinkles; tail that is smooth, nicely tapering and not too large; bone that is fine, firm and free from undue coarseness at the joints as indicated in the legs; shoulders that in the case of boars have not too large development of shields; and by a symmetrical, smooth development throughout the entire body. In short, such points of refinement in form and features are characteristic of well-bred swine.

The form of a prime butcher hog is that of an ideal fat or lard hog, namely, broad back, wide and well-filled hams and shoulders, short, heavy neck, heavy jowls, and short legs. The hog must have these parts well developed, and at the same time be symmetrical, smooth and compact. Together with this form there must be an indication of quality, such as goes only with good breeding and good feeding.

Condition is a greater factor than either form or quality in determining the grade to which a fat hog belongs. By condition is meant the degree of fatness. Prime butcher hogs must be well covered with a thick layer of fat on the outside of the carcass, be well rounded out at the rump, thus making a socket in which the tail is set, be well filled out on the neck up to the face, have a broad, fat back with much fat on the sides and on the belly, and be well filled in the twist. Besides this, they must be free from flabbiness and show a firm, even and symmetrical development.

MOVING PICTURES
OF DAN PATCH 1:55

ABSOLUTELY *FREE* POSTAGE PAID

If you are a Farmer, Stockman or Poultry Raiser and correctly answer, in your postal card or letter reply, the specified questions.

THIS IS THE LATEST SENSATION AND GREATEST TRIUMPH IN THE GREAT MOVING PICTURE ART.

It is a *New Invention* that you can carry in your pocket and show your friends instantly, day or night, either once or a hundred times, and without a machine, curtain or light. It is the first successful moving picture ever taken of a World Champion Horse in his wonderful burst of speed. The original film contains

2400 INSTANTANEOUS PICTURES OF DAN PATCH

and every picture shows the King of all Horse Creation as plainly as if you stood on the track and actually saw Dan Patch 1:55 in one of his thrilling speed exhibitions for a full mile. 2400 distinct moving pictures taken of Dan in one minute and fifty-five seconds means twenty-one pictures taken every second all of the way around the entire mile track from the back seat of a high power automobile. You can see Dan shake his head to let his driver know that he is ready for a supreme effort and then you can watch every movement of his legs as he flies through the air with his tremendous stride of 29 feet. You can see his thrilling finish as he strains every nerve to reach the wire, you can see his driver dismount and look at his watch while thousands of people crowd around, you can see his caretaker force his way through the crowd and throw a beautiful woolen blanket over Dan to prevent his catching cold and then you can follow him up the track before the madly cheering multitudes. As a study of horse motion it is better than the actual speed mile because you can see Dan right before you for every foot of the entire mile. When first shown to the public this marvellous picture caused people to stand up all over the theatre calling "Come on Dan"—"Come on Dan."

This remarkable moving picture is the most realistic and the most thrilling ever presented to the public.

We have taken a part of these 2400 wonderful and sensational pictures and made them into a *Newly Invented Moving Picture* that you can carry in your pocket and show to your friends at any time, day or night. It does not need a machine, it does not need a curtain and it does not need a light. It is all ready to show instantly either once or a hundred times and creates a sensation wherever shown.

THIS MOVING PICTURE WILL BE MAILED TO YOU ABSOLUTELY FREE, WITH POSTAGE PREPAID, IF YOU ARE A FARMER, STOCKMAN OR POULTRY RAISER, AND CORRECTLY ANSWER THE THREE QUESTIONS.

YOU MUST ANSWER THESE 3 QUESTIONS IF YOU WANT THE MOVING PICTURES FREE

1st. In what paper did you see my Moving Picture Offer? 2nd. How many head each of Horses, Cattle, Sheep, Hogs and Poultry do you own? 3rd. How many acres of land do you own or how many acres of land do you rent?

I will not mail this wonderful moving picture of Dan Patch 1:55 free unless you are a Farmer, Stockowner or Poultry Raiser and unless you correctly and honestly answer the three questions.

IF YOU ARE NOT A STOCKOWNER AND WANT THE MOVING PICTURES SEND ME 25 CENTS.

In silver or stamps to pay postage, etc., on Moving Pictures. I will mail this wonderful Moving Picture of Dan Patch 1:55, the fastest harness horse the world has ever seen,—to you if you send me Twenty-five Cents in silver or stamps even if you do not own any stock or land. It costs about $2700.00 cash to have one of the original pictures taken and reproduced. ☞Write me to-day so that you will be sure to secure one before my supply is exhausted.

Care of Pregnant Ewes.

Many ewes and lambs are lost in the winter through crowding in the yards and pens. There are other disadvantages attached to this false economy in the winter care; perhaps it may be truly said want of care, for no other animals more than sheep call for the close oversight of the owner all the time, and none get less of it. Sheep require plenty of room on account of their natural habit of crowding. They also need to be kept in small apartments set off from the main sheds, so that one gang cannot trespass on the place of any other. This is especially important at this time, for crowding will very much interfere with the business of the rams. Fifty sheep are enough to be kept in one shed, and if this shed is made twice as long as wide and has a door at one end and two at the side opposite the feed rack, everything in the shed will be most convenient, safe entrance as well as exit being as convenient and safe as may be possible.

Ewes which have been served should be kept in such pens or sheds as this, and for additional shed room should be made, end to end, and in rows across a roomy lot. This will permit the sheep to go in where it is most convenient for them, and thus the crowding which is so injurious to in-lamb ewes will be avoided,

These sheds should be made on the outside of convenient yards, forming one side of the yard, and each large enough to accommodate a hundred ewes. They will need to be thirty feet wide sixty long, or even longer than this, which will be a great economy in the building of them. The front of the sheds inside the yards should be all doors, and these should not open in the usual way, but be made to slide on rollers, by which they are hung to the front of the building. This manner of building will completely prevent accidents, which otherwise will be happening continually through the crowding of the sheep going in or out of the sheds. It will really be necessary to move these doors, as they may be open all the time with convenience. But there may be unusually stormy winter weather at times, and then the sheep and the lambs especially may need protection, when the doors may be closed. These should be outside and be hung on rollers. Handles to move them should be put on. The rule should always be in all respects in managing sheep that all accidents should be profided for, and then there will be no losses to be regretted when this is too late.

Sal-Hepatica and Bloat.

I note what Mr. R. E. Hollis, of Shelbyville, Ky., has to say about a new cure for bloat in cattle: "Sal-Hepatica. A dose of two tablespoonfuls in a pint of water, given as soon as the bloat is discovered, will relieve in a few minutes. * * Have used it on some fifteen cows. I have noticed that the cows treated do not bloat again."

The above looks like an honest effort to mitigate the great evil of bloat in cattle, and is well worth a trial, for all of us dairymen have lost valuable cattle with this disease, which may have its origin in dyspepsia or indigestion; but we all want at least a temporary relief that we may first save the cow and then cure her.

The success of plain air in curing that dread disease called milk fever, and without any explanation ever being vouchsafed us, leads to hope that other and similarly simple remedies may come for equally serious troubles.—L. S. HARIN, in Jersey Bulletin.

The busiest and mightiest little thing that ever was made is Chamberlain's Stomach and Liver Tablets. They do the work whenever you require their aid. These tablets change weakness into strength, listlessness into energy, gloominess into joyousness. Their action is so gentle one don't realize they have taken a purgative. Sold by all dealers.

SEALED TENDERS addressed to the undersigned, and endorsed "Tenders for Wharf at Cumming's Cove, N. B.," will be received at this office until 5.00 P. M., on Thursday, December 30, 1909, for the construction of a wharf at Cumming's Cove, Deer Island, Charlotte County, N. B.

Plans, specifications and forms of contract can be seen and forms of tender obtained at this Department and at the offices of E. T. P. Shewen, Esq., Resident Engineer, St. John, N. B., Geoffrey Stead, Esq., Resident Engineer, Chatham, N. B., and on application to the Postmaster at Cummings Cove, N. B.

Persons tendering are notified that tenders will not be considered unless made on the printed forms supplied, and signed with their actual signatures, with their occupations and places of residences. In the case of firms, the actual signatures, the nature of the occupation and place of residence of each member of the firm must be given.

Each tender must be accompanied by an accepted check on a chartered bank, payable to the order of the Honourable the Minister of Public Works, for two thousand dollars ($2,000.00), which will be forfeited if the person tendering decline to enter into a contract when called upon to do so, or fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

This Department does not bind itself to accept the lowest or any tender.

By order,
NAPOLEON TESSIER,
Secretary.

Department of Public Works,
Ottawa, December 1, 1909.

Newspapers will not be paid for this advertisement if they insert it without authority from the Department.

DIP YOUR SHEEP

Stockmen and farmers who use the Cooper Dips have healthier animals—get more wool and better prices. More than half the cloth and flannel of the world is made of Cooper dipped wool. Tanks supplied at cost to all users of the Cooper Dips.

COOPER'S POWDER DIP

The leading sheep dip for 65 years. Used on 250 million sheep every year. Kills ticks, lice, nits and eggs in one dipping. Does not stain the wool, but increases the yield and improves the quality.

Prices 25 gal. pkt. 50c., 100 gal. pkt. $2.00.

COOPER'S FLUID DIP

for all animals. A highly concentrated, non-poisonous fluid dip of marvellous strength. Mixes readily with cold water, whether hard, brackish, or salty. The only pure liquid dip—no sediment. Goes farther than Coal Tar dips and, therefore, cheaper. Positive remedy for scab, mange, ticks, lice, ringworm, eczema, sores, bites, stings, etc. One gallon makes 200 gallons for general dipping, or 300 gallons for disinfecting.

Price—Qt. can 75c. 1 gal. can $2.00, 5 gal. can $8.50.

COOPER'S WORM TABLETS

A sure remedy for intestinal worms in Horses, Sheep, Cattle and Hogs. These tablets offer the great advantage of correct doses and certain results. Dose—one tablet for lamb or shoat, two for sheep or hogs, three for horses and cattle.

Price—10 tablets 20c. postpaid, box of tablets, 200, $1.00, postpaid.

COOPER'S "LAVENE"

The most effective skin dressing for Horses, Cattle and Dogs. Cures worst cases of Mange and Ringworm at one dressing. Searches the skin and attacks the disease at its root. Improves the coat and renders hair soft and glossy. Is used by many of the best breeders in preparing animals for show.

Price Qt. can $1.00. Gal. can $3.00. CANADIAN DRUG CO., LTD., ST. JOHN, N. B.

Feeding Value of Separated Milk.

In all dairying countries pigs are considered an important ajunct in connection with the dairy, and as a general rule, it may be taken that feeding pigs with separated milk is about as profitable as any other legitimate method of disposing of this by-product of the dairy. Unfortunately the same ideas prevail in respect to the wholesomeness of separated milk for pigs as are general in regard to calves fed upon this substance. We have, however, sufficient evidence that, as a food for pigs, separated milk may be extremely useful.

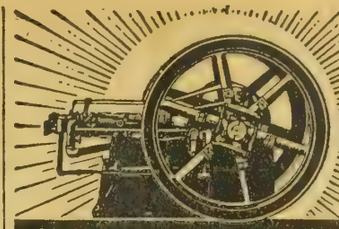
Separated milk alone would be sufficient, not only to keep pigs alive, but it will, if given in sufficient quantities cause considerable increase in the fat and lean meats of pigs so fed. Rothampstead experiments have shown some favorable evidence in this respect. They bear upon the question of fat in animals fed upon nitrogenous or flesh forming foods. In these experiments the increase in body weight ranged from fifty-one to sixty-eight per cent., the feeding being conducted eight weeks, and the total increase in fat consisting from 60 to 80 per cent. From the nature of the food the proportion as leaks on the farm must possibly have been derived from the ready-formed fat ingested, even supposing that the whole of what was supplied had been assimilated, was so small as to leave no doubt that a very large proportion must have originated from some other source. According to the figures given, the proportion of fat which must have so originated, ranged from about two-thirds to eight-ninths of the total amount stored up. Thus it was shown that fat must have been formed from food ingested. The next question for solution was whether the fat produced emanated from the nitrogenous or the non-nitrogenous elements of the food or both.

In these experiments the relative proportion of the nitrogenous and non-nitrogenous parts of the food as given to the several pigs was purposely varied. From the results attained it appeared that there was no material difference in the amount of fat produced, although, if fat were capable of originating only from carbohydrates, it would be reasonable to expect that on diminishing this supply, as in replacing a portion of them by nitrogenous matters, the amount of fat developed would have been less. This evidence tends to encourage the impression that the component parts of food have but small influence upon the proportion of fat and lean produced in the animal.

It has also been proved from experiments of feeding pigs on skimmed milk alone, from which all the fat has been abstracted, that there was a decided increase in the weight of the animal and the increase included a fair proportion of fat.

It must not be concluded as absolutely certain that the chemical composition of food has no influence on the quality of meat produced; in other words, that carbohydrates will produce only fat and that nitrogenous food will produce only lean meat. Carefully conducted experiments, in some of the American Experiment Stations, have shown that fat and lean meat are directly influenced by the composition of the food given the pigs, and that, when a nitrogenous food is given flesh of lean quality is formed, and that by the feeding of fats, starches, or other of the carbohydrate groups, the proportion of fat in the pig is increased.

During late years the bacon industry of Denmark has increased enormously in importance, and the bacon received from that country is most excellent. Large quantities of separated milk are used for pig feeding in Denmark. In fact, the making of skim milk cheese, which was at one time an important industry in Denmark, has given away before the system of using separated milk for pig feeding.



AN IHC GASOLINE ENGINE THE BEST HIRED MAN

THERE'S no doubt about it. Thousands of farmers have proved and are proving every day that one of the simple, dependable I H C gasoline engines makes and saves more money for them than the best hired man they can get.

Don't let the up-to-date farming ways get away from you.

You can make your I H C engine work when and where and as long as you please. It is something you can own. It is all yours. You don't have to talk to it about getting up early or argue about quitting time. It is always ready and willing—just as well pump a tank full of water after dark as in the daytime. It is ready to start the saw, pump or any other machine going before daylight, if you are.

If you have a full day's work for it at grinding, you will get more out of it than you would get out of a half dozen hired men. It's just the same with all kinds of work. Your I H C gasoline engine will work with all your machines—will push them—keep them going steadily—make them really valuable to you. You have nothing to pay it in wages; no fear that it is growing tired and thinking of quitting you. Its only requirement for its faithful service all day—every day or night—is a small amount of oil and gasoline.

Why not let an I H C gasoline engine be your hired man? There are a dozen ways you can use it. You will have it going at some kind of work pretty nearly every day. Attach it to a power-house and, whenever you do start it going, you know you will get at least as much work out of it as you would get out of two or three men.

The I H C gasoline engine is the latest and one of the greatest real aids to the farmer. You ought to have one for your steady hired man. Thousands are going out on the farms. There are many styles and sizes, from 1 to 25-horse power—an engine for every section and every problem, for all farm uses—vertical and horizontal (both stationary and portable) engines on skids; sawing, pumping and spraying outfits. It also includes gasoline tractors—first-prize-gold-medal winners—the best all-'round farm tractors.

Call and take the matter up with our local agent in your town. Or, write the International Harvester Company of America at nearest branch house for catalogue and further information.

THE HORSE.

Care of Farm Horses.

STABLES FOR HORSES.

Naturally, the first consideration will be the stables. Any horse stable, to be a good one, must have several peculiarities, or several distinct features. It must, in the first place, in this climate, where we have to contend with so much cold weather, be economical of space, for we do not wish the horses to have to warm up too large a space. In the second place, it must be convenient, for we have to consider the amount of work that is necessary in looking after horses. We find that the care of the horse constitutes about one-fifth of the cost of keeping the animal, therefore, the more economical we are of space, and the more conveniently things are arranged, the less will be the total cost of keeping the horses. In the next place we must look after the comfort of our animals. If we are going to keep them in good health, comfort is essential, and it will economize not only in doctors' bills, but also in the amount of feed. There is a great deal of difference in healthfulness of different stables. The harness room and feed rooms should be boarded off tightly to the ceiling in order to save being heated by the horses. In the case of the box stall, the partitions should go only part of the way to the ceiling because this would be too large a space for one horse to heat alone.

THE FLOOR.

We have, from observation, and partly from experience, found that the best kind of a floor for the horse to stand on is a wooden one, and under that, if we are going to ensure sanitary conditions, cement is needed. Planks under a horse are expensive, but it is much easier on a horse's legs, and where they have to stand for any considerable amount of time, as for instance on Sundays or holidays, there is always more or less danger of their legs going wrong if they have a hard floor to stand on. In laying the cement in the passage, it will be necessary to make it as rough as possible. I have seen cement floors that were as smooth, or almost as smooth, as glass, and on which the horses were continually slipping. That kind of floor is a very serious menace to soundness, particularly in this country, where there is sure to be more or less ice at certain times of the year. It is also rather more dangerous if the floor should happen to get wet, as it is almost certain to do at some time. Just behind the stalls, which, by the way, I would like to have about six feet wide for an average sized horse—a good sized horse, I had better say—there should be a shallow gutter, not more than a couple of inches deep, just deep enough to gather the urine.

The feed room should be located as convenient to the door as possible, and should have good light. You want bins for four or five kinds of grain—oats, bran, mixed meals and shorts. You might also say for small amounts of different kinds of feeds for supplementing the regular rations. To have only one or two places for meal is to give a whole lot of trouble. Then you want a considerable space wherein to mix the feed if it is desired to use cut feed and mix the meal with it. The harness room should have a stove in it to keep the place warm when it is necessary to clean the harness or repair the same. It should be provided with a single window, should have two lines of good, strong hooks on either side, and a few shelves whereon to store materials to be used in looking after the harness. Right over the feed room I would suggest having a granary.

LIGHT IN THE HORSE STABLE.

Now, another consideration is light in the stable. An abundance of light is absolutely necessary if you are going to have a sanitary stable. It is preventive of disease, it is inspiring and cheerful, it keeps the horses in much better spirits and shape for work when they go out, and it is conducive to cleanliness. If you go into a dark stable the chances are there will be lots of spots where there will be small heaps of refuse, which get wet by some means or other. There is fermentation going on, and the air is almost certain to be bad. Therefore, light is not only one of the most powerful factors that go to insure cleanliness, but also one of the most healthful factors in a stable. And the light should come, if there is no feed passage, through a small window in front of each horse, high up and protected from the horse by means of iron rods. There should also be light coming in at either end, or at least at one end, and light in either side. The question of light is one which does not receive nearly sufficient attention, I find. Most farmers are satisfied to have a little bit of light windows, about a foot by two feet, every here and there in the side wall, so that the place has always a sort of subdued light, very suitable for funerals, but certainly not conducive to health. I think these are points which ought to receive a good deal more attention than we give them in our stables, whether horse stables or cow stables for that matter. Then, again, the windows should be sliding or hinged, so that they may be opened in summer or whenever it is necessary to have a current of air in the stable to cool the place.

Scientific Feeding of Horses.

The Paris "Compagnie Generale des Voitures," or General Cab Company, owns nearly 12,000 horses, and it is, therefore, essential that the methods of feeding this large number should be most carefully thought out so as to combine the greatest economy with the production of the maximum amount of power and endurance in the animals.

To obtain reliable guidance a research department was established some time ago, and it is its duty to investigate the difficult problems connected with this important matter.

The various food materials are bought in large quantities, and for the most part come from abroad; at the present time they consist chiefly of oats from the Danube, although a portion are purchased in France, peas from the East Indies, American maize, locust beans from Algiers, brewers grains, molasses fodder from the beet sugar factories, and a compound special cake (granule) prepared by the company.

Two points are most rigidly adhered to:—

1. All the materials are thoroughly cleaned by special machinery to remove any foreign substances which might interfere with the digestive process and are sometimes of an injurious nature.

2. The different materials before being given to the horses are subjected to a most thorough inter-mixture, as numerous experiments have proved that by this process the food is more completely assimilated.

The special cake is prepared from suitable materials selected according to the relative cheapness of the food-units in the different materials offering on the market at the time of purchase; thus, among other things, bran, rice-offal, brewers' grains, are bought, and then mixed according to a calculation of the food-units, the following analysis in the prepared cake being aimed at:—Albuminoids 21.7 per cent, fat 5, carbohydrates 20 to 30, ash about 6 per cent, including phosphates 1 to 2, and lime about 1-4 per cent. Hay and horsebeans are not employed at present, being too dear.

RATIONS.

The daily rations differ for "resting" and "working" horses. On resting days no oats are given, and the ration consists of 6.17 lb. chopped oat straw, 4.62 lb. maize, 2.64 lb. crushed peas, 2.64 lb. locust beans, 2.20 lb. brewers' grains, and 1.10 lb. special cake, altogether 19.47 lb. This mixture is given to the animals in four equal parts.

For "working" horses; before leaving the stall a fourth portion of the above ration is given; in the course of the day, as convenient, a ration made up of 7-7 lb. oats and 1-10 lb. crushed peas, and after return to the stall a third ration of 6-6 lb. molasses straw (60 per cent.) and 1-76 maize, making altogether in a working day 22 lb.

BEDDING.

The atmosphere in the stables is kept quite sweet, which is due to the exclusive use of peatmoss bedding. The horses stand on a thick mattress of this material, and the parts soaked with urine are daily replaced. About 17 lb. per horse per week are thus renovated. The manure finds a ready sale in the neighborhood.

DISEASE.

The company takes every precaution to protect their animals from infectious diseases. Freshly bought horses are inoculated before being brought to the stables. Isolated stalls are available for horses suffering from disease or accident.

FEEDING SYSTEM.

The system of feeding is the result of a long series of investigations and trials by the experimental department. The trials were conducted with thirty horses chosen for their average condition and capacities for a long period under careful supervision.

These trials led to the important and interesting conclusion that the previous nutritive ratio should be abandoned. For a resting horse it was in the proportion of 1 to 5 or 6 and for a working horse 1 to 4 or 5; but the experiments showed that the proportion of carbohydrates could be increased with advantage to the ratio of 1 to 8; 1 to 12, and indeed, 1 to 20 with the liberal use of sugar.

It was demonstrated that the value of the ration depended not so much on the percentage of albuminoids as on the total of disgestible matter which the ration contained. This has led to a great economy in the use of the expensive nitrogenous foods, and having been now tested on a staff of 12,000 horses it may be assumed to be a conclusion verified by experience.

DINNER BELL MUSIC.

The music of the dinner-bell is always welcome to the healthy man or women—alike to the working man or woman who eats a plain meal at noonday, or to people of easier lives who enjoy a rich dinner in the evening. But to the Dyspeptic there is no music in the dinner-bell—it calls him to a trial for which he knows he is unfit. No one can enjoy a meal, or get nourishment and strength from it, knowing that pain and distress will follow after. The true course, even for healthy people, is to help the digestive system, from time to time, with that excellent tonic medicine, Mother Siegel's Syrup.

Mr. Michael Bureau, of Stanham, Quebec County, P.Q., writes: "For some time I suffered from Indigestion. I had headaches which made life a misery. I could not sleep at night and after eating I felt a sensation of fulness and pains, with heart palpitation. I took no medicine for this illness except Mother Seigel's Syrup and was cured when I had used one bottle of it."

POULTRY.

Maritime Poultry Men in Annual Session.

The annual meeting of the Maritime Poultry Association was held in the Board Room, Winter Fair Building, Amherst, N. S., at 10 a. m. of Wednesday, December 8th. About fifty poultrymen were present and Joseph P. Landry, president of the Association occupied the chair. The relative standing of the Association in connection with the Maritime Stock Breeders' Association was read by the President, who also gave an outline of the courtesy extended to the executive of the Poultry Association by the Stock Breeders' Association and how the requests of the poultry men had been granted in nearly every case. Rev. J. B. Daggett, vice president for New Brunswick, said that poultry keeping was receiving a great deal of attention in his province. Three special poultry shows had been held in New Brunswick last winter; the number will be increased this winter. The watch-word all along the line seemed to be "more and better poultry." He would like the Association to keep advocating for lower express rates on poultry. He also spoke very highly of the treatment he had always received from fellow poultry men at the Winter Fair and regretted that matters over which he had no control prevented his Company from showing this year. He had been sowing the seed of practical, profitable poultry keeping at various institute meetings he had conducted during the past year and he trusted fruit would result from his efforts.

L. H. D. Foster, vice president for Prince Edward Island, gave a glowing account of the increasing interest in poultry in the Island Province. Their Provincal Poultry Association was rapidly gaining in membership and had held a successful show last winter. They were looking forward to a large show in January. He referred to the difficulty experienced by P. E. I. poultry men in getting their birds to Amherst on Saturday preceeding the fair and would like to see the rule ammended so that they might be allowed to enter their birds on Monday afternoon or Tuesday morning.

I. C. Craig, vice president for Nova Scotia said he was glad the President had obtained a statement showing the standing of the Association with the Maritime Stock Breeders' Association. He had no desire to see the Poultry Association hold a special show, but wished to work with the M. S. B. A. The Secretary Treasurer's report showed $68.00 receipts and an expenditure of $36.95 leaving a cash balance of $31.05.

The Prize List Committee's report was given by Messrs. Wm. Robertson and Seth Jones, members of the committee. They were well pleased with the manner in which they had been treated by the executive of the Maritime Stock Breeders' Association, who had acceded to nearly all their requests. There was no report from the committee appointed last year to revise certain classes in the constitution and by-laws and as the matter which led up to a necessary revision had been satisfactorily settled the committee was discharged as further revision is unnecessary.

Mr. F. C. Elford, judge of the Utility classes was present and expressed much satisfaction at the quality he had found in the class he had judged. He could see a closer conformation to type than in previous years and said that the show as a whole was a credit to Maritime poultry men. He had found cases where splendid specimens were accompanied by very poor specimens in making up the utility pairs and advised that in future more care be taken by the exhibitors in making the selections, as very often a coop containing one of the best birds in the show would have to go down in the list of awards owing to the fact that the other bird in the coop was not a good specimen. The dressed poultry classes were not as well filled as he would like. He spoke of the profits from practical poultry keeping. He advised the producers to go after the best market with their birds. The Montreal dealers would like to get our goods, but owing to lack of organization among the producers it was very difficult to get business satisfactorily done. He outlined the working of the Poultry Producer's Association and intimated that he would like to see branches of that Association in all parts of the Maritime Provinces. Then the best markets could be reached and the middleman could be dispensed with both in selling produce and in the buying of feeds.

Mr. Smith, who judged the open classes endorsed the remarks made by Mr. Elford and advised that poultry men combine in shipping their poultry produce to the best markets until the shortage on the home market will be sufficiently appreciated to cause a rise in prices. The exhibit of birds in the classes he had judged was excellent and compared very favorably with shows of equal dimensions in the United States.

A standing vote of thanks was tendered to Messrs Elford and Smith for their satisfactory work and kindly interest in the work of the Association.

The election of officers, resulted as follows: President, J. P. Landry, Truro. N. S.; Vice Presidents, I. C. Craig, Amherst, N. S., Percy Gunn, Sussex, N. B., L. H. D. Foster, Marahfield, P. E. I. Directors:—Wm. Robinson, Amherst, N. S.; Dr. Webster, Pictou, N. S.; Rev. J. B. Daggett, Hartland, N. B.; Walter McMonagle, Sussex, N. B.; C. P. Thorne, Charlottetown, P. E. I.; H. H. Howard, York, P. E. I. Prize list Committee, Seth Jones, Sussex, N. B., Mr. Simpson and Wm. Robinson, Amherst, N. S., and George Thompson, Halifax, N. S. Secretary-Treasurer, M. A. McLeod. Sussex, N. B.

Poultry Show at Winter Fair.

It was a pleasure to note the grand improvement in the Winter Fair building, the poultry room and in the cooping of the best exhibit of live poultry ever brought together in the Maritime Provinces. This year's show easily surpassed any in the past in quality and general excellency of all classes in this department.

The Winter Fair is the society event in animal husbandry in eastern Canada. The show was well handled in all its branches. The superintending and judging left nothing to be desired.

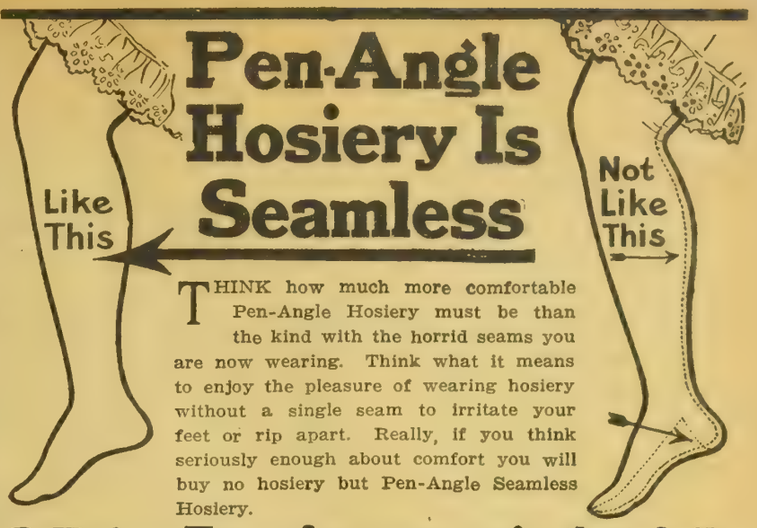
Mr. J. P. Landry, of Truro, superintended the show in the most efficient manner. He was most courteous to the exhibitors and most thorough and painstaking in his management of the exhibits, Joe. gives all the boys a square deal.

Mr. A. C. Smith, Waltham, Mass., officiated as judge in the open class for the first time at this fair and his work was most thorough and impartial to all. None of his awards were questioned. He will be sure of a warm welcome again to our provinces when he comes on similiar missions.

Mr. E. C. Elfoyd, of McDonald College, Quebec, placed the awards again this year on all the utility and dressed poultry. He is one of the most popular judges and always gives the best of satisfaction to both management and exhibitors. Of course the greatest interest of the show was created in Barred P. Rock ally, competition here was "red hot" all along the line, the judge had his work cut out for him and it took several heats for him to decide the winners. 7 cocks, 10 hens, 28 cockerels and 32 pullets made this the best class ever brought together in eastern Canada. After all the winners were picked out there still remained enough quality to make a better show in Barred Rocks than we ever saw at Amherst up to a year ago.

The 1st, 2nd and 3rd, were straping, fine, big, massive fellows, first excelled in color under barring and condition. Hens were close, but the first prize by

(continued on page 146.)



Pen-Angle Hosiery Is Seamless

THINK how much more comfortable Pen-Angle Hosiery must be than the kind with the horrid seams you are now wearing. Think what it means to enjoy the pleasure of wearing hosiery without a single seam to irritate your feet or rip apart. Really, if you think seriously enough about comfort you will buy no hosiery but Pen-Angle Seamless Hosiery.

2 Pairs Free for any pair that fails

We guarantee the following lines of Pen-Angle Hosiery to fit you perfectly, not to shrink or stretch and the dyes to be absolutely fast. We guarantee them to wear longer than any other cashmere or cotton hosiery sold at the same prices. If, after wearing Pen-Angle Guaranteed Hosiery any length of time, you should ever find a pair that fails to fulfill this guarantee in any particular, return the same to us and we will replace them with TWO new pairs free of charge.

Read that guarantee over again carefully, for we want to impress it indelibly upon your mind, because it is the most liberal—the fairest and squarest—hosiery guarantee given anywhere.

It proves our unlimited confidence in Pen-Angle Hosiery. We must be sure of their quality to back them up so strongly.

Exclusive Process

The reason for Pen-Angle superiority is due to the exceptional quality of the cashmere and cotton yarns we use. And because we knit them on Penmans' exclusive machines. We have the sole rights to use these machines in Canada.

They form-knit the hosiery to fit the form of the leg, ankle and foot perfectly without a single seam anywhere.

Reinforced Feet

They reinforce the feet, heels and toes—the places that get the hardest usage—without you ever being aware of any extra thickness.

You see, these wonderful machines increase the wear-resistance, and at the same time make Pen-Angle Hosiery more comfortable—your ideal hosiery. So be sure and get Pen-Angle Seamless Hosiery—the hosiery with the DOUBLE guarantee.

For Ladies

No. 1760.—"Lady Fair" Black Cashmere hose. Medium weight. Made of fine, soft cashmere yarns. 2-ply leg. 5-ply foot, heel, toe and high splice, giving them strength where strength is needed. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1020.—Same quality as 1760, but heavier weight. Black only. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1150.—Very fine Cashmere hose. Medium weight. 2-ply leg. 4-ply foot, heel and toe. Black, light and dark tan, leather, champagne, myrtle, pearl gray, oxblood, helio, cardinal. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1720.—Fine quality Cotton hose. Made of 2-ply Egyptian yarn, with 3-ply heels and toes. Black, light and dark tan, champaigne, myrtle, pearl gray, oxblood, helio, sky, pink, bisque. Box of 4 pairs, $1.00; 6 pairs, $1.50

No. 1175.—Mercerized. Same colors as 1720. Box of 3 pairs, $1.00; 6 pairs, $2.00.

For Men

No. 2404.—Medium weight Cashmere half-hose. Made of 2-ply Botany yarn with our special "Everlast" heels and toes, which add to its wearing qualities, while the hosiery still remains soft and comfortable. Black, light and dark tan, leather, champagne, navy, myrtle, pearl gray, slate, oxblood, helio, cadet blue and bisque. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 500.—"Black Knight." Winter weight black Cashmere half-hose. 5-ply body, spun from pure Australian wool. 9-ply silk splicing in heels and toes. Soft, comfortable, and a wonder to resist wear. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1090.—Cashmere half-hose. Same quality as 500, but lighter weight. Black only. Box of 3 pairs, $1.00; 6 pairs, $2.00.

No. 330. — "Everlast" Cotton Socks. Medium weight. Made from four-ply long staple combed Egyptian cotton yarn, with six-ply heels and toes. Soft in finish and very comfortable to the feet. A winner. Black, light and dark tan. Put up in boxes. Box of 3 pairs, $1.00; 6 pairs, $2.00.

Instructions

If your dealer cannot supply you, state number, size and color of hosiery desired, and enclose price, and we will fill your order postpaid. If not sure of size of hosiery, send size of shoe worn. Remember, we will fill no order for less than one box and only one size in a box.

Catalog Free

If you want something different than the styles and shades listed send for handsome free catalog which shows an extensive line in colors. 43

A Song of Christmas.

Chant me a rhyme of Christmas—
Sing me a jovial song,—
And though it is filled with laughter,
Let it be pure and strong

Sing of the hearts brimmed over
With the story of the day—
Of the echo of childish voices
That will not die away.

Of the blare of the tasseled bugle,
And the timeless clatter and beat
Of the drums that throb to muster
Squadrons of scampering feet.

But, O, let your voice fall fainter,
Till, blent with a minor tone,
You temper your song with the beauty
Of the pity Christ hath shown.

And sing one verse for the voiceless;
And yet, ere the song be done,
A verse for the ears that hear not
And a verse for the sightless one.

For though it be time for singing
A merry Christmas glee,
Let a low, sweet voice of pathos
Run through the melody.

—JAMES WHITCOMB RILEY.

Miss Slimmens's Boarding-House.

(Continued from last issue.)

Dora, there's a box ! Come and help me get it open; but I know what's in it, well enough. It's that splendid plated set we were looking at the other day. No matter how I knew it. It was only last evening, at the table, when I broke my china teapot, some of the gentlemen spoke of making me a present; and here it's only ten o'clock of the next morning, and it's come ! There's a note along with it; I'll read it while Caturah's gone to get the hammer. My boarders are a nice set of young gentlemen. They can take a hint of the most delicate nature, without any necessity for a person's speaking out. What a plain, handsome handwriting ! let's see what it says :—

DEAR SLIMMENS : Do not consider us of-fish-us in making you the slight present which you will find in the accompanying box. It is the first course we have taken to acknowledge your desserts. We cannot express our scents of obligation in any more forcible manner than by selecting this beautiful specimen of table-service, which we hope to see in the future (as it has been in the past) the daily ornament of your board. With emotions greater than we can express, and the strongest remembrances of the past, for your ef-fish-ent labors in our behalf, we beg of you to accept the inclosed. We all feel that you are very near to us, and very dear ! May you live a thousand years, and never be any older than you are at present. You have been weighed in the scales, and not found wanting.

Tenderly yours, etc.,
BOARDERS.

Isn't it queer ? just like my young gentlemen ! can't do the handsomest thing, without their joke about it. Caturah ! come along with that hammer, will you ? Now, then, the lid's off ! How nice it's all done up in cotton and tissue-paper ! We're coming to them now. This must be the spout of the teapot. But my, how funny it smells !

A codfish, and nothing else ! Was ever a poor, unprotected female so put upon as I am ? It's not enough that I must wear my feet off waiting on a parcel of sassy, provoking fellows, but they must up and ridicule me to my face, and insult me in this diabolical manner. It's a burning disgrace to them ! I've a notion to dismiss every single one of 'em this very noon, without a mouthful of dinner. But they'll only go off to the public-house and have a great time, and laugh at me. Besides, I can't afford it. That Hopkins hasn't come on from Newport yet, and until I'm married to somebody, I've got to keep boarders for a living. But they'll repent it, I can tell 'em that. They haven't made me mad for nothing. Here, Caturah ! take this fish and have it boiled for dinner. Don't you put another solitary thing upon the table except the dishes. Lay the table in good style, and put the fish in the middle of it. I'll have something sent to your room for your dinner, Dora; so you needn't come down. We'll see about this impertinence !

It's a beautiful day, gentlemen, beautiful. Quite gorgeous for October. This cool weather gives us a fine appetite. Mr Smith, I'll trouble you to carve. Won't you be helped to more, Mr. Johnson ? Not that I wish to be officious, but I know you are particularly fond of codfish. Don't be backward, Mr. Bethuen, don't. No, thank you, not a bit; I'd rather talk than eat; I've had my dinner. You don't seem in very good spirits, the most of you. Have you heard of the death of any of your acquaintance ? Mr. Smith, give Mr. Blinks some more of the cod. I was hoping you'd all feel as well as I do today. What ! you aren't done ? You haven't half finished your dinners. There be fish enough left to pick up for supper. Would you relish it picked up for supper, gentlemen ? You shall have it, then, by all means. I love to please my boarders, O yes, above all things !

Goodness gracious ! can I believe my eyes ? An entire new tea-set, just as handsome as the solid silver, the very one I had picked out in my mind's eye, standing on my own table, before my own eyes, with sugar in the bowl and cream in the jug, and tea in the pot, and all ! What does this mean, gentlemen ? Another note in the sugar-bowl. Well ! well ! I declare I'm so agitated with pleasure and surprise that I can hardly peruse it.

BELOVED SLIMMENS : We acknowledge the corn—or, rather, the cod. At our second dinner, at Cronsis Hotel, today, we unanimously concluded, over the last cup of coffee, to take up a collection for the purpose of expressing our feelings for the lady who has so long and so ably ministered to our needs. Bury the remains of past repasts. Be good to us. Give us more sugar in our tea. Cast they bread (and cake) upon the waters, and after many days it shall return to thee (on a silver plate.) Please put a little "gunpowder" in the new teapot. Do not be afraid; it will not go off of itself. Milk is guaranteed not to injure the inside of the milk-jug. And ever, when you think of eggs, remember muffins, and do not forget the weakness of your confiding

BOARDERS.

CHAPTER XXII.

DORA'S BABY.

That ever I should have had such a thing happen in my house ! Me, a respectable single woman, with a house full of young men and gentlemen boarders, and such goings-on in it ! It's shameful, perfectly shameful ! She ought to have known better than to have gone and got married. What did she go and get married for ? Didn't she know it would come to this ? Why didn't she firmly refuse all solicitations as I have ? Thank goodness, it isn't me ! But if it isn't me, it's Dora, and that's about as bad. She's been a good little thing, Dora has; she's put up with all my sayings and doings like an angel. I didn't know I did think so much of her. O dear ! I wonder how she's getting along ! I've a mind to go to the door and ask. But I won't; it's good enough for her ? What did she get married for ? that's the question. But they'll all do it—yes, everyone of them —just as quick as they are asked! There hasn't a girl in this town held out till she was thirty, but myself.

I've tangled this silk, and broke my needle, and spilled my thimble. Pshaw! I can't sew; I'm too nervous. What's that ? Oh, it's you, is it, Mr. Little ? You needn't come a sneaking into my room for pity. I despise you. Oh, she'll die, I know she will, and you'll be responsible for her death. I've had a presentiment all the time she would die. There, you needn't groan; I didn't mean to make you any more miserable than you are, poor fellow ! But I had an awful dream last week; I dreamed about white roses, and they're a sure sign of death in the family, especially at this season of the year. Flowers out of season purtend death, and white roses of all others ! Still, I don't wish to scare you. Maybe she'll get along. I wonder what the boarders will say when they hear the news. I got to the dinner-table as cool as a cucumber, and didn't let a soul know what was going on in the house. It'll be time enough when they hear it squall; yes, George, squall ! Don't think you're going to have a cherub with wings, that'll laugh and clap its hands the first day. Little babies are the ugliest things in creation. Red-faced, red-armed, red-necked, screaming, kicking, colicky, squirming—bah ! And everybody will tell you it's the very picture of its father. If you ever had any vanity—as all men have oceans of it, you'll get it took down on this occasion. The picture of its father. O yes, the very picture ! Flat-nosed, blank-eyed, crimson, squalling little bundle, the very picture of its handsome papa ! ha! ha! Oh, you're in a nice scrape, ain't you? and it's good enough for—Mercy, Susan, how you frighten a person! I thought you'd come to say the nurse had sent word Dora was dead, or dying, or something, and here it's only to bother me about tea. Do get tea for once in your life, yourself, without asking any questions. Don't you see I'm in a state of mind boarding on detraction, with boarding married people ? Shut the door.

Do sit down, George, and don't make such a fool of yourself, walking around like a hyena in a cage. There ! what on earth was that ? Nothing but that pesky cat, got in the house again. I thought it was a baby crying. I hope this circumstance will be sufficient to warn me against ever getting my foot caught in the trap. What the female sex ever marry for is a mystery. I don't aspire to be considered a strong-minded woman, but I trust I shall ever have strength of mind sufficient to enable me to resist the inducements of a husband and children. You'll repent this day, young gentleman, the worst of any in your life. Instid of your quiet evenings, sitting reading to Dora, or playing backgammon, or singing, it'll be catnip tea and colic. All the peace you'll get for the next six months you may put in my thimble here, and it won't run over. It's good enough for you ! My best wish is that you won't have two hours' consecutory sleep in a year.

Do clear out and go in the parlor, if you can't keep still a minute. I never saw a man act so much like a fool. But I don't wonder you look like a robber or a felony. I suppose if Dora dies you'll console yourself with—Bless me ! that was a genuine baby's squall ! Just hear the little panther. Ha ! ha ! what makes you so red in the face, George ! you've changed color all of a sudden. Don't you wish you knew whether it was a boy or a girl ? Run up stairs and ascertain, you goose ?

Ha ! ha ! he went up like a rocket. Well, if I ever thought George Little would be flustered by anything! These men are too ridiculous for anything. I must go and see whether Dora's dead or alive, and whether it's a girl or a boy

Ha! ha! gentlemen, you needn't expect Mr. Little's company at the tea-table. I don't suppose he could swallow a mouthful before to-morrow morning. He don't feel the necessity of vittals, O no! he's living on his vanity at present. A boy, of course! a fine, plump, healthy boy. But, he! he! gentlemen, really I beg your pardon for mentioning what has occurred. But as Dora has been like a twin sister to me, I couldn't turn her out of the house in co sequence of her getting married. I don't approve of marriages, the reason I make it a rule to take only single gentlemen to board. I'm single myself, and ever intend to remain singular. Nothing in the world could tempt me to do as Dora's done—get married, and have—but, bless me! what am I talking about? I blush to think it. Gentlemen, excuse my overwhelming confusion.

Seventeen apprentices have I had, in all, since I commenced the millinery business for myself, seventeen, and every one of them wives and mothers, even to Dora, the last and youngest of the lot ! I declare I do feel lonesome, setting here by myself, reflecting on my fate and that little pink innocent asleep in its crib—it makes me feel dreadful lonesome. I could cry this minute. It's no fault of mine, neither; if ever a woman tried faithfully to find a pardner, it's been Alvira Slimmens. I haven't left a thing undone that could be done to bring about a different state. I've toiled faithfully from one year's end to another. I've made money, and I've spared no expense to render myself attracting; yet here I am, setting solitary in my boarding-house, my boarders wrapped in the arms of Orpheus, and

Your foods are in two classes: Foods that please you by their taste, and foods that you depend on because of what they do for you. Quaker Oats has all the good qualities of both classes.

Cowan's "Perfection" Cocoa

Is absolutely pure, strong and healthful. Delightful in flavor, nourishing, economical. Cocoa should be boiled three or four minutes in either milk or water to produce best results.

The Cowan Co. Limited, Toronto. 86

PILES CURED at HOME by New Absorption Method

If you suffer from bleeding, itching, olind or protruding Piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment ; and will also send some of this home treatment free for trial, with references from your own locality if requested. Immediate relief and permanent cure assured. Send no money but tell others of this offer. Write today to Mrs. M. Summers, Box P. 309, Windsor, Ont.

Dora's baby asleep in its crib, with rose-colored curtains around it. I don't wonder George is proud of a boy like that. Somehow, when I went into the room and saw Dora lying there, looking so sweet and pale, and pretty, and her husband so triumphant, and took that little bundle of flannel and lace in my arms, instead of being disgusted, as I expected, a great lump came up in my throat, and I felt like bursting right out a crying. Heigh-ho!

I've jest about made up my mind, setting here and thinking it over, that, sence Mr. Hopkins didn't keep his promise to pay a visit to Pennyville, but keeps putting it off and putting it off, in the undefinable manner he does, the next time I can catch Timothy Bethuen all alone by himself I'll just pop the question to him, out and out; it's leap-year, and I've a perfect right to. I'll offer to support him, and make him a good living—but I'm awful afraid he's engaged to that Philistina Podd. It won't be leap-year again for four years, and I shall take advantage of it while it lasts. I haven't had anything make me feel so lonesome and old in all my life as Dora's baby.

CHAPTER XXIII.

THE BRIDAL DAY.

At last! at last! Alvira Slimmens is a married woman! no mistake this time. At three o'clock this afternoon, the ceremony was performed, in the presence of creditable witnesses, by the minister of my own church; and nothing has as yet occurred to render it null and void. No Professor's wife coming in this time to claim my lawful husband. I've took pains to procure the most doubious evidence that Mr. Hopkins is all that he assumes—a widower, who has already buried two wives, a man of some property, and of a few children, who sha'n't bother me much, I can tell him. Fifty-six years of patient plotting and planning has at last brought me to my bridal. I will confess to myself, now, before Mr. Hopkins comes in, that this moment is not all that I have pictured it in years gone by; he is ruther old, though younger than I, and he's got young ones, and I know he married me for my property, and that I shall have to continue to keep boarders, and support him, instead of him me. But I'm married, and Mehitable Green isn't, and that's triumph enough for one lifetime.

Nobody can say, neither, that Mr. Hopkins isn't a gentleman; there isn't a person in Pennyville who can compare with him in politeness. He's been to every fashionable resort in the United States, he dresses in the genteelest, most laboratory style, wears a gold eyeglass, takes snuff, and is far from a bad-looking man. It's true he limps just the least bit in the world—rheumatiz, I suppose—but nobody would notice it; and his cheeks are as red, and his hair as black and shiny as though he wasn't but twenty-five, instead of forty, which he owns up to. Altogether he's a match not to be ashamed of; and I guess, when we go into church together, next Sunday, there'll be some eyes that won't be fixed on the minister. It'll be the proudest moment of my existence. I make no doubt Mehitable Green would love to stay at home to show she didn't care; but she can't; curiosity will get the better of discretion.

THE DAY AFTER THE WEDDING.

For goodness, gracious sake, Mr. Hopkins, can you tell me who that carriage-load of young ones is, stopping at our door? Your family, Mr. Hopkins! One, two, three, four, five, six, seven, eight, nine of 'em—quite a pretty present to bring your confiding bride the morning after her marriage. I suppose I may trot round now the rest of my life, taking care of them interesting specimens, and keeping boarders to support you and your wooden leg. Oh, Mr. Hopkins, but you're a match for me! How handsome and attracting we both looked when we got off our wigs and our false teeth, and you took out your glass eye, and asked me to help you off with your wooden leg! It was quiet poetical, wasn't it? But let me tell you you haven't got so much the best of the bargain as you think; them great girls that I see trooping up the steps will have to give a little aid and assistance about keeping boarders for their father's benefit. I shall dismiss both my girls this very day. And mind, if you don't walk chalk with that wooden leg of yours, you'll find it in the fire some morning. It'll make excellent kindling wood. That leg gives me the advantage, you perceive, my dear; it won't do for you to quarrel with me. Take them young ones up stairs to the back attic room to take their things off, and then come down and go to market, if your rheumatiz don't prevent you, my love!

My! but doesn't he go off as meek as a lamb! I've got him under my thumb already. "It's an ill wind that blows nobody any good." He fooled me awfully about that limb of his, but he'll repent it; I'll rule him with his own wooden leg, worse than a rod of iron. Well, well, well, this is a curious world; and this is what I've toiled and struggled for during thirty-five long years. Heigh-ho! Well, half a husband's better than none, 'specially if he can be got under good government. Only so's that old Mehitable never finds it out, that's all I'll ask. Nine children at a batch! Well, everybody must have their number, and I've got mine at last. Heigh-ho.

(The end.)

The Farmer of To-Day,

if he wishes to be abreast of the times, has got to know more than how to hoe corn and pitch hay.

He must be a business man, and he has little opportunity of learning business methods unless he spends a term or two at a school which makes a specialty of teaching business.

Fredericton Business College

provides the facilities. The principal is a farmer's son and knows something of the needs of the farmer.

A few dollars sown in this way will produce a bountiful harvest.

Send for catalogue. Address,

W. J. OSBORNE,

York Street, - FREDERICTON, N. B.

Take a Holiday.

DO NOT WEAR OUT AND RUST OUT AT THE SAME TIME, IS GOOD ADVICE.

A writer for the farm page of one of the Canadian city journals gives the following which will apply to many of the householders in the Valley:

Before me lies a letter from the wife of a farmer in which is this passage: 'It is seldom that my husband and myself take a vacation. We do not feel that we can afford it. I cannot understand how so many afford it. They usually come home more tired than they go. I can rest better in my own home if I can get my work done so that I can take the time.'

Oh, the pity of it! Can you not see the colorless lives of those two; the ceaseless grind, grind, grind, days merging into weeks, these into months, months into years, with life and the whole world circumscribed by the boundaries of their little farm and the rising and setting of the sun!

They even question the economic right of other people to let go of the plow handles and put away the dish mop for a little while. They regard such action as sheer waste of time. They have failed utterly to grasp the problem of life in its larger aspect. Not consciously selfish, they are living for themselves alone, and for themselves not well. They are a type. In the busy marts of the city I have heard men boast they have not been from business for a day in twenty years, and when asked why, the answer has been invariably the same: 'Can't afford it.'

Hardly less pathetic than the above letter is this one from another part of the country: 'In my twenty-two years of married life I have had two vacations. When we had been married two years we took a carriage drive of forty miles, taking in a fair and visiting relatives on the way; we were gone six days. Eighteen years later, when my husband was in the legislature, I went back with him and stayed a week.' Thirteen days away from home in twenty-two years!

But even worse than this is a third letter: 'I have been married twenty-four years and have never made a visit of more than a day away from home, with one exception, when I visited my sister for one week.' Think of that. One week in twenty-four years!

It has never occurred to these people to look at this question from the other view point. It is not a question of whether they can afford to take recreation, but whether they can afford not to take recreation. 'Wear out, but not rust out,' is good as far as it goes. But a lot of people are wearing out and rusting out at the same time and the dual process brings an early ending.

Recreation is as essential to the mental, physical and moral development of the human being as is food, drink and protection from the elements. The life of the locomotive, which seldom gets to the shop for overhauling and repairs, is short, while the life of the locomotive, which goes into the shops at the end of every run, is almost indefinite. The human machine is not different from any other machine. To secure its greatest efficiency, it has got to be well oiled, well handled and protected from undue strains and neglect.

Recreation comes from the word re-create—to make new. It does not necessarily mean an expensive trip, but rather a change of scene, or occupation, the inspiration of new thoughts and putting aside of old thoughts and commonplace, everyday duties for something quite out of the monotonous routine. Perhaps what this means cannot be better expressed than in the following extract from a letter from one of our Western farm wives:

'At times during the summer we find leisure for several days' fishing trip with friends, a very pleasant diversion during the season of hard work. Last summer we spent a week with the children camping. Every few years my husband and I enjoy a trip for pure pleasure and sightseeing. This is usually of several weeks' duration. The children will have such opportunities later in life. Just now occasional visits to some friends in the city, picnics, or a day or afternoon off for fishing are sufficient reasons for better and more willing service.'

Make this woman's experience your own. You owe it to your health. Mr. Farmer, you owe it to your wife, you owe it to your neighbors, to take some form of recreation and to see that your wife participates in it.

Twenty-Five Cents is the Price of Peace.

The terrible itching and smarting, incident to certain skin diseases, is almost instantly allayed by applying Chamberlain's Salve. Price, 25 cents For sale by all dealers.

Some Household Recipes.

The following recipes come from different sources. That some of them will be found valuable by many of our readers we have no doubt:—

SCOTCH DROP SCONES.—Ingredients: 2 teacupfuls flour; 1-2 teaspoon bicarbonate of soda, 2 teaspoonfuls sugar, 1 egg, and 1 teacupful buttermilk or sour milk. Put dry ingredients into basin and mix well; make a well in centre of flour, break egg into it, add 1 teacupful of milk—just enough to make a thick batter—and beat for five minutes. Make griddle quite hot, rub over with little butter or lard, and drop spoonfuls of batter a little apart, keeping shape as round as possible. When half done slip a knife underneath, turn quickly, and brown on other side. Can be eaten hot or cold.

SHORTBRED.—Ingredients: 1 pound flour, 1-2 lb. butter, 1-4 lb. sugar, 1 eggspoonful baking powder. Beat butter to a cream, work in flour and baking powder, and add sugar. Mix well, turn onto a board, knead well with hands, make into two round, flat cakes, tap well with fork, and bake in slow oven.

SHORTBRED BISCUITS.—Ingredients: 6 ounces of flour, 2 ounces ground rice, 4 ounces butter, 2 ounces sugar. Knead on board, cut into little thin rounds, and bake in slow oven for twenty minutes.

SOFT GINGERBREAD.—Ingredients: 1-2 cup treacle (fill up the cup with sugar), 1-2 cup butter (fill up with boiling water), 2 cups flour, 1 teaspoon ginger, 1 teaspoon of carbonate of soda. Mix ingredients together and bake in quick oven.

CORN CAKES.—Ingredients: Sift 3 cups corn meal with 1 cup flour, 1-2 teaspoon salt, 3 teaspoonfuls sugar, 2 full teaspoons baking powder, 1 tablespoonful butter (after it has been melted over the fire), 3 cups sweet milk, 1 egg (without beating). Mix meal, flour, sugar, salt, and baking powder together in a basin, then mix with milk, adding egg and melted butter last. Beat all well and bake thirty-five minutes in a moderately hot oven in either patty tins or cake pans—only fill the tins half full. Very suitable for breakfast; to be eaten with jam or butter.

What a Wise Wife Knows.

She knows that home is more than half what you make it, and that a builder of a happy home is a success, indeed. She knows that it takes two to prolong a family quarrel; one, therefore, can terminate it. She knows that filling a house with bargains keeps a couple from owning the house. She knows that if we thought all we said we'd be wise, but if we said all we thought we'd be foolish. She knows that proud people seldom have friends. In prosperity they know nobody; in adversity nobody knows them. She knows that the woman who gains a trifle meanly is meaner than the trifle. She knows that it is less pain to learn in youth than to be ignorant in old age. She knows that if she cannot throw brightness over her home it is best not to throw a wet blanket over it. She knows that the wife who thinks she is perfect is generally the most imperfect. The unwise wife may gain by studying what the wise woman knows.

Character Building.

The world is full of imitations and imitators; and the world is full of failures. Nearly all the failures in the world, failures even as measured by our false, foolish and superficial standards of failure and success, are due to lack of individuality. A person cannot make a more serious failure, however, than that of not being himself. Even though, because of gaining wealth, or fame or some other possession which the world almost invariably misplaces, we call a man a supreme success, yet, if he has failed to be himself, he is a colossal failure. Success consists in doing our best in the place for which Nature has prepared us.—From December Physical Culture.

A Windsor Lady's Appeal.

To All Women: I will send free with full instructions, my home treatment which positively cures Leucorrhoea, Ulceration, Displacements, Falling of the Womb, Painful or Irregular Periods, Uterine and Ovarian Tumors or Growths, also Hot Flushes, Nervousness, Melancholy, Pains in the Head, Back or Bowels, Kidney and Bladder troubles, where caused by weakness peculiar to our sex. Your Music is in the Edison Phonograph

Do you know how much you are losing by not owning an Edison Phonograph?

This instrument was made for you by Mr. Edison. It is intended to bring music into your home. It will help you entertain your guests. It will amuse you during your leisure hours. It will help you to bring up your family to love music.

This is what Mr. Edison meant when he said that he would like to see a Phonograph in every home.

How can you let any consideration of money stand in the way of your owning one of these great entertainers? The Phonograph will give you so much more in return for the money than you can get by spending it in any other way.

Do not take our word for it. Go to a dealer today and hear the Edison Phonograph play the Amberol Records, and you will know why we are so positive that you cannot afford to do without it.

Edison Phonographs - -	$16.50 to $162.50
Edison Standard Records - - -	40c
Edison Amberol Records (twice as long)	65c
Edison Grand Opera Records - -	85c

There are Edison dealers everywhere. Go to the nearest and hear the Edison Phonograph play both Edison Standard and Amberol Records. Get complete catalogs from your dealer or from us.

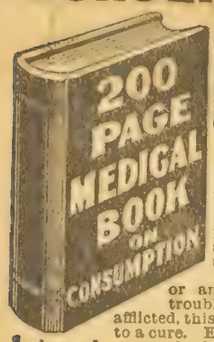
Consumption Book FREE



This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 1432 Rose Street, Kalamazoo, Mich., and they will send you from their Canadian Depot the book and a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful cure before it is too late. Don't wait — write today. It may mean the saving of your life.

Our New Term

Will Begin

January 3rd.

1910 will find us prepared to make our 43rd year the best and most successful we have ever had. Send for catalogue containing rates and courses of study.

150 Favorite Old-Time Songs,

With Words and Music Complete.

This is a splendid collection of favorite old-time songs and ballads—songs that touch the heart and recall the tenderest memories, many of them having been popular favorites for forty or fifty years and just as dearly loved to-day as when they were written. Each song is published in this book with both words and music complete and we question if there ever has been issued a book containing so large a collection of sterling favorities at so low a price. We will send this book post-paid to any address on receipt of 15 cents.

REMARKABLE OFFER—We issue a special line of popular-priced novels by such famous authors as Conan Doyle, Mrs Southworth, "The Duchess," Alexander Dumas, etc, etc. Send us fifty cents for a trial order of a dozen books and we will include the Song Book free of charge. This offer is for a limited time only. Address all orders

Eyes Cured

Without the Knife

Grateful Patrons Tell of Almost Miraculous Cures of Cataracts, Granulated Lids, Wild Hairs, Ulcers, Weak-Watery Eyes and All Eye Diseases. Send Your Name and Address With Two-cent Stamp for Free Trial Bottle.

The cures being made by this magic lotion every day are truly remarkable. I have repeatedly restored to sight persons nearly blind for years.

Ulcers, wild hairs, granulated lids disappear almost instantly with the use of this magic remedy. Weak, watery eyes are cleared in a single night and quickly restored to perfect health. It has repeatedly cured where all other remedies and all doctors had failed. It is indeed a magic remedy and I am glad to give this free trial to any sufferer from sore eyes or any eye trouble.

Many have thrown away their glasses after using it a week. Preachers, teachers, doctors, lawyers, engineers, students, dressmakers and all who use their eyes under strain find with this Magic Lotion a safe, sure and quick relief. If you have sore eyes or any eye trouble write me to-day. I am in earnest in making my offer of a free trial bottle of this lotin. I am glad to furnish prof in many well-proven and authentic cases where it has cured cataract after the doctors said that only a dangerous and expensive operation would save the sight. If you have eye trouble of any kind you will make a serious mistake if you do not send for my great free offer of this Magic Eye Lotion. Address with full description of your trouble and two-cent stamp, H. T. Schlegel Co., 3789 Home Bank Bldg., Peoria, Ill., and you will receive by return mail, prepaid a trial bottle of this magic remedy that has restored many almost blind to sight.

Poultry Show at Winter Fair.

(Continued from page 139)

"Gallina Nuda," the hen that was a disgrace to her breed, her owner and the Halifax Exhibition Commissioners, as she was described by a "know it all poultryman" in one of our journals at the time of the Halifax show was one of the winning features of this class. We know a lot of poultrymen who would be proud to own this disgraceful hen, she won well in the hotest class yet. Second and third hens were very close, 2nd won out in shape. There were 7 good hens left unplaced.

Cockerels were the banner section in this class, and the judge had the hardest two hours work of the show to place these in line to his own satisfaction. 1st, was a model of neatness and style, with grand head points, his prominent faults were, a little under size and lack of brightness in surface color, 2nd and 3rd good ones, 3rd had best surface color among the winners, 4th, 5th and 6th were stunning fine birds and deserved their place. There still remained a dozen fit to win at good shows. Pullets put up a great "scrap," 1st, 2nd and 3rd were very close. 1st got the place for being a little the brightest in color. 3rd had the best legs and back in the class, 4th very shapy and clean, but a little open in tail bars, 5th and 6th close up, 20 nice pullets were left out in the cold.

White Rocks were a strong class in quality, 1st cock, 1st hen and 1st cockerel deserve special mention. 1st cockerel was the star of his class.

The Wyandotte females were well represented by White, Buff, Silver, Golden and Partridge varieties. The Whites were a hot class, many former winners going down to defeat because they were not white enough. Judge Smith was out for white quills, feathers and webs in every section. Every bird that showed brassiness or creamy color was returned to the coop with quick dispatch. Buffs were rather a small class, but quality was above the average. Silvers a big class with a few outstanding winners.

The feature of the show was the grand showing of Rhode Island Reds, 44 specimens were in line and not a poor looking one in the lot. The winners were outstanding in their classes.

Another quality class was found in Brown Leghorns. The finest string of 16 males ever saw in a Maritime show. The females hardly the equal of males.

The White Leghorns had some grand stuff, 1st cockerel the gem of his class

Buff Orpingtons presented 37 specimens and they had quality to burn, 1st cockerel was the choice of the lot. White Orpingtons, new comers, 16 white beauties, 1 cockerel and 1st pullet were grand birds.

Black Orpingtons good enough to show anywhere, Dorkings, Houdans, etc., were out in good numbers. Black Minorcas, Single and Rose combs were a choice lot, many of them made their first appearance in this province.

A new class and feature was the double mating pens of Barred Rocks and Brown Leghorns. Competition was keen, and they proved a success and an addition to the show from an educational stand point.

Utility pairs and pens were out as strong as ever. Water fowl and turkeys had the largest class for years. Geese especially were fine. Turkeys the best yet. Dressed poultry did not come up to the expectations in number or quality. This seems to be the only department that does not improve each year.

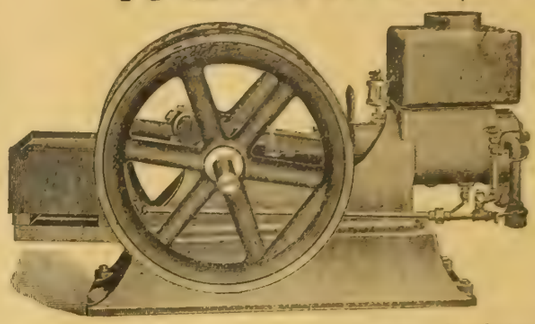
All the big breeders of the Maritime Provinces were out in force and some new ones made a good impression.

From New Brunswick among the prominent, were Seth Jones, Walter McMonagle & Son, Percy Gunn and Thomas Kyle, of Sussex; J. V. Jackson, George H. Seaman, R. A. Knight, of Moncton. Nova Scotia was ably represented. I. C. Craig, Wm. Robinson, R. M. Jackson, Messrs A. C. Reid, Blair, Henry Call, Harrison and many others. Competition has got to be so keen in the popular varieties that none of the breeders made a clean sweep of all firsts except in one instance, those being White Leghorns. Everybody voted the show as being the most successful and harmonious affair of its kind down to date.

WE WANT AGENTS RIGHT AWAY

In every section in the Maritime Provinces where a gasoline Stationary engine can be sold. The one we have to offer, which appeals most to farmers, is the

"Waterloo Boy"



Frost Proof Stationery Engine.

These Waterloo Engines are well and substantially constructed of the best material, by skilled mechanics, and are so durable that the makers have no hesitancy in extending to users their five years' guarantee. Engines are built on the interchangeable plan, all parts being made from jigs and templates, each and every part of the same kind being perfect duplicates, so in future years repairs that may be required can readily be placed without delay.

All the working parts are exposed to view and the duty of each part is readily understood by the user of the engine. The construction of these engines is such that they combine great strength and durability, yet it has been the manufacturers constant study to do away with all extra parts and simplify the construction as much as possible.

If you are looking for a good, reliable and up-to-date gasoline engine to handle—one which sells itself and leaves you a fair margin—write to-day for particulars.

FLORICUL[illegible]TURE.

All inquiries in this depa[illegible]rtment will be an[illegible]
red by H. E. Goold, Floris[illegible]t, Sussex, N B

E. M., of Rothsay, [illegible]N. B. writes :
Would you please tell [illegible]me what to do
ith a little Lace Cact[illegible]us? It has been
the earth since the [illegible]latter part of
ugust, I thought it h[illegible]d rooted but it
oes not seem to have [illegible]any roots al-
ough the top is nice [illegible]and green. I
ave two Hoya slips t[illegible]hat have been in
he earth about the sam[illegible]he length of time
s the Cactus and the [illegible]rootlets are very
iny, but the leaves ar[illegible]e about the same
s when planted. Wh[illegible]at had I better do
with them? I scraped [illegible]the dead part off
he Cactus roots. I [illegible]have lost several
Chinese Primroses; [illegible]they rot off first
above the earth. I [illegible]have put matches in
he earth, what els[illegible]e can I do?

The Cactus will [illegible]undoubtedly root in
ime if the soil be [illegible]well drained and only
fairly moist. D[illegible]rainage is most essen-
tial where soil i[illegible]s used. You did rightly
to remove the [illegible]decayed roots from the
Hoya, or wax pl[illegible]ant. It also roots slowly,
especially dur[illegible]ing the winter. The
period of gro[illegible]wth usually commences
during the m[illegible]onth of March, when, if
alive, your cu[illegible]ttings will probably take
hold. Keep [illegible]them moist and see that
the drainage [illegible]is good.

I fancy t[illegible]hat you have rooted the
Primrose by [illegible]watering over the crown of
the plant, w[illegible]ater should never touch the
centre of a [illegible]Primrose but be applied
around the [illegible]edges of the pot. I am
afraid that [illegible]if your plants have started
to rot off th[illegible]ey cannot be saved. I do
not think [illegible]hatches will help much. I
would not u[illegible]se them.

A MARIT[illegible]ME Reader says:
Can you [illegible]tell me when a plant that
looks som[illegible]ething like a balsam, with
leaves tha[illegible]t are rose like and a bright
pink flowe[illegible]r that has a tail like a Nas-
turtium c[illegible]an be obtained and how it is
grown—wh[illegible]ether from seed or cut-
tings,—and[illegible] where such can be obtain-
ed? I have[illegible] heard it called Siberian
Rose.

Ans.—Th[illegible]e plant referred to is evid-
ently the [illegible]Lmpertuns Sultana, the
seed of wh[illegible]ich can be obtained from all
seedsmen. [illegible]If sown now they will pro-
duce plants[illegible] that will bloom the balance
of the year[illegible]. If carefully treated, these
plants are [illegible]very easily grown and quite
showy and [illegible]it is a wonder that they are
not more so[illegible]ught after.

H. A. W. [illegible]of Chatham wants to know
how to repo[illegible]t Primroses.

In repottin[illegible]g Primroses and in dividing
old plants o[illegible]f this family, trim up the
bottom leave[illegible]s closely and if they are a
little shaky i[illegible]n the pot, it will not hurt
them, as the[illegible]y will soon establish them-
selves. Wa[illegible]ter very moderately after
repotting a[illegible]nd keep well shaded for a
few days.

Sword Fe[illegible]rns do not require so much
root room as[illegible] most ferns and if repotted
and over w[illegible]atered will quickly loose
foliage. If [illegible]Hyderangias are strongly
cut back in A[illegible]utumn, most of the bloom
buds will be[illegible] destroyed as the bloom
buds are large[illegible]ly formed on or near the
matured shoot[illegible]s, Prune these plants in
summer by pir[illegible]ching back, then you ac-
complished the[illegible] pruning in time for the
buds to form i[illegible]n autumn.

Obje[illegible]ct of Pruning.

1. To modif[illegible]y the vigor of the plant.
2. To produc[illegible]e large and better fruit.
3. To keep t[illegible]he plants or trees with-
in manageable [illegible]shape.
4. To change [illegible]trees from wood bear-
ing to fruit bear[illegible]ing, and vice versa.
5. To remove [illegible]superfluous or injured
parts.
6. To facilitat[illegible]e spraying and har-
vesting.
7. To facilitate[illegible] tillage.
8. To train the[illegible] tree to some desired
form.
9. To remove [illegible]parts badly infested
with insects and di[illegible]sease.

The above point[illegible]s will make us see the
importance of p[illegible]runing and pruning
right; far more [illegible]than we generally
realize and practic[illegible]e.—"Southern Fruit
Grower."

AFTER DRUGS FAIL== I'LL CURE YOU.

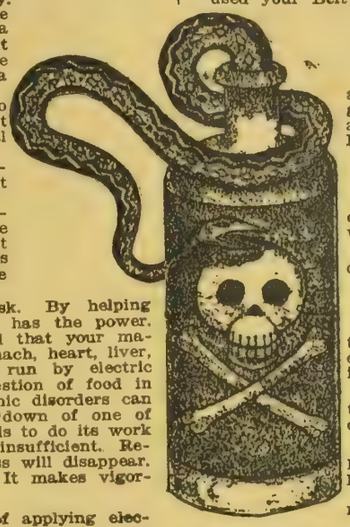
Go try them all; drugs, dope, patent nostrums and doctor's concoctions, and after you have found by experience that none of them will help you, then come to me and I'll cure you, Nature's way.

I've quit asking people to come to me first; to do so would save them many a dollar and lots of useless suffering, but experience is the best teacher and the only thing that will really convince a skeptical mind.

The time is near when doctors who use drugs will have to abandon that system of treatment for the natural treatment, electricity.

Why, there's Prof. Osler, a world-famed scientist, who said recently that most drugs are worthless.

Dr. Albert Leffingwell, of the American Humane Association, says that the average length of human life would not be diminished by an hour if all the drugs of Christendom were dumped into the sea—barring, perhaps, half a dozen.



How does electricity cure, you ask. By helping Nature. Nature will cure you if she has the power. Electricity is that power. Understand that your machinery is run by electricity. The stomach, heart, liver, kidneys and digestive apparatus are run by electric energy, which is created by the digestion of food in the stomach. Most sickness and chronic disorders can be traced to the failure or breaking down of one of these organs. The reason any part fails to do its work is because its supply of electricity is insufficient. Restore that force and pain and sickness will disappear.

Electricity is nerve-food—nerve-life. It makes vigorous men out of weaklings.

I have the only successful method of applying electricity. It has taken me twenty years to perfect my appliance, and I know what I can do.

My Electric Belt is worn while you sleep. Just put it on and turn on the current. There is no shock or burn; the only sensation is a soothing glow.

I have testimonials from people all over the Dominion, who have found health in my treatment. You won't believe these letters, but they are bona fide.

Dear Sir,—I write to let you know that your Belt has cured me, and I am entirely satisfied with your treatment. I then gave it to my sister to wear, and she, too, was entirely cured, after being treated by many different doctors, and also being told that she would have to go under an operation, to which she would not consent. She used your Belt and was entirely cured.

JOHN W. THIBAULT,
Bruce Mines, Ont.

Dear Sir,—I have worn your Belt for a month, and find that it is doing me great good. My stomach trouble is better, and I also feel stronger in every way. I am well pleased with the Belt.

Thomas Copeland,
Lakefield, Que.

Electricity is a lot cheaper than a course of drugging, besides it cures where drugs don't.

Call or send for my free book, read it over and then use your own judgment.

I GIVE IT FREE !

Get my 84-page book describing my treatment, and with illustrations of fully developed men and women, showing how it is applied.

This book tells in plain language many things you want to know and gives a lot of good, wholesome advice for men.

If you can't call, I'll send this book, prepaid, free, if you will inclose this coupon.

Healthy Stables.

Just now there is considerable agitation throughout Canada or in fact throughout the entire sivilized world about the alarming increase of consumption or tuberculosis, commonly called the white plague. This agitation is no doubt well founded, but methinks I hear somebody say what has that to do with agriculturists? Well, perhaps it has nothing to do with agriculturists but they have a duty to perform in helping to stay the dreaded disease in the animal kingdom, which may be a step towards its prevention among humanity.

All medical men are agreed that sunlight and pure air are most necessary for the patient to have in order to effect a cure for tubercular trouble or even to prolong life. If that is the case with human beings that are constantly moving around indoors and out, how much more is it necessary to apply this remedy or prevention to our cattle, many of which are tied up all winter long or nearly half their lives for the purpose of supplying the human race with milk and meat? Now, lest I be misunderstood, I do not wish to put the whole animal kingdom as equally important with the human race, only in so far as neglect of the animal health is likely to affect human health.

I am very strongly of the opinion that dark, dingy, ill ventilated stables are largely responsible for tuberculosis in cattle. As to what effect that has on the meat or milk from such animals when consumed by human beings I am not in a position to say, but I have my opinion. As this is the season for renovating old stables and building new ones I would urge upon anyone contemplating making such changes to put in all the light possible, as well as some system of ventilation. It need not necessarily be an expensive one. However, do not rely upon doors and windows for such ventilation, as it is difficult to so arrange it without throwing drafts upon certain ones of the stock. Build your walls hollow, you will find it much warmer and drier than solid walls, and no more expensive.

It is a good plan to have your window sash made for double glass about half an inch apart. This will make your stable warmer and will give better light in cold weather as the glass will not frost over.

It is important for the health of the animals as well as for the lifetime of the stable that roots are not kept in the stable. This is easily arranged by placing the root cellar under the driveway, and when properly built of cement throughout it should last a lifetime. Another thing that can be conveniently built in the driveway is the water tank. It can be kept high enough to allow the water to run to the drinking fountains in front of the cows. When built of cement and covered up securely it should last indefinitely.—Farm and Dairy.

Parlee Auction Sale Cancelled.

The auction sale of pure-bred Ayrshire cattle which was advertised in our first December issue by Mr. M. H. Parlee, Lower Millstream, N. B., has been cancelled, as the animals offered for sale have been disposed off by private sale to Mr. R. R. Ness, Howick, Quebec, who, we understand, will take them to some part of the West. While in Sussex last week, Mr. Ness also purchased some good ones from McIntyre Bros.

Turnip Taste of Butter.

"The milk from cows fed on turnips has a peculiar odor and taste," says H. Weigmaun. "Apparently some volatile product from the turnips gets into the body fluids of the cow and thus affects the milk. This fault may be corrected by warming or aerating the milk. But besides this, certain organisms, as coli bacteria, Actinomyces odorifer, Penicillium brevicaule and lactic acid bacteria, which are found in the feces of cows fed on beets or turnips, also produce the turnip flavor and aroma in butter made from milk or cream in which they are present. The turnip taste of butter may be due to both of these causes together. Butter may have the turnip flavor and aroma, however, even when no turnips are fed, as coli bacteria, causing the taste, are found also on oats, barley, corn, rape and other feeding stuffs. Pasteurizing the milk, with subsequent aeration, is recommended as a means of preventing the development of the turnip flavor in butter."

Stock Raising and Soil Fertility.

By Prof. M Cumming, Truro, N. S.

STOCK farming is the only kind of farming that will maintain the land in its virgin productiveness. On a properly managed stock farm the soil should be even more productive after a hundred years of farming than when the first furrow was turned. This cannot be said of hay farming or grain farming, or, in fact, of any kind of farming in which the crops raised are sold off the farm in their crude form. The cause of many an impoverished field and run-out farm in the Province of Nova Scotia can be readily traced to the easy method of selling hay and oats, instead of feeding these, with other farm produce, to various classes of live stock, whose products or themselves, when sold off the farm, remove so little fertility as compared with the fertility removed under the hay or grain farming systems.

SELLING FERTILITY.

Every crop grown on the farm has a value as a fertilizer and, when sold, permanently removes that amount of fertility from the farm. If the crop is fed on the farm and the manure properly saved and returned to the fields, this great loss of fertility is largely checked. And if, as is usually the case, other feeds, like bran, middlings, oil cake, etc., are bought and fed and the manure applied to the fields, farms will actually become richer and richer from year to year.

HOW TO CALCULATE THE LOSS OF FERTILITY.

In the table submitted below there is presented the amount of nitrogen, phosphoric acid and potash contained in a ton of the ordinary crops grown, as well as of the feeds purchased on the average Nova Scotia farm. Those who are familiar with questions relating to soil fertility will know that these are the three important elements contained in the commercial fertilizers which are being bought in increasingly large quantities in the Province. In the form of commercial fertilizers, according to last year's prices, we pay for these as follows:

Nitrogen.....20 cents per pound.
Phosphoric acid.....07 "
Potash.....05 "

MANURIAL VALUE OF FODDERS.

Fodders	Pounds contained on one ton.			Manurial value per ton.
	Nitrogen.	Phosphoric Acid.	Potash.	
Timothy hay	25.2	10.6	18	$ 6.68
Red clover hay	41.4	7.6	44	10.99
Mixed meadow hay	28.2	5.4	31	7.57
Oats	41.2	16.4	12.4	10.10
Barley	30.2	15.8	9.6	7.59
Corn meal	36.4	14.0	8.0	8.66
Wheat	47.2	15.8	10.0	11.04
Buckwheat	28.8	8.8	4.2	6.59
Wheat Middlings	52.6	19.0	12.6	12.48
Wheat bran	53.4	57.8	32.2	16.35
Cottonseed meal	135.8	57.6	17.4	32.06
Linseed oil cake meal	108.6	33.2	27.4	25.41
Gluten meal	94 to 126	6.6	100—	23.17 to 29.57
Oat straw	12.4	4.0	24.8	3.90
Barley straw	12.2	6.0	41.8	7.75
Wheat straw	11.8	2.4	10.2	3.04
Potatoes	6.2	2.4	9.2	1.87
Turnips	3.8	2.4	9.8	1.42
Mangolds	3.8	1.8	7.6	1.27
Cows' milk	10.6	3.8	3 6	2.57

The calculation of the manurial value per ton presented in the last column, is a simple matter. For example, a ton of timothy hay contains 25.2 pounds nitrogen, 10.6 pounds phosphoric acid, and 18 pounds potash,

The value of these at the above figures is:

Nitrogen—25.2 lbs., at 20c.....$5.04
Phosphoric acid—10.6 lbs. at 7c..... .74
Potash—18 lbs., at 5c..... .90

Total.....$6.68

This means that it would cost a farmer $6.68 to pay the equivalent, in the form of commercial fertilizer, of the amount of fertility which he sells in a ton of timothy hay. The manurial value of other feeds and products tabulated has been calculated in the same way, so that anyone, by the use of these tables, can calculate how much fertility is being sold with every load that leaves the farm, and how much is being bought with every load that comes to the farm.

NOTE.—By many it is considered that to put the same valuation on the nitrogen, phosphoric acid and potash contained in barnyard manure as in commercial fertilizers is to put too high a valuation on barnyard manure. Some would value these ingredients at 2-3 of their value in commercial fertilizers, in which case the figures in the last column of the above table, representing the value of fertilizing ingredients per ton are too high and should be reduced one third. For example, the value of Red Clover Hay, as a fertilizer is placed in the table at $10.99. This would be reduced to 2-3 of $10.99=$7 33. However that may be, the same principle remains that every fodder has a high manurial value. For convenience, we will retain the former figures, but any of our readers, to be on the safe side of the calculation may reduce these by one-third.

WHAT DOES THIS MEAN TO NOVA SCOTIA?

In the greater part of the province of Nova Scotia no one product is sold off the farms to such an extent as hay and, more particularly, timothy hay. The price received has, of late years, varied considerably. However, it is not very often that the farmer receives more than $10.00 per ton. When one considers that he is selling with each ton of hay the equivalent of $6.68 worth of fertilizer, one readily sees that he is not only doing his soil an injustice, but is receiving a very small margin ($10.00—$6 68 = $3.32) with which to pay cost of harvesting, storing and hauling, as well as the interest on his investment.

COMPARISON OF HAY WITH OATS AND POTATOES.

Assuming that a field that would produce 2 tons of timothy hay would produce 50 bushels of oats and 1 ton of straw, or 150 bushels of potatoes; and valuing hay at $10.00 per ton, oats at 50c. per bushel, oat straw at $5.00 per ton, and potatoes at 40c. per bushel, we arrive at the following figures, which the reader can easily verify by reference to table on Manurial Value of Fodders:

Crop.	Yield per acre	Fertility removed per acre	Market value of crop	Market value exceeds fertility value by
Timothy hay	2 tons.	$13 36	$20 00	$ 6 64
Oats	50 bush.	8 59	25 00	16 41
Oat Straw	1 ton.	3 50	5 00	1 50
Oats and Straw		12 09	30 00	17 91
Potatoes	150 bush.	8 41	60 00	51 59

The readers might change the market valuation or the relative yields per acre, but, whether he does or not, he will find that, in proportion to the price received, hay removes more fertility from the land than any other crop grown. We have, moreover, not taken into consideration the valuable matter, i. e., humus matter, which is also received by these crops. It is difficult to put an exact valuation on this compound, but everyone who has farmed knows that humus is indispensible to a good soil. Of the above crops, timothy removes, by far, the most humus; oat straw comes next, and oats and potatoes remove comparatively little per acre. Whichever we may consider the matter, it is, therefore, apparent that the selling of hay is the most exhaustive of fertility; the selling of oats less so, more particularly when the straw is left on the farm; and the selling of potatoes but slightly exhaustive, and yet, throughout the greater part of Nova Scotia, the standard crop sold off the farm is hay. Need anyone wonder that there are run-out farms and deserted homes.

HOW TO OFFSET THE LOSS

The only practical way to offset this loss is by feeding the greater part of the farm product to stock and marketing milk, butter, cheese, beef, poultry, eggs, pork, horses, etc. In feeding animals farm crops or purchased foods, the greater part of the fertilizing value of the fodder is recovered in the manure.

The exact amount depends upon the age, condition and kind of animal, as per following table :

Kind of animal	Percentage fertilizing ingredients retained in Animal body.	Percentage fertilizing ingrediends voided in the manure
Young growing animals	About 50%	About 50%
Milch cows	" 25%	" 75%
Fattening cattle	" 5 to 10%	" 95%
Matured horses	" 5%	" 95%
Fattening pigs	" 15%	" 85%
Fattening sheep	" 5%	" 95%

In the above table it will be noticed that, with the exception of young, growing animals, the dairy cow takes the greatest amount of fertility out of the fodders consumed. If, however, the cream is separated and the skim-milk retained on the farm, no more fertility will be sold off the farm than when beef is sold, viz about 10 per cent. The advantage of selling butter or cream instead of whole milk is, therefore, quite apparent.

Averaging up the whole table, we may say that from any farm on which a miscellaneous collection of stock is kept, the amount of fertility removed need not exceed above 10 per cent that which would be removed under the hay and grain systems of farming. The important problem that remains is, how can the farmer get the 90 per cent voided in the manure on his fields without further loss? The solution of this depends upon the care taken of the barnyard manure, which is subject to great loss from two sources, viz., leaching and fermentation. To prevent the former he must prevent the running away of the liquid manure. To prevent the latter, he must keep the manure from heating. And to prevent both, he may take as his general guide the getting of the manure on the fields as soon as possible after it is made,

AN INSTANCE.

Suppose that a farmer, instead of selling the two tons of hay produced on an acre of land, as above, feed it to his dairy cows, marketing therefrom only butter and pork. The two tons of hay, as above, contains $13.36 worth of fertility. There will be sold with these about 10 per cent of the fertility in the hay, leaving $12.03 worth of fertility on the farm Of this amount, the equivalent of at least two-thirds will reach the fields. To this should be added the value of the vegetable matter or humus in the barnyard manure, a value which we can scarcely quote in figures, but which constitutes, in the main, the superiority of barnyard manure over commercial fertilizers. The same principles can be applied to all the other fodders, and in every case it will be found that, from the standpoint of soil fertility, it pays to feed all fodders, except those for which the market prices are much in excess of their fertilizing value, on the farm.

BUYING FEEDS.

In buying feeds it is well to take these same questions into consideration. Compare, for example the manurial value of one ton of corn, bran, oats, linseed meal cake, and cotton seed meal :

1 ton corn has fertilizing value of			$ 8 66
1 ton bran	"	"	16 35
1 ton oats	"	"	10 10
1 ton linseed oil cake		"	25 41
1 ton cottonseed meal		"	32 06

It is not long since a large portion of the cotton seed meal produced was sold to be applied directly to the land as a fertilizer. Now it is practically all fed to cattle, with the result of not only increasing the milk flow and adding to the flesh, but of increasing the value of the manure heap at the rate of over $20.00 for each ton fed. Note too the high value of bran as a fertilizer. Through the medium of this, much of the fertility of the Western plains is now being transferred to the East. Compare the relatively low fertilizing value of corn with the high value of linseed and cottonseed cake.

Not every farmer keeps an account of his soil, yet it is hard to see how anyone, who accepts the principles laid down in the preceeding paragraphs, can fail to estimate the importance of knowing whether his capital stock of soil fertility is increasing or decreasing, for in this way only can he expect profitable returns from his fields each succeeding year. Just at present our Western farmers are, many of them, ignoring the principles, thinking that fertile Western soils will not become exhausted like those of the East. They will find, however, as many in the older sections have already discovered, that the most fertile of soils can be exhausted of their fertility and they will be driven "nolens, volens" to feeding live stock. In the meantime, the Eastern farmer has no alternative. He must recognize and live up to the principle that "In live stock lies the salvation of Maritime Agriculture."

EDITORS NOTE—We will follow up this subject in next issue by publishing an article by Prof. Cumming on balanced rations. Study the two articles carefully and preserve them for future reference.

Col. H. Montgomery-Campbell,
Apohaqui, N. B.
The new President of the Maritime Stock Breeders' Association.

The Coming Farmer.

EDITOR MARITIME FARMER :

That the present position of the best class of Maritime farmers is a desirable one we gladly claim. They need envy no one. But that the condition of a large part of those living upon our farms is vastly inferior to what it should be, and might be, we are forced to confess. There are many farmers whose active experience extends backward over a period of forty or fifty years. The wonderful changes that have taken place within that time in connection with agriculture alone are hardly realized by them, so gradually has the work of progress been accomplished. Where wide stretches (in many cases) of native forest then met their view, cultivated fields and pleasant homes mark the advance of our genius and civilization.

The rude log cabin of the early settler now stands obscurely in the shadow of the modern cottage as a reminder of the days of small beginnings. Commodious barns and stables indicate the channels into which, or through which, thrift and enterprise have led the prosperous possessor. "Old Brindle" has passed away—although she is to be found in some sections yet—with the primative quarters erected for her comfort, while in the new stables the better bred and more aristocratic Shorthorn, Holstein, Jersey and Guernsey are found. Poor old Brindle, what might you have accomplished had you been quartered in this model stable, fed a balanced ration of roots, clover hay, wheat bran and oil cake, and drank water that had no ice in it.

The farm implements of former days, when muscular developments had a practical meaning, have given way to improvement that lightened labor and made it possible for a boy to do the work of half a dozen men.

The wives and daughters of to-day know little of the peculiar household cares of their grandmothers. The cooking range, the washing machine and clothes-wringer, the sewing and knitting machine, bread and cake mixers, cream separator, factorys for butter making and many other savers of hard work.

Our mothers and grandmothers contentedly and well performed their household duties without the advantages of these modern improvements, and knew little of modern necessary evil—servant girls.

The favored children of to-day seem to be born to a degree of intellectual and scientific advancement, that it would have taken ten years of application in the schools for their grandparents to acquire, while our social and educational advantages as completely overshadow those of the past, as do improvements in any other direction.

An early acquaintance with good books, music, games and recreations in our homes are comparatively new, but strong influences in moulding character and maturing that most sacred element —a love of home.

We cannot believe that the spirit of progress that has blessed the Canadian people in the past will fail to continue its beneficient work; but to expect that the coming fifty years will be as prolific of invention, scientific achievement and intellectual advancements the past fifty years have been, requires a remarkable degree of faith in the unseen.

Farmers, as a class, are prehaps the most difficult to lead out of old, long-travelled ruts and into a trial even of that which is radically new.

They do not contribute largely to that changeful, restless element that would keep society in a constant ferment and under the foundation of governments, even uncertain.

If they are more persistently loyal to political and religious anticedents than most other classes, they are also slow to recognize these lines of thought and action that lead up to the better methods and conditions in their own particular interests.

If the average farmer of the near future can be brought to the general plane of thrift and intelligence, now occupied by the best representatives of the calling, this will be one of the great and political events of the century.

To accomplish this the farmer must be intelligent in his work; he must recognize the fact that to be a successful farmer he must be a succeseful business man. No other occupation calls for closer discernment and intelligent action. The wide-awake farmer is not only a producer, but a manufacturer. He must, therefore, understand the nature of soils, the value and influence of fertilizers and the law that govern plant growth. He must be familiar with the principles of the breeding of farm stock, the general form, characteristics and adaptation of the various breeds of the animals he handles. He must have an intelligent idea of the profits he should derive from the enterprise in which he engages. He must have well defined ideas of the value and effects of feeds, that when combined they may produce required results. He will be a buyer and seller, and as such, should cultivate a ready and correct judgment. He should study the markets, from a consideration of the question of supply and demand, in order to buy and sell at a profit. Instead of being controlled by circumstances, let him aim to be in a position to use them for his advancement. If the successful merchant deserves the title of business man, the successful farmer should have equal claim to the same distinction. The coming farmer will be an active man in public affairs.

Educational, social and political reform must receive a strong support from the farmer.

Such reforms are an absolute necessity to the maintenance and advancement of his interests and only will he prosper as they are fostered.

The common school is coming to be more and more an institution, peculiar to our rural districts, and the general tendency of advanced pupils from these, to seek better instruction in our town and city high schools, has, in itself, an element of danger to the common district school.

Let not the intelligence and wealth of the country neglect the educational interests of the masses because better instruction is available to their favored sons and daughters.

The farm will continue to be the best place in which to rear strong, brainy men and pure, noble-minded women, and though these may not all remain on the farm, but, as in the past, go out to give strength and character to business, intellectual and social circles in our crowded cities. In the future, those who leave the farm will in no sense be superior to those who remain behind.

Farmers, as a class, are apt to settle down to a conviction that their place is on the farm and that they should seldom go very far from it. The consequence of this is that they are liable to become rather cramped in their ideas of the world about them and to settle down to the conviction that what they do not already know is not worth knowing at all and hence continue on in their old routine way of doing things because their fathers did so before them and to become careless of the great improvement going on about them. This isolation is fossilizing in its influence—it deadens enterprise, dulls the intellect and is inimical to progress. How, then, is this tendency to be counteracted? By a more frequent and more intimate mingling together of farmers in clubs, in fairs, in institutes and in any way that presents an opportunity for them to exchange views and to discuss such subjects as are of interest to them as farmers. Not only this, but they should, as much as the interests of their business will allow, mingle with the world about them and be conservant with and take an interest in the world's work. All this would, undoubtedly, pay in dollars and cents and certainly would in enlarging and liberalizing the mind and in increasing the enjoyments of life.

Farmers are beginning to understand that muscular force cannot solve all the intricate problems which present themselves in this complex art. In times past it has been thought to give the son of a farmer an education was to give him a distaste for the labor of the farm. This, undoubtedly, has, to a large extent, been true. Instead of strengthening his attachment to rural pursuits, he has been educated away from them and has sought admission to the so-called "learned professions," because they were more likely to conduct him to honor and distinction. Agriculture has thus been drained of its most promising young men. The only way to remedy the evil is to elevate our profession and make it a learned profession; and no other profession presents a broader field for liberal culture and scientific research than this. In order that the farmers may occupy that position in society and influence to which their numbers and the importance of their calling would seem to entitle them, they should be thoroughly educated for the business of farming and also acquire some of those useful accomplishments which lend to

professional life influence in so great a degree.

The farmer of the future must believe more strongly in himself and his vocation. He must recognize that no social, intellectual or political barriers are raised before him because of his occupation, but that common with other classes, he will pass for what he is worth, but no more.

When in the future our vast country has been developed; when a largely increased and ever increasing population shall demand that our agricultural resources be taxed to their utmost, when thrift and enterprise shall become necessary adjuncts to insure success; no place will be left for the average farmer of to-day, and he will unconsciously give way to the more successful coming farmer.—A. HECTOR CUTTEN, Inglewood Farm, Lower Truro, N. S.

The Maritime Horse Show.

We have just received a copy of the provisional prize list and rules governing entries for the Horse Show, which will be held in the Winter Fair Building, Amherst, N. S., on April 6th and 7th.

There are to be fifteen classes, viz.:—1, Thoroughbred; 2, Standard Bred; 3, Hackneys; 4, French or German Coach; 5, Clydesdales; 6, Percherons; 7, Shires; 8, Roadster Horses, in harness; 9, Carriage Horses, in harness; 10, Saddle Horses; 11, Carriage Horses; 12, Heavy Draught; 13, General Purpose; 14, Agricultural, and 15, Ponies.

Prizes are offered in each of the first seven classes as follows :

	1st	2nd	3rd	4th
1. Stallion, foaled previous to Jan. 1, 1907..	$20	$15	$10	
2. Stallion, foaled during the year 1907.....	$15	12	8	
3. Stallion, foaled on or after Jan. 1, 1908.....	$12	8	6	$4
4. Mare, foaled previous to Jan. 1, 1908....	$15	12	8	
5. Mare, foaled on or after Jan. 1, 1908.....	$12	8	6	4
6. Stallion, any age.....	Diploma			
7. Mare, any age.....	"			

Classes 8 and 9 have the following sections and prizes :

	1st	2nd	3rd
1. Stallion, in harness.....	$15	$12	$8
2. Mare or Gelding, in harness.....	15	12	8
3. Matched pair.....	20	15	10

Class 10 will have the following sections and prizes :

	1st	2nd	3rd
1. Saddle horse, ridden by gentleman.....	$15	$12	$8
2. Saddle horse, ridden by lady.....	15	12	8
3. Leaper, ridden by gentleman	15	12	8
4. Leaper, ridden by lady..	15	12	8

In class 11, conformation, quality and true all round action will be considered. In judging, the horse will count 75 p. c. and the appointments 25 p. c. The sections and prizes will be as follows:

	1st	2nd	3rd
1. Mare or gelding, 15 1-2 hands and over.....	$15	$12	$8
2. Mare or gelding, under 15 1-2 hands.....	15	12	8
3. Matched team.....	25	15	10
4. Tandem	20	15	10
5. Four in hand.....	30	25	20
6. Champion horse, in harness	Silver Cup		
7. Combination Saddle and Carriage Horse.....	Silver Cup		

All horses competiting in class 12 must be the get of a registered pure bred sire, for which the following sections and prizes will be provided :

	1st	2nd	3rd
1. Mare or Gelding, shown in single harness, foaled previous to Jan. 1, 1907...	$12	$ 8	$ 6
2. Mare or Gelding, shown in single harness, foaled on or after Jan. 1, 1907...	10	8	6
3. Team, in harness, Mares or Geldings, foaled previous to Jan. 1, 1907.....	20	15	10
4. Team, in harness, Mares or Geldings, foaled on or after Jan. 1, 1907.....	15	10	8

Classes 13 and 14 will each have sections and prizes as follows :

	1st	2nd	3rd
1. Mare or Gelding, in harness.....	$12	$ 8	$6
2. Team, in harness.....	15	10	8

Class 15 will have sections and prizes for :

	1st	2nd
1. Pony, in single harness, 12 hands and under.....	$ 8	$5
2. Pair of Ponies, in harness, 12 hands and under.....	10	8
3. Pony, in single harness, over 12 hands and up to 13 1-2 hands	8	5
4. Pair of Ponies, in harness, over 12 hands and up to 13 1-2 hands	10	8

RULES GOVERNING ENTRIES.

1. Entry fee, $1.00 per head.

2. Horses entered in classes 1, 2, 3 and 4 may compete in sections for which they are elegible, in either class 8, 9 or 11, on payment of an additional entry fee of $1.00.

3. In classes 8 and 9 horses alone will be considered, but they must be hitched to an appropriate vehicle.

4. Class 10 is open to horses, which are elegible for any other class, on payment of $1.00 additional entry fee.

5. Horses entered in any section of class 11 may compete in any or all other sectons, on payment of an additional fee of 25 cents for each section so entered.

6. Horses entered in classes 4, 5 and 6 may compete in section for which they are elegible in class 12, on payment of an additional entry fee of $1.00.

7. Class 13, General Purpose horses, must be a horse that can be comfortably ridden, driven single or double to buggy or carriage, suitable for all purposes required about a farm; the form of a large carriage horse, but not possessing extremely high action.

8. In class 14 horses must be high class horses of the light draft type, weighing not less than 1,250 pounds.

As this is the first attempt put forth by the Maritime Stock Breeders' Association to institute a Horse Show, Mr. F. L. Fuller, the Secretary-Manager, in behalf of the Executive Committe, will be pleased to receive and consider suggestions that any of our readers might offer. If no suggestions are offered, the above mentioned sections, which are only provisional at present, will likely be approved.

Preserving Farm Tools.

Why do we oil tools? For the simple reason that it doubles the life and easy working of them. This being so, what oil is the best to use, and what is the best way to apply it?

Without going chemically into the roason why, which would take too long to explain, it has been found, from centuries of experience, that, like the old carpenter's rule of "wood to wood, iron to iron," in working tools, the rule of oiling is "vegetable oil to vegetable matter, animal oil to animal matter, metal or stone."

Of the vegetable oils, we have raw and boiled linseed, and castor, from plants; of the animal, neat or bullock's-foot (neat stood for bullock in Anglo-Saxon) oil, and fat or tallow. These are the only ones we need concern ourselves with; the others are of no use to us.

The raw linseed oil is pale yellow in color, and runs easy as water; if dark yellow, and stickey it has been adulterated with cheap fish oil. The extra refined is very good, and veay hard to get; like the boiled linseed. Blundell and Spence's is about the best on the market at present. The boiled oil is naturally much more stickey than the raw, a lot of the moisture having been driven off in the boiling; it is also darker in color than the raw. The difference in the use of these oils is—that the raw oil penetrates the wood-fibres right through, and only forms a skin outside when these wood-fibres can absorb no more of it. The boiled linseed, on the other hand, is too vicious or thick to enter the wood-fibres, and makes a skin on the outside at once. Thus you can see that if you are oiling or painting wood for yourself (paint is only white or red led mixed up with oil and coloring matter), use the best raw linseed; and, if doing a cheap job for someone else, use only the boiled; the wood will soon decay as the boiled oil skin wears off, but that is none of your business.

The neatsfoot oil, when absolutely pure, is white; but is never sold so in the shops, being a pale yellow. You tell it from linseed by the smell. If you want the real "Mackay" you must square your butcher for it; but good shop oil is all right.

It is unnecessary to describe castor-oil; we have all made its acquaintance at some time or other; its only use is to oil machinery, being cheaper than neatsfoot. The best way to handle these oils is to buy a drum of each; then get four sound old drums, fix a small brass tap on each, near the bottom, and put them on a stand about 3 feet from the ground. You will then be able to use the oil to the last drop without waste; you can get a rebate on the new drums, or keep them for whim or pig buckets.

Now, to apply these oils. First, the linseed. For oiling handles of any sort, take an empty golden syrup or jam tin, see that it is perfectly clean and dry, and half fill it with your raw linseed; stand your handle or handles in it, and leave them there for a couple of days. Then reverse them in the pot, and, after a couple of days, take them out and give them a rub over with a raw linseed oily rag. They are now fit for use, will spring well, and stand the weather with impunity, if the wood in them is any good at all.

You oil planes differently. For the tryer, jacks and smoother, you first remove the wedge and iron. Now block the bottom of the opening (or 'mouth') of the well, as carpenters call it, securely with putty, and pour raw linseed oil into it till almost full. Leave it for a couple of days, and you will find that the thirsty beech has drunk up all the oil. Fill her up again and she will soak up about half of that. When you find she will drink no more, pour the rest back into the drum, remove the putty, clean, and she is ready for work. If you want a pretty plane, rub the sides and top well with the oil also; she will then look as if she had been polished. If likely to get rough treatment, give her sides and top a coat of boiled oil all over; this saves planes wonderfully. For other planes, leave them in a billy of oil for a couple of days, first removing the iron (the wedge wants oiling as well). Then rub them on the sides, and they are ready for work. There is a tradition amongst shopkeepers that all tools and handles are well boiled before they leave England. If so, that oil takes care to escape on the way out; gets licked out in the Red Sea, perhaps. Iron planes, of course, you do not oil at all, except the bed or wearing surface. You must keep on giving this a dab with raw linseed or, preferably neatsfoot oil, or you will not be able to work it at all.

To apply neatsfoot: You must keep a little oil can full of it on the bench; when your oil-stone will not bite, or your saws cling, or feel a bit rusty, flirt a few drops on as needed. Grease or fat will answer the same purpose, but is not so good.

Keep Betler Hours.

Life on many of the farms is not a pleasure as it might be. The family rise very early. A long strenuous day is passed in field and at night after supper the men work in the barn doing chores until a late hour, the women in the house preparing for another day. Too tired to read or to talk all seek their beds as soon as the work can be left to be ready to repeat the process on the coming morrow.

These people know no joy of living as they should, and they rarely ever prosper financially any better than do others who do less work. A ten hour day in the fields with two or three hours doing chores morning noon and night is more than any one can do and do their best work. When the body is unduely jaded the mind will not work quickly. Many unnecessary steps and hard boosts are taken because the mind has not planned the work ahead.

There are dollers to be gained by read-the farm paper and learning what other farmers all over the country are doing. A farmer should keep posted on market and crop reports. It is a part of his business. He must take some time in which to do this and it is time well used. He must not be unduly tired if he would read intelligently and gather the kernel of what he reads for his own use.

Work should be done by seven o'clock—six if possible. The evening should be given to the family circle, reading, making up accounts, which are sadly neglected to the farmers' loss on most farms, and keeping acquainted with the family, about which some men know less than do their neighbors. The boys and girls will be less likely to leave home as soon as of age if the parents spare a little time to cultivate their acquaintance.

Think it over, you men who come in from the barn at nine o'clock and go straight to bed. Try the other method a while and see if it doesn't make life happier and business better.

Breeding Questions.

Subscriber writes:—Suppose A. has a thoroughbred Durham bull and B. has a thoroughbred cow of the same breed would it be possible to get a thoroughbred calf if B. should breed his cow to A's. bull about ten minutes after A. had bred his bull to a scrub cow. Would the bull have anything in taking from one cow and putting the same to another. Suppose A. had a thoroughbred Clydesdale mare and the first colt she had was from a Percheron horse. Her next foal was by a thoroughbred Clydesdale horse. Would colt No. 2 have a tendency to take after colt No. 1, or stallion No. 1 and interfere with it being a thoroughbred Clydesdale colt;?

In reply to Subscriber's questions re breeding. I suppose when he refers to a bull or cow as thoroughbred that he means purebred as there is not any thoroughbred bulls or cows. Thoroughbred is the name of one breed of horses and no other animal is entittled to use it. Therefore I will use the word "purebred". If B. breeds his pure bred Shorthorn cow to A's purebred Shorthorn bull and secure a calf from such mating it would be a pure bred Shorthorn calf no matter how many mongrel cows the bull may have served nor how short or long the time between. If A's purebred Clydesdale mare was bred to a purebred Clydesdale stallion and a foal secured from the mating, it would be a purebred Clydesdale foal regardless of how many foals the mother may have had from Percherons or any other breed or mongrel stallions. J. STANDISH, V. S.

Physicky Horse.

Can you tell me through "The MARITIME FARMER" what to do for a horse that physics when driving? The horse is not fed very highly and is not bothered with the looseness except when driven.

ANS.—Some horses, of nervous disposition, physic very readily when driven. Horses may also physic if driven shortly after being fed. Drive your horse gently so as not to incite nervousness and see that he is fed so that sufficient time will elapse for a partial digestion of food before the horse is driven. Do not drive the horse when his stomach is full.

ENGLISH YEOMAN'S TOAST.

"Let the wealthy and great
Roll in splendor and state,
I envy them not, I declare it;
I eat my own lamb,
My chickens and ham,
I shear my own fleece and I wear it.
I have lawns, I have bowers,
I have fruits, I have flowers,
The lark is my morning alarmer;
So my jolly boys, now,
Here's God-speed the plough,
Long life and success to the farmer."

THE BALANCED RATION.

The short course students who listened to Prof. Cumming's lectures on "Dairying," particularly the parts of the lectures which dealt with the questions of Balanced Rations and the Manurial Value of Foods were loud in their praise of the insight they had received into these matters. Professor Cumming as secretary for agriculture had two very educative articles on the above questions in his report for 1909. The articles in question were worded so that any person of average intelligence might understand them and work out a balanced ration from the foods within his reach. In buying feeds to supplement other feeds in making up a balanced ration, the manurial value of such a feed should be taken into consideration as well as the various food elements that they contain, and it not infrequently happens that a food rich in, say, protein, is of high manurial value and although it may be the most expensive feed on the list its dual value as a food and its high percentage of manurial value may make it the most economical feed to buy. In this and succeeding issues we will publish the articles referred to as thep appeared in Professor Cummings' report, so that those of our readers who did not attend the short courses may be benefited thereby. Preserve and study these articles, apply them in actual practice and we know you will glean satisfactory results.

We would like to urge upon farmers and farmers' sons, who have never followed a balanced ration system of feeding, the advisability of adopting the practice as soon as possible. If anyone should feel skeptical re the matter, start the system by experimenting with one cow and we feel quite sure all skepticism will fade away and the whole herd will be brought under the more profitable feeding system. Why not let your boy take an interest in this matter by letting him conduct the experiment and watch the results?

THE PROBLEM OF COUNTRY.

In country life the winter months are pre-eminently the educational season of the year. All of our organizations devoted to the promotion of special branches of farming hold their principal annual meetings during these months. These gatherings have all been held as usual the past winter. They have been well appreciated, have called out a full attendance, and no one can question but they have exerted a powerful influence, each in its particular line of effort. Farmers need these things, but at the same time the question arises, whether these organized efforts have not been too much confined, or too closely directed, to an education having for its object an increased production. It is not all of farm life to make more butter, raise more fruit and lay by a few more dollars above the necessities of life. This is all desirable, but country life goes with these productions, and we contend calls more loudly for aid in its object the growing of two blades of grass where but one grew before.

The education of rural life in its rural setting is a matter which may well receive, and certainly may properly claim, a large measure of attention from our organizations related to country affairs. It was none too early that our President of the United States directed attention to the standing of country life and while no striking results may directly appear from the movement, yet it cannot fail of directing increased attention to that which has heretofore been more or less neglected. It is the sentiment back of the life in the country that now specially calls for culture, rather than increased production. This is the "rural progress" now most needing attention, and, any or all of our organizations in the interest of country affairs can do no more useful work than for a time to direct their efforts to elevating the standard of life around us.

THE FARMERS' INSTITUTE SEASON.

It must not be forgotten that the Farmers' institute season is now in its height of action and usefulness. The rush of other interests, the finishing up of the fall farm work and the preparation for winter, the excitement, etc., usual to the holiday season, all tend to divert from the study and preparation necessary to keep up with the present day institute work.

The farmer's institute is the greatest helper in agricultural training that is now employed among the people. It is available in the right place and at the right time to give the needed encouragement for reform and improvement in agricultural matters. It is this farmers' institute education and training that is going to supply the country with high-class farmers for the future. The institute prepares the boy for the agricultural college and the agricultural college prepares him for the intelligent and scientific management of the farm.

The institute fair or show is a feature that merits the encouragement of the older members and managers of the farmers' institute. The sooner the boy becomes a patron of the agricultural fair the surer you are of having him tied to the farm. It is the personal interest that must be cultivated into the boy, in his relation to the farm, that is of greatest importance in cultivating an attachment for the farm. Get the boy interested in the farm. This can be done by giving him a share in the production of some branch of the farm crops or live stock. The boy must see results, must share in those results, must have a tangible interest that has a money value to it.

The farmers' institute can do much to cultivate a better relation between the boy and the farm. This is important now, since there is a scarcity of help to handle the farm work. Devise some plan to make the farm life more attractive for the boy. This is a work that the farmers' institutes should take up and discuss, as it is now worth more to agriculture than any other single interest.

BREEDING TO A DEFINITE PURPOSE.

Has it ever occured to you why all the progressive people of the world draw on the Netherlands, Guernsey, Jersey and Ayrshire for cows? Why breeders from various parts of the world go to France and Belgium for draft horses, to England for draft and running horses, beef cattle and mutton sheep, and to Scotland for her beef cattle? Did it ever occur to you that wherever any locality becomes noted for the production of any kind of live-stock, all the people in that locality are making a speciality of breeding in some definite line and for a definite purpose?

Does it not follow that if we can hope to make a reputation and become distinguished for breeding something of great merit and to daw the patronage of enlightened and progressive people, we, too, must specialize, have some definite aim in view and combine all the intelligence and energies of all in a community, county or province to the one purpose? If so, why do some Canadian farmers, as a rule, indulge in hodge-podge breeding and when one starts to breeding a certain kind of stock his neighbor goes straightway and gets something else?

England furnishes a most wonderful example of this idea of localizing the breeding of animals in special sections. When we come to think of it, nearly all of our breeds of horses, cattle, sheep and swine have been originated and developed in Great Britain. What is more, they localize their interests. Certain secetions are given over to the breeding of Shorthorns, others of Herefords, Devons, Polled Angus, Galloways, Jerseys, Guernseys, Ayrshires, etc. Then there are certain districts devoted to special breeds of sheep, or swine or horses. As a consequence, buyers do not waste time or money in running all over the kingdom to find out what they want.

LOOKING AHEAD.

Just now it is well to remember that, barring the unforeseen, what the crop of 1910 will be and what profits will acrue to the farmer, depends in no small degree on the thought that the individual problem at this season of the year.

Haphazard farming will pay no more than haphazard work in other directions. Consider carefully the results of the year, which has just closed. Look for the loopholes through which profits slipped away. Learn from the experience of the past.

Study the agricultural reports and read the farm papers. Get in touch with the markets, and don't help to swell the total of overproduction in this department or that. Reduce your acreage of this and increase the planting of that, if the opportunity seems favorable. Study new opportunities, and without being reckless see to it that the other man does not skim all the cream from the milk while you are wondering "if it would pay."

Above all, when the rush of spring commences be ready with a definite plan, and follow it. System, perhaps, counts for more on the farm than anywhere else.

FUN IS A NECESSITY.

Most people have the impression that fun and humor are life incidentals, not necessities; that they are luxuries and have no great bearing upon one's career.

Many think of fun as frivolous, indicating a lack of serious purpose in life. There are parents who rebuke their children because they want to have fun and go in for a good time. These parents have yet to learn the great part which fun and humor play in the physical economy, and their influence on the life.

Canadian Guernsey Breeders' in Annual Session.

The annual meeting of the Canadian Guernsey Breeders' Association was called to order in the Winter Fair Building, Amherst, N. S., at 2 p. m., December 8th. President D. G. McKay occupied the chair. Secretary H. W. Corning not being present owing to being laid up with a broken leg, Wm. McConnell was appointed Sec'y. pro. tem.

Minutes of the last annual meeting were read and adopted.

The reports of officers were called for and responded to as follows: Pres. McKay gave a written address as follows:

"Gentlemen:—As we meet in annual session of the Canadian Guernsey Breeders' Association, I am glad to state that the present year has been a profitable one for Guernsey Breeders.

"I believe Guernseys have shown up at our fall fairs better than ever they have before.

"To make a success of our breed, there are three important things that we should attend to, viz: breed, feed and weed. It is very important that we have good stock to start with, it is also important that we feed well, but I think perhaps we make more mistakes in the latter by not culling out our misfits. Let us ever remember that we do ourselves and our breed a serious injury by selling a poor animal for breeding purposes.

Vice Pres. E. J. Johnson said that he was becoming more and more interested in the Association and although he had not responded to the Secretary's request and written a paper on the "Grade Guernsey as a profitable dairy cow for Cape Breton" yet he was prepared to advise the dairymen of Cape Breton to breed Guernseys, because he believed them to be the best all round breed. He urged the breeders to use only the best types for breeding purposes and to slaughter the misfits, rather than use them and thus hinder the development of the highest possible standard of the Guernsey dairy cow.

Secretary, H. W. Corning sent the following report which was read and adopted.

"Officers and members of the Canadian Guernsey Breeders' Association:

"As we meet in the beautiful town of Amherst for this, our fifth annual meeting, your Secretary is very glad to report progress for the year 1909.

"Our membership has nearly doubled and I am sure our golden colored Guernseys are more than twice as popular as they were a year ago. This, however, is but a natural consequence, for as the dairymen are coming to realize that the Guernseys most economically produce milk and butter of the best flavor and highest natural color, they are turning their attention toward them.

"Several new herds of pure bred Guereseys are being started and agricultural societies as well as private individuals are seeking after Guernsey bulls for grading herds of profitable dairy cows. A superintendant of agricultural societies said, "Guernsey bulls are scarce and the demahd for them is steadily increasing."

"We have now two hundred and thirteen Guernseys recorded at Ottawa and while this is a small number compared with the thirty-nine thousand registered in American Guernsey cattle club records, yet when we remember that we have only been recording cattle for about four years and that a large percentage of the cattle recorded are just entering thirty days of usefulness, we can easily see that our growth is a certainty.

"According to the reports of the agricultural papers, the quality of the Guernseys shown at the leading exhibitions in Canada this fall was a credit to the breed and while it is necessary that we present our cattle to the public at the shows in their best condition, there is another very important thing that we, as breeders must not lose sight of and that is, what should be the first line of our motto as breeders of dairy cattle, viz: the economical production of milk, cream and butter.

"That a decided advance has been made in this direction is shown by the fact that cows from two herds are now being tested in the record of performance. Let the good work continue!

"The Experimental Farm, Ottawa, has entered three cows and in a letter of recent date, Professor Grisdale stated that he would forward to two or three more entries in a short time. Your Secretary has entered four cows and intends to enter others of his herd as soon as they freshen.

"The Department of Agriculture has provided an easy and cheap way for us to secure official records and the sooner the breeders take the opportunity offered, the sooner we shall know which are our best cows and which strain of blood to seek after to help us in our work of breeding for the most profitable producers.

"There are forms of applications to the record of performance on the table here, and I hope that a large number of our breeders will enter their herds at an early date.

"We may rest assured that while the business like appearance of the Guernsey and the natural high color of her product have attracted the attention of a large number of our dairymen who are catering to a fancy trade, the large official records which she can so easily make will attract the attention of a great many more.

"Your Secretary is very much disappointed because he is unable to attend the annual meeting on account of having a broken leg. He was planning to travel by the aid of crutches but the doctors advised him not to take the risk because a jar might cause him serious trouble, so he has had to resign himself to his fate and stay at home.

"At the request of the executive committee Mr. Wm. McConnell has very kindly consented to act in my place and so I trust that our fifth annual meeting will be a pleasant and a profitable one."

Respectfully submitted,
HOWARD W. CORNING.

The Treasurers report, which was audited by Messers E. J. Johnson and J. F. Roach, a committee appointed for that purpose, showed a cash balance of $91.66.

Mr. Elderkin spoke endorsing the many sentiments embodied in the officers' reports and advised unanimity of propuse among the members. He was much interested in its welfare and pleased with the progress the Association had already made. He was highly pleased with the exhibit of Guernsey cattle at Halifax this year and urged the members to make as good or a better show at the Dominion exhibition in St. John next year.

Mr. John McDonald stated that Guernseys were certainly becoming more and more popular in the section of country where he resided.

The election of officers resulted as follows: President, D. G. MacKay, Heath Bell, N. S. Vice President, E. J. Johnson, George's River, C. B. Secretary, H. W. Corning, Chegoggin, N. S. Directors, John McDonald, Shubenacadie, N. S.; Wm. R. McCready, Jacksonville, N. B.; T. D. Blakie, Great Village, N. S.; Thos. A. Peters, Fredericton, N. B; J. J. Garean, St. Rock Cachigan, Que. Auditor, Robert Robinson, Nappan, N. S.

Moved by Mr. E. B. Elderkin, seconded by Mr. E. J. Johnson and ordered that a letter of appreciation for service and sympathy, re accidental breaking of his leg be written and forwarded to Secretary Corning.

WM. H. MCCONNELL,
Sec'y. Pro tem.

For More Favorable Tarriff Rates.

EDITOR MARITIME FARMER.

Allow me to draw the attention of your readers to a few inequalities in the Canadian customs tariff from the standpoint of one intersted in horticulture.

The idea of bonusing dairy cows is probably a commendable one, but the problem of making a good cow produce more than 3000 lbs. of milk in a year or discovering whether some other cow belongs to the order of "The Sons and Daughters of Rest" or not, is, to all appearance, one easily solved when compared with some which the horticultural farmer is called upon to tackle.

In the present tariff schedule there are 15 articles enumerated as free, not including books for the blind, which can be said to be of exclusive benefit to the farming community.

Of these 15 articles 2, animals for improvement of stock, and cream separators, are of distinct and unquestionable benefit to dairy farmers, there being nothing to correspondingly benefit the horticulturist.

It is only right that these things should be upon the free list, but would it be anymore than right that spray pumps and fixtures and motive power for same should be also placed there, giving us a chance to get the best products of the world, in this necessary machinery, on something like a fair footing.

The value of cream separators and steel bowls, and parts used imported into Canada for the year ending March 31st, 1909 was $760,162.

There is no separate enumeration of spray pumps in the classification, but since these implements have a much more circumscribed field of usefulness, their value must be much less.

I do not claim that the dairyman has an unfair advantage, but simply quote such figures as I could obtain to show that over $700,000 worth of machinery could be imported free to benefit one class, something probably of less than one-half the value could be placed on the free list in aid of another.

FRANK A. BOLSER,
Annapolis County, N. S.

Serious Disease of Potatoes in Newfoundland.

In Bulletin No. 63 issued during the last month from the new Division of Botany at the Central Experimental Farm, the Dominion Botanist (Mr. H. T. Gussow) describes a serious potato disease lately discovered by him in Newfoundland. This disease which is identical with that known in Great Britain as black scab, warty disease, cauliflower disease of potatoes and more properly, potato canker, was first discovered in Hungary in 1896 by Professor Schilberszky, who gave to the fungus causing it the scientific name of Chrysophlyctis endobiotica. In 1901 the disease appeared in Great Britain, where it spread from country to country until in 1908 244 cases were reported under the Destrucsive Insects and Pests Order. By this Order, which was made in 1908, persons concealing outbreaks are rendered liable to prosecution and a heavy penalty.

In appearance the disease is characterized by nodular excrescences which may be larger than the original tuber itself. The growth consists of a mass of coral-like or more or less scaly excrescences or nodules. These are of a somewhat lighter color at the base and are dotted with minute rusty brown spots over the surface. In an advanced stage the tubers are wholly covered by this growth, having lost every resemblance to potatoes. They are lumps of irregular outline, never spherical or oblong, but simply a mass of ragged and edged excrescences. In a still more advanced stage the tuber is reduced to a brownish, black soft mass giving off a very unpleasant putrefactive odour. "This," to quote textually from the bulletin, "is the most dangerous stage of the disease; tubers which have reached it cannot be harvested whole, they break in pieces and thus the brownish pulpy mess consisting almost entirely of the spores of the fungus and remains of the cell walls of the potato is broken up, the spores are liberated in millions and the land is badly infested for years."

The seriousness of the malady may be also gathered from the statement that no sound tuber is saved from a crop that is attacked. The disease is not influenced in any known degree by physical or mechanical conditions, and may therefore be considered as the most serious pest attacking potatoes. Fields at harvest time in affected areas present the most hopeless appearance, and the disease has caused the greatest havoc in all localities where it has appeared.

In the bulletin, which is illustrated by drawings from nature and microphotographs of diseased tubers, Mr. Gussow describes fully the nature of the disease, the method of dealing with outbreaks and the precautionary measure to prevent its introduction. Potato growers are especially warned to guard against the disease (which though it has appeared in Newfoundland is fortunately so far unknown in Canada) by selecting only sound potatoes for cultivation and by strictly rejecting any that appear diseased.

It is understood that as a result of a recent personal investigation by the Dominion Botanist in Newfoundland the disease appears to have been introduced into that country by means of diseased seed tubers imported from Scotland. Potato growers in Canada should therefore be exceedingly cautions in the use of seed tubers that may have been imported from Great Britain or the continent of Europe.

The Profitable Use of Artificial Manure.

Every crop removes a greater or less amount of fertilizing matter from the soil. Milk and beef also deplete the soil, and should these be sold off the farm its fertility ultimately sinks, unless it is replaced by some sort of natural or artificial manure. A plant requires about ten separate constituents, all essential, before it can grow; but by far the greatest part of all plants is built up of consolidated water and carbonic acid gas drawn from the atmosphere—sources which are practically inexhaustible. The soil is responsible only for a small portion, but, as the strength of a chain depends upon its weakest link, so also the ingredient obtained by the plant with the greatest difficulty regulates the crop. Of all the elements in ordinary cultivated soils only four are likely to run short—i. e., nitrogen, phosphates, potash and lime, and it is these we aim at supplying in the several manures. Abundance of any one ingredient in a soil will not make up for the deficiency of another. Some soil may only require one fertilizing substance to be added before it can produce a full crop. Poor soils would naturally require a complete manure, which supplies all that is likely to be wanted, but it must be remembered that every manure is not complete. Some supply only one or may be two of these fertilising elements, and in consequence we have nitrogenous, phosphatic, and potassic manures. The most important point to a farmer is to know which particular class gives him the best results, or how to blend them for the same end. A knowledge of each group and simple trials on the farm, leaving unmanured parts for comparison, will often be the means of forming a paying investment to the farmer. Vendors of manures are bound to supply the purchaser with a guarantee stipulating the percentage of nitrogen, phosphates (soluble or insoluble), and potash they contain, as the case may be. The condition of a manure, as well as the kind and quality of the plant food it contains has also to be taken into account when putting a value on it. Good cultivation is essential if the full effect of manure is desired. Not only does it help to make the dormant plant food in the soil soluble, but also gives more vigorous and robust plants. As to lime in the general average of soils this is found in sufficient quantities. It has a many-sided action. Not only is it a plant food, but it has also a physical effect, helping to open heavy soils, it binds together loose soils, helps to liberate other plant foods, combines with the acid in a sour soil and sweetens it, besides being one of the best curative agents to employ in combating club root in turnips. A usual dressing would be about two tons per acre. To much lime in a soil is about as bad as too little; it has a tendency to sink downwards. R. S. FORBES.

HORTICULTURE

Co-operative Fruit Growers at Waterville, N. S.

On Saturday, January 15th, a special meeting of the members of the Waterville Co-operative Fruit Company Limited met with Mr. G. E. Best in the chair.

Mr. Foster M. Chute, the manager of the company, read the minutes and gave a summary of prices received for apples during the past season which were more favorable than prices received from local buyers, or from agents representing English firms.

Although the company was only inaugurated last fall, it was consequently at a disadvantage because it was not widely known, but the results so far are very satisfactory. The fruit growers of the district already find truth in the old maxim that "unity is strength."

Mr. Chute is not only an experienced orchardist and small fruit grower, but has had some experience in orange-growing and the advantage of travel. He has visited Edgland and other points in the interest of the fruit industry, so that his knowledge of business and markets has served him well in drumming up trade with apple firms. The members of the fruit company seem satisfied that he is the right man in the right place. It was a wise fore-thought of Mr. Chutes' which prompted him to dispose of the early apples in local markets and those of Boston which realized good prices. At that time there was a glut of Gravenstiens in England, and those shippers who were unfortunate enough to export to London recived 17c, or in some instances, 50c per barral while others were in debt. Another advantage was, that the firm in London to whom the company ship, is able to draft fruit in time of flatness to the big provincial towns.

With regard to the community, it was pointed out that the company keeps the people at home by giving them employment, and they benefit the neighborhood by spending their earnings in the place.

As an object lesson in thinning and spraying fruit, three barrels of Baldwins were selected at random from the lots of three different mew. The apples in the barrels were just as they came off the trees, unsorted.

In the first barrel were apples which had been thinned and sprayed. This fruit was of a very brilliant color, clean, and it was calculated that such fine fruit would pack ninety barrels of number ones out of every hundred.

In contrast to the first barrel which was nearly full, there was a barrel of fruit which apparently had shrunk to three quarters of a barrel. This lot had not been sprayed nor thinned. Nearly every apple was badly spotted, and the majority seemed to be culls. Probably there would not be more than a peck of sound fruit in the barrel, yet the grower would wonder why his fruit packed so few barrels of number ones, and would blame the manager for the excess of culls.

The third barrel contained fruit which had been sprayed, but not thinned. It plainly showed the advantage of thinning. All three barrels spoke the praises of spraying and thinning more loudly than a long discourse on the subject.

The cost of packing a barrel of apples is fifteen cents, that of a box seven cents. It takes a much longer time to sort poor fruit. Growing box fruit is desirable, but if we are to compete with the West, we must thin. The best time to do this work is after hay making, or the beginning of August.

By neglecting orchards in spring, it was claimed that the grain and potatoes grown cost all they were worth, if the spraying of the orchards was neglected. We should have more faith in our orchards in the spring. It is good to put in other crops, but we should not put in so much, or so many that they will keep us chaseing after them all summer at the expense of the orchards.

Turning to the subject of manures, one grower estimated that, with a green cover crop, it cost him nine dollars per acre for commercial fertilizer in the form of slag. Other share holders recommended acid phosphate and potash. Another grower said that he used to use much barnyard manure but since he had used slag his apples had been a much brighter color.

It was proposed that the fruit farmers should co-operate and buy fertilizers through the company. If the fertilizer is bought in July, it can be had for one dollar per ton cheaper than if delivered in November, and if bought in quantities there would be a saving of from one to four dollars per ton.

As the warehouse occupied is rented, it was decided that if this kind of business was to be done, they must have a place in which to do it. In order to decide about building a 150 feet warehouse, which was estimated would cost about six thousand dollars, it was decided to call another meeting a fortnight hence. It was also decided that in future the company handle potatoes, with which the manager did well last season.

The advantages of spraying with a sulphur lime wash was then discussed. It was stated that it would not russet the fruit as vitriol will at times. One member said that he now used three pounds of blue vitriol instead of four, and he found that it did just as good work and was not so liable to russet as four pounds.

Several co-operative companies have been formed in the Valley for the disposal of fruit. The business meetings being men together, who naturally discuss the best methods. Different companies will stimulate competition and the man who stands by himself will soon find that he cannot afford to do so. It is to be hoped that the companies will raise the standard of packing. Some people, because of their meaness seem incapable of putting up good fruit. In trying to save, they loose, and the loss is not only theirs, for they give a bad impression in the old country of people who really do put up honest packages.

EUNICE WATTS.

Mr. A. G. Turney,
The newly appointed horticulturist for the province of New Brunswick.

New Brunswick Horticultural Interests will be Looked After.

Mr. A. G. Turney, at present employed by the Ontario Department of Agriculture at Simcoe, Ontario, has been appointed Horticulturist to the Province of New Brunswick. Mr. Turney is a young man of twenty-five years of age, who since coming to Canada has distinguished himself along horticultural lines. Graduated from the Ontario Agricultural College after a four years course in which he specialized in horticulture with distinction, since then he has been employed during the summer months at special horticultural work for the Agricultural Department, and during the winter has been teaching horticulture in some of the high schools. He comes to New Brunswick with the very highest references from the President of the agricultural college, the professor of horticultural there and the officials of the Department of Agriculture with whom he has worked. He will leave Simcoe this month, and after taking the special short course in horticulture at Guelph, from 25th January to 5th February, will proceed immediately to New Brunswick to take up his duties. Some of the work upon which he will be engaged may be outlined as follows:

The supervision of illustration orchards and the planting of additional ones where the public interest demands.

The holding of orchard meetings at the illustration orchards throughout the spring and early summer to give practical demonstration of the best orchard practices

The introduction and testing of new and promising varieties of fruit of all kinds at various points throughout the province.

The teaching of short winter courses in fruit growing at various centres.

The encouragement of the starting of nurseries for the proprgation of the best varieties of apples, pears, etc.

The encouragement of co-operative associations among fruit growers for spraying, packing and shipping purposes.

Instruction in the packing and marketing of fruit and the placing of experimental shipments in possible foreign markets.

To give instruction and assistance in fighting insect pests and diseases upon all classes of crops.

To give instruction and assistance in the eradication and prevention of weeds.

To co-operate with the Dominion Seed Branch in encouraging the growing and sowing of the beft and cleanest seeds of all kinds.

Evidence is accumulating that Eastern Canada can produce a better quality of root and vegetable seeds than are now produced in Europe, and it is very desirable that the growing of seed of this character should be initiated and encouraged and this would also provide a wide field of effort for a horticulturist.

He should also be able to arrange for the display of New Brunswick grown fruit and vegetables whence immigration is desired or where markets are possible.

Brown Tail Moth on Imported Nursery Stock.

To Nurserymen and Others:—We are again confronted with the possible introdnction of the brown-tail moth into the Dominion in the shape of the winter nests on nursery stock imported from abroad, especially from certain regions in France where nursery stock has sometimes been found growing in fields bounded by hedges infested with the brown-tail moth.

Last year nurserymen and other importers co-operated with this division in the work of preventing the introduction of this insect by notifying us of the arrival and expected arrival of consignments of nursery stock from abroad. This enabled the division to inspect the

LYMANS Ltd., Montreal, Canadian Agents.

States, is less advantageously placed, in that apples hold first place in England very largely on account of weight. Latest statistics show that our apples weigh, on an average, ten pounds per barrel more than theirs, thus enabling Canadians to maintain their lead, provided, of course, equal care is used in packing and shipment. There is certainly no good reason why we should lose in this respect, yet of late there have been more objections than usual in the packing of apples received from this country. One authority says that continued dishonest and careless packing will eventually lead to distrust to all grades of our apples, thus enabling our neighbor, the United Stated, to increase her hold on this market.

Commission men should insist on honest and careful packing and farmers should voluntarily do their part toward seeing that our reputation for the best apples is upheld.

Owing to a difference in season, Australia and Tasmania are not rivals to be feared, as their crop is usually all disposed of in the spring and summer. It is therefore plain whom we have to fear, and with a little systematic work done by producers and commission men working together, Canadian apples will still remain first choice in the English market—Canadian Grocer.

A National Apple Show.

The second so called National apple show of Spokane, Washington, was held on November 15th and following days. This is said to be, and no doubt was, the largest exhibition of show apples ever got together. The prize list totalling $30,000 called for big things in apples. From the reports at hand we find our friends claiming that the exhibit, if counted, would exceed 1,500,000 apples. As there were thirteen carloads in competition for special prizes in the carload class, this would seem a reasonable exhibit. The first prize carload netted the grower about $4,400.00, as the exhibit won $250 in its own class and $1,000.00 sweepstakes, while the lot sold for $5.00 per box with 630 boxes in the lot. The variety was Esopus Spitzenburg grown in a five acre orchard of 16 year old trees. There was 98 tin boxes and 136 five box lots, with 278 single box entries, and 1328 plates. A prize for largest apple brought out eleven specimens ; the first prize going to Wolfe River, 16 1-2 inches in circumference, weighing 25 ounces. An apple called the Spokane Beauty was exhibited in this class, 17 1-3 inches and weighing 41 ounces was disqualified by two small cuts caused in packing. The show was a pronounced success, the attendance exceeding 100,000 people.

Visit of Canadian Fruitgrowers.

EDITOR MARITIME FARMER.

The following is an exaract from a letter just received from the Secretary of the National Fruit Growers' Federation :—

"I am instructed by the Council of the Federation to offer to Canadian fruitgrowers a most cordial invitation to visit some of the chief fruit plantations of England. If this visit is arranged, and my Council sincerely hope it will be, they will feel greatly honored at this opportunity of welcoming Canadian fruitgrowers."

This follows a suggestion made in one of my reports to the Department of Trade & Commerce, published in the Weekly Report of August 30th., to the effect that Canadian fruitgrowers ought to imitate the example of those on the Continent and visit the ports and markets in this country. A prominent member of the Federation brought the matter to the notice of the Persident, who himself proposed to his Council that an official invitation be sent, so that if such a party is organized, they should visit not only the market, but one at least of the chief fruit growing districts.

The advantages of such an excursion are obvious, so that I feel confident the project will have your warmest support.

W. A. MACKINNON,
Canadian Trade Commissioner.

EWING'S Seeds Pay

Even if someone offered them free it wouldn't pay you to sow seeds of poor or doubtful quality.

Your crop should be worth 10 to 100 times the cost of the seed. Inferior seed will easily lose you half the crop, or from 5 to 50 times the cost of reliable seed.

Economizing on seeds is most expensive economy.

If you sow Ewing's seeds and the weather is anyway reasonable, and you give them a fair chance in the way of soil and tillage, you can depend on FULL CROPS of A1 quality — crops that will pay handsomely for the land used and the work done as well as for the small investment in the seeds themselves.

Ewing's Seeds have proved their reliability by forty years of bumper crops.

Insist on Ewing's. If your dealer hasn't them buy direct from us.

Our big Illustrated Catalogue is Free—write for it to-day.

Wm. Ewing & Co., Seedsmen, McGill St., Montreal.

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

Figuring the Cost of Milk.

During the years 1906 to 1905 the station has 74 complete yearly records of 29 dairy cows, mostly grade Jerseys. The average yearly production was 6890 pounds of milk, testing 14.1% solids and 4.93% fat. The average food cost of keeping each cow was $70. Since that time the data, while all recorded, have not been tabulated. It is safe to assume, however, that the food would cost 20% more at the present time. The station herd is still fed during most of the year. The cows are, however, turned to pasture during the months of July, August and September if dry. Using the above data as a basis the following calculation may be made :

Food cost of cow for one year	$ 84.00
Care of cow and milk	30.00
Depreciation of cow	7.00
Depreciation of horses, tools and dairy apparatus, etc.	8.00
Taxes, insurance and repairs	5.00
Medicine, salt, bull service and sundries	3.00
Making total expense for year	$137.00
Less five cords manure	$20.00
Less calf	2.00— $22.00
Total	$115.00
2900 quarts of 4.9% milk cost	$115.00

Cost of one quart 4 cents.

In the above calculations the farmer would sell his roughage to the cows at market rates, and if he took care of his herd or part of it, personally, he would save the labor outlay. It is believed, however, that 4 1-2 cents would represent the lowest price at which he could sell his milk produce under reasonable sanitary conditions and secure only a very moderate return on his investment.

Naturally, the cost of producing high-grade or certified milk, from tuberculin-tested cows, would be considerably in advance of these figures. It would be possible to produce milk testing 3 to 4% fat for a little less money than the above.

The food cost of keeping an average size cow yielding the same quantity of 5% milk daily may be estimated as follows :

DAILY FOOD COST.

7 pounds of grain	$0.10 1-2
30 pounds silage	.07 1-2
12 pounds hay	.12
Total daily cost	$0.30
30 cents daily for 224 days	$67.20
20 weeks pasture at 50 cents	10.00
4 pounds grain daily for 20 weeks	8.40
Making total of	$85.60

It will be seen that the food cost by this method very closely approaches the figure given in the previous calculation.

Voohees of the New Jersey station presents the following method of calculation for 40-cow dairy owned by a practical, intelligent farmer, producing reasonably clean milk, and who must get his living from the farm.

DAIRY INVESTMENT.

Farm, 100 acres including buildings	$ 7,500.00
Improvements in dairy barn	1,000.00
Dairy houses	1,000.00
Dairy apparatus	500.00
Tools and implements	1,500.00
Horses (three teams)	1,500.00
Cows, 40 at $75	3,000.00
One bull	100.00
Total	$16,100.00

ANNUAL RUNNING EXPENSES.

Labor, three men at $500 in barns	$1,500.00
Labor, one man and boy in dairy	750.00
Labor, two men with teams	1,000.00
Depreciation in cows, 10%	310.00
Depreciation in horses	150.00
Depreciation in value of tools, implements and apparatus	200.00
Taxes, insurance and depreciation in buildings	150.00
One-half cost of feed	1,720.00
Total	$5,780.00
Interest on capital at 5%	$805.00
Total expense including interest	$6,585.00

The above total expense represents the cost of producing 300,000 pounds of milk (7500 pounds per cow), or $2.20 per 100 and 4.83 cents a quart.

These different methods of estimation in the hope that it will stimulate thought on the part of milk producers. I will be glad to have the figures criticised and to learn the experience of those actually engaged in the production of market milk. It is believed that in the past, milk has been sold at altogeth too low a figure to enable the producer to secure a fair return on his investment.

J. B. LINDSEY,
Mass Exp. Sta.

Regular Milking.

EDITOR MARITIME FARMER.

Among the missionary work to be done by the butter makers now is that of impressing on the patrons the importance of regular milking and regular feeding of the cows. There is a great temptation to the average milk producer, not a special purpose dairyman, to put aside this important work for the apparently more pressing spring work.

We say apparently because the farmer who neglects the regular milking and feeding of his cow in order to get a little more plowing or other field work done, is like the man who cannot see the dollar because he holds the cent too close to his eyes.

Irregular feeding and milking will most assuredly lessen the milk production more or less and so will the neglect of properly stripping the cows—only more so. And anyone who has ever handled milk cows knows how easy it is for them to fall off in their yield and how hard it is to regain it.

But there is another argument in favor of regular milking and that is the fact that nothing will make the hired men or the boys more disgusted with farm life than this working overtime in the field and then coming home tired to milk the cows, and even if this disgust does not develop into a prompt leaving of the farm, it operates on the minds of the milkers so as to make them indifferent and leave the last and richest few streams unmilked. The result is a shrinkage in the yield and an accelerated drying up of the cows ; and the farmer finds at the end of the year that "dairying doesn't pay"—a cry we have heard from too many farmers during the past twenty years or more, and one which hardly agrees with the facts reported from bankers as to the mortgage lifting power of the gentle cow.—Dairyman, P. E. I.

Why Dairy Farming is Profitable.

An Australian dairy professor summarizes the advantages of dairying in the following reasons :

It takes less fertility out of the soil than any other form of agriculture, and hence it is useful in following a well regulated system of rotation.

It can be combined readily with other forms of agriculture or horticulture.

The dairy provides, in winter, a quantity of stable manure in which the straw from the farm is profitably utilized.

The by-products from the cow, skimmilk, whey and buttermilk, are a source of income in raising pigs and calves.

Dairying gives constant and regular employment, of a light character, to every member of a farmer's family.

Dairying inculcates habits of punctuality, industry, cleanliness and thrift on the farm.

Cheese and butter are condensed products, and the cost of carriage, in comparison with their value, is less than that of any other farm product.

The demand for good butter and cheese, on the world's market, is unlimited, and, so long as the quality is maintained, an all-round, even and profitable price can always be secured.

The monthly check from the factory provides the mainstay in the household as against the precarious returns from yearly crops.

In mixed farming the income from the dairy is the most reliable.

The farmer's household, as a result of dairy work, is always supplied with fresh milk and cream, butter, cheese, pork, bacon and veal.

Storekeepers, traders, bankers, financial men and politicians all fully realize, after years of experience, that wherever dairy farming is conducted, farmers are most prosperous, mortgages are rarely found, and the value of landed property considerably enhanced.

The creamery does not alone benefit the farmer. It is a source of great satisfaction and benefit to the merchant also, because where the farmer gets cash for his dairy products, he is able to pay the merchant cash.

It is said that at this time 20,000 dairy cows are now being milked by the milking machines.

The centrifugal hand separator is a necessity on every farm, whether cream is sold to the creamery or whether butter is made for local trade. With a farmer, milking six or eight cows, a condition can not be conceived by which the farmer should not have the best centrifugal machine he can buy.

Two or three shotgun cans should be had with the equipment of each hand separator. They are more handy than the regular milk cans, although the latter should be used in delivery of cream to the station. The shotgun cans are handy for use in cooling the cream before it is added to the supply can. They are light and easily washed.

Cleaning the Separator.

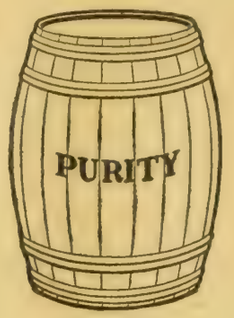
In visiting patrons of creameries, I have found that there is a great tendency to not wash the separator. Some wash it once a day, some not that often. They claim that they cannot see any difference in the butter made from the cream when the separator is cared for in this manner. Let them keep that butter for three months an

PURITY FLOUR

And Its Keeping Qualities

SOME people find it necessary to buy a considerable quantity of flour at one time—sufficient to last for a long period. Naturally they are anxious to procure a flour of the kind best adapted to lengthy storage.

There are two important reasons why PURITY FLOUR possesses these qualities. One is that it is made entirely from Manitoba Hard Wheat. The other lies in the fact that the careful milling necessary to produce "Purity" absolutely excludes all low-grade particles of the wheat berry. It's the high grade Manitoba Hard Wheat Flour that keeps—stands longest storage. That's "Purity."



"Purity" flour may cost a little more, but is more than worth the difference. Try it. Watch results both for quality and yield.

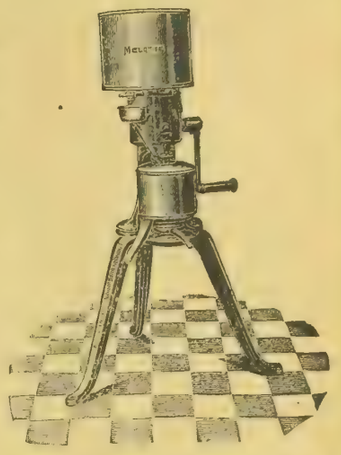
GOOD LIVE AGENTS WANTED.



R. A. LISTER & CO. Limited, 62 Stewart Street, TORONTO.

Agents Wanted!

We want agents to handle the Acme Steel Ladder. It is by far the best seller on the market today. You can, with horse and rig, make $5 00 to $10 00 a day by simply calling on property owners in your vicinity.

The Acme Steel Ladder affords protection from fire in a greater degree than any other ladder.

The Acme Steel Ladder is made and sold in one foot lengths. These can be fastened in such a way as to make a ladder of any length perfectly rigid.

They can be moved anywhere on the roof, either from the top or bottom of it.

Send for information regarding our selling proposition.

The Acme Ladder is made in one foot links just the same as the old style ladder but with a very simple lock which is fully protected with patents. When the ladder is together the links are held rigid.

If you are thinking of equipping your buildings with steel ladders and there is no agent in your locality and will write us we will have a man call on you.

The Acme Steel Ladder Co.,
SUSSEX, - - N. B.

then they will see a great difference. Fifty per cent. of farmers' wives are neglecting to wash the separator. Those practices must be stopped, so far as possible. Many clean women, in other respects, leave their separator in a filthy state because the separator agent, that had a difficult machine to clean, said that it was not necessary to wash his machine. When one woman starts washing her separator only once a day, her neighbors soon do the same thing. As a result of these practices, we are not getting as good cream from separators to-day as we did 10 years ago.

All the filth and the slime in the milk is left in the separator bowl. You may flush it out as much as you like, but all the slime and dirt is left there. The next time the milk is separated many of the germs that are sure to be growing there, will be taken out with the cream. When the separator is not washed, the cream cannot help but be contaminated, unless, of course, the separator has been frozen in the interval. You cannot see these germs, but they are there just the same. Many of these germs grow most rapidly at a temperature of about 70 degrees, hence they find a favorable temperature in which to work when the unwashed separator is located in the stable.

All the tinware and the bowl of the separator should be taken to the house regularly each time it is used and thoroughly washed and scalded. The very best care should be taken to clean it well. One might just as well, and better, leave their milking utensils unwashed as to neglect the separator. Any woman should not be any more shocked at leaving her pails and other cream utensils unwashed than in leaving the separator in an unclean condition.—JAMES STONEHOUSE, Creamery Instructor, Kingston, Ont.

Milk Veins and the Udder.

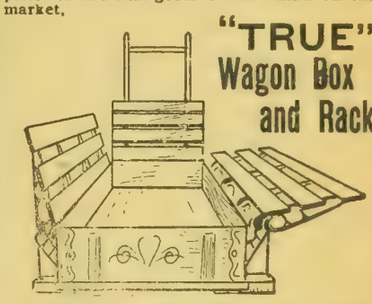
A few years ago, says Hoard's Dairyman, we thought we would see what percentage of farmers believed that the large veins on the belly of the cow which are called milk veins were really veins for conveying milk to the udder. So, without expressing any opinion of our own on the matter, we simply asked the following question of one farmer after another.

Why are these veins called milk veins? The answer from ninety-nine out of the hundred was in effect like this: "Because they carry the milk to the udder." Of the remaining ten, five could not give any answer except to say that they did not know, while only five had the right idea, viz., that these veins were in reality great blood veins returning blood from the udder to the heart. After we conversed with several of the original ninety on the subject and stated to them what science had really found out as to the purpose of these veins. In almost every instance, however, we found them adhering steadfastly to their own ideas. One of them declared that he had cut into a vein on a dead cow and had seen the milk flow out. If we believe the truth as it really exists, that these veins return the blood to the heart, it will teach us several valuable lessons:

1. It will show us the enormous circulation of blood that is required to produce milk in a good cow. 2. It will teach us that we must take good care of the udder, for with such a heavy influx and outpour of blood the organ is very sensitive to the abrupt changes of heat and cold. This is the reason that cows are very apt to have garget by lying on cold ground late in the fall; also by lying on stone or cement floors. 3. It will teach us the folly of tying cows in the common stanchion whereby it is easy for a standing cow to step over onto the teats or udder of the cow that is lying down next to her. We should wisely provide a system of tying cows in the stable that will prevent such serious injuries. 4. A knowledge of the true physiology of the udder will teach us the importance of careful and gentle usage of it in milking and the great importance of attending to any derangements at once which may occur.

Up-to-Date Specialties For Farmers And Gardeners.

Things you need—implements and tools that should be on every truck garden and farm. Our way of making these specialties assures adaptability, strength and service at the minimum price for the best goods of their kind on the market.



"TRUE" Wagon Box and Rack

Without wings and ladder, it is a perfect wagon box. With them, it is the best Hay, Stock, Wood, Poultry, Corn or Fruit Rack ever invented. Adjusted to any position in a m nute without wrench, hook or rope.

"Eureka" Churn

Barrel of finest stoneware—top of clear pressed glass. Churns by hand lever. The only sanitary churn made. 3 sizes—8, 10 and 12 gallons.

"Eureka Root Cutter

will slice or shred from 1 to 2 bushels per minute. Fastest machine made—easiest running. Tapering cylinder—10 best steel knives.

"Eureka" Combination Anvil

Best iron anvil, with vice, pipe vice and drill attachment, and saw clamps. Just what you need for repairing tools and machinery. Weighs 60 pounds.

The "Bacon" Seed Drill

will handle the most delicate seed without bruising or breaking, and will sow evenly to the last seed.

LIVE STOCK.

A Healthy Herd From a Tuberculous Herd.

Bulletin No 277 of the Geneva, New York Experimental Station, gives the history of the development of a healthy from a tuberculous herd. For the benefit of farmers all over the United States a popular edition of this bulletin has recently been issued, giving the substance rather than the details.

In the fall of 1900 one of the cows at the station was found to be tuberculous, on physical examination. Post mortem examination confirmed this diagnosis. The result was the testing of the entire herd, consisting of very valuable animals, many of them registered and some of them recently purchased at a high price.

It was determined after careful consideration not to sacrifice the herd, but to retain the animals which showed no apparent signs of the disease and to handle the herd by the Bang method until the healthy animals reached the number in the original herd. The Bang method, so called from its originator, Dr. B. Bang, of Copenhagen, Denmark, has been successfully used in various countries and at the Wisconsin station. It is as follows :

1. Test all animals in the herd with tuberculin. 2. Separate the reacting or diseased animals from the healthy, keeping them from contact. 3 Disinfect the stables. 4. Test the healthy herd at invervals of six months, to detect any case of the disease which may have been in its incubating stage, at which time the tuberculin test fails to give results. 5. Remove all the calves from the tuberculous herd soon after birth, and put them on healthy cows or pasteurized milk.

This occurred in the fall of 1900. In March 1901 a division of the herd was made and the animals that had not reacted in the fall were put in a new addition to the cattle barn, without being again tested. In the meantime five additional cows and a calf not previously tested developed the disease through contact with the diseased animals, as was shown by their reacting when tested in October, 1901, eleven months after the first test. These cows and the calf were in the stable, but were immediately removed and placed in the tuberculous herd, leaving seven cows and six calves that were sound out of the thirty animals.

A series of accidents followed. The station barns were destroyed by fire, burning three calves and one heifer from the sound herd. In the confusion the the herds became mixed. Contagious abortion next followed, with the result that but one heifer was raised in the herd the next year. For several years many of the old cows lost their calves, practically every heifer aborted at once and one of them twice. Notwithstanding these misfortunes, it was found on testing the herd in November, 1905, four years from the beginning of the experiment, that it contained to the number of the original herd.

The report says : "This work was carried out in the face of as many natural difficulties as can ordinarily be expected in an average dairy as is, accordingly, believed that with good care the rebuilding of the similar herd can be regularly accomplished in from three to five years."

We have not the slightest doubt of it. The Bang method has been proven over and over again to be entirely practical ; first, because tuberculin properly used is a reliable test of the presence of tuberculosis ; and second, because the disease is not hereditary, and the calves born from diseased animals are almost universally healthy.

For four years farm papers have endeavored to persuade the owners of dairy herds and of registered cattle to adopt the Bang method ; to have all the cattle tested by a competent veterinarian ; to separate the sick from the well and in case they were registered cattle of high value, to maintain two separate herds, breeding the diseased herd until their usefulness is largely over or until they show outward signs of disease, raising their calves by hand or on healthy mothers and to sell them subject to veterinary inspection before they assumed the outward consumptive appearance and symptoms.

The beef from tuberculous animals is quite as good as that of the sound, provided the disease does not affect anything but the offal, such as the lunge, bowels and liver. This is recognized not merely in this country, but in all countries. There is any amount of tuberculous meat consumed in European countries, which would be destroyed in this country. It is pretty clearly established that the disease is not hereditary, and hence in the case of registered herds there is a possibility of sacrificing the breeding value.

Next we advise breeders who adopt this plan to sell nothing except subject to tuberculin test. If half a dozen breeders in any state would adopt this method, which is thoroughly practical, selling everything subject to test, other breeders would be obliged to do the same, and the result would be that the small amount of tuberculosis now present would gradually disappear and without any serious loss.

In the case of dairy herds a slightly different method should be followed. These cows are kept not for breeding but for milk production. We would suggest in that case that the diseased be separated from the healthy, fattened for market and disposed of at the earliest period possible. Meanwhile thoroughly disinfect the stables; and in case of old stables tear them down and build new ones with modern system of ventilation.

It must be remembered that tuberculosis is a house disease; that it cannot be transmitted except by the transmission of tuberculous germs; that the healthy animal, with abundant exercise in the open air and living in well ventilated barns, does not readily take the disease even from animals with which it comes in contact. If our dairy herds were kept in the open air, when the weather permits, and an abundance of fresh air was furnished during the severe weather, it would not be found at all difficult to eliminate the disease, which is always an element of danger, not merely to the owners of the herd, but to the cattle interests of the country.

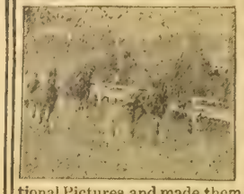
Fattening Lambs.

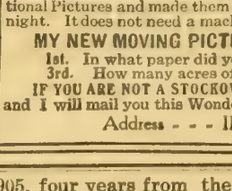
At all seasons of the year lamb is a most welcome and platable meat. Under average conditions people expect to get it when lambs are from three to six months old, or during August, September and October only. That the true lamb flavor is distinctly characteristic of the meat from lambs considerably over six months old, and, indeed, until they are a year old, is a well-known fact. To think, therefore, that lambs must be sold in the fall, no matter what prices prevail, is a great mistake. Well-fed lambs are likely to command an even higher price per 100 pounds, live weight, in winter months than in the summer and fall.

Average lambs, in field condition, in September and October, may be taken and so fed during the next 2, 3, 4 or 5 months as to make sufficient gains to quite repay the cost of feed. Well-fed lambs frequently bring 6 or 7 or even 8 or 9 cents per pound, live weight, in December, January or February. Average lambs, in field condition, in September and October often sell for three or four cents. Such lambs may be counted on to make at least ten pounds gain in live weight per month. No better market for home grown feeds need be asked than selling it to such animals, counting on the increase in weight to pay for feed.

Yet it is not upon the increase in weight alone that one need depend for a chance of profit. As already indicated, the value per pound, live weight, is likely to be considerably higher in the winter months for fatted lambs than in the autumn for field lambs. Hence, the total increase in value will consist of the buying weight, say, 80 pounds, multiplied by the difference between buying and selling prices, say two cents per pound, equals $1.60, plus the gain, say, 30 pounds in three months, say at six cents, the probable selling price, equals $1.80 or $3.40 in all, an amount not infrequently equal to, if not exceeding, the buying price.

Where such feeding operations are regarded as possible, success may be further insured and the margin of profit increased by making certain preparations. The cutting of the hay, a little on the green side; the housing of the most suitable part, that is, of the clean, bright meadow hay or English grass and clover, in lofts or buildings, convenient to the feed yards, and the fencing in of a nice dry slope or hillock, whereon the lambs might run while on



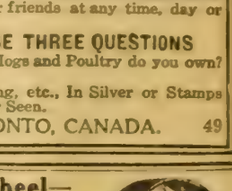


MOVING PICTURES

OF THE WONDERFUL WORLD CHAMPION

DAN PATCH 1:55

ABSOLUTELY FREE TO STOCKOWNERS



It is a New Invention that you can carry in your pocket and show your friends instantly, day or night, either once or a hundred times and without a machine, curtain or light. The original is the first successful moving picture ever taken of a World Champion Horse in his wonderful burst of speed.

A MILE OF 2400 MOVING RACE PICTURES OF DAN PATCH 1:55 and every picture shows the King of all Horse Creation as plainly as if you stood on the track and actually saw Dan Patch 1:55 in one of his Thrilling Speed Exhibitions for a full mile. 2400 distinct moving pictures taken of Dan in one minute and fifty-five seconds means twenty-one pictures taken every second all of the way around the entire track from the back seat of a high power automobile. You can see Dan shake his head to let his driver know that he is ready for a supreme effort and then you can watch every movement of his legs as he flies through the air with his tremendous stride of 29 Feet. You can see his Thrilling Finish as he strains every nerve to reach the wire, you can see his driver dismount and look at his watch while thousands of people crowd around, you can see his care taker force his way through the crowd and throw a beautiful woolen blanket over Dan to prevent his catching cold and then you can follow him up the track before the Madly Cheering Multitudes. As a Study Of Horse Motion it is better than the actual speed mile because you can see Dan right before you for every foot of the entire mile. When first shown to the public this marvelous picture caused people to stand up all over the theatre calling "Come on Dan"—"Come on Dan."

This Remarkable Moving Picture is the Most Realistic and the Most Thrilling ever presented to the public. I have taken a part of the Original 2400 Wonderful and Sensational Pictures and made them into a Newly Invented Moving Picture that you can carry in your pocket and show to your friends at any time, day or night. It does not need a machine, it does not need a curtain, and it does not need a light.

MY NEW MOVING PICTURES MAILED FREE TO STOCKMAN, postage prepaid, IF YOU ANSWER THESE THREE QUESTIONS

1st. In what paper did you see my Moving Picture Offer? 2nd. How many head Each of Horses, Cattle, Sheep, Hogs and Poultry do you own?
3rd. How many acres of land do you own or how many acres of land do you rent?

IF YOU ARE NOT A STOCKOWNER AND WANT THE MOVING PICTURES SEND ME 25 CENTS FOR POSTAGE, For Packing, etc., In Silver or Stamps and I will mail you this Wonderful Moving Picture of Dan Patch 1:55, The Fastest Harness Horse The World Has Ever Seen.

RATHER STALE BREAD.

"What ! a loaf of bread over 1,800 years old ? Nonsense !" Well, my friend, there is no nonsense about it. You can see several of them in the Royal National Museum, at Naples, burned black like carbon, or charcoal. They were found in the ruins of Pompeii, a city that was buried by an eruption of hot, fiery ashes from Mount Vesuvius in the year 79. No one could eat this bread, although carbon is the element in our food that promotes heat in the body.

When Indigestion prevails, your food does not nourish you and you have headaches, poor blood, constipation, dizziness, and other ills. Mother Seigel's Syrup, the sure herbal remedy cures all these ills. Mr. Burton Shortliffe, Central Grove, Digby Co., N.S., writes :—"I was troubled with Indigestion for a long time and found no medicine to give such immediate relief as Mother Seigel Syrup. For Indigestion and all Stomach Troubles it is a grand remedy."

The One Wheel—The One Wagon

Dominion Low, Wide-tire Steel Wheels are made on principle of bicycle wheels. Unlike wooden and other wheels, the Dominion distributes strain equally. Dominion Low, Wide-tire Steel Wheels are stronger, lighter and cheaper than wooden wheels. Have staggered spokes. So, unlike wooden wheels, they will not rot or easily break. Dominion wheels will carry all horses can draw. Wide tires save roads and horses, and reduce loading labor and time. Can be taken apart and repaired, if necessary. Guaranteed not to break in even coldest weather or on rockiest roads.

Our Handy Wagon saves you so much labor and time that it pays for itself the first year. Yet it will last a lifetime. It makes loading and unloading easier. Its wide-tire steel wheels save roads and horses' strength. Strong enough to carry all horses can pull. Made of finest material; best workmanship; neat appearance. Write for free catalogue on Handy Wagon and Steel Wheels.

Dominion Wrought Iron Wheel Co., Ltd., Orillia, Ont.

FITS CURED For proof that hts can be cured write to **Mr. Wm. Stinson, 134 Tyndall Ave., Toronto, Ontario,** for pamphlet, giving full particulars of simple home treatment 20 years' success. Over 1,000 testimonials in one year. Sole proprietors.

Trench's Remedies, Ltd., Dublin.

feed, all help a little. The small field or yard, or at least a part of it, might advantageously have been sown to rape in late July or early August. If another small field, adjacent to the run, could be found, it is a most valuable addition, indeed, to the store of feed and almost a guarantee of success.

Once it is decided to feed, the first thing that should be done is dipping. The presence of ticks or lice means small gains or probably losses. Then shelter from rain or snow must be provided. A warm building is not necessary, but a good roof and a dry, well-littered floor are essentials. The walls should be dog tight and the building should be provided with slatted doors, to permit of free entry of air and so prevent inside temperatures rising much above external. Conveniently located, and properly constructed, feed troughs and racks are a help.

As already suggested, rape is probably the most satisfactory feed for the first few weeks. Some hay should be fed along. If intending to feed a short time only, then add some meal at once. Bright meadow hay, or fine clover hay, and cracked corn, along with rape, means healthy lambs and quick gains, the proper feeds for short-feed lots. Bran and oats, meadow hay, clover hay and roots or rape means growth, the right stuff for early feeding of lots it is desired to carry for more than two months.

Pasturing on rape alone in late autumn (or any other time) is not wise. Some other fields, advisably old pastures, should be accessible. Clean, bright hay, in racks, should always be in reach. Cracked corn should be first, for short feed bunches only. Have some bran along, say, one of bran to four of corn. A good weight of the grain or meal mixture to start with is one-third of a pound per day. They will soon be able to handle more. The rate at which to increase the meal must largely depend upon the length of the feeding period, from two to four ounces per day, according as the periods are to be long or short.

Where rape is not available, then roots (turnips) might be fed at once, but not in excessively large quantities Where fed in the runs, four or five pounds is a fair feed. A good plan, where the root field is conveniently situated, is to hurdle off part of the field. and pasture the lambs thereon. The lambs may be trusted to eat just the right amount provided always that they are receiving meal and have suitable hay where they can get at it readily. If oil cake meal or nutted oil cake is available, it goes exceedingly well along with the turnips, but should have a slight intermixture of bran.

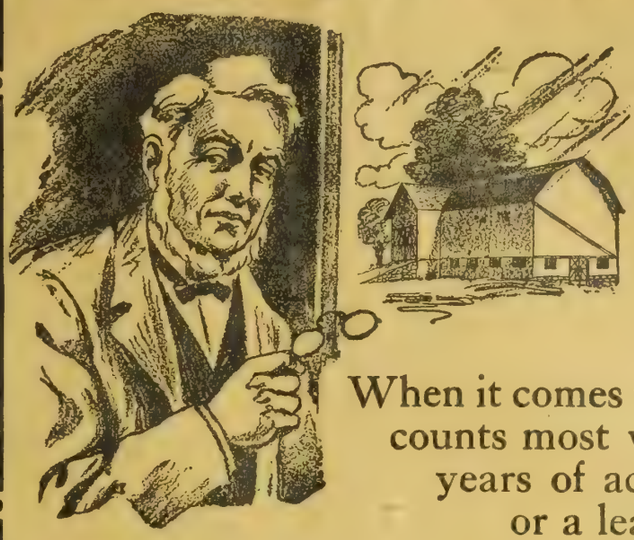
All feeding should be done by a kindly feeder and done on the stroke of the clock. Regularity in time of feeding and in quality of rations means steady gains. Twice a day is often enough to feed. Salt and water should always be within reach, likewise hay. Hay and salt should be kept dry. Salt will be wasted by rain, and hay is not eaten if wet.

For long-feed lambs, roughage, as described above, is about right, but it would probably be better to feed no meal for a time. Start in after a couple of weeks with bran and oats, equal parts, a couple of ounces per day per lamb. Gradually add corn meal or oil cake meal, going up, say, two ounces per day at the end of each week, till each lamb may be getting as high as two pounds of meal per day, equal parts bran, oats (whole), and oil cake meal or cracked corn, preferably oil cake meal at first, and cracked corn the last few weeks.

Quite rapid gains are sometimes made by lambs on proper feed. From thirty to forty pounds in from two to three months may be confidently counted upon. Where it is desired to hold for a longer time than three months, relatively smaller gains for the time on feed may be expected, but good, thrifty bunches will often keep along at the same rate for four or five months. The right start is half the battle.—J. H. GRISDALE.

A Straight Talk To Farmers

By a Farmer



Subject:

The actual test or the doubtful guarantee—WHICH?

When it comes to buying shingles, which counts most with you—twenty-five years of actual wear and tear or a leaky guarantee?

The Actual Test—
What It Proves

"Eastlake" Steel Shingles have proven their durability by the actual test of time.

A quarter of a century ago scores of public and private buildings were roofed with "Eastlake" Metallic Shingles.

These roofs are in excellent condition and certified as such by practical building inspectors.

Think of it! For over twenty-five years scores of "Eastlake" shingled roofs have withstood the ravages of all kinds of weather—the lightnings and torrential rains of summer—the hail, snow and sleet of winter, and yet they are in perfect condition to-day.

Isn't that conclusive evidence that "Eastlake" Steel Shingles make a permanent roof?

The "Eastlake" is the ONLY steel shingle that can boast of such a record.

"EASTLAKE" STEEL SHINGLES
Lightningproof, Stormproof and Rustproof

A Paper Guarantee—
What It Stands For

Did you ever stop to figure out one of those so-called metal roofing guarantees?

Did you ever discover really what it guaranteed?

You find that it is merely a claim—and claims alone will never satisfy the shrewd buyer.

He rightfully demands proofs. He wants to know on what grounds the claims are based.

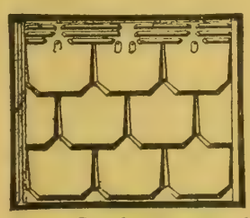
Unless the article has successfully undergone an actual test, a paper guarantee appears a joke.

Many times it is a cloak to hide some weakness of the roofing it guarantees.

Ask your lawyer about it. He will tell you that, stripped of its exceptions and provisions, all high-sounding phrases, little else remains.

It really guarantees nothing.

Kind of risky when the guarantee is as leaky as the roof it guarantees.



You're not asked to buy the "Eastlake" on any paper guarantee—not asked to believe a single claim which the shingles have not proven.

You're only advised to buy the "Eastlake"—if you want a permanent roof, because the durable and weatherproof qualities of "Eastlake" Steel Shingles are positively known. They have been proven by actual wear and tear test.

Some day you intend putting a lightning, fire and stormproof roof on your house or barn. Then you should write to-day for this free booklet, "Eastlake Metallic Shingles." It contains information that will interest you. Send a postcard at once—if you don't you will forget.

—The Philosopher of Metal Town

All kinds of sheet metal building materials—ceilings and walls, siding, cornices, corrugated iron, conductor pipe, etc.—you can have a catalogue simply for the asking. Mention it on your post card.

THE HORSE.

The Bone that Wears.

"No hoof, no horse," is an old horseman's adage that finds verification wherever horse power is employed. It might be said with equal properiety, no bone, no hoof, for the good hoof invariably accompanies the fine, hard bone; or to put it negatively, a good hoof rarely accompanies a poor quality of bone.

When we say that a horse has bone of good quality, we mean in general that the entire bony structure of the horse is of good quality, but in a more specific sense we refer to the bones and tendons found in those parts of the horse's limbs below the knee and below the hock. The term "flat bone" cannot be translated literally, for we all know that the bones of a horse's leg are not flat. Yet the horseman tells us that a horse must have "flat bone," shaped like a razor with the heavy part forward, the edge back. By this he means that the tendons which act upon and in conjunction with the bones should set well back from them and should be free from all meatiness or excess tissue of any kind. It is therefore the tendons which form the "flat bones," just as it is the excess of meat and connective tissue wrapped about the tendons which causes the so-called "round bone." The bone itself is as round in one case as in the other, but the designation is as in the other, but the designation "flat" is used when the tendons stand back to give a razor-like shape to the leg, while "round" refers to the condition when there is so much useless tissue around the tendons that the leg as well as the bone is round or nearly so.

But why do we want "flat bone" in a horse? Is he any more useful because his leg happens to be flat instead of round? Is he any more active, or can he do any more work because his tendons are clean cut and free from meatiness? We can answer both questions in the affirmative, and then the story is not half told. Indeed, a horse is more useful because his leg happens to be flat instead of round. He is more useful because his tendons are placed in a position which gives him the greatest possible leverage at the joints. He is more useful because his tendons act freely and cause full flexion of the parts moved. Because of these facts he is, of course, more active and can do more work. Lastly, the clean cut tendons mean hard, flinty bone and that means freedom from splints, spavins, curbs, sidebones and all the other ills that horse bone is heir to. There is a harmonious relation between all parts of the body so that an indication of coarseness in one part finds its counterpart elsewhere. A loose, meaty structure in the tendinous parts of the leg is an indication of a relatively loose and soft bony structure, and it is this kind of bone that is subject to all sorts of malformations. Besides this, the limb which is overburdened with useless tissue is the one that will be most readily affected with windpuffs, bog and blood spavins. The tendency to looseness in structure extends to the hoofs and opens the way for quarter crack, contracted heels, etc. Investigators tell us that, other things being equal, the tendency to scratches and grease is much greater with the "round" than with the "flat bone."

After considering all these points we are better able to understand the importance of the "flat bone" in horses. It is a guarantee of quality and quality is the guarantee of endurance.

Pictou, N. S.

Skilled Herse Feeding.

No people in the world are more skilled in horse feeding than the French. For hundreds of years they have tested methods of all kinds of feeding, and among the rules laid down the most important is that three meals are necessary and sufficient with an intervale of four or five hours between, to keep a horse in good condition. Oats take at least two hours to digest, hay takes three hours, and because it takes so long to digest it should be given when the days work is over. The evening meal should be a full meal, the animal being then at rest, and able to digest its food at leisure. There should be an intervale of half an hour between the return of the horse to the stable and his getting his evening feed. Too much food at a meal or too long abstinence between meals, followed by voracious feeding, is conducive to colic and indigestion. Irregularly fed he is given to showing his impatience by letting his hoofs play about the woodwork of his stall. Giving "refreshers" at odd times is also bad. Remember that both stomach and bladder should never be loaded in work time, whether light or heavy work is done. A horse, therefore, should not be ridden or driven immediately after a meal, on the same principle that it ought not to be fed sooner than half an hour after work is over. Between one end of the year and another a horse consumes an amount of dry healing food which calls for special regimen to neutralize the excessive protein consumption that has taken place. Thus, in autumn, a ration of oats is good, and so in spring, at the fall of the winter coat, a little green meal is beneficial mixed with hay and oats, for the evening meal. Another maxim much disregarded in practice is that the horse should be watered long before being put to work, and then sparingly.—Ex.

Perfect and Imperfect Actions.

EDITOR MARITIME FARMER.

In the light-horse breeding the most important factor in the success or failure of the breeder's effort is action. It has always been recognized as a feature of paramonent importance, and of late years probably it has received more attention than at any previous time in the history of horse-breeding. There are different kinds of action suited to the requirements of the various breeds, but, without doubt, the most pleasing action, and that which draws a crowded ringside, is that which the modern Hackney typifies. As the action of the breed has developed to the wonderful perfection seen in its best representative to-day, so has the standard, which breeders and buyers alike adhere to, been raised. This standard, however, has not been achieved without concentrated effort, and has only been evolved in the course of time, establishing a higher ideal to work up to. Time was when the breeder regarded a showy display of the fore-legs as the leading equipment of a harness horse, and, without minimizing the undoubted importance of that phase of action, it is not too much to say that more attention is now paid to the manner in which the harness horse uses his hocks.

Not many years ago a popular type of hackney in vogue was required to raise his knees breast high irrespective altogether whether there was range in the action or not. It was seen by short experience of this type of action, that there was a screw loose somewhere, as the feet of the average horse could not withstand the excessive strain thereby put upon them. Accordingly breeders came round to the modern view of what a harness action should be, and nowadays one rarely sees other than good shoulder action, with forelegs well extended, and the ease and grace of the animal thereby benefited. It is true that we miss the "snap" of the knee, which at one time was a very much-prized feature. But what has been lost in this direction has been more than gained in the way of a little extra speed and more graceful movement.—Horseman, Fredericton.

THE BEST LINIMENT

Summers, Box H. 309, Windsor, Ont.

POULTRY.

Getting Ready for Spring.

It is now time to be making plans for our spring chickens, if plans have not already been made. There is no doubt but many will start with pure bred stock, that have heretofore been content with a mixture of everything, or at best, by the use of a pure bred male to use on any old hen.

A good many farmers have an idea that they must cross up three or four breeds in order to get eggs. Perhaps they are like the man of whom I read. He said he liked to buy hatching eggs at the store to see how many different colored chicks he could hatch.

Many run away with the idea that all pure blood fowls are inbred until they are constitutionally weak. No doubt some are, but how about the mongrel flocks that have been bred for years without the introduction of new blood, and are all sizes and colors? Why does not the same rule apply to them? We all know that an egg in winter, from such flock, would put the owner into hysterics.

Such reasoning is all tommyrot when you stop to consider the matter. A man can have pure blood fowls, and can get an unrelated male each year if he wishes and the new blood will have just as much effect on the constitution and on egg production, as though he crossed two different breeds. In the first instance, he will get a uniform flock of pure bred chicks, and in the second instance, he gets nothing of value for next season's breeding pen, but hens good only for eggs and poultry, and if he wants more of the same blood it is necessary to get another breeding pen and cross again.

You first want to get the idea into your head that pure bred fowls will lay as many eggs as cross bred fowls, and that in every other particular they are superior. When you have gotten thus far, you are ready to make a start.

There are two ways to get started, one is to buy eggs for hatching and the other is to buy a pen of birds from which you produce your own eggs. The cheapest way is to buy one or two settings of eggs from which you can raise a few good breeding birds, and the second year you will have sufficient eggs to make a good start. In this case you can continue with your old stock one more year, or until your pure breds are old enough to produce eggs for hatching.

Eggs can be had for one dollar a setting from good utility stock, and I would not advise one to pay a fancy price, for what would be called fancy by most of us. $5.00 a setting gets only a third class setting from a breeder, who gets $15.00 per setting, by reason of his reputation as a winner at the big shows, and an amateur, who has got to learn the fancier's business, would not be able to mate his birds so as to produce Madison Square winners, if he had the best of stock, until he studied the breed and learned their characteristics. It is much better to start slow, and not part with too much money for fancy stock. Start for good stock and let your aim be eggs and poultry and if that leads you to be a fancier, you will become a fancier through gradual selection and improvement of your stock and while you are learning to be an expert, you will have been getting a profit from the production of eggs and poultry and your experience will have cost you little.

Whatever you hatch try and get out a good batch of chicks in April. If you can't do this then hatch in May, and if you can't hatch in May, hatch in June, rather than not at all.

Last year I hatched 80 chicks the 10th of June and some of these pullets commenced to lay the first week in December, but it is better to have them more mature when they start laying. February and March chicks, if forced right along, are quite apt to go through at least a partial moult in midwinter, thereby interrupting egg production when prices are high. This applies to the medium or smallest breeds. Plymouth Rocks and the larger breeds need more time to mature, if of standard size, and may be hatched earlier.

D. I. J.

Egg-Eating Hens.

You may think there's some cussedness back of it all, but there isn't While a hen acquires the habit, through necessity, she may become a confirmed sinner in this regard, just as a cow may develop into a self-sucker. At that stage the habit is hard to break.

While any hen is apt to eat an egg, that is accidently broken in the nest, she may not be a regular egg eater—one that will deliberately break an egg and eat it. This suggests the need of plenty of nests and plenty of straw in each, so the hens will not have to quarrel for a place, and if there is a scuffle the egg will not be broken.

But the need of lime is the main cause for egg eating. The hen craves that which is required in shell construction and to satisfy it she turns upon her own product, just as the meat-hungry sow devours her own pigs.

Keep crushed oyster shell grit where the poultry can help themselves. When you find them eating eggs, go and see if the shell box isn't empty. You must supply them with lime or they will eat egg shells. Old plaster does fairly well, but nothing is nicer than oyster shell.

Live and Dead Weights.

It is a question whether to sell the turkeys live or dressed. The following notes may be of assistance:

The loss of turkeys bled and with only feathers removed is small.

If the head is off and the entrails out the loss is about one-tenth of the weight.

Toms weighing alive 31 1-2 lbs., weighed after bleeding and picking 29 1-2 lbs., a loss of about one fiftenth. Ready for the oven they weighed 28 1-4 lbs, a loss of nearly one-tenth.

If dressed turkeys were 20 cents per pound on the market one would need to get 18 cents per pound of live weight to realize the same money for the turkeys without counting the cost of dressing.

Turkeys will not fatten in a strange place. Better feed in the usual place, increasing the amount fed until a week or ten days before Thanksgiving. While a chicken can stand from three to six weeks of confinement and feeding, turkeys will steadily lose in flesh. Ten days confinement is the the most they can stand, and they won't stand that in an entirely strange place. Try if possible to confine them in a familiar building. Better leave them at large till the night before marketing than confine them where they are dissatisfied.

Market old toms and heavy turkeys at Thanksgiving. Such birds will put on very little flesh between Thanksgiving and Christmas and will eat a great deal of corn. Besides, the Thanksgiving market calls for a larger bird than does the Christmas market.

Ventilation.

Ventilation, by means of roof ventilators, is opposed by many poultry keepers. Plenty of fresh air should be admitted in winter as well as summer, but it should come in very gently. Rushing in at a ventilator is much the same as rushing in at cracks and holes in the boarding. The results are the same, frozen combs, roup and colds. The best ventilators are windows, or at least the upper or lower part of one covered with thick muslin. Muslin does not let air through easily. Draughts do not come through it, but the air gets in just the same, gently and well filtered. These muslin ventilators can be put on frames and hinged to the window, leaving them free to throw open on sunny, warm days in winter giving the house extra airings.

Your old Carpets will make you handsome Rugs. Write for booklet mailed free.—THE MARITIME RUG WORKS, St. John, N. B.

This Is The Salt That Helps Me To Make Prize Butter

And I can tell you, Salt plays a very important part in butter making.

Give me good cows and Windsor Butter Salt, and I will win the prize every time.

At the big fairs for years, practically all of the prize winning butter makers have used it.

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage. Address all communications to EVANGELINE, Port Williams Station, N. S.

The Ordeal; or, the Spring and Mid-Summer of a Life.

(Continued from last issue.)

Sorrow had not left her unthankful or rebellious; it had given her a true estimate of life—only the threshold of existence; beyond its changes was the better, heavenly country, where she was to dwell forever. Here she had her task set by the Master of the Household, and, so far from bending under it, she accepted it joyfully, with new energy, new aims, new hopes of hearing the sentence of reward.

From the first moment of her widowhood, the desire rightly to train her children had conquered the lonely yearnings of bereavement; to be to them father and mother both, to gain the firmness and worldly wisdom that their father would have supplied, and to lose none of the watchful tenderness of a mother's love was her steady aim. Many weak and selfish women would have considered themselves unable to do more than feed and clothe these helpless children, grieving under the necessity; but Mrs. Austin knew that this was a small part of a parent's duty, and as soon as her strength allowed, opened a day-school of such pupils as could be gathered, and set herself steadily to the task of providing the means for a complete and necessarily expensive education.

Eight years of patient routine had passed, sometimes weariness, sometimes beyond her strength, but ever borne with steady cheerfulness, outwardly at least. If she had her hours of despondency, and days when the accomplishment of her hopes seemed far off and doubtful, they were known only to the Friend, whose strength upheld her, and the Father, who, in caring for the "lilies of the field and the fowls of the air," gave her a pledge that she should not be forgotten in such things as she had need of.

From Carrol, the eldest of her children, she had never had a disappointment. In intellect and heart, he was all that she could desire; even when a child at her knee, he seemed to enter into her thoughts with a strange, unchildlike sympathy, and learn as by intuition the beautiful faith in God's fatherly providence, and the wondrous debt of love and gratitude he owed to the "dear Jesus," who had come from heaven to be laid in a manger and die in manhood a sorrowful death for our sakes, and, listening to his simple pictures of the beautiful heaven the angels would take him to when he died, if he tried to please God, or the earnest and solemn asking that he might be made good and holy, a new hope sprang up and glowed in his mother's heart, and, like Hannah of old, she "lent him to the Lord as long as he lived."

When Anne went about the house in her dreary, abstracted way, or Ellen's strong will rose up against her mother's authority, or Ben, with the boisterous naughtiness of a strong, healthy boy, made her tremble for the time when he should follow Ellen's example and set her rules at defiance, it was to the thought of Carrol and his future that she turned to brighten the hope for the rest; but Ellen's wilful words made her despond even here, the night of the rejected invitation; perhaps she had been self-deceived, and only indulging a blind partiality in giving Carrol the advantages he had received. Had she been unconsciously wronging her other children for his sake? She felt all that had influenced her—the hope that he would one day stand up in his father's place, and the desire that mind and heart should be fully furnished for the Master's service—but her disappointment with Carrol might be at hand; he might not feel the claims the younger children would have upon him, he might not wish to devote himself to a life of self-sacrifice, such as any laborer in the harvest must needs live if they would impress others with the reality of their creed and bring their needs to the scanty wages doled out grudgingly oftentimes by the congregations. Her own health might fail before the rest had been provided for, it was not as strong now as it had once been, with all her care, and then she had wronged her younger children for a need that existed only in her own imagination perhaps. It was the hardest form in which doubt could come to her, she was so watchful and jealous always of her own motives; but it made her resolve to do what she had shrunk from again and again—set before Carrol her highest hopes and aims for him, and if the answer was a disappointment, she could only pray for strength to bear it.

The day had been warm, almost oppressive, but the evening grew cold and chilly. The very atmosphere added to her depression, as she unlocked her writing-desk; and then rose, as she heard a stir in the adjoining chamber, to see if the children were all asleep. Never, since the night that she had first gathered them around her, fatherless, had she felt such a sinking apprehension of their future. But they were in her care still, sheltered by a home, sleeping softly and deeply, as only the young or those to whom "He giveth sleep" can rest, and she went back to her letter again.

"I have never told you, my son, of the highest aims I have had for you. Whenever you have talked of your future course, you know I have always put you off with 'time enough by and by.' I had two reasons. One—cowardly, perhaps—I have not been ready for a disappointment; and the other, I had hoped you would make an unbiased choice, such as I desired, for I have sometimes seen your thoughts go out that way, and it has made me happier than you could believe. I have your last letter by me. Frank, affectionate, open as you ever were, you tell me of all you are doing and of your friends. I am glad Mr. Bradstreet is so kind to you, and that you try to have a good influence over his son. You know that I have always told you our influence is one of our chief talents. How much less dread fathers and mothers would have of college life were it not for the evil influences that meet their children there!

"I wish I could see the pretty Lucy you have written me so often about this winter; but, Carrol, I need not warn you that she can never be anything more to you than the sister of your friend. Men of wealth ever seek wealth for their children; and, besides, years must pass before you can afford to make any one your wife. Even were she willing to marry a poor man, and her father willing to have her, you could not selfishly bind her to such weary waiting, a vigil that wears out a woman's health and spirits, in looking towards an unfulfilled destiny.

"It is time now that you should seriously set yourself to consider what you will be. You have no connections to help you on in mercantile life; there is the law, with its slow results; teaching—you have seen something of that; and the ministry. My hand trembles as I write it, my dear son, for the wish of my life is inclosed in it. The first-born of old were ever consecrated to God, and when you were a baby in my arms, and I read of this, it impressed me with a strange, haunting force. God had been very good to me, and I desired greatly to make Him some worthy offering, and so far as it lay in my power to train you up for Him, I resolved to do it. What had at first the vagueness of a fancy strengthened into a vehement desire, into the great purpose and hope of my life, to send out one torch-bearer to the multitudes that sit in darkness, to kindle one faint beacon-light that should warn some misguided soul from hopeless loss, to see my child entering on the noblest pursuit this side the grave. Not that I would have you biased to this by my feeling or the wish, on your part, to save me from disappointment. Far from it. The offering would be worthless in God's sight, unless it is of your own free will—unless you have yourself felt moved to lay aside all worldly projects and ambitions, or, rather, to merge all ambition into the noblest aim a human heart can have, to be 'a fellow-laborer with Him!' I should only defeat my own purpose, and kindle a strange fire upon His altar.

"Do not write me at once. It requires deep thought, and more than thought. I feel very near you to-night, and as if you needed me—as though some solemn crisis in your life had come, and you were turning to me for help. You know where to look for the help and the counsel that your mother could not give, even if she were with you. If you were here, I should only smooth the hair from your forehead, and kiss it softly, and say, 'God bless and keep you, my son!' as I do now."

CHAHTER III.

"Coming 'round to tea, Austin?"

"Does any one expect me?"

"I don't know who 'any one' is. Lucy told me to be sure to ask you, and father seconded the motion."

So the two young men walked off arm in arm, talking of the chances for valedictorian, soon to be decided, the prospects of "the United Brothers," their favorite society, and the boating-club

Ask Her This Question

"Do you know of any woman who ever received any benefit from taking Lydia E. Pinkham's Vegetable Compound?"

If any woman who is suffering with any ailment peculiar to her sex will ask her neighbors this question, she will be surprised at the result. There is hardly a community in this country where women cannot be found who have been restored to health by this famous old remedy, made exclusively from a simple formula of roots and herbs.

During the past 30 years we have published thousands of letters from these grateful women who have been cured by **Lydia E. Pinkham's Vegetable Compound,** and never in all that time have we published a testimonial without the writer's special permission. Never have we knowingly published a testimonial that was not truthful and genuine. Here is one just received a few days ago. If anyone doubts that this is a true and honest statement of a woman's experience with Lydia E. Pinkham's Vegetable Compound write and ask her.

Canifton, Ont.—"I had been a great sufferer for five years. One doctor told me it was ulcers of the uterus, and another told me it was a fibroid tumor. No one knows what I suffered. I would always be worse at certain periods, and never was regular, and the bearing-down pains were terrible. I was very ill in bed, and the doctor told me I would have to have an operation, and that I might die during the operation. I wrote to my sister about it and she advised me to take Lydia E. Pinkham's Vegetable Compound. Through personal experience I have found it the best medicine in the world for female troubles, for it has cured me, and I did not have to have the operation after all. The Compound also helped me while passing through Change of Life."—Mrs. Letitia Blair, Canifton, Ontario.

Any woman who is sick and suffering is foolish surely not to give such a medicine as this a trial. Why should it not do her as much good as it did Mrs. Blair.

some of the fellows wished to establish.

Mr. Bradstreet welcomed them to the tea-table, and sat there listening to all their boyish jokes and opinions, saying kind things to Carrol of his good prospect for the first honor, and finally telling him that, when he was tired of Lucy's piano and the chess-board, he should be glad to see him in his library. He was a generous, kind-hearted man, who had not forgotten his own youth, and he lived it over again in the freshness of these young lives—in the bright blush that kindled upon Lucy's face when Carrol was commended, in the Jonathan and David devotion of the two students, and all their little piques and ambitions, looking upon the honors of Commencement Day as if the interests of a nation were at stake, and the applause of the whole community awaiting the fortunate men, or the execrations of prosperity reserved for the idler of his class.

Out of his counting-house, Mr. Bradstreet's chief pleasure was the happiness of his children. The stately home had lost its greatest charm when their mother, with whom and for whom it was planned, had been carried forth to her burial from it. Lucy was very like her, in face, in voice, in all her gentle, yet decided ways, in her quiet good sense, as well as her feminine grace. Lucy must never be crossed in anything. It cost the father much less to check and restrain Henry's quick, headstrong impulses than to deny Lucy a flower she had set her heart on. The beautiful grounds were kept up to their original elegance to gratify her taste, rather than his pride; the greenhouse, with its wealth of tropical flowers, was at her command. And yet Lucy Bradstreet was unselfish and unspoiled. There are some flowers that open more perfectly in the broad sunshine than with the succeeding light and shade that belong to others.

Had Mr. Bradstreet forgotten his usual wisdom when he brought these two young lives in such close companionship? The dearest thing on earth, Lucy's happiness—had a weak indulgence brought it in jeopardy? It would seem so, that evening above all others, when he had shut himself up in his library, not to walk with the wisdom of the past, or take the bright, hopeful voice of the present for companionship, but to go over, with pen and pencil, the day's operations, count up the thousands he would gain by the morning's fortunate investment, and recongratulate himself on the cautious financiering that had evaded a threatened loss.

Hal Bradstreet had his own engagements, too—a pending rehearsal of the serenade his ladylove was to receive, in connection with the ladyloves of five other amateurs, whose ardor had undertaken to conquer the difficulties of an adagio in E minor, no trifling obstacle to these unscientific musicians.

The soft May evening, the first true spring day of the season, had allowed open windows and unfurled the great buds of the horse-chestnut trees of the avenue, the month going out in a flush of loveliness and the calm of early summer. There were no lamps called for; it was moonlight again, and the opal rays of the sunset had mingled so softly with its silver that the white keys of the piano, at which Lucy sat, had not grown dusky, though dim shadows slept on the velvet carpet. There was a soft rustle of muslin drapery at the tall windows, opening on the lawn, in its first vernal freshness, a glimmer of carved gilding from cornice and ceiling, a gleam of the white limbed statute in the opposite niche, and again the subtle breath of rare flowers, scattered profusely in every vase and goblet of delicate Sevres or curious Bohemian workmanship, throughout the room; above all, that low, delicious melody of voice and instrument, snatches of half-remembered songs, and murmuring preludes, and wandering chords, as memory or fancy guided the slender hands. No wonder that the brave purpose of the young man's heart melted under these enchantments, and he forgot the repeated vows of self-restraint and self-denial he had imposed upon will and emotion. He was leaning near the instrument, and presently bent down his head upon his clasped hands, and gave himself up to dreams of delicious possibilities.

How many veritable lives had gained as lofty prizes, as far beyond their reach! What was the use of talent, and resolve, and energy, if it could not carve out fortune? And Lucy loved him; yes, he could not doubt that, and she would be true and wait for him, as many another true heart had done, and when he could make for her a home like this, she would come to him and be his own, and life should flow on all brightness. But even in the midst of heated vision, the slow and solemn chords into which Lucy had glided, seemed to bear the burden of an anthem he had heard when they buried poor Richmond, their classmate: "For man walketh in a vain shadow, and disquieteth himself in vain; he heapeth up riches, and cannot tell who shall gather them. This is not your rest." But he drove the echo down, and went on with his dream again. How the opening door jarred upon his feverish pulses. The dream was over; it was late, much later than he supposed, and Mr. Bradstreet had sent for him.

"Shall I say good-night, Lucy, or will you be here when I come out again?"

"I will wait."

The simple words seemed like a prophecy to his excited mood; but then a chill suddenly broke the charm. Mr. Bradstreet must have a special reason for wishing this interview. He had made such a point of it, perhaps he had seen all that was passing, and was displeased. But he was unchanged in manner towards him? Still, that would be Mr. Bradstreet's way; he would not give unnecessary pain or be rudely uncourteous, however he was offended. So with the fear of sudden banishment, or reproof, at least, darkening down upon the bright visions of the last hour, he followed the measured footsteps of the old servant.

Fever Sores.
Fever sores and old chronic sores should not be healed entirely, but should be kept in healthy condition. This can be done by applying Chamberlain's Salve. This salve has no superior for this purpose. It is also most excellent for chapped hands, sore nipples, burns and diseases of the skin. For sale by all dealers.

LOCAL TREATMENT FOR WOMEN'S DISORDERS

The health we enjoy depends very largely upon how the blood circulates in our bodies; in other words, if we have perfect circulation we will have perfect health.

There is a constant wearing out of the tissues in every part of the body. The blood flowing through the veins carries off this waste or dead matter, while the blood coming from the heart through the arteries brings the fresh new living tissue, the essence of the food we have digested, to replace what has been carried off. This constant wearing out and expelling of the dead matter and the replacing of it with new matter, atom by atom, goes on day and night, until in about 7 years a complete change has been effected. Thus every man and woman has an entirely different body in every particle of it from what he or she had 7 years before.

It sometimes happens, however, from a variety of causes, that the blood becomes congested in certain portions of the body. This means that the blood vessels in these parts become weakened, and the circulation in that section of the body becomes sluggish and stagnant. The consequence is that the dead matter in that part of the body is only partially carried away, and that but little of the new, vital matter is introduced there to build up and strengthen the tissues and nerves.

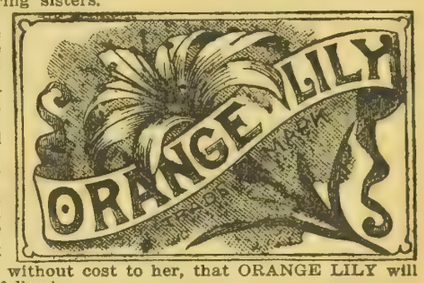
This condition invariably exists in all cases of female disorders. The dead matter retained in the circulation, which should have been expelled, causes irritation and inflammation of the delicate memberane, and oppresses the nerve centres. This condition is the cause of the grievous physical and mental suffering which accompanies female troubles.

To obtain relief it is evident that the first thing to be done is to get rid of the dead matter which is being held in the circulation. If this dead matter is allowed to remain there a species of blood poisoning will result and nature will endeavor to get rid of it by forming ulcers, tumors, etc.

The above explanation will also show why ORANGE LILY is so successful in curing this condition. It is a local treatment, and is applied direct to the affected organs. Its curative elements are absorbed into the congested tissue, and from the very start the dead matter begins to be discharged. A feeling of immense relief, both mental and physical, accompanies it, and the improvement is constant and positive. This feature of the expelling of the dead matter is always present to a greater or less extent, and in some cases it is so marked as to be amazing. The case described in the following letter is not exceptional:

Dr. Coonley—I am thankful to Mrs. F. E. Currah, your Canadian representative, for my health restored by your wonderful remedy. I have suffered for 17 years, but not so bad until 3 years ago. Then I had a doctor, who told me I had a tumor, and could live no more than a year. If I went through an operation I would not live through it. A year later I sent for him again, and he gave me up to die. My husband then sent for another doctor, who performed an operation, and it did me much good. I doctored with him 3 or 4 months, but became so bad again that I thought I could live no longer, and I began to long to die. One day my husband came home and threw a slip of paper to me with Mrs. Currah's address and told me a lady had advised him to write to her for a treatment that would cure me. I said it was too late, that I would die anyway. I could not lift a teacup without hurting me. Then the first doctor told me I was worse than ever. However, my husband sent for ORANGE LILY, and the third treatment brought away one tumor. Others followed, until 7 tumors had been expelled, 3 large ones and 4 small ones. I know if it had not been for ORANGE LILY I would have died, for I could not live much longer. I would have thought it cheap at one hundred dollars for a month's treatment, instead of one dollar. It is worth its weight in gold.—MRS. GEO. LEWIS, Huntsville, Ont.

The above letter is published with Mrs. Lewis' permission. All letters received are treated as being sacredly confidential, but occasionally some patient feels so grateful for being cured that she is willing to make the matter known for the benefit and encouragement of her suffering sisters.



ORANGE LILY is a positive, scientific remedy for all disorders of the female functions. As explained above these troubles are of local origin, and require local treatment. It is just as sensible to take medicine internally for female troubles as it would be to take medicine internally for a bruise, a boil or an ulcerated tooth. In all these cases some dead matter is being retained, and the cure is effected by employing local methods for expelling the dead matter. ORANGE LILY has antiseptic, soothing and healing properties, and also tones up and invigorates blood vessels and nerves. I am so anxious that every suffering woman may satisfy herself, without cost to her, that ORANGE LILY will cure her, that I hereby make the following

FREE TRIAL OFFER

I will send, without charge, to every reader of this notice who suffers in any way from any of the troubles peculiar to women, if she will send me her address, enough of the ORANGE LILY treatment to last her ten days. In many cases this trial treatment is all that is necessary to effect a complete cure, and in every instance it will give very noticeable relief. If you are a sufferer, you owe it to yourself, to your family and to your friends to take advantage of this offer and get cured in the privacy of your home, without doctors' bills or expense of any kind. Address MRS. FRANCES E. CURRAH, Windsor, Ont. 7

They say our celery down by the sea has a flavor not to be had elsewhere.

J. J. GAY & SON,
Charlottetown - P. E. I

Bandages, and What to Make Them of.

Old household linen makes very good bandages, and, short of being rotten, the older the material the more comfortable it will be. Unbleached muslin or factory cotton is mostly used for making the hard roller, the triangular, the T, or the many-tailed bandage. Cheese cloth makes a nice soft bandage to use when dressings are to be kept in place, but no pressure required.

A simple triangular bandage may be used with advantage in cases of emergency, or for keeping in position such applications as poltices and compresses or dressing where a uniform support is of no moment. This bandage is easily made. When folded up into a cravet it can be used as a constrictor on a limb where there is profuse bleeding. For fracture of the small bones in the arm it can be made into a sling to support the forearm. The ends of the bandage should be tied around she neck so that the hand will be higher than the elbow. If the long bone in the arm is broken use the sling to support the hand and wrist only; keeping the hand at an angle below the elbow. This makes the forearm act as an extension and keeps the bone in a better position,

For a wound in the head put a triangular bandage on as a cap. Start in the centre of the forehead, bring the long ends lower down and cross at the back of the head, then back to the forehead and pin. The third end is folded over the long ends where they cross, and pinned. This makes a good cap and cannot be easily pulled off.

For the shoulder and axilla, fold the bandage like a cravat, bring from the under arm, cross on the shoulder, and carry over the chest—one end before and one end opposite to the axilla, where they are tied or pinned.

The T bandage, and the many-tailed ones are prepared from pieces of muslin of different lengths and widths, torn from both ends into two, three or more tails, up to within about three inches of the centre; the length and width being regulated according to their application. They may be used to hold temporary dressings in place for a fractured jaw, shoulder bone or on the chin, head and abdomen.

The hard roller bandage is the hardest to make and also to put on. Usually they are made of unbleached muslin from four to six yards long and two to four inches wide. They should always be torn and the selvedge removed, then rolled into a hard, even roll.

In applying the common hard roller one must learn how to distribute the pressure evenly about the limb so as to give the firmness and support required. Begin at the lower extremity of the limb and bandage upward. Keep the bandage rolled up in your hand to within about three inches of the part; use the finger and thumb of your left hand to keep it in place when applying. This requires some practice, but it is easily learned.

Flannel bandages are cut on the bias of the goods and evenly rolled. They are easily put on, and are used in cases of swelling of the limbs, and also under plaster paris casts to protect the skin.

Plaster bandages are not often called for in a home. They are made of crinoline cut into strips about five yards long and four inches wide. Plaster is rubbed into the meshes. To do this lay the bandage over the table, rub in the plaster with the left hand, and roll loosely with the right. Wrap each bandage in paper and keep in an air-tight can until needed.

Crinoline or mosquito netting bandages are used when a slight stiffness is required. Just before using they are wrung out of the water. This helps the stiffening, and the bandage is very light.—Mrs. Gundry, Goderich, Ont.

Hints for the Home Seamstress.

HEMSTITCHING.

In hemstitching a handkerchief or napkin, the hem is often so narrow that it is hard to hold. This difficulty may be overcome if a strip of cloth

The "Bissell"
is the lightest-draft harrow

Because of its astonishingly light draft time after time the "Bissell" Disk Harrow, in field competition, has done DOUBLE the work its competitors have accomplished under same conditions. The special shape of the "Bissell" Plates allow them to enter the ground easier and turn the soil with less effort. Steel blades, meeting the plates "Chisel fashion," keep the plates thoroughly clean. The space between the plates is kept clear of trash by movable clod irons—the only Harrow that has this feature. Sand bands protect the ball bearings from dust. The seat is placed back of the Harrow. In this way the weight of the driver rests over the frame, and neck weight is removed. The hitch is well back which is still another draft—reducing feature. Search the continent over and you'll not find a Harrow of such light draft and correct proportions as the "Bissell." For further particulars write Dept. M. for catalogue or see your local dealer.

ELORA, - ONT.

Here Are the Two Strongest Fence Locks Ever Made

The Frost Woven Fence Lock is the strongest and most secure Lock known. It will not work loose or slip.

One reason is because it possesses more inches and weight of Wire than any other Lock. But the principal reason is because the Frost method is the most practical.

Note the peculiar, powerful-looking "Knot." Then see the wonderful triple "Wrap," with its ends cut close. (These closely-cut ends prevent springing.) This triple "Wrap" makes the Frost Lock doubly secure.

The picture, alone, of the Frost Lock should prove that no other Lock on earth is so secure.

Lateral Not Kinked

The Frost Lateral is not kinked.

The Lateral in nearly every other Fence is kinked. This weakens it. And when subjected to great strain: snap! she goes. Because all contraction-strain falls on the Lateral.

No other Fence Maker can make this Lock. We own the patent. And we build our Machines in our own Machine Shops.

So, you see, this wonderful Frost Lock cannot be duplicated—nor even imitated.

Frost Metal Lock

The Frost Field-Erected Fence Lock permits the use of No. 7 Hard Steel Stays (a sizes larger and heavier than the Uprights used in Woven Fence). These are immovably bound to unkinked coiled Laterals.

The Lock on the best other Fence made is about 60 per cent. weaker than the Wire.

But the Frost Lock is the strongest part of the Frost Field-Built Fence. Fallen trees, and other unusual tests, which have smashed other Fences to smithereens, have left the Frost uninjured.

This Frost Lock is the safest Field-Built Fence Lock ever made. It is the only secure Lock which will not injure the Wire in a Field Erected Fence.

Make Our Own Wire

There are extreme weather changes in certain sections of Canada which mean a mighty short life to most Wire Fence.

Very little Wire is made to fight off this Wire enemy. Such Wire might fill the bill in some climates, but it's simply unfit for Canadian conditions.

Heretofore we used ready-made Wire ourselves. But we had it made under our own specifications. It always gave good satisfaction, but we wanted better. The only way we could get it was to make it ourselves. So that's what we're now doing.

We've engaged a Wire Expert with 25 years' experience behind him. And we've built special Wire-Making and Galvanizing Mills, and installed the most modern machinery made.

Through scientific Annealing, all Frost Wire is even in temper. It will stand against Canadian weather, no matter how severe.

Two-Thirds of Its Life

Two-thirds of the life of a Wire Fence depends upon its Galvanizing. When this two-thirds is killed—eaten away by rust—the other third is as good as dead.

Yet nearly all Wire is Galvanized too thinly. And, besides, it's merely "coated." That's because Zinc costs four times more than the Wire itself.

(We pay the highest price for Zinc,—and get the best.)

But Frost Wire is Galvanized doubly thick. And it is not merely "coated," either. The Zinc goes down into the Wire, making the Galvanizing a part of the Wire itself. This prevents Frost Wire from scaling.

This is possible only by the Frost "Pickling" and "Cleansing" process. It simply scours Frost Wire of every particle of grease and scale, leaving it as clean as a pin.

Frost Galvanizing will now stick to the Wire through thick and thin. No Galvanizing enemy can rust it. That's why the Frost Fence will last 12 to 15 years longer than most others.

is basted firmly along the edge of the article. The cloth will afford more room by which to hold the piece while working. A piece of linen which has been stamped too near the edge of the material to handle conveniently, can be managed in the same way.

A SHIRT WAIST BAND.

A good way to finish the band of a shirt waist is to stitch it around the waist underdeath across the back and sides up to the gathers in the front and have pieces of tape sewed on here on the right side to tie. The fullness can easily be adjusted and the waist is also held down perfectly. This makes the task of ironing much easier than if the band were stitched all around.

HANGING SKIRTS.

Perhaps the most frequent and readily seen defect in an ill-made gown, is the uneven length of the skirt. To get the proper and even length is often a dreaded task. A long street skirt is very undesirable, not only that it is unsanitary, but very inconvenient and unbecoming. The proper length depends on the form and age of the person. Two to four inches from the floor is the most common measure used. The skirt other than for small girls should always be measured from the floor since the side, back and front often vary.

An easy method for hanging a skirt is for the person for whom the skirt is hung to stand on a table and hold a yard stick parallel to the body with one end on the table. The person who is hanging the skirt can then measure off from the yard stick as many inches from the floor as desired, moving the stick every few inches. The hem can be turned up at once by means of pins or pins may be placed in the skirt the desired distance up. In this way a skirt may be hung very easily in a very short time.

Another method which has proved very satisfactoy when one must do her own skirt hanging, is to hold a yard stick parallel to the body with one end on the floor marking off the skirt with pins or pointed crayon at the top of the yard stick the distance from the floor. Then measure down from the pin or crayon line the length from the skirt band to the floor minus the length from the skirt band to the crayon or pin line and the number of inches from the floor. Since the distance from the waist-line to the pin line varies, it should be measured every few inches. The skirt band should be on in every case before hanging the skirt.

ATTACHING WAIST AND SKIRT.

Possibly no one thing aids in putting on and wearing a skirt and waist so much as having them attached with hooks and eyes or better hooks and very small brass rings. The rings and hooks should both be buttonhole stitched on. Place one of the three small rings one and one-half to two inches to the right of the centre of the waist line in the back, one of the rings in the centre and the other one and one-half to two inches to the left of the centre. Button-hole stitch number three hooks on the skirt band in corresponding positions.

To avoid inconvenience use the same spacing in all waists and skirts. The reason for putting the small rings on the waist is that the eyes are more apt to pull off and are more easy to fasten. No waist or skirt should be considered complete until the attachment of the two is made sure by the hooks and rings.

Announcement

The American custom of "coffee for breakfast" is gaining quite a foothold in Canada, with the result that there is a largely increasing demand for a coffee of really good quality.

In order to meet this demand I decided some time ago to put up a coffee the quality of which would be fully equal to the best that we are accustomed to get when we visit the United States.

It has taken a full year to make preparations, to secure and install the most improved machinery, to decide, after innumerable tests, on the exact standard of coffee which would be most pleasing in flavor, strength and fragrance, and to select and import the high-grade coffee required. This has all been done, and the coffee is now being sold under our brand, "Estabrooks' Red Rose Coffee."

Not only is the coffee of a very fine quality, but we have been fortunate in finding a new and greatly improved process of mauufacture; crushing instead of grinding, a process which removes the chaff or skin of the bean and breaks the kernel into small, even grains. This is described on the label of the tin, and will be described more fully in later advertisements.

You know the success that has attended "Red Rose Tea," a success due entirely to the superior quality of the tea and good business methods. Every guarantee made on behalf of "Red Rose Tea" will apply to "Red Rose Coffee." It will always be just as represented.

Our travellers are just starting out, and it will be about two months before they can visit all the merchants in the Maritime Provinces. By the end of that time we expect to have the coffee in practically every store that sells Red Rose Tea. In the meantime, if you will write and give me the name of the merchant you deal with, I will see that you can get a tin at once.

It is put up only in one grade and only in sealed tins; 1 lb. and ½ lb. 40c. per lb.

DIP YOUR SHEEP

Stockmen and farmers who use the Cooper Dips have healthier animals—get more wool and better prices. More than half the cloth and flannel of the world is made of Cooper dipped wool. Tanks supplied at cost to all users of the Cooper Dips.

COOPER'S POWDER DIP

The leading sheep dip for 65 years. Used on 250 million sheep every year. Kills ticks, lice, nits and eggs in one dipping. Does not stain the wool, but increases the yield and improves the quality.

Prices 25 gal. pkt. 50c., 100 gal. pkt. $2.00.

COOPER'S FLUID DIP

for all animals. A highly concentrated, non-poisonous fluid dip of marvellous strength. Mixes readily with cold water, whether hard, brackish, or salty. The only pure liquid dip—no sediment. Goes farther than Coal Tar dips and, therefore, cheaper. Positive remedy for scab, mange, ticks, lice, ringworm, eczema, sores, bites, stings, etc. One gallon makes 200 gallons for general dipping, or 300 gallons for disinfecting.

Price—Qt. can 75c. 1 gal. can $2.00, 5 gal. can $8.50.

COOPER'S WORM TABLETS

A sure remedy for intestinal worms in Horses, Sheep, Cattle and Dogs. These tablets offer the great advantage of correct doses and certain results. Dose—one tablet for lamb or shoat, two for sheep or hogs, three for horses and cattle.

Price—10 tablets 20c. postpaid, box of tablets, 200, $1.00, postpaid.

COOPER'S "LAVENE"

The most effective skin dressing for Horses, Cattle and Dogs. Cures worst cases of Mange and Ringworm at one dressing. Searches the skin and attacks the disease at its root. Improves the coat and renders hair soft and glossy. Is used by many of the best breeders in preparing animals for show.

Price Qt. can $1.00, Gal. can $3.00. CANADIAN DRUG CO., LTD., ST. JOHN, N. B.

PILES CURED at HOME by New Absorption Method

If you suffer from bleeding, itching, blind or protruding Piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment; and will also send some of this home treatment free for trial, with references from your own locality if requested. Immediate relief and permanent cure assured. Send no money but tell others of this offer. Write today to Mrs. M. Summers, Box P. 309, Windsor, Ont.

THE ST. JOHN Business COLLEGE

S. Kerr, Principal.

Maritime Stock Breeders Convene.

The annual meeting of the Maritime Stock Breeders' Association was held in the D. J. T. A. Hall, Truro, N. S., on Wednesday, January 12th at 2.30 p. m.

President E. B. Elderkin was in the chair and the other members present were: F. L. Fuller, M. McF. Hall, Col. H. Montgomery Campbell, Roy Pipes, S. J. Moore, Hon. D. V. Landry, Robert Robertson, A. Snowball, W. W. Black, S. A. Logan, R. S. Starr, Guy Fuller, Oliver Saunders, W. C. MacLeod, Peter Brodie, C. A. Archibald, Col. Blair, Bliss Fawcett, John Retson, Richard Creed and M. A. MacLeod.

President Elderkin gave an interesting resume of last year's work, including an account of the very successful Winter Fair which was held in December and the bright prospects for the future.

Minutes of all regular and special meetings, held during the year, were read by Secretary Fuller and unanimously approved.

The financial statement and auditor's report showed a cash bank balance of $312.49, with all the Association's bills paid up to date.

The question of the advisability of holding a Horse Show in the spring of 1910 was discussed and on motion it was decided to leave the matter in the hands of the executive, who will go forward with the movement, providing they see their way clear re financial and general public interests.

Hon. Dr. Landry, M. P. P. for Kent County, N. B., and Commissioner of Agriculture for New Brunswick, delivered an address, expressing appreciation of the work done by the Maritime Stock Breeders' Association and giving words of encouragement for future operations.

The election of officers resulted as follows:

President—Col. H. Montgomery Campbell, Apohaqui, N. B.

Secretary-Treasurer—F. L. Fuller, Truro, N. S.

Directors for Prince Edward Island—Hon. John Richards, Bideford; Walter M. Lea, Victoria; James Roper, Charlottetown, and Gavin Harding, Graham's Road.

Directors for Nova Scotia—W. W. Black, Amherst; R. S. Starr, Port Williams; C. A. Archibald, Truro, and S. A. Logan, Amherst Point.

Directors for New Brunswick—Col. H. Montgomery Campbell; M. H. Parlee, Lower Millstream; Bliss Fawcett, Sackville, and R. A. Snowball, Chatham.

After a hearty vote of thanks, moved by Col. Campbell, seconded by R. S. Starr, for appreciation of Secretary Fuller's untiring efforts in behalf of the Association, which was unanimously carried and to which Mr. Fuller replied in a few well chosen words, the meeting adjourned to meet again in the College Hall at 7 p. m., where the question of sheep raising was thoroughly discussed by Professor Cumming, Andrew McPherson and others.

At a subsequent meeting of the executive, F. L. Fuller, R. A. Snowball, Hon. John Richards, R. S. Starr and W. W. Black were appointed a committee for the purpose of carrying on the work of organizing the prosoed horse show.

Milkless Cow.

I have a heifer that came in last spring and did not give any milk and has not given any.

R. B.

Ans. Special feeding will not avail if the use of ordinary farm feeds and bran do not bring on a flow of milk. Persistant hand rubbing of the udder and an application of brandy or alcohol at the last rubbing may stimulate milk flow at calving time, provided there is nothing radically wrong. It may be, however, that the milk producing function is dormant in this heifer, or the glands lacking in development and circulation.

The Empire

PROVES ITS CLAIMS

Claims are **words**—Proofs are **Facts.**

Mere claims have often sold goods. Proofs are a record of dollars made—You, or anyone else, don't want the Cream Separator that **Claims** the most—you want dollars from your handling of milk. Therefore, you want the **proved** separator—the dollar-making.

FRICTIONLESS

Empire CREAM SEPARATOR

Here are some **facts** that will interest you—The Empire turns the most easily—is practically frictionless—is most easily washed—a few simple parts without a cranny or crevice in them—gets all the cream, and the highest quality of cream at that—is durable—will not get out of order—will cost you practically nothing for repair. These facts spell dollars for you if you give them the opportunity.

Send for our new Catalogue—it costs you nothing, but will show you how you can make **dollars.**

A Real Lung Tonic

Rev. Father Morriscy

There are many preparations that will *relieve* a cough—few that will *cure* it. The first class, containing such drugs as Opium and Morphine, simply deaden the irritation and stop the cough, but do little or no permanent good.

"Father Morriscy's No. 10"

does not contain a trace of these dangerous drugs, but is an absolutely safe and scientific preparation of Nature's own remedies—Herbs, Roots and Balsams.

It entirely removes the irritation that caused the cough, by cleaning out the mucus, stopping the inflammation and healing the delicate membrane of throat and lungs.

Moreover, it tones up and strengthens the whole system, particularly the lungs, and protects against future coughs and colds.

Trial size 25c. per bottle. Regular size 50c.

At your dealer's. 23

F. G. JAMES, Bowmanville, Ont.

The Poultry Industry in Canada

Taking practical and unexaggerated figures the average hen produces only one hundred eggs per year, taking her product as 100 eggs worth $1.00, 8 chickens at 10c, her body worth 25c less cost of feed etc, say $1,00, how much greater will be the profit derived if the hen lays half as many eggs again (and 150 eggs is quite a reasonable demand from a hen, under favorable circumstances); the increase will be clear profit.

What are favorable circumstances?

Proper housing and ventilation, cleanliness, varied and unstinted rations, and care and selection of stock, breeding only from the best layers, either using trap nests or some such convenient measures for ensuing the latter. Such point mentioned, must receive equal attention. The best hen can't lay well in a dirty, damp, poorly ventilated house. Receiving the best of care in feeding a hen may lay under such conditions, but she can't do her best, a great deal of the food that should be making eggs has got to go to keeping up her constitutional vitality and health. Neither can the best hen be reasonably expected to lay in the finest built and most modernly ventilated house, if she be fed only sufficient to keep her alive, or what will produce fat, or muscle or bone only, she must have a variety to keep her health, the surplus goes into the egg, and so, equally unreasonable would it be to expect hens to lay, no matter how well housed and fed they be, if they are not layers. There are such hens. As in everything else there are drones in the poultry world; as Pat says, "hens that are no good for nothing." This is avoided by breeding from layers only.

Taking up another side of the question, Prof. Gilbert put the two great questions, "Why do we not get more strickly new laid eggs on the market?" and "Why do farmers not take a greater interest in poultry?" The only answer that can be attributed to the second is that "the farmers are too well off." Some say "There's nothing in it." How do they know? How many farmers keep a strict account of what department of his farm is paying him and what is not? How long could a merchant carry on business on these lines? No, the merchant can tell at once just how much profit he is deriving from this department and how much from that. How many farmers can do this? and yet they will tell you there is nothing in a branch that has been proven time and again to be the most paying branch there is, the poultry branch. Most likely he depends on the authority of someone else who had a friend who knew a man who had a dozen hens and starved them to death, and then set forth the cry, "oh there's nothing in it?" Everybody can't succeed; nothing of any value can be had without work and perseverance. Some will fail; but, does the news that so and so has failed in business, drive all other merchants out of business?

A farmer does not begrudge summering two or three colts and selling at a loss of twenty to thirty dollars, yet he won't give the poor little hen half a show.

Follow up the first question as to why strictly new laid eggs are so hard to obtain, the learned Professor said. "Eggs today, in the Montreal markets are worth, wholesale, 60c to 70c for strictly new laid eggs. To be fresh, that is strictly and absolutely fresh, with the flavour of fresh eggs, they can't reach the consumer too soon after they are laid, they should not be fertilized. Take the fertilized eggs. The eggs first laid in the nest may have been covered by different hens in the course of laying, several hours during the day, and possibly through neglect left in the nest to the same treatment the second day. In eight hours the germ will start to develop, the egg is placed away in a cupboard, there to remain until a sufficient number warrants a trip to market All this time especially in the warm months of summer, the little germ is growing. At this stage every jar the egg receives causes deterioration, so

LOGAN BROS., Amherst Pt., N. S.

that it is not hard to conclude the condition of the egg when it reaches the consumer. The remedy for this, said Prof. Gilbert, is marketing only unfertilized eggs. "Oh", but you say, "how about hatching?" Keep your breeders by themselves. Have a few of your most select specimens, the best layers of course, birds true to type and color and breed from them alone. This may incur a little extra trouble, but is it not the persevering merchant who succeeds?"

Again the feed the hen receives controls largely the flavor of the egg. No deteriorated animal or vegetable matter should be fed. The bird should not be allowed to scratch over the dung hill, as is so frequently done.

Having taken all precautions as to the freshness and flavour of the egg, the next point is to put it on the market in an attractive manner. Already some localities find that they can only sell strictly guaranteed eggs—and it will come yet when every egg marketed will have to be guaranteed full value, if they are to be sold at all. To-day, eggs sold in this manner command a price fifteen to twenty-five cents in excess of the regular price. The Professor cited different cases in actual experience that bore him out in this statement. It was no mere theory but backed up by hard plain facts. Get the article,—get the superior article—and then you can get the price. This is an age when the demand for pure food is rampart, and it will be had, even if at an advance in cost. The difference in cost is deducted from the doctors' bills every time.

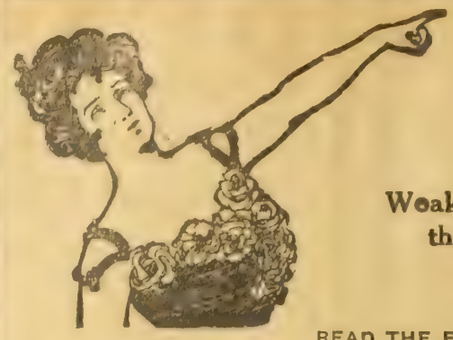
On being asked by Mr. Foster, if there was any way in which P. E. Island farmers could reach the markets paying 50c a dozen for eggs, Prof. Gilbert said, "Yes". "If the eggs can be positively guaranteed absolutely fresh." He mentioned the "Poultry Producers' Protective Association of Eastern Canada," as being a body recently formed, who would handly only such eggs. He stated that he would bring the matter to the notice of the secretary of that association, and suggested that a branch might be formed in P. E. Island. He thought it a good matter for the P. E. Island Poultry Association to take up.

Asked the best breed for the farmers to keep—any of the dual purpose fowls such as Rocks, Wyandotte, Orpingtons, or Reds, were suggested by him. By dual purposes is meant, birds that will produce two sources of profit, eggs and meat. He would not consider it profitable from the farmers standpoint, to separate the two qualities. By carful trap-nesting and selection, the heavy breeds can be bred to lay as well as any of the Mediterranean family, at the same time having a good table bird.

How many birds should the farmer keep? No more than can be given the proper amount of attention without neglecting any of the farm work.

As to the care and feed of chickens, the first part or middle of May is sufficiently early to hatch—arrange to have the chickens grow with the grass. Care should not only be taken in feeding the chicks, but also the brood hen, before the eggs hatch. The last days, (the 19th, 20th day of incubation) the hen must be fed on the nest.—During the first day and a half of the chicks' life, no food should be given, this allows the digestive organs of the little chicks to adjust themselves and become stronger, the unabsorbed yoke of the egg sustaining life during this period. The first meals should be of dry stale bread crumbs. Later this may be soaked in milk, squeezed dry and fed. About the fourth day boiled rice may be added. Positively no whole wheat should be fed till after at least the twelfth day the little chicks can't digest it. The first six weeks is the critical period in the chicks life.

By steadily increasing the rations till



Cures From All Over Canada

Weak Men in Every County and Town Throughout the Broad Dominion Restored to Robust Manhood by the Use of Dr. McLaughlin's Electric Belt.

READ THE EXPRESSIONS OF GRATITUDE.

J. C. Jamison, of Elmside, Que., says: "I have not had a touch of Rheumatism after one week's use of your Belt. I am completely cured."

D. Jannison, Steelton, Ont., writes: "I have been cured of weakness and varicocele and feel like a different man; would not be without your Belt for any money."

C. H. McKague, Roland, Man., has this to say: "After ten days' use of your Belt the losses have stopped, my stomach is digesting its food, and the constipation is a thing of the past. You have my sincere thanks."

Men with small, flabby muscles, thin-chested, dull-eyed, short of breath, without endurance, courage, ambition, sand or grit in their make-up, are WEAK MEN. If they were not born weak, I can make physical giants of them.

I am not performing miracles. I have only discovered that what makes all this strength, this steam, this FORCE in a man is his Animal Electricity. That is what makes muscles and heart strong. When I find a man who has lost that power and feels only half a man, I want to give it back to him, and I can do it, for I have done it for thousands.

There are men in every town in this country now who thank me for making them feel once more like the greatest of God's creatures—MAN.

HERE IS MORE PROOF OF MY CLAIMS.

J. Largess, Box 53, Vankleek Hill, Ont., reports: "The lameness in my back is all gone, the varicocele is better, and I am getting better health generally, and have gained a good deal in weight."

Jas. Hatt, Beach Hill, N.S., says "The pains in my back and chest are all gone, and I have gained fifteen pounds in weight. It is a pleasure to say that I have at last found a remedy that will cure me of my aches and pains."

Belonie Gaudet, Miscouchie, P.E.I., writes: "I am delighted with the success of your Belt. In forty days' use I have only had three losses. My health is greatly improved, and I feel refreshed after a night's rest."

Where there is any physical constitution to work on, my treatment will develop perfect manhood. It will take the slightest spark of manly vigor and fan it into a flame which will encompass the whole structure and charge every nerve and muscle in the body with the vigor of youth.

EVIDENCE THAT CANNOT BE DENIED.

J. Sweeney, care of Seamen's Inst., St. John, N.B., has this to say: "The pains in my back have gone, and the Varicocele has disappeared, and it has done me much good otherwise. I will always recommend it."

Jas. S. Bryson, Maple Creek, Assa., expresses his gratitude by saying: "Your Belt has done me a world of good. I would not be without it if it cost me double the price which you ask."

W. H. Eaton, 512 Cordova St. E., Vancouver, B.C., is thankful because after four days' use of his Belt he was cured of a very severe case of Rheumatism, and has not had a pain since.

Richard Brill, Revelstoke, B.C., says after a month's use of the Belt he is better and healthier than he has been for years and recommends it to all weak men.

My Belt Cures To Stay Cured Nervous, Weakness, Pains in the Back and Limbs, Rheumatism, Kidney and Stomach Troubles, Varicocele, Loss of Strength and all the effects of wasted force in Men and Women.

NOT A CENT UNTIL CURED.

That is my offer. You take my latest improved appliance and use it in my way for three months, and if it does not cure you need not pay me. My only condition is that you secure me, so that I will get my money when you are cured.

If you don't say this is the best value you ever saw, and worth every cent of $1.00, return them at once and we will refund your money immediately, January Sale Price, PREPAID.....79c

the bird is fed unstintingly of a varied ration of fleshing foods, a weight of three pounds can be and has been, time and again, produced at three months.

Asked as to double mating the professor said he did not favor the idea. Breed from birds of as even Barring as possible.

Prof. Gilbert thanked his audience for the good attention they had given him.

On being asked to say a few words, H. E. Miller Secretary of the Poultry Association stated the disappointment felt by the management of the show just past that it was not better patronized by the farmers in whose interest the shows were being held. If possible another show will be held in the fall of 1910, and if it does not warrant the association continuing the shows can only be abandoned. Touching lightly on the conditions on the Island, one of the first points to be remedied is the housing of our birds—neither the house that is in every sense of the word, "an open air house" open on four sides, nor the horatically sealed house is the proper style; the birds are better in the trees than in either of these styles. As to the improvement possible in the number of eggs produced, even a greater percentage of improvement is possible than mentioned by Prof. Gilbert, as, while the learned Professor set his figures at what he thought a very low mark, 100 eggs per hen per year the last P. E. Island Government census showed that our hens averaged only 80 eggs per hen per year—this easily allowing the production to be doubled without going beyond the average of other places.

Extracts from an address on poultry keeping before the Marshfield P. E. I., Farmers Institute, by A. G. Gilbert, poultry manager at the Ottawa Experimental Farm.

The Westmorland Poultry Show.

The second annual show of the Westmorland Poultry and Pet Stock Association was held in the old opera house, Moncton, N. B., on January 13th, 14th, and 15th.

Mr. George Robertson, of Ottawa, placed the awards and the large number of entries kept him busy for some time. He did his work carefully and well.

Mr. J. V. Jackson presided at the formal opening and several prominent gentlemen took an active part in enlogizing the work of the Association and the revenue producing powers of our feathered friends. Over fifty exhibits of almost as many varieties, totalling 854 birds, took part in the battle for supremacy in their respective lines. The showing throughout was excellent and many very fine specimens were on hand to uphold and demonstrate the merits of their respective breeds.

Upwards of 120 birds were shown in each of the Barred Rock and White Wyandotte classes.

Following is a list of the awards.

Note—c, cock; h, hen; r, cockerel; p. pullett,

Barred Plymouth Rocks, Glen View Poultry yards, 1, 2 and 3 c; 1 and 3 h; 3 and 4 r; 3 and 5 p.

FLORICULTURE.

All inquiries in this department will be answered by H. E. Goold, Florist, Sussex, N. B.

Are the diseases, so often destructive to plants in the house, caused by careless watering, etc. ?

An unhealthy condition of plants is often caused by lack of ventilation, too little or too much water, too high or too low temperature. Coal and escaping illuminating gas also must be guarded against with the greatest care. For both insects and diseases an ounce of prevention is worth a hundred weight of cure. See to it that your plants have proper soil and drainage and that watering and temperature are not neglected. Be sure that no insects are brought in from out doors on the plants and also provide for the evaporation of water near the plants, that the air may be kept sufficiently moist. Syringe the foliage on bright days and three or four times a month dip the small plants into soapy water, followed by a dip in clear water. Sponge off the large plants with the same preparation and follow with a clear syringing.

The three insects most likely to give trouble are probably familiar to all who have ever attempted to grow plants in the house. They are : The Green Aphis, Mealy Bug and Red Spider.

The Aphis, a common green plant louse, is of sufficient size to be plainly visible, but it keeps to the underside of the leaves and shoots where its presence is unsuspected and often, for a while, escapes detection. It is a sap sucker, multiplies with great rapidity and greatly injures the vitality of the plant. Unless checked at once, before many of the insects are full grown, it is difficult to eradicate. The conditions favorable to its attack are poor ventilation, partial shade and plants crowded together should be changed immediately. Use tobacco, applied in one of the following ways : Syringe the plants, (using one of the small hand syringes for sale by almost all seeds men), and then sprinkle thoroughly with tobacco dust. Some brand, made especially for this purpose, is a great deal better than the ordinary dust, which is apt to have but little strength. If possible, apply the dust with a bellows, so as to get it on evenly, particularly under the leaves, where it is most needed. If the plants are not too large, invert them while applying the powder. Allow the dust to remain on the plant for twelve or eighteen hours and then thoroughly syringe with clear water. If necessary, give the treatment again in two or three days.

The Mealy Bug is a white, cottony looking mass, easily seen. It seems to be most fond of the Colins Fuchsias and other soft wooded plants. It thrives on a hot, dry, close atmosphere and is apt to keep out of sight in a mass of leaves or in some corner until there is a great number, when they infest the undersides and stem joints of the leaves.

If there are only a few insects upon the plants when you first discern them, take a fine feather or a small, stiff brush and with this apply alcohol, kerosene or coal oil to the insects, killing them on the spot.

The Brown Tail Moth.

(Continued from page 180)

stock and to destroy any of the winter nests that were found. Over a million and a half plants were examined and nearly 200 nests were found on seedlings and stocks of pear, apple, plum, quince, cherry, rose, spiraea, etc. In view of the fact that each nest contains from 200 to 300 young larvae of this insect, the great benefit to fruit growers, horticulturists and others resulting from the work of last season can readily be understood. In the eastern states thousands of dollars are being spent annually by the various authorities in their efforts to control and prevent the spread of this insect which has established itself in those regions since its introduction into Massachusetts on imported stock about the year 1980. It is of the utmost importance that all steps possible shall be taken to prevent its introduction and establishment in those regions of Canada now free from its attack, and its further spreading in these places in Nova Scotia and New Brunswick where it has been introduced accidentally. Its establishment in Canada would be most serious to the nurserymen and fruit growers of this country, and every precaution possible must be taken to avert such a calamity.

Will you kiudly inform me, therefore, if you are importing or have already imported nursery stock this season from abroad, and the place from which the stock is being or has been imported.

As nests have been found on stock imported during the present season, I should be pleased if you would send me this information at once in order that your stock may be inspected, if necessary. If the stock has not arrived already would you please send me notice as to the time of its arrival in order that it may be inspected at the time of unpacking, and thus the least inconvenience will be caused.

It has been found that fumigation is of no avail against this insect and that destruction by burning of the winter nests is the only safe remedy.

I feel sure that all to whom this letter is addressed will be alive to the seriousness of the danger which is imminent, and will co-operate with the division and other authorities in the efforts being taken to prevent the introduction and spread of the brown-tail moth. I shall be pleased to supply further information or reply to communications on the subject and shall be grateful for any assistance which you are able to give me.—C. Gordon Hewitt, Dominion Entomologist, Ottawa.

Chamberlain's Stomach and Liver Tablets invariably bring relief to women suffering from chronic constipation, headache, biliousness, dizziness, sallowness of the skin and dyspepsia. Sold by all dealers.

They Pass the British Government's Acid Test for Galvanizing

Do you know that PRESTON Safe-Lock Shingles are the ONLY kind you can buy that are made according to British Government Specifications for Galvanized Sheet Metal?

The British Government is the most particular buyer in the world. The sheet metal it buys for public works must be made and galvanized far better than ordinary sheet metal.

Each sheet must be carefully sheared to exact dimensions, thoroughly cleaned, and afterwards galvanized with best Virgin Spelter, which must consist of not less than 98 per cent. pure zinc—Extract from British Government Specifications.

Each steel sheet is cut to the exact size of a PRESTON Shingle before it is galvanized with 98 per cent. pure zinc. In this way even the edges are thoroughly galvanized.

The sheets must be heavily and uniformly coated with zinc.—Ex. from B. G. S.

Ordinary galvanized sheets are not nearly so heavily coated with zinc as those galvanized according to British Government Specifications. To secure a thin coating the spelter is heated to a very high temperature. When the steel sheets are dipped into it only a small portion adheres to the surface.

Your eye cannot tell a thinly coated sheet from one heavily coated. That is why there are such a lot of cheap steel sheets on the market. They are considered good enough for ordinary shingles. But they couldn't pass the rigid specifications required of the steel sheets we use for PRESTON Shingles.

The steel sheets for PRESTON Safe-Lock Shingles are dipped into spelter kept at a lower and correct temperature. The sheets thus become very heavily coated. And, the coating is made perfectly smooth and even.

The sheets must stand bending without cracking the galvanizing.—Ex. from B G.S.

Unless the steel sheets for PRESTON Shingles were of perfect quality and galvanized according to British Government Specifications not only would the galvanizing crack, but the metal also, where our top lock is folded to produce three thicknesses of metal. Look at a PRESTON Safe-Lock Shingle and you'll find the steel and the galvanizing perfect at our top lock as well as everywhere else on the shingle.

THE ACID TEST

The galvanizing must be able to stand the test of dipping the sheet into a solution of sulphate of copper at a temperature of 60 degrees Fahrenheit, allowing it to remain in the solution for the space of one minute, and then withdrawing it and wiping it clean. The galvanizing must allow of this being done FOUR *times without showing signs of a reddish deposit of Copper.—Ext. from B G.S.*

The reddish deposit shows up the thinly galvanized spots. Ordinary galvanized sheets, treated to this test, would be thickly spotted with reddish deposits. Yet you are asked to pay the same prices for shingles that cannot pass this test as you are for PRESTON shingles, which will easily do so.

This Acid Test is more severe on the galvanizing than twenty years of Canadian weather. You see, sheet steel galvanized according to British Government Specifications is galvanized to last. PRESTON Shingles are good for twice the service of ordinary galvanized shingles.

The construction of PRESTON Safe-Lock Shingles is far ahead of all others.

Other shingles merely slip or slide together at the sides and are easily pulled apart. PRESTON Shingles are securely locked together at the sides on the principle of the "sailor's grip." The heavier the strain, the firmer the grip. You cannot pull them apart.

The top lock of PRESTON Shingles is TWICE as strong as our wonderfully secure side lock.

The top of the shingle is where the greatest strain falls. PRESTON Safe-Lock Shingles have a top lock consisting of three thicknesses of sheet steel, so that they can easily withstand the strain due to shrinking of sheeting or settling of building.

No other shingles can have such a top lock, because this feature is patented by us. The top lock of most shingles isn't as strong as the side lock of ours.

Lightning causes the loss of thousands of dollars each year to Canadian farmers. With every PRESTON roof you get a FREE Lightning Guarantee which secures you against this terrible destroyer.

You do not get a Free Lightning Guarantee with other shingles. Neither do you get shingles safe-locked on all four sides. Nor shingles with the nailing fully protected against the weather. Nor shingles made according to British Government Specifications. Nor shingles so easy to lay.

We have just issued a new booklet "Truth About Roofing." We should charge something for this, as it contains information of real value to anyone who has a building to roof. But we will send it FREE as a reward to all who cut out, fill in and mail the coupon to us. Just you send it to-day.

The Heart of the Community

OUT OF 259,000 PHONES IN USE IN CANADA, 250,000 ARE MADE BY US

DON'T you think that fact almost speaks for itself? There hardly seems to be much left to say. No better evidence could be demanded—or given—of the absolute perfection of every instrument turned out by us. For a long time past we have had our best engineers at work on the problem of designing a more powerful Farmers' Line Telephone. And now we have it. The work was completed months ago, although it is only now that we are offering it to you. The interval has been devoted to "trying out" these new sets under the most exacting conditions it would be necessary to meet anytime—anywhere.

SEND FOR OUR FREE BOOK

ALL you have to do is to ask for Bulletin 2816 and we will mail you FREE, at once, the full story of farm telephones. Asking for the book places you under no obligation—don't hesitate to tell us you want it. We are anxious that you should be posted on the value and economy of farm telephones. A post card will bring it.

Watch for the other advertisements of this series. They have a story to tell you.

OUR NEWLY DESIGNED NO. 1317 TYPE TELEPHONE SET

represents the attainment of perfection in telephone construction. Go over it point by point—prove it for yourself by comparison with any other instrument you like.

Take the transmitter—into which you talk—you will find it the standard long-distance type.

Then there is the receiver—the earpiece: it is simply perfect—never will you be bothered by local noises to spoil transmission. The result of long and careful study, it is the best possible construction and combination for the purpose.

The generator has also been well worked out—so well, in fact that this generator is stronger than any other telephone generator on the market. Observe how easily it turns. It will ring more telephones on a longer line than any other 5-bar generator made today. Thousands of these generators are now operating on lines more than 30 miles long with as many as 40 telephones on the same line.

The ringers and gongs are unusually efficient. Our new type 38 ringer is not only very sensitive, but very strong and operates on from only one-third to one-fourth the current ordinarily required. The extra large brass gongs produce a volume of noise fully half as great again as gongs on other sets. You'll never fail to hear this telephone when it rings. The switch hook makes all contacts on the best grade of platinum points—that makes for efficiency.

Taken as a whole Set No. 1317 is an extremely handsome instrument. The woodwork is of quarter-sawed oak of finest quality and handsome finish. And in point of service this telephone is unsurpassed—more than $10,000 was put into it in engineering expense alone before the first instrument was made. Would you like to know more about it? The space here won't permit us to tell you, but if you will write, we'll gladly give you any information you may desire.

The PUBLISHER'S DESK.

A TESTIMONIAL.—I am very pleased indeed to write you, that the man you sent me, is giving good satisfaction. I wrote you soon after he arrived, that I thought he was going to be rather slow, but I have found out the work for which he is adopted, and he is very faithful and trust worthy at it, the other man you sent me is also doing well. As far as I have had experience, the Salvation Army has sent out an exceptionally good class of men, and I am pleased to approve of their system, I remain, yours sincerely.

The above is one of the many testimonials, received from farmers regarding the class of men brought to this country through our agency. Farmers who will need help during the winter, or in the early spring, should write at once to STAFF, CAPT. JENNINGS, BOX, 477, Halifax, N. S.

A WELCOME ADDITION TO MARITIME INDUSTRIES — The enterprise and large business capacity of Mr, T. H. Estabrooks has given him a commanding position in the tea trade of Canada, and made St. John the principal port of entry for Indian and Ceylon Teas in the Dominion. This success is especially remarkable because it has been won within a few years. Persistent and judicious advertising has made Red Rose Tea a household word from the Atlantic to the Pacific, but the real basis of Mr Estabrooks' success has been his unwavering adherence to his conviction that quality pays, and to his straightforward and generous business methods. There is no man held in higher regard by the retail trade of Canada.

Having turned the eyes of Canada to St. John for tea, Mr. Estabrooks has decided to enter the coffee trade, and with his established reputation and his far-reaching business organization, backed by his keen business ability, success is assured.

This is not a sudden impulse however For more than a year prepartions have been under way. A plant fashioned after the most scientific and commercially approved methods has been installed and is now in operation. The coffee, instead of being ground, is now crushed between steel rollers, which turn it ont in grains of uniform size. This is the most modern and approved method of preparing coffee for use

The same day it is roasted, the coffee is crushed and put up in pound and half-pound doubly-sealed air-tight tins

Only one grade of coffee will be put on the market, and it will be a grade to appeal to particular people. With coffee, as with tea Mr. Estabrooks will adhere to the principal of quality goods.

Coffee blending, roasting and packing by new, scientific methods, and on a large scale, will be a welcome industry in the Maritime Provinces, and for this reason as well as for his own sake, the trade will wish Mr. Estabrooks unbounded success in his new venture.

The new coffee will bear the name "Estabrooks' Red Rose Coffee." The labels are very handsome, and in addition to directions for making, give a description of the new crushing process.

A TRIP TO ALASKA—A trip to Alaska is one seldom undertaken by people in the British Isles and of the many bookings undertaken by the Grand Trunk Railway officials in London, few tickets show the destination to be that part far north of Canada, where coal and gold, together with meteorological observations, are often supposed to be the chief reason for the existence of that land. That such a trip can be made with little out of the ordinary fatigue of travelling is well proved by a recent communication sent to Mr, Fred. C. Salter, European Traffic Manager of the Grand Trunk Railway, from Mr. Bromley Challenor, F.R.G.S., who has just returned from the north-western limit of the North American Continent. The letter has an added interest by reason of the fact that on the day of the official opening of the Grand Trunk Railway's new offices at 17-19 Cockspur Street, S. W., Mr. Challenor was the first person to book a passage with the Company for Canada On Dominion Day (July 1st) the trip was planed and provision made for the journey, and, in the first week in October, back in England again, the well-known geographer has been pleased to write to the Grand Trunk offices expressing his entire satisfaction with the easy way in which the journey was accomplished. After thanking the railway officials for making his means of transportation pleasant and comfortable, he says: "I was very pleased, indeed, with both the road and rolling stock of your Company, and in my opinion it is second to none on the Continent of America. The arrangements you made for me very much added to my comfort and enabled me to reach my destination in the quickest possible time, and I must say I experienced the greatest civility from the Company's staff during my passage on your road. The route you worked out for me was a most interesting one, and coming back as I did, over the Rockies and the Great Lakes, I did not travel over a single mile a second time except the short run between Sarnia and Toronto. Will you be good enough to send me particulars of your 'Round the World Tours.' I am thinking that next spring I may have another run out to the West, and if I do, I should like to return home via the East." Thus the whole of Great Britain is quickly put in touch by this great railway system, with what frequently is said to be the uttermost parts of the earth.—Dublin (Ireland) Daily Express, Oct. 19, 1904.

Are you frequently hoarse ? Do you have that annoying tickling in your throat? Does your cough annoy you at night, and do you raise muscus in the morning? Do you want relief? If so, take Chamberlain's Cough Remedy and you will be pleased. Sold by all dealers.

Throw away the old washboard!

How about that heavy family washing that has to be done each week? It seems incredible, but there are still some people who continue to use the old back-breaking washboard method, which makes common drudges of Mother, Wife and Sister (which results in irritable, nervous, over-worked women.) Our

"New Century" Washing Machine

washes a tubful of clothes in five minutes. Powerful oil tempered steel spiral springs and tool steel ball bearings make the work so easy that a child of six or eight can do it.

The new Wringer Stand is strong and rigid, and drains the water right into the tub. Ask anyone of the army of satisfied users about it, or better still try one; they will be a better argument than we can put on paper.

$9.50 complete, without wringer, delivered at any railway station in Ontario or Quebec.

Cummer-Dowswell Limited,
HAMILTON, Ont. 43 A

Canada's Best and Best Known Felts

Kimmel Felt Shoes and Slippers are for all men, women and children — young and old.

And the Kimmel trademark is on every pair.

Kimmel FELT FOOTWEAR

Styles to suit every use and every taste — each the best at the price that money can buy.

THE LOCK CAN'T SLIP

MARITIME WIRE FENCE

The illustration demonstrates the phenomenal gripping-strength of our lock. Under the most unusual strain it never gives. It is known as the lock that can't slip; the lock that unfailingly holds the wires in their correct position.

Our Free Catalogue will tell you more about our can't-slip lock, and about the superior English high-carbon, hard-drawn steel wire from which Maritime Wire Fence is made. Address the card to

New Brunswick Wire Fence Co., Limited, Moncton, New Brunswick

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad. as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, Sussex, N. B.

SHORTHORN BULLS FOR SALE.—WALTER E. EATON, Upper Canard, Kings Co., N. S.

WANTED.—Hides, calfskins, sheep and lamb pelts, J. J. McLEAN & SONS, Hopewell, N. S.

GUERNSEYS FOR SALE.—Two yearling Bulls, one six months old Bull and several Bull Calves.—T. D. BLAIKIE, Great Village, N. S.

FOR SATE.—Registered Shorthorn Bull, fifteen months. Color, dark red; weight, eleven hundred pounds.—ISAAC CHIPMAN & SON, Chipman Corner, Kings Co., N. S.

MARITIME REAL ESTATE CO., Sackville, N. B., are making up their new lists of "Farms for Sale", parties wishing to buy or sell, please write.

$25.00 buys a No. 3 Sharples Separator, nearly new. In first class shape. S. B. HATHEWAY, Fredericton, N. B.

REGISTERED GUERNSEYS FOR SALE.—One bull, 3 years old; bull calf, 6 months old; one heifer, 8 months old.—W. R. McCREADY, Jacksonville, N. B.

ALL kinds of books on Poultry, Pigeons, Rabbits, Pheasants, Horses, Cattle, Farming, Gardening, Bees, Fruits, Flowers, Vegetables, etc. Catalogue free.—MORGAN'S POULTRY SUPPLY HOUSE, London, Ont.

FARMERS.—We are buyers of dressed pork, poultry, fresh eggs and want prime quality goods. Small or large shipments. Prompt returns.—JOHN HOPKINS, St. John, N. B. Established, 1867.

WE have four second hand gasoline engines for sale, sizes 3 to 6 horse power. All in good order, just been overhauled. Write for further particulars if interested. EMPIRE CREAM SEPARATOR CO. LTD., Sussex, N. B.

WANTED.—Traveller to assist local agents in the sale of Cream Separators and Gasoline Engines. Apply, with salary wanted, and recommendations first letter. All correspondence confident.—EMPIRE CREAM SEPARATOR CO., Ltd., Sussex, N. B.

"Agents make BIG MONEY SELLING "VOL-PEEK" Granite Cement. Mends holes in Graniteware, Iron, Agate, Tinware, etc. Mends a hole in 1 minute. Every housewife buys. Greatest seller on the market. Agents make over 100 p. c. profits.—V. NAGLE, WESTMOUNT, QUE.

MONEY MANUFACTURED.—The progress now being made by Canadian manufacturers and merchants should be taken advantage of. Write for information about a safe, quick way of doubling your money. Address ROBERT E. KEMERER, Confederation Life Building, Toronto.

WANTED.—A reliable man in every locality in Canada with rig or capable of handling horses, on salary or commission, $15.00 a week and expenses, with advancement, introducing and advertising our Royal Purple Stock and Poultry Specifics, putting up our bill posters, 7 by 9 feet, selling goods to merchants and consumers. No experience needed. We lay out your work for you. Write for particulars.—W A. JENKINS' MFG., CO., London, Ont

N. B. Potatoes

I grow and have for sale large quantities of Potatoes. Seed varieties a specialty.

Geo. A. Fawcett, Middle Sackville, N B.

For Sale.

1 pr. fine S. C. Buff Orpingtons; 1 pr. S. S. Hamburgs also 1 good pen S. S. Hamburg chickens; all bargains to clear, also some of the best S. C. R. I. Red Cockerels in the Province, $1.50 to $3.00 each. All A1. stock. Satisfaction guaranteed.

THE BURLEY POULTRY CO.,
46 Princess St. St. John, N. B.

Incubators For Sale.

The Hartland Poultry Yards are selling incubators and brooders. You will want one of these machines, if you are going to hatch chickens this season. Send for catalogue, it is free.

HARTLAND POULTRY YARDS.
Harrtland, N. B.

FARMER'S ALMANAC FREE.—See advertisement of the Na-Dru-Co. Almanac in this issue and write today for a copy of this book of valuable information.

GILLETT CONSPIRACY CASE.—All the papers have been turned over to the Company in pursuance of an order made by Judge Denton in this case, the formulas, plans, and drawings of machinery which the detectives found at the houses of Morrison and Gibson, former employes, have been turned over to the Gillett Company.

STOCK NOTES.

A company of farmers has been formed at Southampton, York County, to purchase the imported Clydesdale stallion, "Southwick," brought to the province by Wm. Meharey, with the mares that were sold last month at St. John. Southwick is a large, smooth three year old of splendid draft type and calculated to greatly improve the draft horses of the district in which he is used. He has gone forward to Jas. A. Pinder, M. P. P., of Millville, where he will be kept until the season opens. Mr. Pinder, in addition to the mare, which he bought at the sale, also bought a two year old filly, Trim of Bampton, and she has been shipped with Southwick from St. John. "Ace of Spades," a seven year old black Clydesdale, which exited so much admiration from horsemen attending the sale, has been sent to the Provincial Hospital Farm, pending his sale to some district where he may be wanted. A number of agricultural societies are anxious to have this horse placed in their districts and it is expected before long a sale will be consummated. Two Percherons, "Garnin," a handsome four year old, and "Hobleur," a three year old, just landed from France, have been shipped by Mr. A. H. Thomson to Woodstock, where there are a number of enquiries for stallions of this breed. Mr. Thomson, who has been all his life in the purebred stock business, is prepared to take orders for importation of any kind of purebred stock from Europe. He comes to the Department of Agriculture with recommendations of the highest order from the men with whom he has been doing business in various countries, and also from the officers of the British War Office, for whom he has bought largely in the past. His connection with the breeders in both Great Britain and France is of the best and he can be depended upon to carry out any arrangements he makes to the letter. He is prepared to bring stock, subject to inspection by the Department of Agriculture and to do business on a business basis. The condition in which his first shipment arrived shows that he is looking for a continuation of business, rather than immediate sales at large profits, as contrary to the usual practice of Percheron horse importers. His horses, instead of being overloaded with fat, which is a serious detriment to their breeding powers, have arrived in splendid breeding condition, each of them capable of carrying from two to three hundred pounds more flesh than at present. Moderate prices and quick sales for cash are his methods, instead of large prices with long term notes. This is an excellent avenue for the stock men of New Brunswick, who wish to secure the services of a thoroughly competent judge and honest importer to improve their studs, herds and flocks. Correspondence may be opened with Mr. Thomson through the Department of Agriculture, Fredericton, where all letters to him may be addressed.

Messrs Wm. Jamieson and Alex Walker, of Sussex, have recently purchased the three years old grey Percheron stallion "Glaneur" from Mr. A. H. Thomson, who imported him with two others direct from France at the instigation of the Provincial Department of Agriculture. This horse is perhaps more typical of the old pure Percheron blood than any stallion of this breed that has come to the province for some time, and the farmers of Kings County are to be congratulated on having such a fine specimen of this noted draft breed made available for their use. What old "Prince Imperial" did years ago for the farmers of Carleton County, "Glaneur" is capable of doing for the farmers of Kings. He should be the means of adding thousands of dollars to the bank accounts of horse breeders of the County.

See our ad. on this page of this paper.—LOGAN BROS., Amherst, N. S.

MARKETS.

Charlottetown Market.

GRAIN.—Wheat, $1.00 per bushel; oats, 40c per bushel; peas, $1.15 per bushel; barley, 85c per bushel; buckwheat, 90c per bushel.

FEEDSTUFFS—Bran, $1.30 per cwt.; shorts, $1.40 per cwt.; middlings, $1.40 per cwt.; corn, $2.00.

LIVE STOCK.—Stockers, $25.00 to $30 00; milch cows, $35.00 to $45.00.

DRESSED MEATS.—Beef (carcass), 6c to 8c; beef (retail), 8c to 12c: mutton, 8c to 12c; lamb, 10c to 12c; pork, selected, 10c to 15c.

HORSES.—Drafters, $1.25 to $1.50.

DAIRY PRODUCTS.—Creamery butter, 25c to 26c per pound; dairy butter, 25c per pound; cheese, 13½c to 16c per pound

POULTRY AND POULTRY PRODUCTS.—Eggs, 32c to 34c per dozen for strictly fresh; fowl, 11½c to 12c per pound; chickens, 12c to 15c per pound; ducks, 15c per pound; geese, 14c per pound; turkeys, 18c per pound.

FRUIT.—Apples, $2 00 to $4.00 per barrel; cranberries, 12c per quart; honey, 16c per pound

VEGETABLES.—Carrots, 60c per bushel; potatoes, 35c to 40c per bushel; turnips, 20c to 25c per bushel; beets, 50c to 60c per bushel.

MISCELLANEOUS.—Hay, 50c to 55c per cwt.; straw, 25c to 35c per cwt.; wool, 20c per pound; beef hides, 10c per pound; calf skins, 14c per pound; sheep skins, $1.00; lamb skins, $1.00.

Opportunity for Breeders

Of the Maritime Provinces to secure breeding stock from the best herds, studs and flocks of Great Britain and the Continent of Europe by direct importation, without expense of special trip and at minimum cost.

An importer and dealer of many years experience is prepared to fill orders for all classes of stock, subject to inspection on arrival by officials of the Provincial Departments of Agriculture, delivery upon conclusion of inspection and quarintine. No inflated prices but turn over made as low as quality of stock will permit. Horses, Cattle, Sheep or Swine bought as orders may be received. Reference from prominent stockmen and officers of the British War Office may be seen at the Department of Agriculture, Fredericton. Correspondence solicited. Address

A. H. THOMSON,
Care Dept. of Agriculture, Fredericton, N. B.

Homestead Farm

Has one of Canada's leading Holstein Herds. Have won more prize money in the last five years than all other Maritime Holstein herds combined. Have more officially tested cows than any other herd in the Maritime Provinces and more high records. 6 cows over 20 lbs. butter in one week and some of those close to 24 lbs. Our champion cow at the Winter Fair has no official record while the fourth prize cow has a 23 lb. record.

We have a lot of young stuff to sell of the very best breeding. You can't afford to miss this. A few cows cheap. We also offer a few ewes (not bred) lambs of 1909.

Our Clydesdales are in splendid shape, and we can part with the two foals of '09. No. 1 Stallion.—Dam, Soubrette, Imp., by Labori, champion at Halifax, 1909; 1st prize 1908. No. 2 Filly—Dam, Pink Rose, Imp., by Up to Time, 2nd at Halifax 1908; 3rd, 1909. Both are sired by Handy Andy, Imported by Marmion out of a Baron's Pride mare. Write or come and see us.

LOGAN BROTHERS, - - Amherst Point, N. S.

PROPERTY FOR SALE.

Property of 60 acres, new modern house, good barn and poultry buildings, frontage of 1,700 ft. on Main street, and ¾ mile from centre of Town of Sussex. It is beautifully situated and a most desirable country place and suitable for general farming, fruit and poultry raising, &c. Terms and further description on application.

G. S. KINNEAR, - Sussex, N. B.

Halifax Prices.

GRAIN—Oats, 55c; buckwheat, $2.50 per 100 lbs.

FEEDSTUFFS.—Bran, $1.40 per bag; shorts, $1.50 per bag; cracked corn, $1.80 per bag; corn meal, $1.90.

DRESSED MEATS.—Beef (carcasses) 7c cow, 8c steer; beef (retail) 10c to 20c; mutton, 7½c per lb; veal, 7c per lb; lamb, 11c per lb; pork, 10½c to 11c

HORSES.—Drafters, $250.00; roadsters, $200 to $300, carriage, $150 to $250.

DEIRY PRODUCTS.—Creamery butter, prints, 28c to 29c; solids, 26c to 27c; creamery prints, 24c to 25c, tubs, 22c to 23c; cheese, twins 13¼c, large, 13c.

POULTRY AND POULTRY PRODUCTS.—Eggs fresh, 30c to 35c, case 27c to 28c; fowl, 12c per lb; chickens, 15c per lb; geese, 17c per lb; turkeys, 22c per lb.; ducks, 17c per lb.

FRUIT.—Apples, $1.50 to $3.00; evaporated, 7½c to 8c per lb; cranberries, $7.00.

VEGETABLES.—Carrots 60c bush; potatoes, $1.50 bag 3 bush; turnips, 90 c bbl.

MISCELLANEOUS.—Hay, $15.00; straw, $9.00; wool, 21c; beef hides, 10c to 11c; calf skins, 15c to 18c; sheep skins, 80c to $1 00

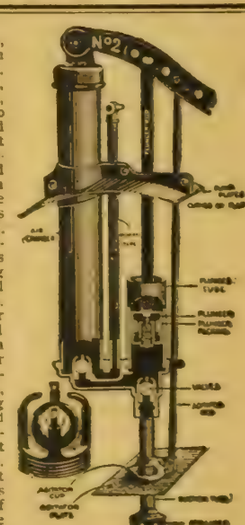
Beef, native, is very scarce and most of beef used here is from Ontario.

Butter, dairy prints are coming forward quite rapidly from Annapolis Valley as usual at this time of year, and is finding a ready market in preference to held dairy solids and tub, creamery continues scarce and higher prices are looked for, stocks of all butter held here are very light in comparison with a year ago. Eggs, fresh laid, are coming forward slowely, but with the continuing mild weather will no doubt come forward more freely during the next ten days. Stocks of cured are being called upon heavily and stocks are no ue too large to carry over until fresh are in sufficed quantities to supply the demand. We do not look for any light prices on eggs.

Potatoes are advancing slowly, the supply in store is very light and higher prices are looked for. Apples, the market is glutted at present on account of low prices in England and good apples can be obtained at very low prices.

Fully nine out of every ten cases of rheumatism is simply rheumatism of the muscles due to cold or damp, or chronic rheumatism, neither of which require any internal treatment. All that is needed to afford relief is the free application of Chamberlain's Liniment. Give it a trial. You are certain to be pleased with the quick relief which it affords. Sold by all dealers.

Mr. Leigh, Supt., put on the N. Y. C. Stock Yards, Buffalo, N. Y., 40 tons (80 000 lbs.) of Cold Water Paint with these wonderful Hand Machines In this event the Spramotor has proven its value. A demonstration like this is more convincing than a bookful of arguments. The Spramotor is guaranteed for a year. In all sizes for Orchard, Potatoes, Painting, Whitewashing Vineyard and Weed destruction. Say what you want it for. This ad. will not appear in this paper again; if interested write now.



W. C. Heard, 1380 King St., London.

READ THIS.

If you want an incubator you should talk to me, I have the goods that are right. If you want credit I will give it to you. A postal and I will mail you particulars. Do not buy until you hear what I have to say.

The Balanced Ration and its Importance.

BY PROF. M. CUMMING.

FOODS vary in the amount and character of the nutrients which they contain. Some, like cotton-seed meal, linseed meal, pea meal, etc., or meat, eggs and beans are especially rich in nitrogenous or muscle producing matter. Others, like potatoes, corn, or cream, etc., are equally rich in carbonaceous or heat and fat producing matter. Still others, like oats, and bran, and clover hay, or wheat bread, or whole milk, contain these two classes of nutrients in about an ideal proportion. Experience has shown men that, if they eat excessively of the nitrogenous class of foods, they not only derive less energy than might be anticipated from the amount of food consumed, but their digestion soon becomes impaired, and smaller results have followed the consumption of foods too rich in carbonaceous matter. Men have, therefore, learned the wisdom of eating such a mixture of foods as will combine in the propor proportions these two classes of nutrients. Experience has also shown stock feeders that, if their animals are to be fed so as to give the greatest possible returns consistent with economy and, at the same time, remain in the best of health, they must be given fodders, which, together, afford a proper proportion between the nitrogenous nutrients on the one hand and the carbonaceous nutrients on the other. A balanced ration, whether for man or beast, is nothing more nor less than a ration in which various fodders are used in such amounts as to provide the nitrogenous and carbonaceous constituents in the best possible proportion, Meat (a nitrogenous food) and potatoes (a carbonaceous food) combine to make a better food for mankind than either alone. Together they form a fairly well balanced ration, Either alone is too one sided in its character. So also, cotton-seed meal or linseed meal fed alone to cattle are too rich in nitrogenous matter, but, when mixed in reasonable proportions with other more carbonaceous foods, like corn, or hay, or roots, give excellent results.

Apart from the labratory altogether, observant feeders have, in the course of time, arrived at an appreciation of the importance of giving to their cattle a well balanced ration, and have obtained a practical knowledge of the proper porportions. However, it has remained for the careful investigator to ascertain the principles underlying and make animal feeding a more or less exact science. He has done so, not in any mysterious manner, but by putting together the observations of practical men, and by carrying on actual experiments in the feeding of animals. As a result, his investigations have proved of great value, even to the practical feeder, who pretends to ignor the principles of science, but who; were he to trace its knowledge to its ultimate source, would, many times, find it issueing from the laboratory of the scientific man, who, by careful investigation, has determined the relative importance of the various classes of nutrients in fodders. Cotton Seed Meal, for example, was formerly applied directly to the land as a fertilizer, but, as a result of the knowledge discovered of the importance of balancing up the nitrogenous constituents of a ration as set forth by the scientists, cottonseed meal is to-day used almost entirely as an animal food. It is our purpose in this article to present as clearly as possible the more important underlying principles of the balanced ration.

To commence at the beginning, Agricultural Chemists have determined the constituents of the animal body. They have determined, too, the constituents of the fodders by means of which the animal body has been built up, and they have also determined the percentages of nutrients of these fodders which are digestible, as well as the percentage which are indigestible.

In the animal body they have found water, ash, protein and fat; in plants they have found these four, together with carbo-hydrates and crude fibre. They have also ascertained that the four groups of constituents of the animal body are derived from these six groups of the plant kingdom, together with water and air. A few notes in regard to each of these classes of constituents will help to make this matter clear.

WATER.—Water is the most abundant constituent of the animal body, its proportion varying from 40% to 85% of the total weight, according to the condition and age. It is indispensable to animal life. Animals take this into their system largely in its pure, unmixed form. However, even the dryest fodder they consume, such as bran, or oats, contain about 10% of water, and such foods as grass, roots, ensilage, etc., may contain from 80% to 95% of water. Water derived from these succulent foods, as they are called, is much more effective in the animal system than in its pure, unmixed form. So far, however, as nutrition is concerned, we can take it for granted than any combination of foods which the skilled feeder would give, contains sufficient moisture and we will not, therefore, refer to this component to any further length.

ASH.—Ash is the mineral matter which remains after complete burning. From two per cent. to five per cent. of the animal body is ash or mineral matter. It consists of lime, potash, soda, magnesia, from, phosphoric acid and sulphuric acid. While forming an important part of the blood, flesh and tissues, ash enters most largely into the composition of the bones. The amount of ash contained in the various fodders, differs considerably, as may be seen in the following table:—

In 100 pounds	Indian Corn,	there are	1.5	pounds	Ash.
" 100	"	Wheat Bran,	"	"	5.8	"	"
" 100	"	Oats,	"	"	3.0	"	"
" 100	"	Timothy Hay,	"	"	4.4	"	"
" 100	"	Clover Hay	"	"	6.2	"	"

The percentage of ash in other common fodders, will be found in the table submitted at the end of this article. Almost any ordinary combination of foods will contain enough ash for needs of the animal system. Cornmeal, glutenmeal, etc., are, however, markedly deficient in ash, and it has been found by actual experiment that animals fed largely on foods of this class will develop a much weaker bone frame than animals reared on such ash rich foods as clover hay, oats and bran. So far as nutrition is concerned, we may as with water assume that any combination of fodders fed under our conditions, will contain sufficient ash for the needs of the animal system, and so we will not again refer to this component of fodders.

PROTEIN.—The word protein is a general term applied to numerous compounds which make up the organic part of the bone, cartilage, muscle, skin, hair, wool, feathers, etc. The white of an egg, the casein of milk, dry lean meat, wheat gluten, are all well known examples. Protein is of the utmost importance in the animal economy. It is the flesh and tissue former and also the source of the solids not fat which constitutes much the larger part of the solids of milk. Plants of the clover family are rich in this compound. Timothy is relatively poor. Bran and middlings contain a fairly large proportion, whereas cornmeal and barley are relatively deficient. Such concentrated foods as linseed meal, cotton seed meal and gluten meal are very rich in protein. (This protein group is subdivided into Albuminoids, being the more complex forms and usually insoluble in water, and Amides, being the simple forms and usually soluble in water and so capable of being transformed from cell to cell in the plant. In young, growing plants a large portion of the protein is in the Amide form; in the mature plant, practically all the protein is in the Albuminoid form.) While nitrogen is the most important element, protein also contains carbon, hydrogen and oxygen (the three elements that constitute fat and carbo-hydrates) and sulphur. From its analysis, we will not be surprised to learn it can also be used like carbo-hydrates and fat, as a fuel to supply heat. Protein is, however, too expensive a part of our fodders to be used for this purpose, fat and carbo hydrates being much cheaper fuels The economic feeder should, therefore, so understand the composition of foods that, by judicious balancing, the protein may be conserved to build up the animal tissue and to form the nitrogenous part of such products as milk, wool, etc., and not be wasted for heat production. Young growing animals require a large amount of protein in their food to build up their tissues. Cows giving a large flow of milk also require a large amount of protein As, under Maritime Province conditions, protein rich foods are usually much more expensive than foods rich in carbo-hydrates and fat, it is exceedingly

important that, from the standpoint of economical feeding, this subject of balancing rations be thoroughly understood.

FAT.—This term is applied to the whitish, greasy, easily melted part of the animal tissue, ordinarily found in all parts of the body. It commonly constitutes from six to thirty per cent. of the live weight of animals. It contains carbon, hydrogen and oxygen, but no nitrogen. All plants contain a certain amount of vegetable oils, corresponding to the fat of the animal body. (In making his analysis, the chemist extracts this fat with ether, which, however, also extracts wax, resin and green coloring matter. So far as is known, these have about the same feeding value as pure fat. In virtue of the above, the reader will often notice in text books that instead of giving the percentage of fat in the fodders, the chemist gives the percentage of ether-extract.) In the animal system fats perform three functions: a—They supply, as they are digested and broken down in the animal system, heat and energy. b—If an excess, over what is required for the production of heat and energy is digested, storage as fatty tissue usually takes place. c—When digested, fat protects the more costly protein from being consumed, as described above, to supply heat and energy.

CARBO-HYDRATES.—The carbo-hydrates of food are chiefly starch, pentosans, sugars and celluloses; these substances consist of carbon, hydrogen and oxygen, the last two elements being in the proportion to form water (two parts hydrogen and one part oxygen)—hence the name From their analysis, it will be seen that carbo-hydrates contain the same elements as fat. Investigation has shown that their function in the animal system is identical with the function of fat, which see above. For these purposes, however, fat is about 2.4 times as efficient as an equal quantity of carbo-hydrates.

CRUDE FIBRE —This is the frame work, forming the walls of the cells of the plant. It is particularly abundant in hay, straw and the hulls of seeds. It is the least valuable of the nutrients contained in foods, being, to a large extent, indigestible. That part, which is digestible, is classed, by agricultural chemists, (since it contains the same three elements, carbon, hydrogen and oxygen) as carbo-hydrates.

At the end of this article will be found a table in which is given the total dry matter (by subtracting from 100, the student can ascertain the total water) ash, protein, crude fibre, carbo-hydrates and fat contained in the standard fodders. There is also presented the amount of protein, carbo hydrates and fat in each fodder, which is digestible. These latter figures have been much more difficult to obtain than the former, for, in order to secure them, chemists have had to feed these various fodders to animals, carefully weighing the total amount fed, equally carefully weighing the undigested part, the solid excrement and thus determining the actual amount digested by difference.

NUTRITIVE RATIO.—With the aid of the figures presented in the last three columns of this table, viz., the digestible protein, carbo-hydrates and fat in 100 pounds of each of the fodders, it is possible to put into definite figures the relation which exists between the protein, i. e., flesh forming constituents, and the carbo-hydrates and fat, i. e., the heat and energy producing constituents, and thus have a common standard of comparison between different fodders or combinations of fodders. This relation has been technically termed the Nutritive Ratio, which may be defined as "the ratio which exists between the amount of the digestiple protein in a given feeding stuff and the amount of the digestible carbo-hydrates and fat it contains." An actual illustration will make this clear. We will determine the nutritive ratio of oats. Turning to the table, we find the following particulars : 100 pounds of oats contain 9.2 pounds digestible protein, 47.3 pounds digestible carbo-hydrates and 4.2 pounds digestible fat. The nutritive ratio accordingly is as 9.2 pounds protein is to 47 3 pounds carbo-hydrates, plus 42 pounds fat. This, however, is stated in too complicated a form, and moreover, is considerably involved from the fact that, as stated above, 1 pound of fat is, for purposes of supplying heat and energy, equal to 2.4 pounds of carbo-hydrates. Scientists have, therefore, agreed, in order to simplify this, to state the number of pounds of fat in terms of carbo-hydrates which is, accordingly, done by multiplying by 2.4. Hence, 4.2 pounds fat in oats, is equal to 4.2, multiplied by 2 4=10 08 pounds carbo-hydrates. Adding this to 47.3 pounds carbo-hydrates, we ascertain that 100 pounds of oats contains the equivalent of 57.38 pounds carbo-hydrates. The nutritive ratio, is therefore, as 9.5 is to 57.38, or as 1 to 6.23; i. e., in oats there are 6.23 times as much carbonaceous or heat producing matter as of nitrogenous or flesh producing matter. In the same way the student may calculate the nutritive ratio of other fodders. To repeat : first multiply the number of pounds of fat by 2.4; add the result to the number of pounds of carbo-hydrates; the nutritive ratio is then as the number of pounds of protein to this product, which may be more conveniently represented by stating the relation in comparison with one pound of protein. For example :—

The nutritive ratio of bran is..1 to 3.74
The nutritive ratio of corn meal is.....1 to 9.7
The nutritive ratio of timothy hay is.....1 to 16.7
The nutritive ratio of clover hay is.....1 to 5.8

Nutritive ratios are spoken of as wide, medium or narrow. A wide nutritive ratio is one in which the carbo-hydrates and fat greatly excel the protein as, for example, in corn meal or timothy hay. A narrow nutritive ratio is one in which there is a much closer proximation between the amount of protein and the carbo-hydrates and fat, as in bran or in cotton seed meal, the nutritive ratio of which is 1 to 1.24. Examples of medium ratios are oats' clover hay, etc.

Our readers should now clearly understand how to calculate the nutritive ratio of any single fodder. However, we are more interested in calculating the nutritive ratio of a whole ration of fodders, such as would be given to the cow in the course of a day. The principle in this case is exactly the same, the only addition being that it is necessary to add together the amounts of the various nutrients in the ration, after which the calculation is the same as with a single ration. To make this clear, we will calculate the nutritive ratio of a day's ration for a dairy cow, which, in the experience of the writer, has proved most satisfactory for cows, giving them 25 to 40 pounds of milk per day.

The following is the ration:—

Mixed Clover and Timothy Hay	16 lbs.
Mangels	40 "
Bran	3 "
Middlings	3 "
Oats	1 "
Cotton Seed Meal	1 "

By reference to the appended table, which gives the amount of dry matter and of digestible protein, carbo-hydrates and fat in 100 pounds of various fodders, one can easily calculate the amount of these constituents in the actual number of pounds of each fodder in the ration as follows :—

Fodder.	Amount.	Dry Matter.	Protein.	Carbo-hydrates	Fat
Timothy Hay	8 lbs.	6.91	.22	3.47	.11
Clover Hay	8 "	6.77	.54	2.86	.14
Mangolds	40 "	3.64	.44	2.16	.04
Bran	3 "	2.64	.37	1.18	.08
Middlings	3 "	2.63	.38	1 59	.10
Oats	1 "	.89	09	.47	.04
Cotton Seed Meal	1 "	91	.37	.17	12
		24.42	2.41	11.90	.63

Multiply the weight of fat .63 by 2.4 equals 1.152; add this to the weight of carbo-hydrates, 11.90, equals 13 412. The nutritive ratio is, therefore, as 2.41 to 13.412, or 1 to 5.56.

This would be considered, by scientists, a very well balanced ration for cows giving the amount of milk mentioned above, and we have no doubt that many of our readers have learned, from experience, that a ration somewhat similar to the above will give excellent results. The matter has been extensively investigated by agricultural chemists in Germany, the United States and elsewhere, who, as a result of their investigations, have given to us the amounts of dry matter, together with the amounts of digestible protein, carbo-hydrates and fat which they consider constitute a balanced ration. We will present, herewith, some of the best recognized standards for dairy cows:

	Total Dry Matter.	Protein	Carbo-Hydrates	Fat.	Nutritive Ratio.
Wolff German Standard	24 lbs	2.5 lbs	12 5 lbs.	0.4. lbs	1 to 5.4
Well proposed American Ration	24.5 "	2.15 "	13.27 "	.74 "	1 to 6.9
Atwater and Phelps proposed American tandard	25.0 "	2.5 "	12 to 13 "	.5 to 8 "	1 to 5.6

Several German investigators, notably Lehmann and Kuhn, have recommended standards varying with the actual milk flow, naturally advising a narrow ration when the cow is milking heavily and a wider ration when the cow is giving less milk. Their standards, however, average about the same as the Wolff German standard, as given above. In this connection, the reader will observe that the ration, which we discussed above, approximates very closely this Wolff standard. I may say, however, that as the cow advanced in her lactation period, we would, for purposes of economy, feed a gradually widening ration, so that our own practical experience would conform largely with the standards announced by Wolff and modified by Lehmann and Kuhn.

The most practical use to which a knowledge of these standards can be put occurs when a farmer, wishing to increase the milk flow of his cows on an economical basis, purposes buying some extra feed. Let us suppose he has made a calculation as above, and has ascertained that the ration he is feeding his cows contains the following nutrients :

Dry matter	Protein	Carbo-hydrates	Fat.
25 lbs.	1.8 lbs.	13.5 lbs.	.6lbs

The nutritive ratio of this is 1 to 8.3.

We have known farmers, under such conditions to purchase cornmeal, the nutritive ratio of which is 1 to 9.7. Manifestly, although the cornmeal would cause some increase in the milk flow, it would not help to narrow the ration so as to approximate the standards: not that that in itself is important. But in so far as the standards are based on careful observation and investigation, this farmer would find himself bette r off were he to purchase some fodder, relatively rich in digestible protein, as, for example, cotton seed meal, gluten meal or oil cake. By feeding one or two pounds less hay, and adding from one to one and a half pounds of any of the above feeds, the farmer would give his cows a ration that would almost invariably insure a larger flow of milk at a relatively small increase of cost.

With a very little practice, one can become familiar with the use of these tables and can thus calculate the actual nutrients which he is giving his own cows. By making a few trials he can also ascertain what fodder will bring his ration up to the standard.

While, however, we consider a knowledge of these principles exceedingly important, still we would be far from recommending any stock feeder to blindly follow any of these standards. They are simply guides, a knowledge of which will often save errors and enable

Fodders.	Total Food Constituents. Percentages.						Ingestible Ingredients. Percentages.

the feeder to make a more intelligent selection of fodders. An actual illustration may serve to best show their use.

Representatives of the Storrs (Connecticut), Experiment Station, a few years ago, visited the stables of nine dairymen, studying the rations fed and the amount of milk and butter produced. The representatives recommended new rations in every case narrower than were being fed, as in the following table :

	Digestible Protein	Nutritive Ratio.
Average of nine rations originally fed by Connecticut Farmer	1.68 lbs.	1 to 7 5
Average of ration adopted by armers recommendation	2.17 "	1 to 5.6

Following this advice, the dairymen saved 6 cents per 100 pounds milk and 2 cents per each pound of butter produced. Other instances might be produced, but we think that this one sufficiently illustrates the point, and with this we conclude our presentation of the subject, adding, however, a few notes with a view to making the subject a little clearer.

NOTES.

There are some principles which are not taken into consideration in figuring the nutritive ratio, but which are, nevertheless, exceedingly important. One of these is platability. The more palatible a ration is, the better will the cow thrive upon it. Well cured hay, though not differing greatly in analysis from poorly cured hay, will give decidedly better results. Straw, when cut and mixed with pulped roots and a little sprinkling of meal, will give better results than if these three feeds were fed separately. A mixture of grains will generally give better results than any single grain. Another principle is Succulence, or the amount of water contained in the foods given. This has already been discussed under the head of water in the first part of this article. The next, and by no means least important, is that the cost of different fodders must be considered. In the Western States, for example, where corn is very much much cheaper than any of the fodders that are richer in protein, it may still pay to feed a decidedly wide ration. The careful feeder must keep account of the cost of the extra ingredients added to his ration, and must also ascertain, by weighing, the increased production of milk or butter. If this lptter fails to more than off set the former, then the ration must be cheapened. It is assumed that the reader will make considerable use of the table submitted at the end of this article, and hence, a few notes are added in regard to this.

1. It will be noted that the amount of digestible protein, carbohydrates, and fat is considerably lower than the total amount of protein, carbo-hydrates and fat. The person who buys new fodders must keep this in mind, for, as a rule, the analysis given of these, if given at all, represents the total nutrients and not the disgestible nutrients contained.

2. By computing the nutritive ratio of milk and more particularly of the colostrum milk, the student will observe that, under a state of nature, growing animals receive a very narrow ration. As the animal grows, this ration becomes somewhat widened, bnt, under no condition, should young animals have to live upon fodders of a very wide nutritive ratio. On this account, clover hay excells timothy hay for all young stock and oats and bran and a little oil-cake excel any other grain feed for young stock.

3. New foods are being constantly put on the market—generally by-products from starch, breakfast food or sugar factories. It is impossible to give an analysis of these for there is no definite standard for them. The purchaser should always ask the analysis. By reference to the table appended, he can then form a fairly satisfactory estimate as to the value of any of the foods he may think of buying. Do not forget, however, that, as mentioned in the last nota, the analysis given of these patent foods is almost invariably of their total nutrients, as well as the digestibe nutrients of each of the standard fodders.

Getting on the Trail af the Indian.

A year or two ago Rev. F. A. Wightman, then of Alberton, P E. I., wrote an article for our columns suggesting that it would be a good idea to propagate the variety of Indian corn that was found with the native indians at the time that the white settlers took possession of Nova Scotia, and by a system of selection bred up a strain that would yield a fair quanty of stalk for soiling and ensilage purposes, and mature seed in districts where other varieties will not mature.

The following letter from Mr. R. B. Murray, Coxheath, Cape Breton Co., N. S., relates how he is succeeding in following the Indian's trail.

EDITOR MARITIME FARMER :—

Some years ago attention was called in the MARITIME FARMER to a variety of corn native to the Maritime Provinces.

About that time the writer had procured a sample of the seed. This was on a cob about two inches long and a rather poor specimen.

The corn is of the flint variety. As grown in Cape Breton it has about one third of the kernels ranging in color from a dark red to a shiny black.

Native Indian Corn.

Propagated by Mr. R. B. Murray, Coxheath, Cape Breton Co., N. S.

The kernels are in eight rows evenly set. When used green the flavor is superior to any other flint variety known to me. Three or four years, experiment has shown that this variety is capable of unusual development.

With a view to growing for the early market the yellow and the colored kernels have been planted separately so that the fourth year has produced a totally yellow and a totally black strain. The latter not promising to be of much market value, has not received the care that the former has so has not developed as large an ear. Last season, ears of the yellow strain were produced which were five to six inches long.

As is the case with all early varieties, there is usually only one ear developed on each stem. In the first year's growth several stems were noticed which had, besides a good ear, one or two rudimentary ears. The seed for the following year was taken from these stems. This plan has been followed since with the result that last season produced plants having four or five fully developed ears ranging in length from one and one half to five inches.

The aim in developing this variety is to produce a plant that will give a large number of medium sized ears. This variety of corn seldom grows more than three feet high so that the seed may be planted quite close together, say in rows two feet apart and the seed one or two inches apart.

I am sending you a few ears which you may give to any of your readers who wish to grow some of the corn.

ROBERT B. MURRAY.

Ice For Summer Use.

Foresight is needed in the dairy business if the best results are to be obtained. If loss and annoyance from over ripe milk next summer is to be avoided the proper steps must now be taken to secure ice. January and February afford an opportunity to cut and haul a supply for the dairy and for household purposes.

There are many reasons for keeping ice in store on the farm. Milk is a perishable product even in cold weather. In warm weather it requires careful handling to prevent its spoiling before reaching the factory. By cooling the evening's milk to 50 degrees the development of the germs is checked and it can be taken to the factory next day without fear of rejection because of sourness. Providing it has been kept cool, ten pounds of milk will make one pound of cheese. If allowed to get over ripe, twelve pounds of milk will be required for each pound of cheese. Here is a clear loss of from 10 to 20 per cent. to the patrons of the factory.

The Saturday night milk has to be taken care of at the farm. This will necessitate the keeping of it at a proper temperature until it can be handled on Monday morning.

Roughly speaking, 10 pounds of ice are equal in cooling power to 100 pounds of cold water. Thus 100 pounds of water containing 10 pounds of ice will do as much cooling as 200 pounds of the same water. Or, in other words, the use of ice in the water surrounding the milk may do away with the necessity for changing it. The same advantage applies in the case of using a special milk cooler. The ice can be placed in the receptacle which contains the supply of water for the cooler.

But the most important advantage in the use of ice arises from the fact that by its use the temperature of the milk can be reduced to, and maintained at, a lower point than is possible with the use of water alone; and a low temperature is absolutely necessary for preserving milk for lengthy periods. The temperature should be reduced to 50 degrees and maintained at that temperature when milk is to be kept from Saturday night or Sunday morning till the following Monday morning.

Attention is called to this matter at the present time, as now is the time to act. In bulletin No. 20, of the Dominion Department of Agricultere will be found a description of a combined ice house and milk stand that will suit the requirements of patrons of cheese factories. Copies of this bulletin may be obtained free on application to the Dairy and Cold Storage Commissioner, Ottawa.

The question is eften asked: "How much ice is required for a farm dairy?' This can be determined readily when it is known that a cubic foot of ice weighs 27 1-2 pounds. One ton of solid ice measures, approximately, 35 cubic feet. A consumption of 2 cubic feet (115 pounds) per day for four months would amount to nearly 7 tons. Allowing for the waste when such a comparatively small body of ice is stored, a building 10 feet square and 10 feet high will afford ample space for that quantity of ice, if it is carefully packed.

Fifty pounds per day for four months would amount to 3 tons. Allowing for waste, a solid block of ice 6 feet square and 6 feet high should be sufficient if properly stored.

For the purpose of estimating the weight of ice roughly by the number of blocks, the following table will be found convenient:—

12 blocks 18x36 ins. 8 ins. thick—1 ton
10 blocks 18x36 ins. 10 ins. thick—1 ton
8 blocks 18x36 ins. 12 ins. thick—1 ton
7 blocks 18x36 ins. 14 ins. thick—1 ton
6 blocks 18x36 ins. 16 ins. thick—1 ton
5 blocks 19x36 ins. 20 ins. thick—1 ton

Provincial Hortieulturist Takes up Duties at Fredericton.

EDITOR MARITIME FARMER.

The expert in fruit growing when it was announced some time ago by the Commissioner of Agriculture would be engaged to assist in developing the horticultural interests of the Province has arrived in Fredericton and entered upon his duties. His official title is Provincial Horticulturist. This gentleman, Mr. A. G. Turney, an Englishman of some seven years residence in Canada, comes from a position on the staff of the Ontario Department of Agriculture and most highly recommended by the men under whom he worked as well as by the President of the Ontario Agricultural College, where he took a distinguished course. Mr. Turney invites correspondence on all matters pretaining to fruit, flowers and vegetable growing and will be glad at all times to furnish information and advice on such matters and to attend meetings whenever possible. He will visit as many as possible of the illustration orchards in the early spring. Demonstrations of pruning, spraying and grafting will be given in the orchards and methods of cropping, fertilizing and cultivation will be discussed. Where time permits, Mr. Turney will be pleased to visit neighbouring orchards and discuss their treatment with their owners. Notice of the dates of these visits and demonstrations will be given in due time and everyone in the vicinity interest in fruit growing is invited to attend. In correspondence concerning horticultural matters complete details of the conditions bearing upon the subject should be given. Compliance with this suggestion will ensure more satisfactory answers. All communications should be addressed to The Department of Agriculture, Fredericton N. B.

W. W. HUBBARD.

The Conventions.

Before this issue of the MARITIME FARMER reaches our subscribers the New Brunswick Farmers' and Dairymen's Convention will be in full swing. The Forestry Convention will also be under way. The New Brunswick Horticulturists will meet on the 24th when the following programme will be carried out.

10 a. m.—President's address, discussion. Report of Secretary Treasurer, Appointing of nominating committee

2. p. m.—Report of nominating committee

Address—W. Saxby Blair, McDonald College, discussion

Address—Cultivation of Strawberries, Wm. B Fawcett, Sackville; H. H. Smith, Blissville, Sunbury Co.

8 p. m.—Address, Box Packing, G.H. Vroom, Middleton, N. S.

Address—A. G. Turney, Provincial Horticulturist.

THE MARITIME FARMER

And Co-operative Dairyman.

Semi-Monthly Journal devoted to the interests of the farmer of the Maritime Provinces.

Official Organ of The Farmers, and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association The Nova Scotia and P. E Island Fruit Growers' Associations The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers Association, and The New Brunswick Poultry Association.

Subscription Price $1.00 per year. When paid in advance 80 cts. Persons taking advantage of the 80 cent rate when subscribing are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definite order for dis. continuance is given.

The date after your name on the little green label on front Page is, in every case, the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said :—**"I saw your adv. in the MARITIME FARMER."**

RATES FOR CASUAL ADVERTISEMENTS.

2 inch—First insertion 75 cents; 2 inches—First insertion $1.50; 3 inches—First insertion $2.25.

NOVA SCOTIA MAKES INVENTORY OF FOREST WEALTH.

From the East came wisdom, it is said ; and the easternmost province of the Dominion, Nova Scotia is showing its wisdom by "taking stock" of its forest resources with a view to inaugurating a businesslike system of managing them. This inventory was begun during the past summer (1909) and under the charge of Dr. B. E. Fernow, dean of the faculty of forestry of the University of Toronto, who was assisted by the Chief Fire Warden of the province and several trained forests.

The southwestern part of the province, from Hants county westward, has been covered and it is expected that the survey will be completed during the coming summer.

The total area surveyed during the past summer was about 8500 square miles. The cost was very low, averaging less than twenty cents per square mile.

Only a rough survey, or "reconnaisance," was attempted. Each member of the party was assigned a certain district and allowed considerable latitude in choosing a way to cover this to the best advantage. Time and experience were saved by utilizing existing records and information secured from well-informed persons, where these were found reliable, the field-work consisting largely in checking in the information thus obtained, studying forest types, etc.

This information was then plotted in the field directly on large scale maps (2 inches to the mile) Among the points recorded were the extent of the burned areas, the degree of cutting on cut-over areas, the composition of the forest, the condition of the young growth or "reproduction" and the character of the farming lands, meadows, etc., within the farming country.

Dr. Fernow's report as to the possible future of the forest is interesting and encouraging. He remarks :—"Although the data on reproduction and rate of growth are not yet collated, it is safe to say that, if the fires are kept out (and apparently with the present organization still further perfected this can be done reasonably well) there is no dificulty in restocking by natural means most of the cut-over area, if not too severely culled. In the pure hemlock-spruce stands all that is necessary is to remove the old hemloch thoroughly and cleanly to have the young growth of spruce, already on the ground, take its place."

He thinks, however, that incorrect ideas are often held as to the growth of spruce. The white spruce, may, he says, when growing in comparatively open situations, make a sawlog in sixty years. The forest spruce, which is mostly red spruce, is of slower growth, and will probably not average a sawlog in less than a hundred years.

To a large extent the different species are found to be localized. Thus the white pine is found most plentifully in Shelburne and part of Queens, the hemlock in Annapolis and the spruce in Digby.

Heretofore estimates of Canada's forest areas, the stands of timber thereon and of the county's forest in general have been very largely guesswork. The action of Nova Scotia takes prominence as the first attempt on any large scale to substitute accurate information for this uncertainty. While no doubt errors have crept in, the estimates are at least based upon exact knowledge, and that is far more than can be said of former estimates. It is to be hoped that other provinces of the Dominion will see fit ere long to follow Nova Scotia's example in this line of work.

LET YOUR LIGHT SHINE.

Ever since there has been cloths there has had to be sewing. First this sewing was done with bone needles, and afterwards with steel needles, but until about two hundred years ago there were no thimbles. For hundreds and thousands of years people had been sewing and pricking their fingers and saying: "Oh, dear ! Oh, dear ! How very unpleasant pricked fingers are ! I just hate sewing, I wish I didn't have to sew any more !"

But they never did anything about it, but just kept on sewing and pricking their fingers for hundreds and thousands of years, till at last there came a man who thought. They happened once in a while.

Well this man who thought wasn't anybody in particular, just a metal worker who lived in London and worked hard every day except Sunday.

A button came off this metal worker's coat one day, as they have come off since the beginning of buttons, and while the metal worker was trying to sew it on again he pricked his finger—just as fingers had been pricked thousands and thousands of times before. But this time it was different because the metal worker was a man who thought. Instead of saying, "Oh, dear ! Oh, dear, I hate sewing !" he said, "I am going to try to think of something that will keep people's fingers from getting pricked, when they sew a button on to anything!"

Then he sat with his pricked fingers in his mouth and thought.

"I'll make a thimble !" he cried at last. Only he called it a thumb bell, because he was going to wear it on his thumb and it was to be made bell shaped. So he did. When it was finished he tried it on and found he could sew all his buttons on without once pricking his fingers.

He was so happy that he took his new thimble and showed it to all his neighbors, who all cried, "What a good idea ! Why didn't we think of that before ?" which is always the way of neighbors.

On another page of this issue will be found a letter from a Carleton Co. lady in which she sets forth a plea for more activity among our lady readers re expressing their ideas on various home questions and relating ways and means they have employed to advance their own education and in attractive home making.

Our columns are always open and free to as many of our lady readers as wish to advance thoughts that will assist their friends over the rough-spots of life. We welcome the Carleton Co. lady to our list of contributors and trust she and many more like her will continue to make good use of our columns. To our respective lady readers we would say you can do an unestimable amount of good in helping to make farm life more attractive by relating ways and means that you have tried and proved in accomplishing your household duties. You may have an idea that looks very simple to you—you have tried it—you have found it a better method for doing a certain piece of work than any other you had ever tried. Although you may look upon it as commonplace and not worth passing along it may be the very thing for which some other readers have been looking for a long time. You grasped the idea first either by planning it in your own mind or by getting the idea from some one else.

It will only take a few minutes for you to put your idea in writing. Send it to the MARITIME FARMER and it will carry the idea to every corner of the Maritime Provinces. If each and every lady reader would do just a little along this line they would be the means of assisting very materially in the upbuilding of our greatest institutions, our farm homes.

Some of your sister readers may say, "What a good idea! Why didn't we think of that before?"

Let your light shine.

TUBERCULOSIS.

A special international commission composed of representatives of Canada and the United States for the purpose of considering what can be done to supress and control the spread of bovine tuberculosis was in session last month in Buffalo. This commission was appointed at the meeting of the American Veterinary Medical Association in Chicago. Two days were spent at this preliminary meeting, mainly in an intense and thorough discussion of the situation as it practically exists among the cattle of both countries and the state of public sentiment among the producers and consumers of meat and milk products. It was made apparent at the start that a wide difference exists in various portions of the country, particularly among the farmers as to the importance of this disease and the necessity of combating it vigorously if great loss is prevented. It is clearly evident that with the farmer, in the main, rests the question, whether the disease is to spread or be checked.

Just in proportion as the farmers have been enlightened and made to understand just what the disease means to them, their future financial profit and the increase or decrease in consumption of milk and meat products, and the existence of their herds has progress been made in lessening the spread of the disease. This was shown in the reports that were made of present condition of affairs in Wisconsin, Minnesota and New York where the most of agitation on this question has been had. In these states, and particularly in Wisconsin much effort has been put forth by the authorities to hold at state and county fairs, farm institutes, dairy conventions and special meetings, public demonstrations of cattle slaughtered and exposed to view which were afflicted with the disease.

"Seeing is believing" and it is hard for a man to see the disease in its savage repulsiveness and not gain useful conviction that something ought to be done in a sensible, practical way to stop its spread.

The commission finally settled upon the following divisions of the question for future study and consideration; Education and Legislation; The Manner of its Dissemination; How to Determine its Location.

The commission will hold its second meeting at Detroit, the last week in February. The purpose is to study out if possible what is the wisest method to pursue in dealing with this great problem, for it is one that affects the future well being of the farmers of America and Canada more than any others that can be named. Several of the most prominent farmers in both countries have succeeded in ridding their herds of this disease. What a few have done the many may do, if they will inform themselves to the same extent upon the matter.

One thing is sure. The disease will not be stopped by weak, dilatory methods, ignorance of its character or denial of its existence. This will prove true in the case of each idividual or nation. The counsels of courage and resolution in facing the danger are a thousand times safer.

Nova Scotia Farmers in Annual Convention.

(Continued from last issue.)

TUESDAY EVENING.

On Tuesday evening Mr. Jas. A. Fraser, Editor of the Eastern Chronicle, in behalf of the town of New Glasgow, extended a cordial welcome to the visitors.

President Eastwood, of the Board of Trade, also gave the Association a hearty welcome to New Glasgow and spoke of the benefits accruing from the deliberations that take place at conventions, such as is annually held by the Nova Scotia Farmers' Association.

Mr. A. C. Bell, of New Glasgow Board of Trade, spoke of the rejuvenating influences of country life, the vanishing contempt for book-farming, the want of more co-operation and as the people of New Glasgow represent manufacturing occupations, while the delegates present represented agricultural occupations, much benefit would accrue from a co-mingling of the devotees of both classes.

An address, welcoming the Farmers' Association to Pictou County, was delivered by Mr. E. F. Porter, President of the Pictou County Farmers' Association.

ADDRESS OF WELCOME FROM PICTOU COUNTY FARMERS' ASSOCIATION.

Mr. President, Officers and Members of the Nova Scotia Farmers' Association, I beg leave, on behalf of the Pictou County Farmers' Association, to extend to you a cordial and hearty welcome to our fair county of Pictou.

It was with great pleasure that the Pictou County farmers heard that the fourteenth annual session of the Nova Scotia Farmers' Association would be held in the town of New Glasgow, which, on account of its central situation, affords a grand opportunity for the farmers of Pictou County to attend your meetings and thus meet the leading agriculturists of the province and by this means get in touch with the best and most up-to-date methods of farming.

What the farmer needs to-day, when competition is so strong, is better farming, a greater scientific knowledge of farming and more co-operation, and when we consider the fact that the farm products in Nova Scotia, for the year 1909, have made an increase of about $3,000,000 over the year 1908, this alone should give us encouragement and urge us on to greater attainments.

Great good has resulted from meeting of this Association in promoting the interest of agriculture in the days gone by and I hope that these meetings will result in awakening our farmers to a greater activity in every branch of farm industry and in stirring up a greater interest in our Association.

I, for one, feel very much pleased that the Farmers' Association decided to meet this year in this fair town of New Glasgow.

Again, gentlemen, I extend to you a most hearty welcome to our county and hope that you may see your way clear to meet with us again, in the near future.

MR. C. HOWARD BLACK in replying to the address, re-iterated the previous speakers' statements re the benefits accruing form the annual co-mingling of farmers and expressed his pity for those who were shortsighted enough to leave the farm to become, "a part of a machine" in the city.

HIS HONOR LIEUTENANT GOVERNOR FRASER was present and was glad to note the hopeful character of the young men in the audience. He put forth a strong plea for more education as a factor in cojointly utilizing brain and phisical powers.

He was glad to note the intelligent manner in which the business of the convention was being transacted and stated that it would be impossible to get such an intelligent gathering some years ago. The aim of every true Nova Scotian should be to do his and her best to make the province what it ought to be. He was proud to say of Nova Scotia that no man within her domains, who is willing to work, need be idle. No country has better markets in proportion to her crops.

The recent Winter Fair exemplified that we can grow our own beef, if we would. He referred to the splendid work that is being done by the Agricultural College and various farmers' gatherings. He expressed the hope that ere long Nova Scotia Horticulturists would so care for their trees and fruit that they may grow fruit of such quality as will warrant the shipping of the greater percentage of it in boxes instead of in barrels. The farm was the place to make ones home. Stick-to-it-ve-ness to ones profession is sure to win contentment. However, the abundance of life depended not on the things that one possesses and the person who works for daily wages must discount many of the comforts of life.

Each and every farmer in Nova Scotia should say "This is my home and here I am going to remain." The speaker had noticed that wherever a man devotes his time to his farm, he is always successful unless prevented by sickness or is overcome by some folly.

Industry, tidyness, thrift, progressiveness, independent thinking, independence, fearless intelligence, seizing opportunities, education and wise planning to make work easier were all touched upon by the Governor as traits that go to make a wise farmer and good citizen.

JOHM M. BAILY, M. P. P. for Pictou County took the audience on an imaginary tour of New Glasgow industries and surrounding country.

P. M. MCGREGOR, M. P. P., in addressing the Convention referred to the problems of transportation on high ways and public roads. He set forth a plea for more attractive conditions on the farm. A good public telephone system was one of the present day utilities that go to make life more desirable. The incorporation in our public school curriculation of agricultural literature was one of the things that should receive careful consideration at an early date.

Several of New Glasgow's young men and young women interspersed the speech making with solos and quartetts that were very highly appreciated and helped to make the session as pleasant as possible for the visitors.

ON WEDNESDAY MORNING

the committee on credentials reported that 46 agricultural societies were represented by 49 delegates. Eleven counties were represented by 43 delegates and the Maritime Stock Breeders Association had one delegate making a total from all associations of 90 delegates.

THE ELECTION OF OFFICERS resulted as follows:

President, Howard S. Kennedy, Alma, Pictou Co.

1st Vice President, W. H. Woodworth, Berwick, Kings Co.

2nd Vice President, R. M. Jackson, Jacksonville, Cape Breton Co.

Directors, H. W. Corning, Chegoggin, Yarmouth Co.; Samuel Freeman, Amherst, Cumberland Co., William O'Brien, Windsor Forks, Hants Co., A. S. McMillan, Upper South River, Antigonish Co., and Wm. Barss, Barss Corner, Lunenburg Co.

Auditors, E. S. Archibald and J. P. Landry, Truro.

Exhibition Commissioners, R. S. Starr, Port Williams, Kings Co. and Chas. R. B. Bryan, Durham, Pictou Co.

At a subsequent meeting of the executive, Mr. Bryan was again elected Secretary Treasurer.

Miss Caroline Carmichael, President of the East Pictou Council of Women gave an interesting talk on the work that the Women's Council is doing to assist in stamping out the Ragwort pest. Professor Cumming and J. A. Fraser added their tribute of appreciation to the work that is being done by Miss Carmichael and her coleagues and the Association extended their hearty vote of thanks

LAND TO BE DRAINED was the title of an interesting addres by F. L. Fuller, in which he thoroughly discussed the why and wherefore of land drainage. Mr. Fuller has had a great deal of experience in the work of land drainage and knows whereof he speaks.

DRAINAGE OPERATIONS.

was the subject of an interesting address by Prof. E. S. Archibald, of the Truro Agricultural College. He outlined the methods one should follow in determining the location of drains and the methods involved in getting proper grades, digging and laying the tiles.

Professor Cumming outlined the objects of his department in purchasing a drain digging machine, which for its initial tests will be operated by Mr. Fuller in Colchester County.

WEDNESDAY AFTERNOON.

There were no meetings on Wednesday afternoon so that the visitors might get a chance to visit some of the principal industries of the town. The majority of the visitors visited the Nova Scotia Steel Company's plant, the Glass works and some of the other minor establishments. About twelve of the members took opportunity of an invitation from the management of the Drummond mines, to visit their colliery. There they were most corteously received by the various officers in charge of the overground departments after visiting which they were taken in hand by Messrs Robert Laughlin and George Wright of the underground staff, who conducted them on a tour of the underground departments which is about 2,800 feet below the surface. Messrs Laughlin and Wright were as courteous a pair of officials as we have seen and they and the pleasant trip into the bowels of the earth will be long remembered by the visitors.

WEDNESDAY NIGHT.

After some discussion on the various resolutions that had been offered, Mr. Drummond, of the Dairy Division, Ottawa, gave an interesting address on "Dairying." He set fourth a plea for better feeding methods, better business methods and better breeding methods. He also gave a short account of the work that is being done along the lines of cow testing and exemplified the means by which farmers, who test their cows regularly are a power of example to their fellow farmers.

Rev. J. J. McNeil, Prof. M. Cumming and Mr. A. C. Bell were then appointed a committee to draft a resolution re a suggestion offered by Mr. Woodworth re the teaching of agriculture in our public school.

Mr. J. P. Landry, of the Poultry department, Truro, was the last speaker of the evening and gave an illustrated talk on poultry. There was not sufficient electrical power to make the lantern show the various picturs to good advantage but they were all clear enough to make the matter interesting and to show the various points Mr. Landry wished to emphasize.

THE CLOSING SESSION.

The last session of the Convention was held on Thursday morning. Mr. McMahon, the retiring president, introduced the new president, Mr. Howard Kennedy, who thanked the Association for the honor they had conferred on him, after which the Association extended to the retiring President an unanimous vote of thanks for the very efficient manner in which he had attended to his duties while in office.

REPORTS OF COMMITTIES.

The following reports of Committies were received and adopted:

RAGWORT, NOXIOUS WEEDS AND SEEDS.

To the N. S. Farmers Association:
Your committee beg leave to report as follows:

As for noxious weed seeds imported in bulk under bags or otherwise, your committee would have the matter referred to the Department of Agriculture so as to protect farmers from the spreading of these pests.

With regard to Ragwort we recommend that the Legislature be approached:

1st.—To enact a law compelling residents to destroy the weeds on their farms and compelling the Municipal Council to attend to the roadsides.

2nd.—To vote annually sufficient money to enable the County Associations to have the weed eradicated from vacant lands and timber leases.

We recommend that the Secretary of Agriculture be requested to confer with the Superintendent of Education so as to have placed in the hands of all teachers in the Province a bulletin on Ragwort and have same read and explained to all the children in the schools, so as to teach the up-coming farmers the dangers impending from this pest.

As for other noxious weeds we recommend that the Department of Agriculture be asked to take active measures to see that they be annually destroyed before seeding.

A. S. MCMILLAN,
C. H. BLACK,
ANDREW MCPHERSON,
REV. D. MCPHERSON,
} Committee.

AGRICULTURE IN THE SCHOOLS.

Whereas we believe the education received in the common schools has a profound influence on the development of the interest of the boys and girls of the country and,

Whereas we are of the opinion that the teaching, at least in most of the schools of Nova Scotia is not such as to educate the interests of pupils in the pursuit of farming,

Therefore be it resolved that we endorse such measures having this in view as to the establishment of the Rural Science School held at Truro and that,

We memoralize the council of public construction to consider the public school curriculum with a view to replacing some of the recent subjects taught in the rural school by compulsory courses in nature study and the principles of agriculture, and that,

We request the faculty of the Agricultural College to, in general, investigate the common school curriculum and in particular make recommendations in regard to giving the trend of education a more distinctly agricultural bias by endeavoring to secure additions to the school readers in use in the more advanced grades of well written articles from such writers as Agricola and other authorities on agriculture—such additions for the present to be in the nature of leaflets which could be placed in the school readers.

W. H. WOODWORTH,
A. C. BELL,
PROF. M. CUMMING,
REV. J. J. MACNELL.

Messrs. A. E. McMahon, A. S. McMillan and C. H. Black were appointed a committee to bring this matter before the Council of Public Instruction.

PROMOTION OF SHEEP RAISING INDUSTRY.

We, the committee appointed to consider the promotion of the seeep raising industry of Nova Scotia, beg to report and recommend as follows:

That this Association approach the Local Government through the medium of the local representatives of the county of Pictou and ask that the statute for the protection of sheep from dogs be amended as follows:

That all dogs be registered in the office of the clerk of the respective municipalities and that the owners of dogs be required to furnish each dog with a collar containing the municipal number of the same.

With regard to the promotion of the sheep industry, we recommend that, whereas the ragwort and other noxious weeds are alarmingly spreading in the eastern part of Nova Scotia and Cape Breton and it has been demonstrated, by experiments, made by the Department of Agriculture of the Dominion of Canada, that the ragwort has been the cause of the cattle disease of Pictou County and that sheep offer the most effective and practical means of eradicating this noxious weed, at the same time thriving thereon, and whereas we believe sheep to be among the most profitable stock on a farm and regarding, with apprehension, the diminuation of the sheep raising industry in this province and believing that the eastern part of Nova Scotia, as a whole, to be best adapted to sheep raising and being the area, at present, as most infected

HORTICULTURE

Lime-Sulphur vs. Bordeaux for Summer Spraying*

Before proceeding to the discussion of the value of lime-sulphur as a summer spray for apple and pear orchards let us first briefly call to mind the main fungous diseases of apple and pear orchards that require a summer treatment. In apple orchards the main one is clearly apple scab or black spot, as it is sometimes called. Less important diseases are the leaf spot and Baldwin spot. Black rot canker is a very serious disease attacking the trunk and branches but its main treatment must be before the buds burst; yet, as the summer treatment is also important we shall include it in our list. In pear orchards we shall only deal with pear scab, omitting the different kinds of leaf spot, because these are not often serious and lime-sulphur has not been tested on them. Pear blight, twig blight or fire blight, which are all the same disease, is not caused by a fungus and apparently cannot be controlled to any appreciable extent by spraying, so it is omitted.

In spraying for any of the above mentioned diseases it is clear that no mixture can be given a fair chance unless it is applied at the right time and in a thorough manner Hence a word or two about these points.

To prevent most fungous diseases the spray mixture must be applied before the disease gets any chance to make headway; in short, it should be applied early enough to prevent the spores getting a chance to germinate. Hence the date of the first application is usually of special importance. For apple scab the first spraying should be shortly before the blossoms open. If left until the blossoms fall the disease gets a great start for the first sign of it are on the leaves about the time of the opening of the first blossoms. The second spraying should be just after most of the blossoms have fallen, which is the proper time to spray for codling moth; the third, either two or three weeks later. Of these three applications the first and second are by far the most important and should never be omitted.

Leaf-spot and canker are controlled by the same sprayings as the scab, except that canker requires a special spring application in addition to these. It should be noted that leaf-spot is usually caused by the same fungus that causes the canker, namely, the black rot.

Baldwin spot. appears much later in the season and so requires separate treatment. The first spraying for it should be about July 1st and the second about two weeks later. It is seldom, however, that it is so severe in Ontario as to make spraying necessary.

Pear scab begins earlier than apple scab and so requires that the first spraying should be made just as the buds are ready to burst. The second application should be just before the blossoms open, the third at once after the blossoms have fallen and the fourth about three weeks later. The early first application seems to be necessary for even fair results.

We all know that it is not only necessary to spray at the right dates but also to do it thoroughly. Most of us who have done much spraying know that it is very seldom that a really thorough job is done. The trees are often only half sprayed. Perhaps this in a number of cases is due to the old motto: "Stop spraying just before the leaves begin to drip." This is not a safe motto and our first rule should be: "Make sure that every leaf and fruit is thoroughly covered;" and second, "try to do this with as little waste as possible." One cannot emphasize this thoroughness too much. No man deserves real good results without it nor indeed is he likely to get them.

BORDEAUX VS. LIME-SULPHUR.

Now let us pass to the mixture and the results. Bordeaux has for so long been the standard fungicide for all the above-named diseases of the orchard that it sounds almost startling to us at first to hear that it has a close rival in lime-sulphur. This wash either in the commercial or self-boiled form has been considerably experimented with in apple orchards as a summer wash especially the last two years. The results given are sufficiently good to show that it has much merit as a fungicide for apple diseases. They do not, however, show that it is a better fungicide than Bordeaux, so that those who "swear by Bordeaux" may still continue to do so.

SPRAYING FOR APPLE SCAB.

Taking up first the results upon apple scab: Prof. W. M. Scott, of Washington, D. C., and Dr. Brooks of New Hampshire Experiment Station have each made a good many careful tests of both the self-boiled and commercial lime-sulphur upon this disease. Each report the commercial wash as giving almost as good results as Bordeaux. The self-boiled in last year's experiments, (1908) did not give quite so good results although it showed a fair degree of merit. It was, however, made with cold water instead of hot, which would almost certainly have given better results. I have not seen the reports of this year's work (1909) but from Dr. Waite's remarks at the American Pomological Society convention held at St. Catharines, I infer that Professor Scott has been much pleased with the way the self-boiled mixture has also controlled the scab.

In experiments conducted by myself at Guelph this summer I sprayed eight fairly large Snow apple trees with the Vanco brand of commercial lime-sulphur. The west side received the three applications at the times mentioned above, the east side owing to my enforced absence had to go without the middle spraying. For the first application a strength of one to twenty-five was used. This burned the leaves slightly so one and forty was used for the other spraying and no injury resulted. The spraying was very thoroughly done. In September the fruit was examined and on the west side where three sprayings were given less than one per cent. of it was scabby; on the east where the important spraying just after the blossoms fell had to be omitted, nearly fifteen per cent. of the apples were scabby. The fruit moreover was free from russeting and the surface smooth and glossy. Similar results have been reported to me by correspondents. So that there is practically no doubt that lime-sulphur, especially commercial lime-sulphur, can control apple scab in a very satisfactory way, in fact just about as well as Bordeaux.

One point, however, has scarcely been sufficiently well tested yet, viz., whether or not as good results can be secured in wet seasons. The last two summers have been dry and have given the wash a good chance. It is almost certain that a soluble substance like commercia lime-sulphur would wash off more rapidly than Bordeaux. If so, its efficiency would be lessened unless an extra application were made.

PEAR SCAB.

On pear scab I have not got definate data from any experiments except my own. In the college orchard at Guelph there are six or seven Flemish Beauty trees near each other in three rows. Two trees in the middle row were chosen. The fruit and leaves of these were both very scabby last year. They were sprayed this summer at the proper dates mentioned above with Vanoc lime-sulphur. The first application was of the strength one to nine, the second was one to twenty-five, but as this burned the foliage considerably the other two were each made one to fifty. In September, when picked, the pears were absolutely free from scab as were also the leaves. All the surrounding trees which had received three applications of Bordeaux had consideroble scab on both the fruit and leaves. Probably if they had got the first application (the one omitted) they would also have been quite clean. However, the experiment showed clearly that commercial lime-sulphur would control pear scab even on Flemish Beauty trees.

LEAF SPOT.

As for leaf spot, Dr. Brooks has been making a close study of the cause and remedy for this disease. He finds that the regular sprayings with either Bordeaux or lime-sulphur will control it quite satisfactorily. This is valuable information because Professor Scott and Dr. Brooks have both demonstrated that the disease which causes most of these small round spots on the leaves is also the cause of the back rot canker, and so a wash that will control it in one form will also control it in any other. The leaf spot seldom does much damage to the leaves but its prevalence will help to spread the cankers, which are very serious and require special care. Therefore its control is of importance.

CANKERS.

There is not time here to discuss the proper method of treatment for cankers but as already said the first spraying must be in the spring before the buds burst as the spores spread very early and must not get a chance to germinate. Lime-sulphur of the regular home-boiled type has been well tested this year for the spring application and those who have used it think it vastly superior as a spring treatment to Bordeaux. The summer applications, as said above, should be the same as for apple scab, and either Bordeaux or lime-sulphur, preferably the commercial form, may be used. As the cankers occur on the trunks and branches these will require to be very carefully sprayed in the districts where cankers abound. Badly infested orchards treated in this way this year (1909) show no new infections and a great improvement in the health of the trees.

BALDWIN SPOT.

Tests made by Brooks showed that Baldwin spot could also be controlled by these forms of lime-sulphur or by Bordeaux if applied at the proper dates mentioned.

L. CAESAR.

Hot Beds and Cold Farmers.

The best way to have early plants, such as cabbage, tomatoes, celery and lettuce, it is to start them in a hot bed. The hot bed may be easily and cheaply made and should have a place in every garden. For the hot bed make a frame four feet wide and as long as desired. This can be made of one by six-inch planks, nailed at corners and placed in the ground, the north side of the frame extending four inches and the south side two inches above the level of the ground.

Dig the pit two feet deep, taking pains to have the lower portion a little wider than the top. The heat is best genetrated by fresh horse manure, which is allowed to ferment. Put the manure in small heaps and keep it damp with water. Hot water will start fermentation quicker. Stir the manure heap frequently with a spade to start decomposition. When the manure begins to heat, put it into the pit, about 18 or 20 inches deep and tramp well. Cover this with about five inches of good garden soil. Put in a thermometer and when the temperature reaches about 85 degrees F. plant the seed.

The bed may be covered with ordinary glass sash for this purpose. It should, however, be left open in warm weather. When sash is not available, cloth will answer for a cover fairly well.

The cold frame is made like the hot bed, except that the former has no artificial heat. The cold frame is simply a

(Continued on page 255)

Apple Packing.

There is a great deal more to be learnt about the packing of apples than most people imagine. The apples of Nova Scotia are for the most part packed in barrels, but of late years there has been some attention paid to the packing of apples in boxes and it is to be hoped that this may be given more attention so that in a few years it will be the general rule to pack the best of the fruit in boxes. It would hardly be considered advisable, as yet, for the average fruit grower to pack his fruit in boxes. Only in cases where the grower has extra quality of dessert fruit would it be profitable to use the box. For the poorer stock and the varieties not used in the dessert trade, such as Ben Davis, Stark, etc., box packing is out of the question solely on account of the cost of package. Each box would cost about eighteen cents (18c) and as it takes about three boxes to equal a barrel there would be a cost of fifty-four cents (54c) against twenty-five cents (25c) the cost of a barrel.

PACKING IN BARRELS.

The minimum size of the standard barrel, containing 96 quarts, is as follows :

Inside measurements,
Between heads 26 1-2 inches,
Head diameter 17 "
Middle 18 1-2 "

A heavy plank should be provided for the barrels to stand on and upon which the racking can be done during the process of packing.

The barrel should be prepared for packing as follows:—The quarter hoops should be driven down firmly and three nails driven in and clinched on the inside. The face end of the barrel should be nailed and the packer's name and address, variety of apple and grade, whether No. 1, 2 or 3, stamped thereon. The fruit for the face should then be placed neatly in the barrel. The grade of the apples should be precisely the same in the face as in the rest of the barrel and there should not be the slightest attempt to get high colored or specially perfect fruit for the face Each apple is laid with the stem end down, the stem having been previously cut off with a stemmer. If the apples are well colored, the second layer should be placed so that the color of the apples will show through between the apples of the first layer, when the face end is opened. After the second layer is laid, the rest of the apples may be turned in from the baskets. The baskets should have swinging handles and be small enough to enable them to be let down into the barrel, thereby obviating the necessity of having to pour the apples in from the top, which is a great mistake, "practiced by some of the common packers," as it is apt to bruise the fruit. As each basketful of apples is placed in the barrel, the barrel should be shaken slightly, not sufficient to throw the apples against each other or against the sides of the barrel violently, but just enough to settle them into place. When the barrel is full to within two or three layers of the top, a round piece of plank (padded), slightly smaller than the head of the barrel, should be placed on the apples so that when the barrel is shaken, the fruit will be prevented from jumping out. In tailing, the apples may be placed with either the stem or the blow end uppermost. The aim in tailing the barrel is to have equal pressure upon every apple in the last row. It is advisable to use paper heads at both ends of the barrel. The exact pressure which must be given will depend somewhat upon the variety of the apple; if they are packed for storage or for a short trip, then the pressure need not be so very heavy, but if they are packed for export, it will be necessary to press them quite heavily, but care must be taken not to break the skin of any particular specimen.

Such apples as the Spy have to be pressed very moderately, as the apple splits and bruises readily under pressure; Russets, on the contrary, will stand much heavier pressure, without breaking the skin, which is very convenient, as they require a heavy pressure to prevent slackness from evaporation.

BOX PACKING.

The size of the Canadian apple box is 10x11x20 in., inside measurement. It is recommended that the box should be made from the following specification:—The end pieces not less than 5-8

Buying A Piano Made Easy

Perhaps you are deterred from enjoying the delights of a New Scale Williams Piano in your home, by the thought of laying out several hundred dollars in a lump sum.

This is unnecessary.

By our unique plan, you gain the piano of your choice by easy payments.

New Scale Williams PIANOS

Another great advantage to those living at a distance from the large cities, is that we ship pianos on approval, guaranteeing the instruments to please or they are returnable at our expense.

Write us for details of these two selling plans—and our beautifully illustrated catalogues of New Scale Williams Pianos and Player Pianos.

THE PERFECT SPRAY PUMP

Is without equal for convenience and efficiency in all its parts, from the bottom strainer to the nozzles on the end of the rod.

R. B. Westhaver, Mahone Bay, N. S.

inch nor more than 3-4 inch thick. The sides not less than 3-8 inch, the top and bottom ½ inch or a little less would be better. These dimensions cannot be changed to any great extent. The best available variety of wood for the covers is probably White Spruce, but many different kinds may be used for the ends and sides. The proper nails to be used are four-penny rosined nails. Cleats should be used on top and bottom.

Whether the apples should be wrapped in paper or not depends somewhat upon the variety and the grade of the fruit. Wrapping has several advantages.

1. It serves as a cushion in the case of delicate fruit.
2. It prevents rot and fungus diseases from spreading from specimen to specimen.
3. It maintains a more even temperature in the fruit.
4. It gives a somewhat more finished appearance when the fruit is exposed for sale.

Wrapping has also some disadvantages.

1. It adds to the cost of packing.
2. It prevents rapid cooling in cases where the fruit is not cool at the time of packing.

Double wrapping and the use of waxed paper is of use where extraordinary precautions are needed to preserve the fruit. The boxes should be lined with cheap paper. The paper to be 19x26. Two sheets for each box.

A permanent packing house is almost an absolute necessity for the best work in box packing, or even barrel packing.

In all packing houses there should be ample ventilation in order to cool the building off during the night time.

It is more convenient to have two tables for box packing :—1st table for grading; 2nd table for packing.

The simplest method of box packing is the barrel pack, which is to place the bottom row and dump the rest in. This method is not to be recommended.

In a general way, the size of the apples is indicated by the number of tiers in the box. If three layers will fill the box properly, it would be called a 3 tier apple. In the same way if 5 tiers fill the box, the size is said to be 5 tier. If the apples of one layer are placed in the spaces between the apples of the tier below, there would be, say, 4 layers of apples, intermediate in size, between those that would fill the box in three layers or in four layers, if packed directly over each other or straight pack. Such intermediate size would be styled a 3 1-2 tier size.

A very useful diagonal pack for the 3 1-2 tier size is made by placing three apples in the first row, one in each corner and one in the middle. The second would then be made with two apples, third with three and so on, until the tier is completed. The second layer would be commenced with two apples, third layer with three and so on, as in the first layer. The packer should never attempt to fill a space with an apple smaller than the rest of the apples in the box. If there is a small space left, it can be assumed that he has chosen the wrong pack. A beginner will find it necessary to try different packs until he obtains the correct one. He may try his pack in one end of the box, instead of using the whole box. The art of box packing can only be learned by practice. I might mention here that the packing table should be well padded and the apples dumped onto the table as carefully as possible, so as not to bruise them.

In putting the cover on the box, nail one end of the cover first, then press the other end down and nail that. It is found advisable to place the apples so that the ends are lower than the middle, this gives a swell to the cover and bottom. A swell of about one inch or an inch and a half is advisable.

The box, after being nailed, should be marked with name and address of packer; kind of fruit, grade, number of tiers, number of apples, whether well colored or not and also a number or mark indicating the packer.—ANDREW W. THOMSON, Berwick, N. S., in Maritime Students' Agriculturist.

The Only Roofing With A Lightning Guarantee

THOUSANDS OF DOLLARS LOST

Thousands of dollars are lost each year through lightning. Yet the farmers of Canada need never lose another cent from this cause if they will roof their buildings with PRESTON Safe-Lock Shingles—the ONLY roofing GUARANTEED proof against lightning.

We don't charge you a cent for this lightning guarantee. It's absolutely free. Yet no other guarantee actually means as much to the Canadian farmer as this.

With a PRESTON Shingled roof your barn is SAFE, no matter how severe the electrical storm. You can look out of your window and see barns burning on other farms, yet feel absolutely secure about your own PRESTON Shingled barn, and the horses and cattle, the machinery and crops stored within it.

We could not afford to give this Free Lightning Guarantee did we not know the superior lasting qualities of PRESTON Shingles. If a PRESTON roof were likely to wear out in a few years, it would not be proof against lightning.

PRESTON Safe-Lock Shingles are made and galvanized according to British Government Specifications—the only shingles that are.

The British Government, you know, is the most particular buyer in the world. Ordinary metal shingles could not pass their Acid Test for galvanizing.

This test is more severe on the galvanizing than twenty years of Canadian weather. Yet PRESTON Shingles will pass this test.

Shingles galvanized according to these Specifications are good for twice the service of shingles galvanized in the ordinary way. That is why we can safely give you our Lightning Guarantee.

You don't get a Free Lightning Guarantee with other shingles. Neither do you get shingles SAFE-LOCKED on all FOUR sides. Nor shingles with the nailing fully protected against the weather. Nor shingles made according to British Government Specifications. Nor shingles so easy to lay.

But we cannot tell you in this space all the superior features about PRESTON Safe-Lock Shingles or give other roofing information of vital interest to you. So we've issued a new booklet, "Truth About Roofing."

We should charge something for this booklet, as it contains, information of real value to anyone who has a building to roof. But we will send it FREE as a reward to all who cut out, fill in and mail the coupon to us.

Just you send the coupon today.

METAL SHINGLE AND SIDING CO., LTD.
Head Office, King St. Factory, PRESTON, ONT.
Branch Office and Factory, Montreal, P. Q. 4

Please send me your new booklet, "Truth About Roofing." I am interested in roofing, and would like complete information about PRESTON Safe-Lock Shingles, British Government Specifications and Free Lightning Guarantee.

Fine Dairy Farm For Sale

Within 1-2 Mile of Sussex Station

Two Hundred Acres.

Modern buildings of ample capacity, all arranged for convenience. Land in splendid state of cultivation. Yield an average crop of 100 tons of hay, 900 bushels grain, 1300 bbls. turnips, 100 bbls. potatoes, renders pasture and green feed for 25 head cattle and herd of swine and paddocks for colts. Also wood lot.

For further particulars apply to

S. J. GOODLIFFE, - SUSSEX, N. B.

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

How to Make Good Butter.

Mrs. Andrew Thompson, one of the prize winning exhibitors of dairy butter at the last Canadian National Exhibition relates her butter making method in a recent issue of the Ottawa Valley Journal:

"One of the principle things to be considered in the making of good butter is cleanliness in everything, from the stable to the package in which it is shipped; all dairy utensils should be well washed, scalded and aired every time they are used, milk should be removed from stable as soon as possible, and separated at once. We generally keep from eight to ten cows, and until a little more than a year ago raised the cream by the deep can system and ice, and as we had always been very fortunate in winning prizes, and having first class butter, wouldn't have a cream separator, but now after using one, wouldn't on any account go back to the old way, it is so much easier, can make more butter, and just as good as by the old system.

"We always milk in stable, both summer and winter; have the separator in the out-house near by, and as soon as cream is separated, cool it down as quickly as possible, by putting the cream pail into a large vessel containing ice, stirring occasionally, and never on any account add the fresh cream to that already gathered until ice cold. In summer if cream is not cold enough, we set the cream in a galvanized tub containing ice the night before we churn. Of course it is trouble taking ice to cellar, and again removing the water, but to have first-class butter you have to take trouble, and it pays I may say I have made butter for a great number of years, and never had a pound of poor butter.

"We scald the churn the night before, in the morning rinse with cold water, and then strain the cream into churn, adding coloring if necessary. All last summer we churned at a temperature of 52 degrees, no higher, and the butter generally came in 35 or 45 minutes. Wouldn't like it to come any sooner. As soon as butter breaks, add a small quantity of ice cold water, and when churned enough, draw off buttermilk. We then rinse lid, sides of churn and butter off with ice cold water, and find that by doing so, one washing will be sufficient to remove all butter-milk in summer. I sometimes add a handful of salt to the wash water, turn the churn very rapidly for a few times and then drain the water off, remove butter into the butter-worker, sifting on the salt, allowing one ounce to every lb. for crocks or tubs, and 3-4 oz. for rolls. For Toronto Exhibition we are just allowed to put 1-2 an ounce to lb. for tubs, which is not enough. It would taste much nicer, and I am sure suit the taste of most people better if more were added. Of course, good salt is of great importance, there are many good brands of salt, but we always use the Windsor Dairy Salt.

"When working butter, great care must be taken not to work too much, as it spoils the grain, which makes it appear greasy; we never work it more than once. I have seen two workings recommended, but with experience one working is sufficient. I suppose an inexperienced person would have streaked or mottled butter, so in that case two workings would be necessary."

"Just now in cold weather, we cool the cream just the same as in summer, always stirring well when it is added to the cream already gathered. We always add a small quantity of fresh butter-milk to the cream gathering for the next churning, and if I think the butter-milk is getting a little bitter, of off flavor, make a fresh starter from fresh sweet milk, churn twice a week, and day before, heat the cream up to 68 degrees by setting can in warm water, next morning it will be ripe or sour enough, and cooled down to about 62 degrees which is about the ripe temperature for churning winter butter; of course, rich cream can be churned much lower than thin. You cannot learn everything about the making of butter by reading; you need experience and a certain amount of good common sense."

Different Breeds of Cows for Different Purposes. Value of Adaptation.

Near where I live there is a large milk condensary just starting into operation. This is something new here and there is considerable interest manifest among the farmers as to the value of the milk of the different breeds of cows for this purpose, as there is no difference in prices paid, the only requirement being that the milk shall be in clean, wholesome condition and come up to the standard of four per cent butter fat, the same as required by dealers in milk for the city trade.

Not all breeds are alike as regards the amount of butterfat contained in the milk, there being much difference in some of them. For instance the Jerseys and Guernseys excel in richness of milk and its high color while that of the Holsteins would be lower in butterfat but larger in amount.

It has been stated by those engaged in the condensing business that, of the principal breeds, the Holsteins stood in the lead, giving a large yield of milk and nearest to the composition considered the most profitable for the disposition that is to be made of it. It will also stand carrying quite long distances, as is often required, better than that of the Jerseys which would be another argument in favor of the Holstein for this purpose.

The Ayrshire is a good all around cow—that is, will give a good yield of milk of average quality for butter, cheese or for sale in the markets and bears transportation well. It would probably rank next to the Holsteins in value for the condensary or might equal it.

Where the condensary is to be patronized it will be found more profitable to select or breed cows from the large milk producing kinds, where the butterfat and milk solids are in the nearest proportion to what is wanted. This is advised and will probably be followed by those interested in the matter.

It would not pay a farmer, having a herd yielding milk rich in butterfat, to dispose of it to a condensary, but it would be just the kind or quality wanted for the cream or fine butter. This condensing business has set farmers to studying and testing a little on their own account in order to find out what the results might be in changing from a creamery to a condensary, for instance, which is certainly commendable.

Two farmers in a near-by town, one having Holsteins and the other Jerseys, on their grades, and who had both been patronizing the same creamery, where sweet pasteurized cream was made a specialty for the city markets and good prices were paid for both milk and cream, weighed the milk from their herds for one week, thus finding what its value would be if delivered at the condensary at the price then paid. The one having the Holsteins, forty-four in number, found that he would have received $5 00 more for his milk if it had been sold at the condensary. But in this case there would be no skimmed milk left upon the farm, which must be considered.

The other farmer with his thirty-three Jerseys found that he would have lost $5.00 by selling to the condensary, and and would not have the skimmilk at home. The last would, considering this a reliable test, do better to continue along wiih the creamery, while the other might find an advantage in selling to the condensary, but it would be rather slight, taking everything into consideration.

This is a matter that should be more fully understood by dairymen. They seould select the breed or kinds of cows that experience proves to be the best adapted to the disposition that is to be made of milk, whether to be sold as such in the city markets, or as cream, butter or cheese, or for the condensary. These are all necessary methods for its disposition and endeavoring, as all farmers should, to get the most possible from their dairies, they should seek for the "best way" with the utmost carefulness, and then having made their decision, stick to it with a firm purpose, a purpose that will bring its own reward along with it.

E. R. TOWLE.

Franklin County, Vt.

Trust the Farmer's Wife to get the right Salt for her Butter.

When she was a girl, her first lesson in Butter making was with Windsor Salt.

When she started housekeeping, of course she used Windsor Salt.

She knows—by years of experience—that Windsor Salt is best. And naturally, she won't use any other.

Are you using WINDSOR BUTTER SALT?

10

Streaked Butter.

It is not uncommon to find butter carrying streaks of lighter and darker shades of color, even when no coloring matter is used in the making. This wavy appearance when the butter is cut down is very objectionable even to those who know how it is brought about, and much more so to the user who knows nothing of its cause. This wavy or streaked appearance is caused wholly by an uneven salting of the mass. Salt serves to increase or bring out the color of the butter, and after it is added if the mass is not thoroughly worked or commingled so that all parts will be evenly salted, it will show white streaks. This in no respect detracts from the quality other than appearance. This, however, is enough to make it objectionable, for it is a point of merit to have the butter show an even shade of color when cut down. Where it does not it is wholly due to the maker, and not to any defect or impurity of the milk or cream from which it was made.

Losses in Butter Making.

More or less loss of the solid material ensues in handling milk for the making of butter. This is shown by the fact that the sum of the solid ingredients found in the products (butter, skim and butter milk and slops) does not equal the amount in the whole milk used. This loss falls almost entirely on the fat. The casein and albumen, milk sugar and ash in the products check fairly well with those in the original milk, but the fat does not. This loss of fat is inversely proportional to the amount of milk used and to the care taken in its handling, decreasing relatively with increased volumn of milk handled with greater care. The loss is a purely mechanical one, due to the greater viscosity of cream as prepared to skim-milk. If the cause were chemical or biological as great proportional destruction would ensue with large as with small lots of milk. The mechanical losses in 22 days' survey of the operation of a small creamery approximated 0.9 per cent.

When a Cow Should be Dried.

There are few subjects connected with cattle management on which there is more difference of opinion than the period during which the cow should be dry. It may be taken that there is a general agreement among farmers and dairymen as to the desirability of allowing a cow a period of rest by drying off the milk secretion during the closing days of gestation, but the question is, for how long before its completion? As a general thing, it is the man who has had the least to do with dairy cattle who advocates the longest rest, but, within reason, the cow should be milked as long as possible, and especially is this the case with the young cow or or heifer with her first calf. This is called inculcating the milking habit, and experience goes to show that as the cow is treated one year she expects to be treated again. Furthermore, the cow-keeper owes it as a duty to himself to get the greatest amount of work out of his milking machine in the least possible time and at the mimimum of cost, for in these days it does not pay a man to have idle stock about him.

Still Here Selling Melottes After Twenty Years.

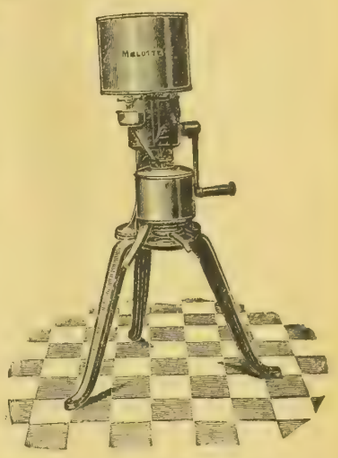
GOOD LIVE AGENTS WANTED



R. A. LISTER & CO. Limited, 62 Stewart Street, TORONTO.

Agents Wanted!

We want agents to handle the Acme Steel Ladder. It is by far the best seller on the market today. You can, with horse and rig, make $5 00 to $10 00 a day by simply calling on property owners in your locality.

The Acme Steel Ladder affords protection from fire in a greater degree than any other ladder. It is made and sold in one foot lengths, which can be fastened in such a way as to make a perfectly rigid ladder of any length. It can be moved anywhere on the roof, either from the top or bottom. With other makes of steel link ladders, it is impossible to do this.

A very simple lock on the Acme, which is fully protected by patents, makes it a perfectly rigid ladder when put together.

Send to-day for information regarding our selling proposition, as this may not appear again.

If you are thinking of equipping your buildings with steel ladders and there is no agent in your locality and will write us we will have a man call on you.

The Acme Steel Ladder Co.,
SUSSEX, - - N. B.

The cow herself has a great deal more to do with it than is generally realized, and the period has to vary with the animal and the particular circumstances of the case. Thus, absolutely hard and fast rules are impossible. A rest from milk secretion is, of course, for the benefit of the cow, of her prospective offspring, and, I believe, of the milk yield after the production of the calf, for it is certainly not in accordance with the arrangements of nature for a female to be always producing milk, and continued secretion must be a terrific drain on her system where no opportunity is allowed for recruiting.

In the case of the poor milker, which, in these days of high pressure and keen competition, no one should keep as a dairy animal, there is no difficulty about fixing the period during which she should be dry; she simply goes dry herself, generally a deal too soon for her owner; and some will take as much as three months' rest, or yield in response to persistent dragging and generous feeding a quantity of milk that does not pay expenses. The short and best way with animals of this class is to weed them out, for they are quite out of place in the modern dairy.

A cow in poor condition may be allowed two months in which to recruit her strength with advantage to herself and her prospective calf, but this is to some extent a matter of keep. If the animal is in a healthy condition, and the quantity of milk produced pays expenses there is no reason why the period of rest should not be further reduced, and milking can be continued until within a month of calving. If a cow is in a low condition, it is better, in my opinion, to resort to higher feeding than to dry off. I have known cows traeted thus for many years sometimes being milked to within a month of calving that have carried as good an appearance and produced equally good calves as those which run dry nearly three times as long. Six weeks may be considered the average period during which a cow should be dry, unless the circumstances are exceptional.

It is, however, the extraordinary milker that occasions the greatest difficulty to the dairyman fortunate enough to possess her, both as to the policy of her dying at all, and if it is decided that this is necessary or desirable, in the matter of the way in which the secretion is to be stopped without incurring great risk of injury to the udder, and possible loss of secretive function in parts of the gland structure.

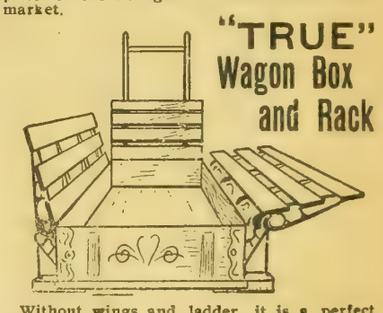
There are some deep milkers that are the despair of their owners, who would often enough be willing to accord them a reasonable period of rest if there was a posibility of drying them off without having to take considerable trouble and running a great risk. For these there seems nothing but "milking round," as it is called, and I am bound to admit, much as I prefer a moderate rest, that so far as immediate consequences are concerned, the animals do not appear any the worse for it, nor is the milk yield after calving materially affected This last named point is perhaps difficult to determine because it is not possible to say, although the cow milks splendidly, of what she would have been capable had it been possible to accord her a months' rest

This much, however, seems certain, the risk of causing garget or inflammation of the udder and the possible loss of one or more quarters is too grave to be lightly incurred and in such cases the practice of "milking round" is quite justifiable.

In the case of heifers, they should never be permitted to go dry early, or the habit of ceasing the supply early may be perpetuated. This class of animals should be kept in milk even when the yield falls below a profitable quantity, for it is by persistently asking for more that the qualities of prolonged lactation have been developed in the cow. Needless to say, the animals should be well fed. W.H. UNDERWOOD.

Up-to-Date Specialties For Farmers And Gardeners.

Things you need—implements and tools that should be on every truck garden and farm. Our way of making these specialties assures adaptability, strength and service at the minimum price for the best goods of their kind on the market.



Without wings and ladder, it is a perfect wagon box. With them, it is the best Hay, Stock, Wood, Poultry, Corn or Fruit Rack ver invented. Adjusted to any position in a m nute without wrench, hook or rope.

"Eureka" Churn

Barrel of finest stoneware—top of clear pressed glass. Churns by hand lever. The only sanitary churn made. 3 sizes—8, 10 and 12 gallons.

"Eureka Root Cutter

will slice or shred from 1 to 2 bushels per minute. Fastest machine made—easiest running. Tapering cylinder—10 best steel knives.

"Eureka" Combination Anvil

Best iron anvil, with vice, pipe vice and drill attachment, and saw clamps. Just what you need for repairing tools and machinery. Weighs 60 pounds.

The "Bacon" Seed Drill

will handle the most delicate seed without bruising or breaking, and will sow evenly to the last seed.

LIVE STOCK.

Rearing of Calves.

EDITOR MARITIME FARMER.

A problem which troubles many farmers and dairymen is that of raising their calves successfully. They may be raised on whole milk, on the cow, on skim milk, and with no milk at all. The most practical and cheapest way is to raise them on skim milk. Of course skim milk must be supplemented by other feeds to replace in a measure the fat removed by skimming. Good feeds are oil meal, oats, corn, bran, gluten, or wheat. A more desirable feed is a mixture of all or some of these to form meal with a nutritive ratio of 1:5. A liberal supply of good hay should be kept before the calves. This is the first thing they learn to eat. Perhaps the best is early cut or second crop clover hay. All hay should be fine. Some bone meal should be supplied to furnish mineral matter. Bone meal is indispensable to cattle in the barn all winter. The calves should also have salt at all times. Salting at intervals sometimes causes overdrinking and consequent scours.

Calves over a week old should have all the pure water they want after they have had their milk.

PAILS AND MANGERS.

The pails in which the calves are fed should be kept perfectly clean, thus killing all germs and bacteria which would be apt to cause disease. Their feed boxes should be clean and sweet.

STALLS.

The stalls and pens should be clean and dry and well bedded. It is a good plan to sprinkle the floor with land plaster. This will correct the odors and absorb moisture. If possible have the pen where the sun will shine in it. Sunshine is a great destroyer of germs. The pens should also be disinfected with some good disinfectant. Do all you can to prevent disease or disorders of the calf. A calf is very hard to treat successfully.

CARE OF DAM.

The care of a calf should begin when it is still unborn. The mother should have laxative food just before calving. Bran, oil meal or wheat are good, because they are stimulating as well as laxative. When about to calve, a cow should be placed in a box stall alone and be left perfectly quiet. Never disturb a cow by trying to help her as a cow rarely needs help. Give her plenty of time, especially a heifer. Darken the stall if possible.

THE CALF SHOULD BE WITH MOTHER.

The calf should be left with the cow for a day or so. If the calf is small or weak, leave it a long time. Under any circumstances it should get the colostrum. This is practically rich in albuminoids and is of much benefit to a new born calf.

But the longer a calf remains with its mother the harder it is to teach it to drink and the more it feels the change from sucking to hand feeding. When the cow is taken out and placed in her stall, the calf should be left undisturbed for from twelve to twenty-four hours. It should be left till it is very hungry. It does not pay to waste time with a calf when it is not hungry, for it spoils the calf and the temper of the teacher. When the calf will suck the fingers, take three pounds of milk. Have it very warm for the process of teaching the calf to drink cools it.

TEACHING CALF TO DRINK.

Back the calf up in a corner and, placing one knee against the body to keep the calf from escaping, place two fingers in its mouth, gradually lowering them until the calf's mouth is in the milk. Allow the milk to be sucked up between the fingers. While the calf is busy withdraw the fingers. Some calves will keep right on sucking and thus drink alone. Some, however, will need a few lessons before drinking alone. Do not lose patience with the calf and bat it on the head. Handle it very gently and it will have confidence in you, and it will come to you voluntarily instead of seeking a hole when you approach.

FIRST WEEK'S FEED. SCOURS.

The first week the calf may get six to eight pounds of its mother's milk. Always feed at a temperature of about 90 to 100 degrees. A variation will cause scours. And never make the mistake of overfeeding. This is a very easy thing to do and is the cause of many calves' death.

SECOND WEEK'S FEED.

The second week the calf may be fed a little hay. Hay being the first thing a calf will eat, the calf should have it young. The milk need not be increased until the second week. As soon as the calf will eat it, which is about a month, it should have meal to eat. Give it all it will eat, as at this age it will not over eat.

THE THIRD AND FOURTH WEEK'S FEED.

The third or fourth week the change may be made from whole to skim milk. This is the critical time, so the calf should be watched closely. Frst take away a pound of whole milk and add a pound of skim. Change a pound about every two days until the change is complete. At the first sign of scours, cut down the milk and heat it up to 120 degrees and add a little water. This will stop the disease and is very simple. Under no cirumstances allow the calf to struggle along with scours.

SKIM MILK FEEDING.

When the change is complete the calf may get twelve pounds of skim milk and two pounds of grain, also all the hay it will eat. Increase the milk two pounds a week until the calf gets about eighteen to twenty pounds. Do not feed more than this. It will make a scrawny pot-belly with no lung capacity. When a calf gets large enough to use more than twenty pounds of milk it will be too large to make the most profit out of it.

At six months the calf may get less milk, say two pounds a week, until it gets none. Give plenty of good hay and grain and a little silage may be fed. Do not get it fat and thus give a tendency to lay on flesh. Be sure to give the calf plenty of those two great necessities of life—salt and water.

In closing I will say, little calves are like children. Early learned habits are remembered and if you spoil your heifer, you will have a spoiled cow. Never abuse calves, but make pets of them; let them have confidence in you. Learn the little calves properly and you will have a herd that will be a source of satisfaction and revenue to you.

Pictou Co., N. S.

A Great Lhmbing Record.

"I own a small flock of Shropshires containing 34 breeding ewes, descended largely from pure bred ewes raised in Eastern Ohio, but having a small per cent of blood direct from the Peter Everall flock, of England.

"Of the 34 ewes, 31 have lambed up to date, and 26 of the 31 have produced twins, so the 31 ewes have given me 57 lambs (27 ewes and 30 rams), I have never before counted on more than a pair of twins for every alternate ewe, and there has been no special selection of mothers that were twins or in selecting a twin ram for flock header. I have paid no attention as to their being or not being twins or the sons of twins. The flock is at present headed by a ram imported from Canada, a son of "Corston Lad," who headed the flock of Hon. John Dryden, and was bred in the Butter flock, of Scotland. I am quite at a loss to account for the large proportion of twins, and would like very much if someone who is an expert on sheep breeding will tell me what there might be in the conditions to account for it.

"Last fall, owing to the continued drouth, what pasture there was seemed to be wonderfully nutritious, but because there was not enough to be gotten by grazing, the sheep were fed on clover hay ever since September. The ewes during the fall were no fatter or better conditioned than in other seasons. During the winter they were fed corn fodder at morning and noon and clover hay at night, together with about three gallons of corn and oats mixed in equal parts morning and night. All have had constant access to salt mixed with tobacco dust, five measures of salt to one dust.

"I am not overly anxious to repeat the experience next year, as I would rather have, as a rule, one large lamb than two medium sized ones, as not all ewes furnish milk enough, even if well fed, to keep a pair of twins growing rapidly all summer. But I want to know the philosophy of such an unusual per cent of twins. Kindly tell me if this record has ever been beaten by any flock of full-blood Shropshires anywhere on earth, so far as you know."

The foregoing article by Stephen O. Young in a recent issue of the American Sheep Breeder, was replied to as follows by the editot of that paper and may contain a beneficial hint for some of our Maritime Province sheep men.

"Mr. Young's percentage of twins is very large, the surprising feature being the large proportion of twins with no mention of triplets or quartets, which quite often come in a prolific lambing, adding greatly to the percentage of lambs to the number of ewes bred. The heavy percentages of twins and the excessive total percentages of the number of ewes bred nearly always come to the

"New Century" Washing Machine

The "New Century" washes a tub of clothes in five minutes — without boiling or rubbing.

It washes heavy clothes thoroughly — and soft, thin things without the least injury.

The "New Century" enables you to do the biggest kind of a wash in an hour, that would take the whole day with an ordinary wash-tub.

It saves your hands, your back, your time, your nerves — to say nothing of the clothes. The ball bearings and powerful oil-tempered steel springs make it run so easy that a child can do the family washing.

It is the cheapest machine ever sold, for value given.

The Wringer Stand is one of the many improvements the "New Century" has. It is as rigid and strong as a bar of steel—in just the right position for quick, easy wringing—**the wringer is always on stand**—and the water drains right into the tub.

Twenty-five years of "knowing how" are built right into every part of it.

Some people buy them because they run "so easy," others because they do such perfect work in so short a time—all of them because there is no other "just as good."

Price $9.50 without wringer, delivered to any railroad station in Ontario or Quebec.

HEALTH, WEALTH, AND WORK.

So long as Nature's laws require that mankind shall work, the necessity of keeping one's self in health and strength is of first importance. Many people believe that men of great wealth do nothing. That is a mistaken idea. They may not work with hammers or shovels, but they work with their nerves, brains and minds. Scores of millionaires have worked themselves into nervous prostration in their efforts to control, *to avoid losing*, their millions. But it is the humble workers who suffer most.

Mr. Arvez Berten, of Robertville, Gloucester Co., N.B., is a sturdy man of 65, who works in the lumbering districts in winter, and who, therefore, must have good health. Some years ago, he suffered much from Dyspepsia, with headaches, dizziness and rheumatism. In a statement, dated June 24th, '09, he says he used only Mother Seigel's Syrup and four bottles cured him completely.

Used in Canada for over half a century —used in every corner of the world where people suffer from Constipation and its resulting troubles—

Dr. Morse's Indian Root Pills,

stand higher in public estimation than any others, and their ever-increasing sales prove their merit. Physicians prescribe them.

Minard's Liniment Co., Limited

small flocks running from six or eight up to twenty-five ewes. The smallness of the flock usually leading to better sanitary conditions, higher thrift, better health and a nearer approach to the normal.

"The first flock of Shropshires ever seen by the writer numbered eight ewes, which had delivered recently twenty-one lambs, eighteen of which were still alive and well on their feet. Four of the ewes had borne twins, three of them triplets and the other a quartet of lambs. What a startling percentage of lambs! Almost 300 per cent. These lambs came a deluge, without any known pernatal influence to account for the deluge. This happened in Saline Co., Mo., the garden spot of the that good old state. The following year, in the same state, the writer saw a flock of Cotswold ewes, numbering perhaps half a hundred, that had been built up by selection, only twin ewes and rams being used for several years in the matings, with the result that the owner rarely failed of a 200 per cent lamb crop, and these nearly always twins.

"The results were natural and, of course logical, because they has been systematically bred for. In the case of Mr. Young's 26 pairs of twins out of 31 ewes lambed, there is no philosophy that can account for the big percentage of twins, and the best we can do is simply to say it "just happened so." We may guess the rich fall pasturage previous to mating time had much to do with the generous conception, and the later balanced winter feeding contributed to the surprising results. It is all beyond the philosopher's ken or the chemists analysis. We cannot say that Mr. Young has broken all records of Shropshire lambings anywhere in the world for we have published small flock lambing records in excess of 200 per cent totals, though we are not as sure as to the percentage of twins. Cannot something be done to avoid excessive lambings? asks Mr. Young Yes; no trouble about that. Starvation at mating time and subsequent neglect will do it every time, and from having too many, the road is short to where you will have too few.

Hog Notes.

The man who always feeds well in flush as well as hard times is the one that wins in the end.

If a pig is not going forwards, he is losing the owner money; when he is just holding his own he is losing money.

The later the spring litters come the less care is required to start them, but the opposite is true of fall litters.

There is no profit in keeping the pig or any other animal when there is no gain.

An abundance of good feed mixed with a good deal of care and attention will make a young pig thrive amazingly.

The boar will thrive much better if given good range and exercise, will have more vigor, will sire pigs with stronger vitality, and the litters will be larger in number.

The compact sow is objectionable because she cannot assimilate sufficient food to maintain a large litter.

For market the great point is to get a lot of hogs as even as possible, and of moderately heavy weight, and at the same time neat and fine.

No cast iron rule can be held down as to the exact size at which swine can be sold to the best advantage, but it is always safe to have them just as good as possible.

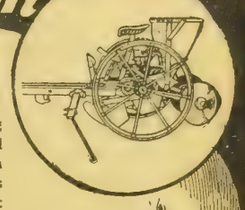
Pigs should never be fed so much as to be indifferent about their feed, or so that they will leave any; but feed all that they will eat clean and keep them so that they will always come to their feed with good appetites.

The first hundred pounds put on a pig costs less than the second, the second less than the third, and every additional hundred costs more than the preceding. Keep the pigs growing from the day they are farrowed and market as soon as ready.

RED ROSE TEA.

"Is Good Tea".

Only requires 1 man



Lighter Draft, Better Results

The Aspinwall No. 3 Potato Planter is not a two-man machine. It only requires one man, saving you the extra man's wages. It is lighter draft, too. And will plant one-third faster. No other potato planter can compare with it in accuracy. The Aspinwall No. 3 drops over 99 per cent. good. And does it without slightest injury to the seed. We've put seed through the planter over fifty times and it produced as good results as seed planted by hand. No change of pickers required for different sizes of seed or different distances of planting.

Get our catalog 72 explaining detailed construction of Aspinwall No. 3, which is made by largest makers of potato machinery in the world.

THE ASPINWALL MANUFACTURING CO. 2
Jackson, Mich. and Guelph, Ont.

Aspinwall No 3 Potato Planter

EWING'S

Seeds Pay

Even if someone offered them free it wouldn't pay you to sow seeds of poor or doubtful quality.

Your crop should be worth 10 to 100 times the cost of the seed. Inferior seed will easily lose you half the crop, or from 5 to 50 times the cost of reliable seed.

Economizing on seeds is most expensive economy.

If you sow Ewing's seeds and the weather is anyway reasonable, and you give them a fair chance in the way of soil and tillage, you can depend on FULL CROPS of A1 quality — crops that will pay handsomely for the land used and the work done as well as for the small investment in the seeds themselves.

Ewing's Seeds have proved their reliability by forty years of bumper crops.

Insist on Ewing's. If your dealer hasn't them buy direct from us.

Our big Illustrated Catalogue is Free— write for it to-day.

THE HORSE.

Azoturia.

Azoturia is a disease occurring in the most serviceable horses—those that are doing the hardest work, and often in those having the best appetites and in good condition.

It is a very common disease and yet one with which horse owners in general are not familiar. Englishmen sometimes call it "Monday morning disease," because of its frequent occurrence on the first working day of the week.

Practically the same symptoms accompany every attack of azoturia. An animal has been doing steady, hard work, either driving, plowing, or hauling heavy loads; it has been well fed and cared for; because of a storm a breakdown, or a holiday, there has been a day of rest. The feed, especially the grain, has been given in the usual quantity, and often increased, the owner taking advantage of the rest, and hoping by doing this to add more flesh to his horse.

The following morning the horse feels exceptionally well, and for a fraction of a mile is very high-spirited; by this time it will probably become lame in one hind limb, breaking out in a profuse sweat, trembling at though in a chill, and beginning to show signs of fatigue. If he urinates at this time, the water will be coffee-colored and very thick, like syrup. If a driver is familiar with azoturia, these symptoms should be sufficient for him to recognize the trouble; but, too frequently, this condition is unnoticed, or unheeded, and the animal is driven until both quarters are involved and it falls in the harness. Of course some attacks may vary from the one just described and the symptoms become changed as different groups of muscles are involved, but the history will invariably fit this outline.

Azoturia is one of the numerous diseases that result from the improper care of horses. It occurs from an attempt to take too good care rather than the usual fault of neglect.

The observance of a few simple rules should prevent the occurrence of the disease, unless in exceptional cases, and in these the fatality can be decidedly reduced if recognized at the beginning of an attack.

The most important factor in the prevention of azoturia is the item of feeding. A very good practice carried out by a great many stable men in the cities, especially those in charge of large numbers of work horses, is to feed, on Saturday night, bran mashes and the ordinary feed of hay only. Sunday the feeds are just as regular as usual, but are cut just one-half.

Horses should not stand in the stall all day Sunday. but should receive a good grooming and be turned out to roll and exercise at will. The man on the farm always has this advantage, while the city man is usually crowded for room.

As soon as an animal is believed to be suffering from azoturia, it should be unharnessed and covered with blankets. Except in extremely cold weather, the horse should not be moved, but should be allowed to stand and sweat so as to eliminate as much of the waste products as possible. It is advisable in an hour or two slowly to lead the animal to the nearest place of shelter and there to have it treated for a day or so before attempting to take it home.

With as good a start as this a veterinarian should be able to save more than ninety per cent. of his azoturia patients, while, as conditions now exist, he is fortunate if he saves more than twenty-five or thirty per cent.—H. E. Kingman, Colorado Agricultural College, Fort Collins.

Brood Mares in Winter.

EDITOR MARITIME FARMER :—

The foal crop is an important one and if prices for horses continue to advance, as they have done for the last ten years, it will be still more important that the number of good brood mares be increased and be treated in such a way as to bring forth healthy offspring.

It would be interesting, and doubtless, at the same time appalling, to learn what proportion of foals are lost each year. Unfortunately, too, it is the better class of mares that more frequently lose their foals, largely because of the too generous treatment given them. As a rule, the cheaper class of mares are allowed to rough it and no doubt this has much to do with the high percentage of smart foals produced by them.

Opinions differ among horsemen as to the best way of managing the brood mares during the winter season. Some believe in giving them the run of the lot, with shed shelter, and allowing them to be completely idle. This has been a very common practice among the breeders of pure bred stock, either of the driving or draft class. Their chief object, of course, is to get a foal. They consider that in following this practice, they were doing what was best for the health of the mare. It has been found, however, that light labor is not only more conductive to the thrift of the mare during this season, but it is also more favorable to securing strong and vigorous foals. Consequently, on the ordinary farm, where a few mares are kept, and these lightly worked, we find that the mortality from weakness in foals is less than it is at many breeding establishments, where every care is taken to add to the comfort of the mare.

Of course, where large bands of brood mares are kept, it is impossible to work them all, but on the ordinary farm, where a few are kept, it is the best management to give them.

There are some things to especially guard against in the case of brood mares, whether they are worked or allowed to run at large. One of the most common sources of trouble is due to their slipping on ice. This is a matter which can hardly be prevented, unless extra care is taken to guard against it while they are at work or by seeing that such places do not exist in the yard. Where a band of mares are allowed to run together, another very fertile source of trouble is from one or two among them, of mean disposition, that continually annoy the others and finally give expression to their viciousness by kicking. This very often not only results in permanent injury, but frequently produces a deformed or dead foal.

Such mares, in some way, should be kept from the others. The approaches to stable doors are frequently another cause of trouble. They are, sometimes, too steep and may have become worn, so as to afford very insecure footing and unless special attention is drawn to it, one is likely to consider it too small a matter to be immediately attended to. Where the mares run loose, it frequently occurs that they crowd each other in the doorway, and because of this, become hipped or injured in a less serious way.

As the time of foaling approaches, there is no more satisfactory arrangement made to have a dry, well bedded box stall for the use of the brood mare. Some think it is better for the mare to foal in the pasture, but colts have been known to permanently injure themselves by being allowed too much liberty just at this time. When they get on their legs and become sufficiently strong to stand and walk a little, they are likely to overdo it, but if confined in a box stall, there is less danger. To prevent anything of this kind occurring in a box stall, it is necessary to see that it is dry and well bedded, for if it is slippery and damp, and the foal endeavors to get its feet, it may strain itself so as to result in permanent injury. It is also very necessary that the quarters should be dry, because it has been quite definitely determined that joint troubles in colts are largely due to the infection of the nayal cord in filthy quarters.—WALTER S. COGSWELL.

Let Poultry Keeping Stand on its Own Merits.

EDITOR MARITIME FARMER :

While I appreciate the continual improvement in your paper and consider the issue of Jan. 25th as superior to any of the many good ones I had the benefit and pleasure of reading, the many valuable suggestions in the editorials, as well as those in the various communications, make them too numerous to mention separately.

And believing you desire to improve agriculture, as a whole, I take the liberty of objecting to a statement made in the article, "The Poultry Industry in Canada," where it says "a farmer does not begrudge summering two or three colts and selling at a loss of twenty to thirty dollars, &c." Such is not the case, as most farmers do object to summering or wintering horses or other stock at a loss and occasionally a capable horse manager may loose money on a horse, but that is the case with other classes of farm animals and poultry also. Now, what I object to is the all too common practice of some speakers of advocating one product and making disparaging reference to others just as profitable. There is room for all, and almost all over Canada the horse is necessary for the profitable production of any of the others, excepting honey. And if we leave the farm and look to the city or town, we find more money invested in securing, equiping and maintaining horses for pleasure than any, if not all, domestic animals. And, if a horse is a pleasure to the city dweller, it is the same to a farmer and his family, as well as a part of his necessary equipment. The statement was made lately, by a high authority, that the question before the people is, how can rural life be made attractive? The horse aids in solving that problem, so their production should not be disparaged or made skeptical, because an unfortunate producer suffered a loss, such not being the general condition, as the Canadian province, having the most money per capital on deposit in the banks, has long been famed for producing good horses.

And surely poultry is important enough to maintain its self on its value, without discrediting anything else. For instance, it could be said losses have occurred in poultry production and give the causes and remedy without trying to justify such losses, because a man, through some misfortune, lost twenty or thirty dollars or two or three colts and then proceed to quote price of eggs at 60 to 70 cents per dozen and chickens proportionally high priced. That should show the possibilities of the poultry industry and the necessity of good horses to provide food for the poultry, as well as an animal to assist the poultry men to enjoy their great wealth.

J. STANDISH, V. S.

HORSEMEN ATTENTION!

Dr. J. Woodbury's Horse Liniment and Dr. J. Woodbury's Condition Powders will save and preserve the life of your horses. They cure Cough, Cold, Distemper, Colic, Glanders, Spavin, Pink Eye and all diseases of the Horse.

TRURO, N. S.

Dear Sirs,—One of my horses had a bad cough, and I made a complete cure with three bottles of Dr. J. Woodbury's Horse Liniment. The cough was of twelve months standing. In my large experience with horses, I consider this liniment to be the best made for all diseases of the horse, and I recommend it to my friends.
E. J. ANDERSON.

DEAR SIRS,— BEAR RIVER, N. S.

We do not hesitate in recommending your Dr. J. Woodbury's Horse Liniment. We have used it in the woods for coughs, colds, distemper and cuts, and would say that no lumberman should be without it.
Yours truly,
CLARKE BROS.

How to Save Labor on the Farm.

Dominion Low, Wide-tire Steel Wheels are lighter, stronger and cheaper than Wooden Wheels. They will not sink into the earth, like narrow Wooden Wheels. So they save your land and roads, and make it easier for your horses. Will hold as much as horses can draw. Guaranteed not to break from frost or rocky roads. Only Steel Wheel made which can be taken apart and put together again. Save their own cost first season, and will last a lifetime

Our Handy Wagon has low, strong, steel Wheels. You can load this low Handy Wagon in less time than a high one. It saves you half on labor and time. Can be changed into platform wagon in few minutes. Easy draft, strong, neat and guaranteed. Free booklet tells all about this wonderful money saving Handy Wagon and our Steel Wheels.

DOMINION WROUGHT IRON WHEEL CO., Ltd., - Orillia, Ont.

Our 60 Years' Experience

and continued success is a guarantee to You of Good Quality and Fair Dealing.

We are offering for the next 30 days our No. 15 "Martello" Single Strap Nickel Mounted Driving Harness at only $12.00. It is fine enough to suit any one who needs a medium price set, well made and well finished Harness.

Ask your dealer for this Harness, and if he does not keep them, write us, and we will forward the same prepaid to your nearest express office on receipt of the amount. If not satisfied we will refund the amount.

DESCRIPTION

Bridle—⅝; box loop cheeks; patent leathe blinds.
Breast Collar—Single strap.
Traces—1¼ wide; heavy single strap lined at both ends; sewed to breast collar.
Saddle—2¾ in.. full padded; patent leather; swell skirts.
Breeching—Well made, with flaxseed stuffed cropper.
Reins—Cut from good leather.

9 & 11 Market Square, St. John, N. B

POULTRY.

The Principles and Practice of Poultry Breeding.

Selection is the key to successful and satisfactory breeding of poultry. In order to make proper selections, in breeding domestic fowls for his purposes, the poultryman should have a thorough understanding of the underlying facts and exercise his brain powers to the fullest extent possible. His knowledge should extend to all of the influences and conditions affecting the breeding of the birds.

THE FACTORS IN POULTRY BREEDING.

The numerous influences involved in the propagating of fowls may all be included in three groups: first those relating to Inheritance; second, those which constitute Environment; third, those which are the result of Exercise of Functions.

1. Inheritance or Heredity includes all the powers, qualities and characteristics which the parents transmit to the offspring through the germ-cell of the egg. The germ-cell in a hen's egg is easily observed if one will gently make an opening through the shell, about midway on one side of the egg, and then hold the egg with this opening uppermost. The yolk of the egg floats to the top and carries, imbedded in its upper surface, a whitish circular spot about one-eighth of an inch in diameter. This spot is the germ-cell, which in a fertile egg, subjected to the influences of incubation, develops as an embryo and, if all goes well, hatches into a live chick Wonderful indeed is the working of this law of life, which insures the conveyance of the combined or mingled qualities of the hen that laid the egg and of the male bird that mated with her, to the little chick hatched from the egg.

This powerful influence of inheritance extends to the size and shape of body and of the different body-parts, to the coloration of the feathers, to the capabilities of the digestive system, to the capacity of the breathing apparatus, to the heart-development, to the quality of the bones and muscles, to the keenness of vision, to the texture of the comb and wattles, to the foldings of the brain. It affects the new creature's bodily strength or weakness, its possible length of life, its breeding powers (egg-production) and even the chicken's disposition and habits. Unfortunately poor or bad qualities are inherited as readily as good ones.

Disease is not directly transmitted but conditions inviting or favoring the development of disease-germs in the body may be inherted. For example the bird which has by inheritance, weak lungs or poor digestive powers is very likely to succumb to disease attacking these parts of the body at some period in its life.

This hereditary influence of the parents haf much to do with the start in life not only of the fowls but also of the poultryman himself, for these facts apply to the human family as well as to our feathered pets.

The laws of inheritance hold the animal kingdom to an orderly, systematic development and procession. The poultryman is thereby assured of regularity in the results of his matings of fine fowls. The eggs of these birds will certainly produce their kind and not hatch into sheep or swine or snakes. Nature is not fickle and as a rule she forbids the formation of freaks.

2. Environment. As soon as an egg begins to be incubated, influences surround it which are very different from within and we wonder at the power of these life influences enclosed within a minute cell. Other influences, however, act upon the embryo from the outside. Temperature, moisture, air all effect the growth of the embryo chick in the incubating egg. After hatching, these surrounding influences increase and become more potent in the life of the chick. Shelter, food and all that is signified by the domestication and care of the fowls have much to no with their welfare and future usefulness as breeding stock. Summed up, these surrounding influences should result in continual comfort for the fowls.

Conditions of environment, causing discomfort, are sure to check the development and growth and result in impaired breeding quality. Unhealthy surrounding conditions may induce disease and destroy breeding power.

Much, therefore, depends upon the selection and maintenance of right conditions of environment for poultry. Here is ample opportunity for the poultry breeder, to exert his power, for most of the surrounding conditions are under his control. Suppose, for example, that he has fifty little chicks, which he is rearing in a brooder. If he selects and maintains for them a continuous comfortable temperature, other conditions being also favorable, the chicks grow thriftily and bring both pleasure and profit to their owner. If, however, the other conditions remaining favorable, he, by carelessness or accident, permits the chicks to get chilled, this one item of the environment being wrong, trouble begins, digestive disorder very likely follows, growth is checked or halted, many of the chicks die and those remaining alive do not prosper.

The food might not, at first thought, seem to be one of the conditions of environment. It does not surround the fowl, rather the fowl surrounds it. Consider, however, that the digestive tract is really a long tube, extending through the bird's body. It has a lining or skin on the inside. The organs and parts of the bird really lie between this inner skin and the outer skin of the body. Even the food in the digestive canal may be considered as outside of the vital parts of the animal, i. e., separated from them by the lining of the canal. Certainly nothing should be allowed to come in contact with the outside or inside lining of the bird which would inflict iujury.

One of the most important items of environment is the food, which should be wholesome, healthful, nourishing and supplied in properly balanced rations. Domestic fowls are almost entirely dependent upon the poultryman for their food supply in respect to both quality and quantity and this is one of his most important means of influence in the management of his breedig stock.

The Warm Mash.

To feed or not to feed a warm mash in the morning, or any time during the day, is a mooted question among poultrymen. Considerations pro and con resolve themselves into one chief argument on each side. Those who favor it say that hens need the mash on winter mornings especially to warm them up and get them into egg-laying condition. While those who oppose it say that the hens quickly gorge themselves on the warm dough and then sit stupidly around too inactive to lay.

We have a theory of our own about the mash that is satisfactory to us. As we have many chores we cannot prepare a mash for the hens and feed them before nine or ten o'clock. But we think that a few handfuls of grain, preferably wheat, scattered in the litter, early, for the first feed gets the hens to exercising and warms them up. If the hen house is secure from rats and mice —and rats and mice are a nuisance in hen houses—the grain can be scattered in the litter the night before and the hens will begin to work as soon as they come from the roost. The poultry keeper can thus enjoy a morning nap so far as responsibility for the hens is concerned.

In the middle of the forenoon we make a warm crumbly mash of boiled vegetables, meal and bran, with egg-making ingredients such as beef scrap or animal meal, table scraps, and a little condition powder if desired, well mixed and seasoned. We then go through the pens, turn down the troughs, and feed the warm, savory mixture, stopping a little short of what the hens would like to eat of it. We wish to leave them with an appetite. We then remeve the boxes or troughs and again scatter a few handfuls of grain in the litter. The hens go merrily to work and the exercising helps to digest and make immediately available the egg-producing food of the mash. It seems to us that we get better results from the food in this wav than we could in any other way. A mash fed later in the day and not followed by the scratching exercise would not become so immediately available.

Next to this way of feeding a mash we consider plenty of fresh water, grit, oyster shell, a full crop of grain at night clean quarters, and plenty of fresh air indispensible in getting winter eggs.

Egg-Basket Robbers.

Here are some of the robbers of the egg basket. Watch to see that they do not keep your basket empty.

1. Poor ventilation of the poultry house. Foul air means stuffy houses and is about as dangerous as cold drafts of wintry winds.

2. Too much sloppy food and a lack of gravel and grain. Eggs cannot be manufactured without plenty of egg producing foods.

3. Parasites of different kind. These suck up the vitality of the hens. Whitewash, carbolic acid and kerosene emulsion mean death to lice.

4. A thin or broken roof. The hens generally roost near the roof, and if it is thin they will be uncomfortable in cold weather. If the roof leaks, on rainy days or nights the hens will be made to suffer from cold shower baths.

5. Damp or wet floors. Hens don't like slop and mud. They will not wade around in it unless compelled to do so. They are sure not to lay under such conditions, besides, disease of some kind is liable to break out among them,

THE SATISFACTION OF SATISFACTORY TELEPHONE SERVICE

THE telephone is in several respects unlike anything else in the civilized world today; it is at once a convenience and a necessity. In fact, so much so is this true that let its service be anything but absolutely perfect and its user feels its loss in a way he could never have believed possible in days before he realized what a telephone meant to him. When you remember that out of 259,000 phones in use in Canada today, all but 9,000 are our make, you will realize the quality we must put into our instruments and begin to understand what

"Northern Electric" Service Means

WHILE "Northern Electric" telephones are as near perfection as brains backed by years of experience can make them, even yet are we trying to still further improve our instruments.

Our newly designed No. 1317 Telephone Set—absolutely the most modern farm 'phone in the whole telephone world—represents years of study, an expenditure of $10,000 in cash, and months of patient experiment and test before we have allowed it to go on the market.

We now pronounce it perfect—now, firmly convinced that it is all we have tried to make it, we offer it to you.

Examine it for yourself—or if you are not sufficiently well posted on such matters, get your own electrical expert to give our No. 1317 the severest tests of which he knows.

Take it up point by point. There is the transmitter, for instance, the same, standard long-distance type that is used on all standard long-distance 'phones. The general manager of the biggest telephone company in the world could have no better on the private 'phone he uses on his own desk. There is no better made. And not only is ours the best transmitter but it is also the cheapest in point of maintenance; it requires less battery current than any transmitter on the market—as little as 1-7 of some of the others.

Then the receiver on No. 1317 is worthy of attention. Here the magnets demand consideration; made from a special grade of steel, they are permanent—retain their full strength indefinitely. And the bell pieces are made of special annealed Norway iron. This receiver is so constructed that dust cannot accumulate on the back of the diaphragm nor can local noises disturb the listener and spoil transmission. Each part of the receiver on No. 1317 is the result of long and careful study—throughout, it is the best combination possible.

Or look at the switch-hook—note how compact and self-contained it is,—how all contact springs are vertically mounted as to afford no resting place for dust and other accumulations.

Our standard self-contained switch-hook is equipped with platinum points—you can understand the efficiency for which that makes.

And so it goes—through our No. 1317 every part is the best, and most perfect it is possible to devise. Never before has it been possible for any manufacturer—no, not even for us—to offer such an instrument to the Canadian farmer.

SEND FOR OUR FREE BOOK

THIS book, Bulletin No. 2816, we call it, (and that's what you ask for), not only tells you all about our instruments, but also tells you all you need to know—every detail—about the steps necessary to take in the organization of a rural telephone company. It describes the simple procedure—goes into it minutely—tells about the very small amount of capital necessary, explains how to interest your neighbors and informs you how your own community can have just as efficient a telephone service as the largest city on the continent. Write for it,—learn why a telephone on your farm will actually save instead of costing you money. Send today.

Send NOW for Free Book and Sample!

"For more than five years I have been experimenting with our experts to find the BEST culvert for all-around uses. We sought the markets of the world for one that was just right; and we didn't find it. If we had, we'd have bought the patent rights for Canada. Finally, last Spring, we struck the idea. Then we put in some expensive months in making that idea better,—and NOW we've got a culvert that is so far ahead of any other there's no comparison.

You'll read something about it here; but to KNOW how 'way ahead it really is, you'll want to see the sample (sent free) and read the booklet (free, ditto). With that before you, you will soon see why every reeve, or warden, or town councillor, or anybody who has any use for culverts at all,—will find it pays to get in touch with me right NOW. I am asking you to lay aside your notions of what makes a good culvert, and a cheap culvert, and find out about this NEW culvert. I don't expect you to buy a foot of it until it PROVES to you that Pedlar Culverts are in a class by themselves, and that you can't afford to overlook them. Let us start that proof toward you soon—address place nearest you.

G. H. Pedlar

Learn about the strongest most practical most durable and easiest-laid culvert ever made

PEDLAR PERFECT CORRUGATED GALVANIZED **CULVERT**

Frost-Proof, Rust-Proof and Wear-Proof

This triple-rib flange-lock principle, found only in Pedlar Culverts, not only adds greatly to the strength of the piping and makes a perfect joint—practically as good as if welded—but it also allows for expansion and contraction under cold or heat. Though a Pedlar Culvert, of any length, be frozen solid full of ice, it will not spring a leak. Send for sample and booklet and you will see why. State your probable needs and we will gladly quote prices.

Made of Special Billet Iron, Extra Heavy

In every size of Pedlar Culvert, which comes in all standard diameters from 8 inches to 6 feet, we use nothing but the best grade of Billet Iron, specially made for us, of extra-heavy gauge (14 to 20 gauge according to the diameter). This Billet Iron is curved into semi-cylinders—curved COLD, so there will never be any variation from exact dimensions; and it is then deeply and smoothly corrugated on a special press that puts a pressure of SIXTY TONS on every square inch of the metal. The corrugations, therefore, are uniform and very deep.

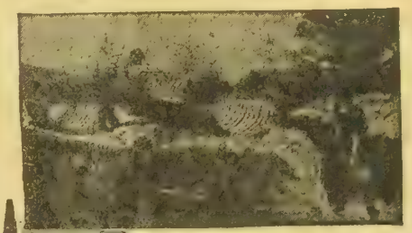
A few hours' work and a few dollars will put a modern and permanent culvert structure in place of a ramshackle bridge like this.

A structure like this, with Pedlar Culvert, won't wash out nor need repairs.

Galvanized AFTER Being Pressed Up

When the corrugating process is done, the sections are galvanized by our exclusive process that covers the entire surface with a thick coating of zinc spelter. Every edge, every crevice, is heavily coated with this rust-proof, corrosion-proof galvanizing; not a spot is left unprotected. This is the ONLY culvert galvanized AFTER being shaped. It is ABSOLUTELY RUST-PROOF.

Two men can ditch for, and lay more lineal feet of Pedlar Culvert in a day than four men can with any other culvert.



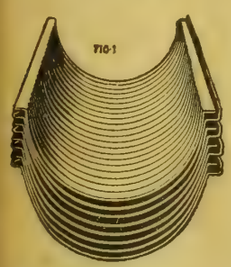
Can be readily laid by unskilled labor. Can't lay it wrong.

Will Stand Incredible Strains

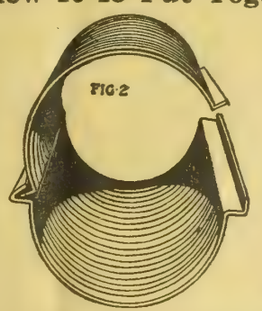
The heavy-gauge Pedlar Billet Iron sections deeply corrugated and locked together **without bolts or rivets** by our compression triple-rib (this rib is flat, not corrugated), make a culvert that will stand enormous crushing strains and neither give nor spring. A thin cushion of soil on top is all the protection such a culvert needs against traffic; and no special precautions need be observed in laying it,—it will stand what no other culvert can.

COMPACT—PORTABLE—ENDURING—ECONOMICAL

This Shows How It Is Put Together



Pedlar Culverts are shipped in half-sections, nested—saving freight and making carriage easy in roughest country. Quickly and easily transported anywhere. Fig. 1 shows the half-sections or semi-cylinders, nested one within the other for shipment. One of the ribs is a radial flange, the other a re-curved flange. Sections are assembled as shown by Fig. 2. Note that the ribs are flat, and the curved part of the cylinder deeply corrugated. These ribs add vastly to the culverts' strength. Unskilled labor, with a simple



tool, quickly clamps the flanges together, making a triple-fold joint that is tighter and better than any riveted or bolted joint could possibly be. Fig. 3 illustrates the simplicity of the Pedlar Perfect Culvert flange-lock—no bolts, no rivets, no makeshifts. This is the only culvert that is laid with broken joints—the overlap between ends comes in the centre of each length. No chance of leakage.

The Ordeal; or, the Spring and Mid-Summer of a Life.

(Continued from last issue.)

So it happened that she was quite alone, with the last footfall of the last scholar sounding under her window, before she opened the letter; and then she laid her head down upon her desk a moment, with an inward cry for strength, before she turned herself to read it.

There were two dates, the first several days old.

"Mother, I have a long story to tell you; I scarcely know where to commence. I have had a long talk with Mr. Bradstreet more than once; but at first I was at his house, at tea, and he sent for me to come into his library. I thought of a hundred things as I went along—that he was going to forbid me the house, and tell me that I must not think of Lucy. My mind was all in a whirl, for I had been thinking of her more than ever lately, thinking that she might be my wife some day—yes, mother, I did—and how you would love her, and she would love you, for she has no mother, you know and she likes nothing so well as to have me talk about you and my sisters; she never had a sister. Mr. Bradstreet sent for me into the library, but it was not for any unkind or harsh purpose. I have always told you that he was not proud or overbearing, and he proved it by making me an offer to take me into his counting-house. It seemed providential, mother."

"O Carrol!" And the dream of years seemed swept away, as Mrs. Austin turned the leaf. It is so hard to find that our best desires and purposes, seemingly in accordance to God's will, have been set aside by him for plans of his own ordering.

"It seemed Providential, mother." She glanced back at the words again. If it was His providence, though it broke her last "idol to her face," she would not reject it. "I thought perhaps the blessing upon the fatherless, that you have always said so much of to me, had moved Mr. Bradstreet's heart to place me in a way to help my brothers and sisters, and first of all to relieve you from your hard and busy life. And then Lucy! I have not told you all. He said he knew I loved Lucy and would give her to me, too. I don't know why, but that made me feel as if it was a temptation. It came into my mind like a flash, how Satan carried the Savior to a high mountain, and showed him 'all the kingdoms of the world and the glory of them,' and promised to give Him everything, if He would worship him. Everything seemed placed within my grasp. It was too much of a temptation; it betrayed itself; I could not fight away the feeling.

"I had been thinking all winter, ever since Christmas, that I ought to devote my life entirely to God's service. I was no sudden fancy. I have often thought of it before, even when I was no older than Ben; but this year, knowing that it was the last one here, the thought came back and back to me so often that I wonder I have not written to you about it before. The only thing was, I could not bring my mind to decide, and I did not want to trouble you with my doubts. I had almost made up my mind to write to you after my birthday, for I did vow in the stillness of my heart, that day if God would make me His servant, I would 'fight manfully under his banner,' but something held me back from sealing it, even by telling you; yet I know now that it was no less binding. Do you not see how the temptation put on the face of duty, as well as inclination? I thought of you first, of the toiling hands and the head that had never rested for my sake, for the home you were borne to and I could make for you again, of Ben's education, and all I could do for my sisters, and Lucy at last, when I had earned the right to make her happy. Oh, mother, you do not know, even you, with all your love for me, cannot tell what a struggle it was, knowing Lucy loved me, too; and, though she would not say a word, I knew what she hoped I would choose.

"I did not go near the house again. I have only seen her once since. I shut myself up in my room. I did as people used to do in old times, when they tried to discern God's will and empty themselves of selfish hinderances to it. I fasted, and prayed, and thought, and read my Bible, and, mother, I am not ashamed to tell you that I wept. Sometimes I walked the room pressing my hands against my head, for it seemed as though my brain would burst. The sacrifice seemed too great! I could not give up Lucy. Then your letter came. Oh what a comfort! 'At evening time, there was a light!' It came like a message of peace, like the leaves of healing to Christian after he fought with Apollyon, in the Valley of Humility! I cannot tell you what it was to me, or what it was not. It seemed easy then, not easy, but less impossible, to give up the thought of Lucy's love, and the worldly part of the temptation all vanished.

"I went to Mr. Bradstreet, and told him that I could not accept his kindness. I knew he would not understand it, and he did not. He felt hurt, more about Lucy than because I was ungrateful; he seemed to think I could not love her as much as I said I did, or I would not throw her away for a 'fanatical idea.' He was right about my not coming there any more, though it has been just like home this winter. He said and I know it is so, that, even if he should give his consent for Lucy to marry a poor minister, he could not afford to take enouge out of his business and settle on her to make her as comfortable as she ought to be, and I should be only selfish in asking her to wait. Bet he let me see her again, and that was a great comfort; for, though I told her I hoped she would be very happy and marry, and forget me, it will be something to think of as long as I live, that she did love me and understood why I gave her up and did not try to change me. Only once she laid her head on my shoulder and sobbed as if her heart was breaking, and said, 'Oh, Carrol, is death any harder than giving you up!' It did not seem to me that it could be harder for either of us than to say good-by for ever. But the struggle is all over now; and, in a little while I shall not be here to keep it in remembrance, and the pain will die away. I could do all the more good if I never marry, perhaps, and I can make you happy. My choice will make you happy, I know.

"I almost forgot to tell you that I have the Valedictory! Only think of it! When, six months ago, I should have telegraphed it to you, I believe. If you could only be here on Commencement Day. I cannot give it up, yet. It will be nothing to me; I have no one here to care—that I ought to feel would care, I mean.

Long, long after she had finished this letter, Mrs. Austin remembered the other which had come that morning. She had her wish but what an ordeal her child had passed to reach the goal she had pointed out to him! It passed through her mind again and again, all he had suffered and struggled against, and his noble self-conquest, before she came back to what he had said about Commencement Day. She had always secretly hoped to be there and share in his triumph. The wish had been the one darling self-indulgence of her life for the past two years; but she had failed to lay aside the means to accomplish it. Her habit of prudent foresight had, by God's blessing, helped her to meet every want for herself and her children. There was even a little sum accumulating in the hands of a kind friend against unforseen need, but she did not dare to draw upon it, anymore than if it had belonged to a stranger. Yet it seemed hard to give up the journey, especially hard when her boy seemed to need her comfort and sympathy. She said to herself, with an almost rebellious sigh, it was only one with her life, always to be chastened and restrained, even in what seemed most lawful.

But the other letter! Now that Carrol's was at last refolded, she touched it as she looked for the envelope. It was short, and the signature unknown to her. There was an enclosure which she did not unfold:—

"Dear Madam: The year before your husband's death, he lent me $20 to come to the place where I am now residing. He looked upon it as a gift, I know, for there was then little hope that I should ever repay it. I have always intended to, and do so now, inclosing you a check for twenty-five dollars, the original sum, with interest.

So it is in life, that our hopes are never so near fulfilment as when we think them quite lost.

CHAPTER V.

"I do hope we shall have good places. It's so nice having reserved seats; I don't believe I should have come at all to-day, if we had not had tickets for them." It was little Miss Perkins who had hurried along Benefit Sereet at a far more rapid pace than was usual with her. "Dear me, Lucy, how fast you do walk? Do you think there is any need for quite so much hurry?"

Women Who Suffer

from woman's ailments are invited to write to the names and addresses here given, for positive proof that Lydia E. Pinkham's Vegetable Compound does cure female ills.

Tumor Removed.
Chicago, Ill.—Mrs. Alvena Sperling, 11 Langdon Street.
Lindley, Ind.—Mrs. May Fry.

Pecos, Texas.—Mrs. Ada Young Eggleston.
Graniteville, Vt.—Mrs. Chas. Barclay, R.F.D.

These women are only a few of thousands of living witnesses of the power of Lydia E. Pinkham's Vegetable Compound to cure female diseases. Not one of these women ever received compensation in any form for the use of their names in this advertisement—but are willing that we should refer to them because of the good they may do other suffering women to prove that Lydia E. Pinkham's Vegetable Compound is a reliable and honest medicine, and that the statements made in our advertisements regarding its merit are the truth and nothing but the truth.

"You know how early people go, just as well as I do, Jane; and Henry charged me not to get crowded by the door of a pew, or I should not be able to see at all. Just look at all these ladies! We are not the only ones that have reserved seats." And so they hurried on until they came to the old church which had been the scene of Commencement Day triumphs from time immoral.

Already, a rainbow-hued crowd fluttered up the isles and stretched aroud the front seats of the broad galleries, like a row of tulips bordering a grass-plot, heralds of the mass of humanity, masculine, feminine, and juvenile, that would pack the whole house to suffocation two hours later. The young girls paused in the broad isle, and nodded to Ella Beckford, stationed in the choir, close to the grand organ that had pealed out Old Hundred at midnight at the close of the Commencement sermon. Miss Perkins, quick to discern acquaintances, for all the eyeglass that proclaimed near-sightedness, waved her fan here and there, and shook her parasol in recognition, while Lucy Bradstreet, her companion, satisfied the guardian of reserved seats that they had claims to be admitted to them. Already nearly every pew in the inclosed space had one or two occupants, and it was some little time before the fastidious Miss Perkins could decide where to bestow herself in her flounces. To be seen was quite as much her object as to see, even though the front pews were sure to be filled with grave old doctors of divinity and unattractive trustees. There were distinguished strangers always scattered here and there among them, and that delightful George Cushing, who wrote those clever stories for Harper, was expected, and the poet of yesterday was young and handsome. Besides, the isles were always filled, and there was an opportunity for some of the gentlemen to slip along and chat while the band was playing. So in spite of Henry Bradstreet's admonition, Jane Perkins was determined to sit as far forward as possible, and next to the door of the pew. The one in which she finally consented to settle her redundant array, after trying several that proved unsatisfactory, had a single occupant. "Quite as good as nobody," remarked Miss Perkins, in a tone that was far from being a whisper. Miss Perkins had reference to an oversight that might be exercised upon her little schemes for the enjoyment of passing flirtations. The lady did not look like a person who would interfere with or remark upon her young neighbors. She had a calm, grave face, so familiar that Lucy bowed as she came into the pew, and then checked herself in the fear that she had made a mistake. Bu it drew her to look at her neighbor again, and again. The thin, oval outline, the firm lips, the pale brown hair parted away under the plain bonnet-cap, were strangely familiar. She was evidently a lady, though her dress—all of stone-color and black, though it was not mourning—was not in the prevailing style, and her bonnet was unfashionably large. She looked at the long, slender hands quietly crossed, noted the absence of all ornament, and then turned away, lest her stealthy glances should be noticed and counted rudeness.

Faster and faster came the throng; fans fluttered in the galleries—a tulip-bed now—and the space around them grew less and less. Jane Perkins stood sentry for their pew, politely unconscious of the faint efforts of several individuals to occupy the two seats remaining, and the warning injuctions of the ushers, "Five ladies in each pew, if you please." Airy French bonnets and Chintilly scarfs marked the fashionable city ladies who had come to witness the debate of some son or broteer; and toilets quite as elegant, though not so novel, and a certain broad, slightly blouse look, those residents of the elegant mansions near the College who had seen the rush and parade of many Commencements, and wished the programme well over. There were the College people, the wives of the professors and trustees, who were personally interested in many of the actors in the brief drama about to be performed, and chance pleasure-seekers, who had no feeling save in the amusement of the passing hour.

Lucy Bradstreet looked around upon them, and remembered how often and how eagerly she had anticipated this day; and, now it had come, was there a heavier heart than her own in all that great multitude! Her brother had done well, much better than they had hoped—thanks to the generous emulation with which his friend had inspired him and his friend had won the valedictory; but it was indeed a valedictory—parting words to her, as well as to his classmates. She knew he would leave next day, and that their lives were henceforth apart; it was an ever present thought.

"How tiresome!" Miss Perkins had been a faithful sentry, but even her calm obliviousness of the numerous attempts to pass her could not prevail against the sister and cousin of young Martin, one of the graduates, who considered their right to the pew quite as good as Jane Perkin's who had not a relative in College, as they knew perfectly well; and their parasols were quite as pointed as the one that kept guard at the desired threshold. They did not mind the cool stare of amazement at their temerity one iota. Miss Martin's father was a member of Congress, even though Miss Perkins did not choose her acquaintance, and two winters at Washington had not increased her maiden bashfulness; she was much the taller and more sweeping of the two, so Miss Perkins had rather the worst of the encounter as Bell Martin and her cousin pushed past, regardless of fringe and lace, and nearly twitched the sentry's mantle from her shoulders. Nor did the look of ineffable scorn and writhing contempt darted after them ruffle Miss Bell's serenity in the least. She had reserved tickets; she had fought for a good place, and won it; she was very much obliged to Miss Perkins for keeping it; and she made herself very comfortable.

Very different was the movement at the opposite end of the pew, where the lady made room for Lucy Bradstreet, and the young girl quietly and pleasantly acknowledged it. The stranger thought she had not seen so homelike a smile among all the unknown sea of faces that oppressed her, and made her realize her isolation. She had a quick eye for elegance and taste, for all the plainness of her own attire; and the snowy chip hat, with its blue crape and white moss roses, made its wearer like a lilley of the valley—to pursue the flowers—in the neighborhood of the full-blown Miss Martin, and even Jane Perkin's overloaded dress bonnet.

"They are coming!" telegraphed the quicksighted little lady, drawing herself as far as possible from her unfashionable neighbors, while she availed herself of the elevation of a footstool to see the procession pass in. The tall, gentlemanly usher, with his blue-ribboned baton of office; the dignified and undignified dignitaries that followed; the short men and the spare men; the shining red faces bathed in perspiration, and the pale countenance indicative of much sermon writing and dyspepsia; the young men who had suddenly found themselves made doctors of law and divinity, to their own astonishment and the disgust of their rivals, and the old men who had worked fifty years for the Church and the world, with no public recognition of their merits, not so much as the moderationship of an association; smiling well-to-do busieessmen arm and arm with the minister of a country church, who had sent three boys to College on five hundred a year; the nervous Senior whose heart beat fast as he recognized dear, familar faces, and resolved to "do or die," and the callow Freshman in his first tailor's suit, who imagines himself a conspicuous feature in the pageant; the noisy, brassy, unheeded band, who puffed away for the edification of small boys and young ladies from the country. Every member of the long, slow procession that made Commencement Day had filed in and bestowed themselves before Miss Perkins removed her eyeglasses and subsided into her seat.

MERIDEN BRITA CO.

Proving by Actual Experiment

This experiment will always interest the children, and will provoke a good deal of thinking. The explanation, of course, is, that the lighted piece of paper which is inserted into the inverted glass drives out most of the air, so that when the mouth of the glass is quickly put down into the water there is very little air, and, consequently, very little pressure above the water within the glass. Hence, the weight or pressure of the air on the water outside the glass drives the water up into the glass to occupy the space from whence the air was driven by the burning paper.

A practical demonstration of this kind is always more convincing than any mere statement. This is particularly true of medical remedies.

The effect of the anti-toxin treatment for diphtheria is noticeable within a few hours, so that everyone must believe in its virtue. In a similar way, the treatment known as ORANGE LILY gives a practical proof of the progress it is making in curing women's disorders, and that, too, within a few days after commencing its use.

All authorities agree that in every case of women's disorders there exists a congested condition of the womanly organs. The circulation in these parts is sluggish or stagnant, and the result is that the broken-down tissue or waste matter which should be carried off if the blood was circulating freely, remains in these parts, causing inflammation, irritation, oppression of the nerves, etc. ORANGE LILY is not taken internally, but is applied direct to the suffering organs. It is absorbed into the circulation, and its antiseptic properties at once act on the waste matter referred to above. The consequence is that this waste matter, which is causing the inflammation, ulcers, nervous troubles, etc., begins to be discharged, and it continues to be discharged until all the foreign matter is removed from the circulation. At the same time the blood vessels and nerves are toned and strengthened, the nervous trouble disappears, the circulation is restored and good health follows.

Toronto, Ont., June 2, 1909.

Dear Mrs. Currah,—I wish to tell you that Orange Lily is doing me a great deal of good. Those ulcers come away one or two every week, and I have less pain and fewer headaches. I feel sure I will be perfectly cured in a little longer time.

MRS. D. S. T.

The explanation of the wonderful cures performed by ORANGE LILY is very simple. It is a scientific remedy, based on the discoveries of Pasteur and Lister. The conditions existing in all female troubles are alike in character, differing in degree and development only, so that a positive remedy, as ORANGE LILY is, acts with all the certainty of a chemical experiment. In order to convince every suffering woman that ORANGE LILY will cure her. I make the following

Free Trial Offer

I will send to every reader of this notice who suffers in any way from any of the troubles peculiar to women, if she will send me her address, enough of the ORANGE LILY treatment to last her 10 days. In many cases this trial treatment is all that is necessary to effect a complete cure, and in every instance it will give very noticeable relief. If you are a sufferer you owe it to yourself, to your family and to your friends to take advantage of this offer, and get cured in the privacy of your home, without doctor's bills or expense of any kind.

Enclose 3 stamps, and address, MRS. FRANCES E. CURRAH, Windsor, Ont. 1

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 1475 Rose Street, Kalamazoo, Mich., and they will send you from their Canadian Depot the book and a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful cure before it is too late. Don't wait — write today. It may mean the saving of your life.

Quality Butter

If you have never used a "FAVORITE" CHURN, you can't imagine what a difference it will make in the quality of the butter.

The "FAVORITE" is known all over Canada as the Churn that brings the quality butter—and gets every drop of butter out of the cream. Hand lever and foot tread —8 sizes.

"Puritan" Washer is another old favorite. Washes a tubful of clothes in five minutes. If your dealer does not handle them, write us.

DAVID MAXWELL & SONS, - ST. MARY'S, ONT.

The Call to the Field.

Back to the farm, where the brownstone mansion's rearing; back to the farm, where they still afford fresh eggs; back to the farm, where the rooster, chanticleering, knows well the wealth in his pair of yellow legs; back where the cow, in the distance, softly lowing, brings up fresh milk that is rising every day; back where the steak grows, that keeps on going, going higher and higher, and melts away our pay; back where the hens lay at sixty cents a dozen, charging for overtime and Sundays, when they do; back to the land of the dear old Country Cousin—now is the time that he has the edge on you.

Back to the farm, where the money's all congested; back where the pork grows at twenty cents a pound; back where the Nation's cash is all invested; back where a dollar goes but half way round; back where the joys are that poets cannot utter; back where the corn shucks fifty cents an ear; back where they charge you forty cents for butter; back where there's wealth at a hundred plunks a steer; back where the pies are of ripe and yellow pumpkin, retailing now at some fifty cents a wedge; back to the home of the dear old Country Bumpkin—I guess we know who's the fellow with the edge.

Back to the farm, where the turkeys strut and hobble, listed up strong at full thirty cents a pound; back where they weigh legs and charge you for the gobble; back where the bank bills litter up the ground; back where Hi Hayseed opens wide the throttle, puts on more steam and crowds you in the ditch; back where the cream grows at forty cents a bottle; back where the squabs hatch, but only for the rich; back where the ducks, in their arrogance, are quacking, knowing their price tags keep them safe from harm; back where the farmhands all are busy stacking bank checks and greenbacks—back to the farm!

Back to the farm, there is riches in the flour, wealth in the beef, and money in the whey; back where the mutton's rising every hour; back where they measure money up like hay; back where the bees get overtime for working; back where the sheep grow golden fleece for wool; back where the lard sells at seven plunks a firkin; back where the old sock's stuffed and running full; back where good fortune's never false nor fickle; back to the land of the strong highwayman's arm; back to the jam and the silver-plated pickle; back where our money goes—back to the farm!—J. W. FOLEY, in Saturday Evening Post.

A Plea for a Woman's Page.

EDITOR MARITIME FARMER :—

I am a farmer's wife. The MARITIME FARMER and its predecessor have been coming into our house for years. Often have I scanned its pages to see what there was of particular interest to me, and nearly as often have I laid it aside disappointed. It is purely literature for the master of the house, and its contents are certainly helpful and instructive.

But what I want to know is this—why can we not have one page devoted to the interest of women? There are hundreds of intelligent farmers' wives and daughters, who would be glad to contribute something for the benefit of their sex. Many, who could interest and instruct each other in the exchange of ideas and methods. For want of reading, I find that we are to narrow in our views, too limited in our ideas. As a general thing, very few magazines reach the farmer's library table. His reading matter consists chiefly of the daily paper, with perhaps an occasional treatise on the horse or cow thrown in. Many of us are compelled, either by domestic duties, or for want of means, to remain closely at home. I really know women who have not been out of their district for years. Now tell me, please, how we can, under such circumstances, be the intelligent, up-to-date

The Empire PROVES ITS CLAIMS

Claims are **words**—Proofs are **Facts.**

Mere claims have often sold goods. Proofs are a record of dollars made —You, or anyone else, don't want the Cream Separator that **Claims** the most—you want dollars from your handling of milk. Therefore, you want the **proved** separator—the dollar-making.

FRICTIONLESS

Empire CREAM SEPARATOR

Here are some facts that will interest you—The Empire turns the most easily—is practically frictionless —is most easily washed—a few simple parts without a cranny or crevice in them—gets all the cream, and the highest quality of cream at that—is durable—will not get out of order—will cost you practically nothing for repair. These facts spell dollars for you if you give them the opportunity.

Send for our new Catalogue—it costs you nothing, but will show you how you can make **dollars.**

companions that our husbands and children demand?

Many of us have, by hard work and self sacrifice, sent our boys and girls to college, determined that they shall have a better chance in this world than we. But have you ever thought—you dear old sweet-faced mother—how we compare with the educated people they have been meeting? In the thunder and lightning, for bread and butter, and the other necessaries of life, have we not been neglecting ourselves, both in mind and body? James Russel Lowel says that "woman is the master piece of the Creator, the greatest work of His divine hand." Is it not then up to us to keep ourselves in condition to do our best—to seize every precious opportunity that comes our way? Let us consider it a sacred duty to keep ourselves up to the highest possible standard, physically and mentally, otherwise we shall not be fitted to fill the divine purpose for which we are created. And let me also, my sisters, impress you with the fact that too much energy is wasted in fretting, worrying fault-finding, grumbling—in the little frictions and annoyances that accomplish nothing. Just look back over yesterday and see where your energy went to—see how much leaked away in trifles. I often repeat to myself one of the beautiful prayers of Robert Louis Stevenson. I pinned the slip to the wall and committed it while washing dishes. It is so short and contains so many good things, I shall give it, hoping some one may be benefited from it, as I was: "The day returns and brings us the petty round of irritating concerns and duties. Help us to play the man. Help us to perform them with laughter and kindness; let cheerfulness abound with industry. Give us to go blightly on our business all this day; bring us to our resting beds, weary and content and undishonored, and grant us in the end the gift of sleep."

The door of another year has been opened to us by hands not our own, and we have been thrust on 1910 with many a misgiving as to what it may hold for for us, and while the year is still in its infancy, let us resolve to make the most of our opportunities; begin with a firm purpose to better our condition; make up our minds to find the starting point that leads to efficiency and knowledge. One writer has said that the education of a child should begin with its grandmother, and rightly, too, for brains are, to a great extent, transmitted. Then, for the sake of our progeny, let us be brainy, virtuous, whole souled women. — FARMER'S WIFE, Andover, N. B.

Imitation Broiling.

Some foods, which theoretically should be broiled, are, in practice, much better if cooked in a very hot oven or on a rack set over a pan. This is especially true if the facilities for broiling are not perfect. A chicken or slice of fish, for instance, can be nearly cooked in the oven, which should be hot enough to sear the outside quickly, then browned over the coals or gas flame, to give it the mark of the broiler Broiled ham or bacon is excellent to eat, but wastefully cooked; if the same meat is cooked in the oven, the fat will be saved and the cooking done evenly. A wire toaster, laid over a tin pan, makes a convenient broiler; the racks in the broiling ovens or gas stoves are of little use, they are so inconveniently made. The handle of the ordinary toaster or broiler is too long and must be shortened to allow the oven door to close. Occasionally a short handled broiler is found in the first part of broiling and then finish with wires close together are convenient for bacon and oysters.

Many cooks use the gas range oven for the first part of broiling and then finish under the flame; this way ensures greater perfection in cooking and saves some labor, for it is not an easy task to watch a broiler that is down in the under part of the range and near the floor. Lobsters are cooked with less

trouble in the oven than over the coal, for they splutter all over the top of the range; an epicure cannot tell where the cooking was done if he sees the marks of the hot wires, which can be added as a fancy touch.

The Canadian Forestry Convention.

Among those who have signified their intention of taking part in the Canadian Forestry Convention which will be held in Fredericton this week in addition to the President, are Mr. Thos. Southworth and the Vice-President, Hon. W. C. Edwards are:

Hon. Clifford Sifton, Chairman of the Commission of Conservation.

Hon. Jules Allard, Minister of Lands and Forests, Quebec.

Hon. Charles E Oak, Bangor, Maine, and Chatham, N. B.

Hon. J. P. Burchill, Nelson, N. B.

Dr. B. E. Fernow, Dean of the Faculty of Forestry, University of Toronto.

Dr. C. C. Jones, Chancillor of the University of New Brunswick.

Mr. W. B. Snowball, Chatham, N. B.

Mr. E. A. Sterling, Forester of the Pensylvania Railroad.

Mr. C. W. J. Hall, Supt, of the Bereau of Forestry, Quebec.

Mr. H. W. Woods, M. P. P., Welsford, N. B.

Prof. R. B. Miller, of the University of New Brunswick.

Mr. Ellwood Wilson, Grand Mere, Que.

Mr. F. C. Whitman, President Western Nova Scotia Lumbermen's Association.

Mr. G. Y. Chown, B. A., Registrar, Queen's University, Kingston.

Mr. W. R. Brown, Secretary Forestry Commission of New Hampshire.

Prof. E. J. Zavitz, Professor of Forestry, Ontario Agricultural College.

It is expected that the Forestry work of the Dominion and of the Provinces will be represented by others whose arrangements are not complete enough to permit of their names being announced.

RAILWAY ARRANGEMENTS.

The Railway Companies have kindly granted a single fare for this meeting. Delegates must purchase first-class full fare one-way tickets (the fare for which must not be less than fifty cents) to Fredericton. (or the nearest junction point if a through ticket cannot be obtained) and secure a certificate to that effect on the standard certificate form where the ticket is purchased. Railway ticket agents are supplied with standard certificates and are instructed to issue them on application. At the meeting, these certificates must be handed to the Secretary for signature by him and the special agent of the railway companies. At the time of validation, the special agent will collect from the holder of each certificate a fee of twenty-five cents.

RAILWAY CERTIFICATES WILL NOT BE HONORED.

(a) If a ticket for going trip is purchased more than three days (Sunday not to be counted a day) before the opening of the meeting.

(b) Unless ticket for going trip is purchased within three days prior to meeting (Sunday not to be counted a day) or during the continuance of the meeting.

(c) If not signed at the end of the meeting by the Secretary and vised by a validation paster affixed by the Association's special agent.

(d) Unless surrendered to railway ticket agents at Fredericton and ticket for return trip purchased within three days (Sunday not to be counted a day) after adjournment of the meeting.

(e) Unless presented to the ticket agent not less than thirty minutes before the train is due to leave.

(f) No certificates except the Standard form (procured from the ticket agent when procuring ticket will be honored for return passage.

OBJECTS OF THE ASSOCIATION.

The Canadian Forestry Association was founded in 1900 and is the organization in Canada for promoting by agitation and education in the prevention and

Hard Land Won't Stick

The "Bissell."

Do the gangs on your harrow crowd together and rise out of the ground if it is hard? They don't do this on the "Bissell." The "Bissell" is so designed that the gangs cannot crowd or bump together, no matter how hard the ground may be. Tough soil won't stick the "Bissell." It stays right down to its work and pulverizes the ground thoroughly. Wet, sticky soil doesn't clog it up either. The "Bissell" scrapers meet the plates "chisel fashion" and keep the cutting edges clean. Movable clod irons—an exclusive "Bissell" feature—keeps the space between the plates clear. We ask ask you to take the "Bissell" out into a field and test it beside other harrows. Then you'll have the proof that hard land won't stick it—that it pulverizes the best—that itis the lightest draft. Ask your local dealer to show you the "Bissell" or write to Dept. M. for catalog.

ELORA, - ONT.

Galvanized Rust-Proof—

But Won't Scale

Extreme weather changes in Canada is the reason why so much Wire Fence rusts about 12 or 15 years sooner than it should.

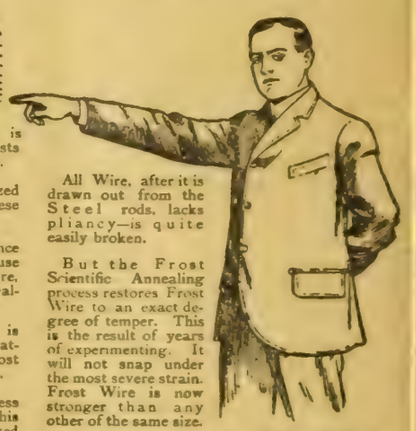
Nearly every Wire Fence is Galvanized too thinly to fight off the result of these weather extremities.

Two-thirds of the life of a Wire Fence depends upon its Galvanizing. Yet, because Zinc costs four times more than steel Wire, much Wire is wiped almost clean of its Galvanizing.

And, besides this, nearly all Wire is merely "coated" with Zinc. This "coating" will peel off years before the Frost Fence begins to even show signs of wear.

You see, all Wire, because of its process of manufacture, has a greasy surface. This dirt and scale must be thoroughly removed before Galvanizing will stick.

You can't expect Zinc to adhere permanently to greasy, scaly Wire, can you?



All Wire, after it is drawn out from the Steel rods, lacks pliancy—is quite easily broken.

But the Frost Scientific Annealing process restores Frost Wire to an exact degree of temper. This is the result of years of experimenting. It will not snap under the most severe strain. Frost Wire is now stronger than any other of the same size.

The man who makes this Frost Wire has been making some of the best in the States for 25 years. He ought to know how.

Cleaned Three Times

But Frost Wire goes through three Cleansing processes before it ever sees a Galvanizing Furnace.

This makes the surface as clean as a pin. It enables Frost Wire to be double-Galvanized, without fear of peeling off.

When Frost Wire goes through its double Galvanizing process, the Zinc not only spreads over the surface, but goes into the Wire, becoming a part of it.

The Frost Fence will now endure those awful weather variations from 10 to 15 years longer than any other Fence made.

Make Our Own Wire

We are the only exclusive Fence Company in Canada who Make and Galvanize Wire. The Wire formerly used for the Frost Fence was made under our own specifications. It was as near to what we wanted as we could buy.

But we knew that we could make better, so we built and equipped our own Mills. We are now making the best Wire ever used for a Fence in Canada.

Not Merely Excuses

Any Wire Fence without "coils" will snap when severely contracted. And it will sag, lose its shape when expanded.

But the Frost Fence has the essential coils. And they act exactly like a Spring. When contracted, these coils "give out" their surplus Wire, instead of snapping. And when expanded, this surplus returns to the Frost coils, instead of sagging.

The Frost Woven Fence is the only Machine-made Fence with necessary give-and-take features.

Lots of Fence has such things as Tensions, Curves, or Kinks. These excuses are so short that they'll snap with severe contraction. And they simply cannot "take in" when expanded.

Both the Frost Woven and the Frost Field-Erected Fence have the extra contraction and expansion provisions. These Frost Coils always act the same, regardless of number of times contracted or expanded.

Write for free booklet and samples.

The Frost Wire Fence Co., Ltd.

Agents Wanted in Open Districts

"Frost" Fence

extention of the forests of Canada and all the interests dependent upon them. It has now over two thousand members scattered from the Atlantic to the Pacific. It holds Conventions and meetings for the discussion of the forest problems in the different parts of Canada, publishes quarterly the Canadian Forestry Journal, an anuual report and other literature, and arranges for the delivery of illustrated lectures showing the state of our forests, and what should be done to prepetuate them.

The Association seeks as members all who spmpathasize with its objects and who believe that our natural resources should be conserved and rationally developed. The membership fee is one dollar per year which entitles the members to all the literature issued. If you are not already a member you are earnestly invited to join the Association by sending your name and address with the annual fee of one dollar to

NOTE.—This is the Annual Convention. The annual business meeting of the Association for the election of officers, etc., will be held at Ottawa, on March 10th. Notices will be sent to the members, who are also reminded that the membership fees for 1910 became due on January the first. These should be forwarded to the Secretary at the above address.

Value of Ancestors.

Breeders of pure-bred stock receive many letters in regard to the stock they have for sale. Every man who has been in the breeding business for any length of time can tell from the contents of a letter of enquiry whether the prospect of a sale is good or poor. Scores of letters are received from would-be purchasers whose only question is, "What is the price of your bull calves and yearlings?" Nothing is asked regarding individuality, nor concerning the dam, second dam, sire's dam, etc. Price is the only thing the writer wants to know about. Personally I have sold but one bull to an enquirer of this kind and after I described a few bulls to him he took the highest priced one of the lot, and I believe he bought the best bull for the money.

As well might a man go into a clothing store and ask the price of a suit of clothes. The clothing merchant can sell you a suit for $1 and from that price on up to $25 or $30. What determines the price on these different suits of clothes? Quality, style and finish. Now it is just the same in the pure-bred dairy stock business. Here price also depends upon quality, style and finish; in addition, a matter of as great importance as all combined is ancestry, especially in pure-bred dairy stock. A bull may be the perfection of form, the most stylish in appearance, and be finished in the most skillful manner, yet his ancestors may be inferior as milk producers Perfection of form and stylish appearance are much to be desired, and when combined with an ancestry of large producing capacity, an animal possessing them is usually worth all a breeder asks for it. Bulls from good ancestors, but not so full of quality or so stylish in appearance can be bought for less money and they will usually give fully as good satisfaction in a grade herd or on common cows, as the chief consideration in such herds is to produce cows that shall be profitable at the pail. These are the kind of bulls the dairyman should buy who has grades of the same breed or just common cows, Large production intensely bred in the bull's ancestors should be sought after in purchasing a bull for a grade herd or common cows.—T. J. Julian in Ottawa Valley Journal.

Fever Sores.

Fever sores and old chronic sores should not be healed entirely, but should be kept in healthy condition. This can be done by applying Chamberlain's Salve. This salve has no superior for this purpose. It is also most excellent for chapped hands, sore nipples, burns and diseases of the skin. For sale by all dealers.

Throw Away Your Drugs

Dr. McLaughlin's Electric Belt Will Make You Strong and Well

That's what a man does with his bottle of medicine as soon as he begins to feel the effects of my Belt—turn it down the sink spout.

If you want a stimulant, take whisky. If you want permanent health, strength and vigor, fill your nerves with electricity. Don't drug. Drugs are stimulants, narcotics, antidotes and poisons, and you know these things don't cure.

Take an inventory of yourself. Seek the truth. Don't further wreck your nervous system and befuddle your brain with DRUGS, stimulants, but use that great, wondrous power, Electricity, as I apply it with my Electric Belt. No sensible man now uses drugs to build up his strength or to cure his aches and pains. Drugs are unnatural, and what is unnatural must necessarily be harmful.

The most eminent physicians and scientists of the world now agree with me that electricity is the basis of human vitality, and that we cannot feel well and strong unless we have a normal supply of it in our bodies. Electricity is the life of the nerves and of the various organs, and there is no way in which it can be applied that is so convenient and effective as with my Belt. Applied while you sleep, it directs a soothing, invigorating current, a glowing warmth through all the organs of the body.

If You Have Rheumatism, Nervousness, Backsache, Kidney, Liver and Stomach Troubles, or if You Have a Pain or an Ache, Etc,

My Electric Belt Will Cure You

It has made thousands of ailing men and women strong and healthy. It will do the same for you.

Auld's Cove, N.S., October 1, '09.

Dear Sir:—

I have worn your Belt for three weeks, and write to let you know that I find it very good, indeed. It has helped my heart. I can sleep better, and the weak spells are becoming less frequent and less troublesome, and I hope soon to be able to report a complete cure.

Yours very truly,
JAMES W. BARRIE.

Sussex, N.B., December 7, 1909.

Dear Sir:—

I have used your Belt now for about four months off and on, and it has cured me of stomach trouble, which I had for years. The pain left after I had worn the Belt for one month, and I have not had any since. I can recommend your Belt to any one to be a good article.

Yours, truly,
J. D. WHALEN.

My Belt, with especial Electrical attachment, will restore your vigor. It will check all loss of vitality, and strengthen every organ of the body. It cures Nervous Debility, Varicocele, Rheumatism, Lame Back, Lumbago, Sciatica, any case of Kidney Disease that has not gone as far as Bright's Disease, Stomach Trouble, Constipation. If you haven't confidence in electricity, let me treat you at my risk. I will give you the Belt on trial, without one cent of risk to yourself. All I ask is that you give me security for the Belt while you wear it and you can

Sturdy Elasticity

The wire for "Maritime" Wire Fence is imported direct from England. We have found that this English wire is distinctly superior. While stiff and hard it is not brittle, or as easily broken when subjected to a severe strain as the ordinary hard steel wire. It is real "live" wire, pliable and springy, capable of withstanding hardest usage and unaffected by any degree of temperature recorded in this country.

Will you let us mail you our **free catalogue** which tells more about Maritime Fence and its absolutely secure lock?

Leguminous Crops.

EDITOR THE MARITIME FARMER:—

Among the speakers of the fifth annual seed fair held at Berwick on January 19th, 1910 was Professor E. S. Archibald of Truro Agricultural College who addressed the audience on the subject of raising leguminous crops. He said that these crops consisted of beans, peas, tares, vetches clovers alfalfa and others akin to them.

There are many reasons why we should raise leguminous crops in preference to others. They make superior food for stock, as clover contains twice as much protein (a very essential element) as timothy hay. A second and more important reason is that legumes are not only nitrogen gatherers, but nitrogen consumers. Clover will take nitrogen from the soil and also has the faculty of gathering it from the air. Legumes, being deep rooted plants assist the air to permeate the soil thus making plant food available to a greater depth.

As cover crops, legumes are excellent, they save the nitrogen and return it to the soil when plowed under as humns. Orchards should not be left bare, otherwise the nitrates dissolve in the drainage, or are lost in the air as ammonia. Any class of cover crop will prevent the leaching of nitrogen and potash and aid in the retention of snow which is so benefical as a protection. Cover crops assist in ripening the wood of young trees in the fall by checking their growth. Although buckwheat is a good cover crop it is not so profitable as a leguminous one.

Some men allow the weeds to grow and say that if they plow them under, that they are as good as a cover crop. This bad method is not desirable. In the first place the weeds will not come up so evenly, or so thickly as a sowed crop, and this practice is conducive to the spreading of noxious weeds.

There are many failures in the raising of leguminous crops, one is owing to the lack of good seed which should be vigorous and bright as in any class of seed, samples containing noxious weeds should be discarded. To avoid bad seed, farmers should patronize the Canadian Seed Growers' Association, where they are certain to get pure bred seeds.

Lack of drainage is another reason why legumes fail to catch. It pays to underdrain sour wet land which by reason of its being water-logged cannot be worked as early as other soils. The result is that the crop is later in maturing and the yield will not be so great; no seed should ever be sown on wet ground, it is better to wait and let it dry out. Even sandy soil often has springy and wet spots.

A lack of good cultivation, and a deficiency of lime in the soil are two other reasons for unsuccessful legume culture. In districts where farmers are growing alfalfa for pasture, fifty per cent of them say that the soil needs lime. Where there are poor catches the grower should experiment on different sections of his fields with lime, nitro-cultures, or any of the manures. In peaty soils which are apt to be sour, lime sweetens and breaks down the tissue making good humus, it also frees the potash and makes it available. However it is not advisable to use lime until experiments have been made in small trial plots.

It pays to study the chemical constituents of crops and their requirements, and feed accordingly. For instance oats need, and have a difficulty in gathering nitrogen, while legumes find it hard to collect lime and potash which they need in large quantities.

In experiments at Truro, with fertilizers, muriate of potash alone gave practically no returns. It was concluded from these experiments that mixed fertilizers are the best, provided that the farmer mixes his own from high grade fertilizers. It is not profitable (for the farmer, with the agent is different) to buy mixed fertilizers as firms charge about four dollars per ton for mixing, which leaves room for fraud. The analysis on the bag is often mis-

USE I H C BINDER TWINE FOR SURE-STEADY-ECONOMICAL RESULTS

DON'T experiment with binder twine of low grade or unknown quality. Sisal or high-grade Manila, bearing the I H C trade-mark, should be your choice.

You can be sure that they will stand the necessary strain. They have the quality and quantity of fiber in them that insures strength to spare.

Even-spun, smooth-running, no knots, thereby avoiding tangles in the twine box and consequent waste. These qualities give even tension—which means perfect binding and perfect tying.

Inferior binder twine is dear at any price. It means not only waste of time and poor work, but a waste of the twine itself, possible loss of crop at harvest time; and it is not always full length to the pound. Every ball of I H C twine is

Guaranteed to be Full Length

And every ball runs smooth and steady so you can use all of it.

Remember, we sell grain binders. Naturally, therefore, we are more interested in the quality of twine you use than the twine manufacturer who does not sell binders.

Stick to Sisal or Standard Sisal 500-ft. twine. If you prefer Manila, you will economize by getting high-grade Manila 600-ft. or Pure Manila 650-ft. Don't be fooled by a low price. Low-grade Manila costs as much as high-grade Sisal, but isn't worth as much. 85 to 90 per cent of the farmers know. 85 to 90 per cent use Sisal and Standard. In any case, look for the I H C trade-mark to be sure of quality. Choose from any of the following brands:

Deering McCormick International

Better let your local dealer know well ahead of time how much you will need. Meanwhile, if you want more interesting facts on binder twine, write the International Harvester Company of America at nearest branch house for particulars.

Agents for the Deming Spray Pump—Send for catalogue.

DEPT. OF MILITIA AND DEFENCE, OTTAWA.

SEALED TENDERS (in duplicate) for the supply of Coal and Fuel Wood required to heat the Military Buildings at St. John, Fredericton, Woodstock and Sussex, N. B., for the year ending March 31st, 1911, will be received up to Monday March 7th next. Each tender is to be marked 'Tender for Fuel,' and addressed to the Secretary of the Militia Council, Ottawa.

Printed forms of tender containing full particulars may be obtained from the Secretary of the Militia Council, Ottawa, or at the office of the District Officer Commanding, St. John, who will furnish all information required.

Each tender must be accompanied by an accepted cheque, on a Canadian chartered Bank, payable to the order of the Honourable the Minister of Militia and Defence, for five per cent of the amount of the tender, which will be forfeited if the party making the tender decline to sign a contract when called upon to do so. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

EUGENE FISET, Colonel,
Deputy Minister of Militia and Defence.
Ottawa, February 4th, 1910.

(99—8—12)

Newspapers will not be paid for this advertisement if they insert it without authority from the Department.

leading. For instance it may be stated that there is so much available plant food, but the firm omits to say when those elements will be available. Ground leather meal may contain much nutriment, but it is not available for four years.

Nitro-cultures, if used to innoculate the seed, will also innoculate the soil. Each varietiety of legume has a different kind of organism living in nodules on its roots, which is able to gather nitrogen from the air; owing to this fact it does not follow that if one kind of legume will grow that another will be as successful on the same land. Legumes cannot be raised unless these organisms are available. The nitro-cultures which have been distubuted through the Annapolis Valley have not been as successful as they might have, had the season not been so dry.

After this address Professor Archibald answered many questions which were put to him. Among the things of interest Mr. L. D. Robinson asked for particulars regarding the scheme put on foot by the government to assist the farmers in understanding their land. In answer the professor said that it was proposed to let the farmers have a draining machine from the government if they paid for running expenses and a little more for wear and tear. Underdraining prevents winter killing and is the only salvation for heaving soil. The cost of this week is from twenty to sixty dollars per acre.

The writer remembers Professor Archibald's father once remarking in Professor Sears class that "trees would not flourish with wet feet." The son is eviently propagating his fathers theory. This was Professor Archibalds' first public appearance at Berwick, and his lecture was very favorably commented upon by those who heurd him.

EUNICE WATTS.

EDITORS NOTE:—Owing to an oversight on the part of our printers only the latter part of the foregoing article was inserted in our last issue consequently the article is published in full in this issue.

Hot Beds and Cold Farmers.

(Continued from page 236.)

bed with good, rich, mellow soil arranged so that it can be easily covered with sash or cloth cover in cold or disagreeable weather.

It is advisable when tender plants, such as tomatoes, are forced, to start them in the hot bed, then transplant them into the cold frame. This hardens them and prepares them for the trying ordeal of transferring to the open ground where they are to stand By means of the hot bed and cold frame tomatoes may be safely transplanted when they are in bloom.

Lettuce may be grown during the winter in hot beds. It may be started in the hot bed and transplanted in the open ground if desired.

When a number of hot beds are needed, as for the mardet garden, care should be taken to have them arranged in rows, conveniently located with reference to barn and garden. It is also necessary to have a southern exposure so that there will be a large amount of sunlight for the young plants.

The Prince Edward Island Provincial Seed Fair.

The Prince Edward Island Provincial Seed Fair will be held this year in Thomas Anderson's show room, Summerside, on the 9th, 10th and 11th of March. "The best in Canada" is the motto of the Committee who have the oversight of the preliminaries that go to make the fair a success. All the first prize grain will be offered at auction sale on Friday, March 11th at 11 o'clock a. m. After the sale of the first prize grains all other exhibits will be offered for sale. The owner, however, has the privilege of bidding in his own exhibits if he so desires.

The seed shown must be a representative sample of a quality which each exhibitor must offer for sale. For instance an exhibitor of buckwheat must have at least 2 bushels for sale, an exhibitor of wheat must have 2 1-2 bushels for sale, an exhibitor of oats must have 5 bushels for sale, barley 5 bushels, late potatoes 5 bushels and early potatoes 2 bushels.

No premiums will be offered for seeds containing impurities of a noxious nature. Prozes ranging from $4.75 to 30 cents are offered.

The prizes are drawn out to ten places as the competition promises to be keen. Any person wishing to procure good seed grain would do well to visit Summerside on the Seed Fair dates.

An interesting exhibit of Household Science articles will also be held in McNeil's building on the same days on which the Seed Fair is held.

Interesting addresses will be held in Market Hall and on the whole an instructive, interesting time is expected.

EUREKA

SANITARY CHURN

There's no comparison between the ordinary wooden churn and the "EUREKA". Barrel is stoneware—top is clear glass.

Besides being absolutely sanitary, the glass top enables you to see how the churning is coming along without opening the churn.

Also made with Aluminum top.

The "EUREKA" is the easiest churn on the market to operate. By tilting back the frame until the weight rests on the wheels, the churn can be quickly and easily moved—while the barrel remain upright.

If your dealer does not handle the "EUREKA," do not take a substitute but write us for catalogue.

10 A

EUREKA PLANTER CO. LIMITED, WOODSTOCK, ONT.

The **horse** does all the work, except holding the pole, with the **H. P. Spramotor.** It can be operated by either horse or hand. Has 8 nozzles at 175 lbs. pressure, which practically smoke the tree with spray. All automatic. The number of nozzles can be arranged to suit size of trees. The largest tree may be sprayed. Same price for 1 or 2 horses.

The **H. P. Spramotor** can be arranged for vineyards, row crops, strawberries or grain crops. The nozzles will not clog. **Agents wanted.**

Farm Problems.

Haematuria.

SUBSCRIBER, writes: Can you tell me what to do for a mare that passes red or very dark urine? She is not in foal.

ANS.—The disease is known as haematuria and may be due to renal calculi, degeneration of the kidneys. Highly colored urine is also seen in cases of indigestion, induced by feeding innutritious food, such as large quantities of pea straw, especially if over ripe and musty. The condition is commoner in cattle than horses, and, in cattle, all authorities agree that the disease is caused by food containing an excess of water and diminished proportions of flesh and fat-forming matters. To cure the condition, prepare the animal by giving wheat bran mash and wateronly, for 12 hours, then give a physic of eight drams of Barbadoes aloes, two drams of ginger and glycerine sufficient to form a ball, then for 24 hours after give only bran mash at feeding time and small quantities of water. After that feed well cured hay, some bran and oats, three times a hay, with three or four hours between each meal, that the animal cannot get any food. Give salt frequently or place so that it can be had at will. After physicing ceases, give gentle exercise at least once a day, preferably twice, for two or three hours at a time, and take two ounces of sulphate of iron, two ounces of gentain and two ounces of nux nomica, mix well and divide into 16 parts and give one part, night and morning, in food. If the condition is due to indigestion, this will improve it. A dessert spoonful of salt petre in food, once a week, will be beneficial.—J. STANDISH, V. S.

Lactic Acid—Starter.

W. A. S., writes: Can you tell me where I can get pure lactic acid for use as a starter in sweet cream? Can you tell me the best way to prepare one's own starter from sour skim milk? As I churn so often that the cream does not have time to properly ripen, I would like to receive some information re the above questions.

ANS.—By sending twenty-five cents to Bacteriological Department, Ontario Agricultural College, Guelph, subscriber may secure a pure lactic culture. It is sent out in powdered media, with full instructions for propogating in milk, until suitable to add to the cream. A more expensive culture can be secured from the laboratories of Chris. Hawsen, Little Falls, N. Y.

A home made culture or starter may be obtained in the following manner: Clean and thoroughly scald half a dozen pint fruit jars. Fill these two-thirds full with milk or skim milk, from different sources getting, if possible, a couple from fresh cows, milked in a cleanly manner. Place these jars where they will be at a temperature of about 70°, until the milk thickens, Select those having a smooth, solid curd, free from gas holes, and having no whey on top. Skim off the top of the milk in the selected jars and again examine for the best flavored sample. Choose the one having the best regulation and cleanest lactic acid flavor. Use this for propogating a larger amount of milk to be added to the cream. If the larger amount of milk is heated to 180 degrees and cooled to 65 degrees, before adding the culture from the jar, a greater surety will be secured in the work.—C. W. DOUGALL.

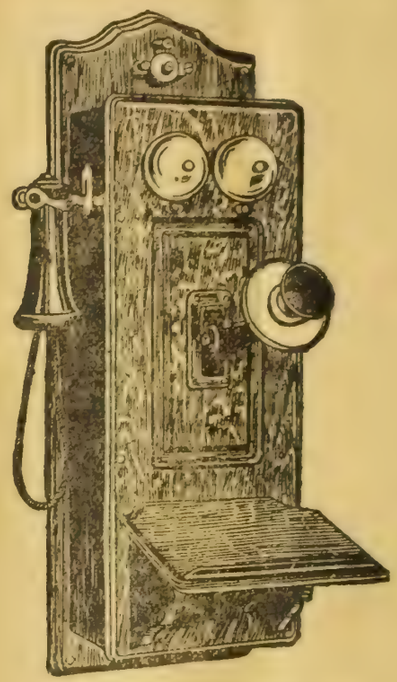
Home Made Cement Tile.

FARMER, PICTOU CO., N. S., QUES.—I realize the importance of drainage, but I find the price charged for small lots of tile is almost prohibitive for a farmer with small means, who does not wish to go in debt. Can a farmer make cement tile?

What is the cheapest method for performing the operation of manufacturing one's own tile?

TELEPHONES ON THE FARM.

The telephone is widely recognized to-day as a necessity on the farm Means of quick communication are as necessary to the farmer, both in his business and in his domestic life, as to the city man. Probably a telephone is a greater convenience and of more direct value to the farmer than to the man in the city.



WALL TELEPHONE, MAGNETO TYPE

DIP YOUR SHEEP

Stockmen and farmers who use the Cooper Dips have healthier animals—get more wool and better prices. More than half the cloth and flannel of the world is made of Cooper dipped wool. Tanks supplied at cost to all users of the Cooper Dips.

COOPER'S POWDER DIP

The leading sheep dip for 65 years. Used on 250 million sheep every year. Kills ticks, lice, nits and eggs in one dipping. Does not stain the wool, but increases the yield and improves the quality.
Prices 25 gal. pkt. 50c., 100 gal. pkt. $2.00.

COOPER'S FLUID DIP

for all animals. A highly concentrated, non, poisonous fluid dip of marvellous strength. Mixes readily with cold water, whether hard, brackish, or salty. The only pure liquid dip—no sediment. Goes farther than Coal Tar dips and, therefore, cheaper. Positive remedy for scab, mange, ticks, lice, ringworm, eczema, sores, bites, stings, etc. One gallon makes 200 gallons for general dipping, or 300 gallons for disinfecting.
Price—Qt. can 75c. 1 gal. can $2.00, 5 gal. can $8.50.

COOPER'S WORM TABLETS

A sure remedy for intestinal worms in Horses, Sheep, Cattle and Hogs. These tablets offer the great advantage of correct doses and certain results. Dose—one tablet for lamb or shoat, two for sheep or hogs, three for horses and cattle.
Price—10 tablets 20c. postpaid, box of tablets, 200, $1.00, postpaid.

COOPER'S "LAVENE"

The most effective skin dressing for Horses, Cattle and Dogs. Cures worst cases of Mange and Ringworm at one dressing. Searches the skin and attacks the disease at its root. Improves the coat and renders hair soft and glossy. Is used by many of the best breeders in preparing animals for show.
Price Qt. can $1.00. Gal. can $3.00. CANADIAN DRUG CO., LTD., ST. JOHN N. B.

The following article on Home-Made Cement Tile appeared last year in the Canadian Horticulturist. It answers our correspondents enquiry very fully :

"Oftentimes, when fruit or vegetable soils need underdraining, the work is neglected on account of the cost of tile. Many undrained soils would be drained if tile could be made at home. Ordinary six-inch tile costs about $45 per 1,000, and even at that high price they can scarcely be had. Brickmakers say they are not convenient to make, as they take up too much space when drying.

"These tiles can be made at home at odd times in winter and spring. Such work is a good means of profitably employing labor in the slack season, and of retaining skilled help, that otherwise might be lost. Mr. C. E. Secord, of St. Catharines, makes his own tiles, and makes them of cement, at a low cost of $15 per 1,000. During a recent interview he showed the writer the apparatus, and explained how the work is done.

"The bottom of the apparatus is a 3-inch plank, about 12 inches wide, and any length desired, say 18 feet. A heavy plank is used so that there will be no 'spring' or 'give' when weighed with the tiles. On this plank is placed a number of circular pieces of sheet iron (the bottom of the moulds), 8 inches in diameter, with a small hole in the centre, sitting on a pin, or brad, driven into the plank, 12 inches apart, and protruding upwards about two inches. Around this sheet iron disc are a number of stout wire brads, driven into the plank to hold the mould in place.

"The mould consists of an outer 'shell,' made of two pieces of common sheet iron, 12 by 15 ins. each, and a central 'core' of solid wood, a cylinder 6 ins. in diameter and 15 ins. long. Such a mould will turn out a 6-inch tile with an outside diameter of 8 ins and 12 ins. in length. The outer 'shells' are bent in half circles, overlapping, and placed at the bottom, within the circle of brads on the plank. At the top they are held in place by an inch board with holes cut 8 ins. in diameter and properly spaced, that is, 12 ins. apart from centre to centre. The holes in this board fit over the upper ends of the 'shells.' Within each shell is placed a 'core,' the bottom end of which, being bored, sits over the central pin on the plank. The core protrudes 3 ins. above the mould for ease in handling, and so that it can be twisted occasionally to make the inside of the tile smooth.

"The mixture is made up of equal parts of fine sand and gravel, about the size of wheat kernels, and one-sixth Portland cement. This is mixed in the ordinary way, but not too wet. When the mixture is prepared, it is put in the moulds until they are about half full, then 'tamped' or pounded well. Then the remainder is added, 'tamped' again, and the top levelled off and smoothed. The moulds are allowed to 'set' for about 24 hours, after which they are removed, dried and stored until ready for use."

Seed Mixture for Permanent Pasture.

SUBSCRIBER, SALISBURY, N. B., QUES.—I am ploughing up some old sandy meadow and want to sow oats in the spring. The land has a good slope to the sea wall and looks as if it would be hard to grow any crop on it. I expect to fertilize it well with rockweed in the spring. What seed or mixture of grass seed would you advise me to sow for permanent meadow ?

ANS.—Would not advise your trying to seed down for permanent pasture on this land if at all possible to follow a rotation thereon. Results would be very much better than if sown to grass permanently. For rotation, the best mixture would be red clover, 10 pounds; timothy, 10 pounds per acre. If, however, you feel you must sow permanent pasture seed thereon, I would recommend Dutch clover, 2 pounds; timothy, 5 pounds; brome grass, 5 pounds; Western rye grass, 5 pounds; Kentucky blue grass, 5 pounds. This thoroughly mixed together and sown at the rate indicated per acre.

It will be absolutely necessary to give thorough preparation for seeding. The field should look as level and smooth as a perfect onion bed before attempting to sow any grass seed. The nurse crop, if any, should be sown rather thinly, say two-third of the usual seeding per acre. The grass should be divided into two equal parts, one-half sown lengthwise and the other half sown crosswise, then harrowed with a light harrow and rolled.—J. H. G.

The fence that's strong all through

Every wire in our heavy farm fence is No. 9 hard steel, with uniform strength and lasting qualities in each strand. A fence with any small or soft wire in it is short lived. A chain is no stronger than the weakest link. Then PEERLESS Fence made from English wire is rust-proof—that withstands more than double the endurance of other makes.

Peerless the fence that saves expense

The PEERLESS does not cost anything to keep—there are no repair bills—it is not affected by changes of temperature. The horizontal wires being crimped makes ample provision for all contraction and expansion. PEERLESS Fence, once well stretched, is always tight—no shock affects it. We are manufacturers of high grade farm, poultry, ornamental fencing and gates. Write for Free Book, a sample of PEERLESS Fence and a simple method of testing any make of fence.

Think Only of Permanency

When buying fencing FORGET about the NOW cost. Do as the railways. Think only of PERMANENCY. Select the fence with the quality, weight, stiffness and strength to give longest service. And three or four years from now you will shake hands with yourself because you were shrewd enough to see eye to eye with the railways and buy IDEAL woven Wire Fence.

This Lock makes "IDEAL" FENCE Strongest in Existence

No fence has a simpler lock than the IDEAL. Yet the railways have proven to their entire satisfaction that the IDEAL lock has the greatest gripping-tenacity. Other things being equal, the impossible-to-release grip of this simple lock makes IDEAL fence strongest in existence. But other things are not equal. IDEAL Woven Wire Fence has the best quality of hard drawn elastic steel wire laterals. It has the stiffest uprights. The galvanizing is the smoothest and heaviest—most rust-proof. The scales prove IDEAL the weightiest woven fence. What further reason do you need to prompt you to buy IDEAL fence? Well, here is another: IDEAL Fence will cost you no more than other fences that you will not buy if you think only of permanency. Our fence and gate booklet shows different styles for horses, cattle, hogs, etc. Write for your copy.

JOIN OUR STAFF OF AGENTS and increase your income. The weight, quality and strength of IDEAL fence make it easiest to sell.

THE McGREGOR-BANWELL FENCE CO., LIMITED, WALKERVILLE, ONT.

Preparing Wool For Market.

Young Breeder, Antigonish Co., N. S. Qus.—What is the best way to prepare wool for market so that one may realize the best available price for it?

Ans.—The price of wool may be lowered or increased by the condition it is in when marketed. The condition of the wool at marketing time should be uniform throughout. If it is to be washed on the sheep's back see to it that the sheep are washed so that the wool will be clean, and do not let them run until the wool contains as much grease and dirt as it held before the sheep were washed. Tags should not be tied up in the inside of fleeces, but sold separately. If wool is to be shorn unwashed, the same care ought to be taken to keep the fleeces free from tage and use all diligence in keeping all foreign substances from the fleeces.

The question of tying the fleeces is also to be carefully considered. Use twine which will not damage the wool. Never use binder twine, as the fibres of sisal refuse to take color, and in sorting wool these sisal fibres cost the manufacturer much trouble and annoyance. Coarse, loose twine of any kind should not be used. Use a small linen or hemp twine, putting one string around each way of the bundle. In tying spread the fleece out on a clean floor with the outer ends of the wool up. Fold the skirts of the fleece in towards the centre only a trifle at each end, but considerable on the sides, so that the sides lap well, and roll the fleece from end to end making a short cylindical roll of wool. When rolled this way a small hemp or linen twine run around the roll a little distance from each end will do. Some fleeces are tied with a roll of wool, a plan that is not to be recommended as it does not leave the fleece in good condition and binds it too closely in some places; besides it leaves the fleece in the best possible condition to get torn. Keep out the tags, put all the wool and nothing else into the roll and tie up as described above, and you will get all for your wool which the market will allow.

MARKETS.

St. John Prices.

GRAIN.—Oats, 50 c to 55c.

DRESSED MEATS.—Beef (carcass), 5½c to 9c; beef (retail), 8c to 20 c; mutton, 5c to 8c; veal, 7c to 10c; lamb 7c to 10c; pork, 10½c to 11c.

DAIRY PRODUCTS.—Creamery butter, 25c to 28c; dairy butter, 20c to 24c.

POULTRY AND POULTRY PRODUCTS.—Eggs 25c to 27c: fowl, 70c to $1.50; chickens, 75c to $1 50; ducks, 90c to $1.40; turkeys, 23c to 25c.

FRUIT.—Apples, $2.00 to $4.50

VEGETABLES.—Carrots, $1.20 to $1 50; potatoes, $1.25 to $1.50; turnips, 65c to 80c; beets, $1.50.

Charlottetown Prices.

Apples per barrel, $1 75 ot $4.50, according to quality and variety. Quite a few Ben Davis are being packed by the Co-Operation Fruit Packers Association for the English market.

Mutton, if for supply, worth 7c to 8c per lb.

Pork, supply kesps up and receipts have been good. Prices are at top notch that has been reached so far as we can remember. Select hogs worth 10¼ worth ¼c extra if dressed for inspection with usual discounts for heavy fats.

Eggs, the mild winter has kept supplies coming forward and as shippers are not willing to take risks of delivery at destination the business is confined principally to the retail stores. They are paying about 25c per doz, but a slight increase in supplies would glut the market.

Butter, the market has been well supplied and lately the prices has been easier. Choice farmers separator butter selling to-day at 20c to 21c and ordinary dairy is hard to dispose of at 18c to 19c. Creamery solids have also been lower and we know of one lot of choice creamery tubs being sold at 23¾c although most factories are holding at 24c to 24½c.

Oats, the supply of oats in store is small and deliveries very light and prices are strong, white selling as high as 43c and black at 45c although one cent less is the general quotations.

Hay, pressed hay is in very limit supply on the market here although there is quite a lot in the country but the continued bad roads has prevented deliveries and as the prices has been advancing farmers are in no hurry to sell. We quote $10.50 to $11.50 for best quality although it might not be easy to dispose of a large quantity at the outside figure.

Poultry, fowls and cickens are about the only

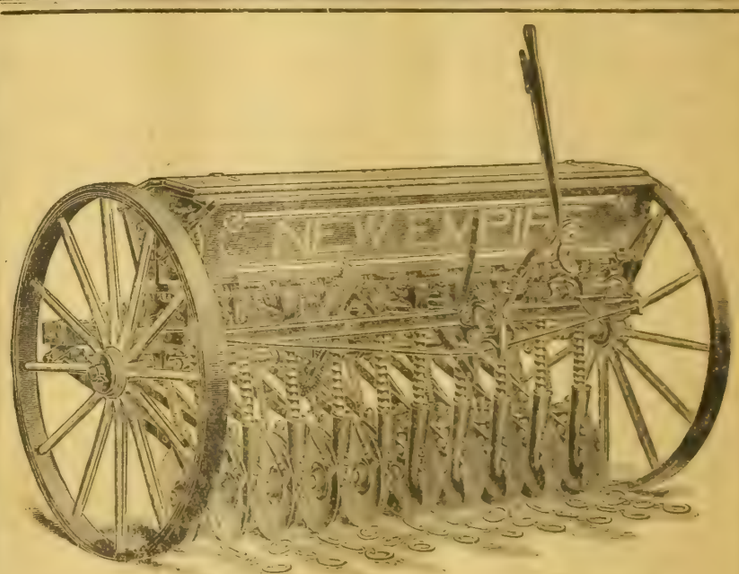
The Fraser Machine & Motor Co., Ltd., New Glatgow, N. S



Empire Fertilizer Drills.

When you buy a Grain Drill, do not purchase an experimental machine, that no one knows whether it will sow right. A Grain Drill should be able to sow all known grains and commercial fertilizers in any quantity desired and sow them right. There is no one tool on the farm that plays such an important part in the final results, the harvest—as does the Grain Drill. If the machine skips and bunches the seed and does not sow all the seed at an even depth in the soil, and an equal amount of seed in each furrow, how can the farmer expect to get a fruitful yield of high-grading grain

The Empire Drill has been on the market for more than half a century and it is used by the most progressive and successful farmers in all parts of the grain-growing world. This is ample evidence that the Empire is all right. Because, if the machine would not do the work as it should be done it would never have survived—it would not be manufactured to-day. Empire Drills will sow all brands of commercial fertilizers, no matter how obstinate, in wide range of quantities. Every grain feed sows exactly the same as its neighbor, plants the seed in properly prepared seed furrows at an even depth in the soil, an equal amount of seed in each trench without skipping or bunching Even sowing means even growing, even ripening, and a proper high grading crop. We want you to see the Empire Drill, See how well it is made, how easy to operate, how simple it is and what choice materials enter into its construction.

Bligh & Prince, **Agricultural Implements and Carriage Dealers,** Truro, N. S.

Exclusive Agents in Nova Scotia for Empire Grain and Fertilizer Drills.

kind offered and are worth 10c to 12c according to quality.

Potatoes are about the only kind of vegetables procurable at present except from the retailers at this season and as the quality was so bad last fall the dealers put in small stocks, consequently any that come out at present find ready sale at the retailers at good prices, 40c per bush being paid, but shippers will not touch them at any such prices.

Halifax Prices.

FEEDSTUFFS.—Bran, $24.00 to $25.00; shorts, $26.00 to $27 00; middlings, $27.00 to $28.00; corn meal, $1.70 to $1.75 per bag.

DRESSED MEATS.—Beef, (carcass) 8c to 9½c; beef, (retail) 12c to 20c; mutton, 6½c to 7c; veal, 6½c to 7c; pork, 10c to 10½c.

HORSES.—Drafters, $250.00; roadsters, $200.00; carriage, $150.00.

DAIRY PRODUCTS.—Creamery butter, prints, 28c to 29c; solids, 26c to 28c; dairy butter, prints, 24c to 25c; tubs, 22c to 23c; cheese, large, 13c to 13½c; twins, 13½c to 14c.

POULTRY AND POULTRY PRODUCTS.—Eggs, 27c to 28c; fowl, 75c to $1 00 per pair; chickens, $1.00 to $1 25 per pair; ducks, 16c to 17c per pound; geese, 16c to 17c per pound; turkeys, 22c to 23c per pound.

FRUIT.—Apples, $1.50 to $3.00; cranberries, $7 00 to $8.00.

VEGETABLES.—Carrots, $1.25; potatoes, $1.50; turnips, 90c to $1.00 per bag; beets, $1.60 per bbl.

MISCELLANEOUS.—Hay, $12 50 to $14.50; straw, $9.00; wool, 21c; calf skins, 15c to 18c; sheep skins, 80c to $1.00; beef hides, 10c to 11c.

There is slightly a firmer feeling in the butter market owing to increased enquiries in Montreal for creamery solids for western shipments, local receipts of creamery are light and will not increase to any extent until middle of March. Dairy butter is still coming forward in large quantities and of only fair quality, receipts almost exceed demands.

Cheese, the market has advanced half cent per lb. and will in all probability go higher as Montreal reports continued export enquiries and stocks held here are light

Eggs, owing to the mild weather, receipts are increasing and on account of no interruption to navigation with P. E. I., the trade here have been able to bring forward fresh laid from P. E. I. each week thus keeping the market well supplied, in fact receipts during the past week were too heavy for local market and several shipments of considerable size were made to Quebec. Limed stock is exhausted and if continued cold weather should set in higher prices would be looked for.

Potatoes and other vegetabtes are very quiet. Collections are reported very poor for City but fairly good in country.

D. S. B. Exhibition Grants.

The Executive of the Shorthorn Breeder's Association which met recently in Toronto proposed that the following grants be made for exhibitons,

Ontario, at Toronto, $1,000.
Ontario at London, $250.
Ontario (Winter Frir), at Ottawa, $125.
Manitoba, Winnipeg, $300.
Manitoba, at Brandon, $300.
Alberta, at Calgary, $300
Saskatchewan, at Regina, $300.
British Columbia at Victoria, $50.
Quebec, at Sherbrook, $160.
Maritime Provinces, at Halifax, $50.

The grants are made subject to the condition that the executive shall be satisfied that the animals winning prizes are recorded in the Shorthorn herd book, that they are the property of the exhibitors at the time of the show, and that the Secretary receiving the grant shall contribute an equal amount toward Shorthorn prizes.

A PLEA FOR MARITIME PROVINCES.

F. L. Fuller, of Nova Scotia, desired to see the grant of the Maritime Provinces increased beyond the figure of $50 provided for in the report of the executive He said breeders in the Maritime Provinces had some years since given up their records and joined in the Dominion herd book It was hard to convince some of the people that this should be done, and he wished liberal treatment accorded to Maritime Provinces on that account.

Capt T. E. Robinson, who presided, pointed out that the total grants for all fairs were $3,000. If this sum were devided according to the paid-up membership in each Province, it should be appropriated as follows: Ontario, $2,038; Manitoba, $476; Alberta, $153; Saskatchewan, $164; Quebec, $86; British Columbia, $24; and the Maritime Provinces, $68.

It was further pointed out that the executive had proposed that a special grant be made to the Dominion Exhibition to be held at St. John, N. B., This year if deemed advisable.

The recommendation of the executive in this particular was approved and on that understanding the regular grants for fairs were allowed to stand as recommended by the executive.

During the discussion there was a rather sharp passage between Robert Miller of Ontario and C. A Archibald of Nova Scotia.

Mr. Miller said in times past, when more liberal grants had been given the Maritime Provinces, complaint had been made there that professional show men went from one show to another and took in all the prizes.

"Who gets them here ?" asked Mr. Archibald "Professionals or amateurs ?"

"Many a dollar is lost by putting off until to-morrow. Send for catalogue to-day."

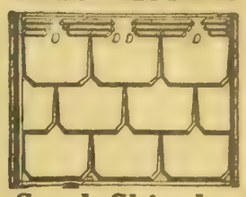
EASTLAKE



Steel Shingles

No building material like this— "METALLIC"

is superior in every way. It is most economical—is easy and quick to lay or erect, saving expensive labor, and lasts a lifetime without continual repairs. Lightning, rain, wind or snow has no effect on "Metallic"—it is WEATHER, FIRE AND RUSTPROOF, the best material for all buildings.

Look over this list—all made from the finest quality sheet steel

"EASTLAKE" METALLIC SHINGLES. On buildings for 25 years, and still in perfect condition.

"METALLIC" CEILINGS AND WALLS. A handsome, sanitary decoration—lasts a lifetime.

"METALLIC" ROCK FACED SIDING. In brick or stone design for houses.

"MANITOBA" STEEL SIDING. The best for large buildings, elevators, mills, storehouses, etc.

CORRUGATED IRON—GALVANIZED OR PAINTED. For implement sheds or barns, fireproof and durable.

You should read our interesting booklet "EASTLAKE METALLIC SHINGLES" and our new Catalogue No. 70. A post card with your name and address will bring them to you at once.

The MARITIME FARMER

Sussex, New Brunswick

The Tuberculin Test.

Subscriber, Hants Co., N. S.—QUE. How is the tuberculin test conducted? Is milk from an infested cow considered safe to use?

ANS.—The Tuberculin test is conducted as follows: The tuberculin can be got from the Department of Agriculture, Ottawa. The temperature of the cow is taken and recorded 3, 6 and 9 hours before injection. The seat if injection (neck and shoulder) is disinfected with a 5% solution of creolin. About 60 drops of the dilute tuberculin is injected with a hypoderinc syringe. In 9 hours the temperature is taken, and then every three hours for 18 hours.

If the temperature increases 2 degrees or over above the highest point reached before injection, she is tubercular. If increase of temperature is noted she is free from disease. The milk from a diseased animal is not considered safe to use.

A Mating Query.

NOVICE, N.S., QUES.—Will the FARMER please tell me how long the male bird should be with the flock of hens before the eggs will be suitable for hatching?

ANS.—Authorities agree that four days after mating males with hens the eggs will be fertilized if the birds are adapted to one another. It is safer to have them mated a week and even better to have hens and males acquainted for several weeks by allowing brief runs together. When the male takes a dislike to one or more females confined with him, it will be best to remove offending hen or hens from the pen, in order to avoid having infertile eggs.

Making Butter For the Overrun.

The overrun from cream is usually about 18 per cent and 100 lbs. of cream testing 24.5 per cent fat should make about 29 lbs. of butter. If you get the overrun for making the butter, you would receive 29 minus 24.5 or 4 1-2 lbs. of butter per 100 lbs. of cream testing 24.5 per cent fat. If butter is worth 30 cents per lb. you will receive $1.35 for making 29 lbs. of butter, which is at the rate of 4.6 cents per lb. for making. If the price drops then the amount received for making will be less. You can easily calculate what it will cost for butter at any price by multiplying the lbs. of overrun by the price per lb. of butter.

N. S. Farmers in Annual Convention.

(Continued from page 235)

with ragwort, therefore we, the Farmers' Association, in session at New Glasgow, recommend that the Dominion Government, having already done considerable work along the line of investigating the noxious weed question, be memoralized through our federal representatives, requesting that board to establish an Experimental Sheep Station somewhere in Eastern Nova Scotia, with a view to stimulating the sheep raising industry.

F. C. LAVERS,
W. J. WALSH,
ANDREW MCPHERSON,
PROF. M. CUMMING.

Resolved that this Association request the Department of Agriculture to prepare circulars, giving the life history of the harm done by and the best methods of exterminating the destructive insects and fungus diseases in our province, and circulate the same among the farmers through the County Associations and Agricultural Societies.

Invitations for the 1911 meeting were received from Yarmouth and Windsor and the matter of choice was left with the executive.

After votes of thanks were extended to the various persons, who had helped to entertain the Association, the convention, which was a success in every respect, came to a close.

FLORICULTURE.

All inquiries in this department will be answered by H. E. Goold, Florist, Sussex, N B.

Easter Flowers.

Easter is a festival which seems not to have been properly observed unless church and home have been decorated with beautiful and seasonable blossoms. This association of Eastertide and flowers grows stronger from year to year, and with each new season the markets are taxed more and more to fill an increasing demand. Many persons willingly deny themselves little luxuries for weeks ahead that they may be able to purchase some potted favorite for their homes at Easter.

The Easter Lily is queen of the flowers at this season and her pre-eminence is never questioned. The popularity of the Lily for church decoration never wanes, but rather grows greater and greater from year to year. Lily culture has become a very important department at all modern conservatories and the greatest care is taken that the plants shall bloom just at the proper time.

The Rose is another flower that is always a favorite and for which there is always a steady demand at Easter. This year very large orders are being taken for the various varieties.

Carnations of every shade and color hold a high position in the popular esteem, not only on account of their natural beauty, but because of the exceptionally long time that they keep fresh and sweet.

One of the loveliest and sweetest flowers that is procurable at Easter are the English Violets. There are many who would prefer a bunch of Violets to a dozen of the choicest Roses procurable. If it is allowable to speak of fashionable flowers, the Violet is greatly in vogue at present. Another great favorite is the Lily-of-the-Valley, with its pure white blossoms. The delicate perfume is more suited to the house than many others, so this Lily and the English Violets are sold a great deal together for personal use.

The great masses of flowers raised at this time are intended for church decorations. All the above flowers find a place in the altar decorations, as well as the Hyacinths, the Tulips, the Arolias, the Daffodils, the Primrose and the Spireas. Hundreds of these blooms, potted and cut, are used to beautify our holy churches for the grand festivals.

A look through the hot houses of any of our florists just now is enough to make one decidedly envious. Everything is at the height of its beauty, creating a most beautiful effect.

FERNS, A., writes: To settle an argument, please tell us the difference between the Whitmanii and the Pearsonii Fern, if any.

The Pearsonii was sent out nearly ten years ago by the T. R. Pearson Co., of Torrytown, on the Hudson, it being one of the earliest permeated sorts from the Boston Ferns. It is of course habit with a decided tendency to revert to the parental type. The Whitmanii is a somewhat later production of H. H. Barrows, of Whitman, Mass. It is of fine, compact habits, seldom shows any tendency to revert and is a very satisfactory house Fern. The Pearson Co. have a very similar Fern (Superbissima) that is a far better Fern than the old Pearsonii, which, by the way, is practically out of existence to-day.

YOU NEED A BUSINESS EDUCATION

If you wish to remain on the farm you need a thorough training in Bookkeeping, Rapid Figuring, Arithmetic, Writing, Letter Writing, English and Banking.

NO FARMER CAN BE REALLY SUCCESSFUL, who lacks this practical commercial training.

Do You Want to Enter the Business World?

You must have a thorough business training. We offer you, right AT YOUR HOME, a MORE COMPLETE BUSINESS EDUCATION than you would get at any Business College, and it will cost you about 1-3 as much. Read the following testimonials from one in your own part of the country. THIS IS PROOF.

Qualified for a Position

Parkdale, Lun. Co., N. S., July 4, 1907.

GENTLEMEN:—

It is with pleasure I state my perfect satisfaction with your course in Shorthand and Typewriting. I have found your study papers amply lucid, without sacrificing, in the least, the essential quality of conciseness. I have pursued the course with increasing interest and pleasure, and now find myself QUALIFIED FOR A POSITION IN AN OFFICE AT ABOUT ONE-THIRD THE COST OF A RESIDENTIAL COURSE.

Wishing you continued success and many students, I am,

Sincerely yours,
VERNON B. RHODENIZER.

Placed in a Position

Winnipeg, Man., Oct. 12, 1907

GENTLEMEN:—

I beg to advise you my address is changed from Parkdale, Lun. Co., N. S., to the above, for the present.

You will pardon me for neglecting to inform you of my successful location before.

I arrived in Winnipeg Saturday, August 24th, started work Tuesday, 27th, on the strength of your letter of recommendation alone, not even having to show my diploma.

THANKS TO YOUR EXCELLENT TRAINING, I am filling a position in C. P. R. office at $55 00 per month, even though they use the Empire Machine, while I learned the Underwood.

I CAN TAKE MY NOTES WITH EASE AND SHALL ALWAYS BE GRATEFUL FOR YOUR VERY EFFICIENT TRAINING. With best wishes, Yours respectfully,
VERNON B. RHODENIZER.

What we have done for MR. RHODENIZER we can do for YOU.

Write to day for our booklet on "Commercial Education"—it will give you full particulars. Address:

Lansing, P. O., Ont.

The PUBLISHER'S DESK.

HONEST VALUES.—We draw your attention to the advertisement of J. H. Connor & Son, Limited, of Ottawa, Ontario, in this issue. Mr. J. H. Connor, over 30 years ago, to supply a local demand, commenced the manufacture of a Washing Machine. The line was gradually added to until to-day their business reaches from coast to coast, and they have a variety of a dozen different styles of Washers and over thirty varities of Wringers. The success of the firm is due to the high quality of goods which they turn out, and their guarantee to give satisfaction in every instance. They have a well established reputation for "Honest Values" and we heartily commend them to our readers.

HOW TO BUY WIRE FENCE.—The great enemy to long life in a wire fence is rust. Examine some of the fence in your neighborhood and you'll find that in most cases where it has broken down rust is the cause. The galvanizing on a wire fence should protect it from rust. It will do if it is the right kind of galvanizing. The Banwell Hoxie Wire Fence Co., Ltd., Makers of Peerless Fence, believe that their fence will last longer than any other fence made. They believe this because they have put the wire to the most severe tests, and it has stood them all. In fact, they are so confident that the galvanizing on the Peerless Fence will protect it from rust and corrosion that they are willing to send anyone interested a sample of their wire and a simple formula for testing it. Anyone thinking of buying a fence should write the Banwell Hoxie Co., Limited, at Hamilton, Ont., and get this formula, than they can know if the fence is going to wear before they buy.

THE BEST TRAIN SERVICE AT REASONABLE RATES.—"Collier's Declares I. C. R. Dining Cars Preach a Sermon.—The Canadian editor of "Collier's" in last week's issue, thus sums up the advantages the people are receiving from the Government operation of the Intercolonial Railway The last thing a people-owned railway should try to do is make money. It should give good service, run fine passenger trains, charge reasonable freight rates and seek to pay expenses. All this the Intercolonial does. Even its deficits are to be counted to it for gain They show that it is not robbing the people to fatten balance sheets. The Intercolonial is an object-lesson in altruism to other railways that are not managed on such high principles It is a good thing and our own, and Canada does not want to part with it. Even its dining-cars preach a sermon, which is that, in these days, when meat is a luxury for the rich and butter is worth its weight in gold and eggs are more precious than rubies, the best table d'hote dinner on the continent can be put up for a dollar.

STATEMENT BY MR. DYER.—My attention has been called to a recent article in a New York daily newspaper which has been widely copied, and wherein it stated that the future of the phonograph was not very bright. This article is entirely misleading and does not accord in any way with the views of myself or anyone connected with the Edison Companies. The future of the phonograph was never so bright as at the present time: in fact I feel that the surface has hardly been scratched. Orders are coming in so rapidly at the present time that we are not able to fill them promptly and the sales are entirely satisfactory. The fact that we are just starting in with the Amberola and a full line of Grand Opera Records is certainly an indication that so far as we are concerned the future does not have to be questioned. If any one of us had the slightest doubt as to the future of the business, why should we be spending hundreds of thousands of dollars each year in advertising and a corresponding amount in the development of new lines and in experimental work? In connection with the very article under consideration, it is interesting to inquire why, if Mr. Edison has any doubt as to the future of the business, he should be willing to spend $155,000.00 in cash to acquire a minority stock interest? The whole transaction was simply this, that in the early days of the phonograph business this particular minority block of stock of the Edison Phonograph Works was acquired by outside interest, and was later put up as collateral to secure the issue of bonds of another independent company (not controlled by Mr. Edison) having rights in certain foreign countries, and on which the interest payments were defaulted. These bondholders were anxious to realize something from their investment and Mr. Edison was willing to buy the stock, so that the transaction was consummated. The Edison Phonograph Works, as persons familiar with the business know, is a separate company located at Orange and engaged only in the manufacture of machines, which are turned over to and are distributed by the National Phonograph Company. The National Company manufactures all Edison records and sells directly to the trade. The National Company in assets, property and amount of business done is immeasurably larger than Edison Phonograph Works. The purchase of this block of stock by Mr. Edison was a personal matter and has no direct bearing on the phonograph business, other than showing his confidence and a desire to withdraw the stock from litigation.

POUNDING THE INTERCOLONIAL.—A most extraordinary and incomprehensable event during the past fortnight was the motion of Dr. Black, in the House of Commons regarding the I. C. R. We have never been able to understand why these attacks on the efficiency of the Intercolonial should be made from time to time. Whether it is that the Government are anxious to get clear of the road and are preparing the public for it by letting the backbenchers criticise the management, or whether the backbenchers do it of their own initiative, we have no idea But we know that if the average small shipper through the country, and the jobbing trade at the distributing points along the I. C. R. only appreciate how much better service they are getting not than they would ever be likely to get from a company-owned road, they would not sit passively back and let this sort of thing go on.

Mr. Carvell, speaking on the question in the House of Commons, spoke of the freight rates from St. John to a certain point west as compared with the rates from St. John an equal distance east. And it is not only a question of cheaper rates, but passenger service as well. We doubt very much if there is a country of similar population anywhere on this side of the water with a better passseger service relatively than we enjoy in the Maritime Provinces. We are quite willing to admit that a Government owned road has not the same free hand in building up industries along the way as a company-owned road; but it has other compensations. We should like to see the other trunk lines getting running powers over the I. C. R into the province of Nova Scotia, but we do not believe in abandoning the railway—that is, unless it can be shown to be a hopeless failure and a burden on the country.

As for the present management of the I. C. R, under the Commission, we have taken pains since the beuinning of the year to make enquiry among people who come close in contact with the railway at nearly every point from Halifax and St. John to Montreal, and the universal opinion seems to be that there has been an improvement. Why then should any of our own local members seek to "knock" the I. C. R.? There is no answer that we can think of. We might understand this in a Western man who does not come in contact with the direct benefits of the road, and has not a full understanding of the value of it to the country. But in a Maritime man it seems almost unpardonable.

We have no serious transportation problems in the Maritime Provinces. If we had such problems for marketing goods as are met with the far west of Canada and in the Western States, where people can only get their products out over one line of railway, we might have something to complain about. But in these provinces, where our staple exports are apples, lumber and fish, if need be we are independent of railway people altogether.

There is nothing that we have said to leave the impression that we are against the entrance of company-owned roads in Nova Scotia. On the contrary we would welcome the C. P. R. and every other road that could get running rights over the I. C. R. And we dare say that if the C. P. R. eventually comes to Halifax, this will be the way by which it will come.—Maritime Merchant.

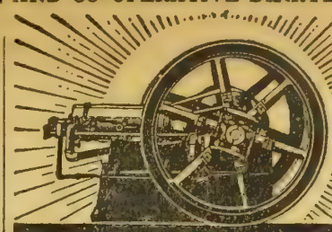
AN I H C GASOLINE ENGINE THE BEST HIRED MAN



THERE'S no doubt about it. Thousands of farmers have proved and are proving every day that one of the simple, dependable I H C gasoline engines makes and saves more money for them than the best hired man they can get.

Don't let the up-to-date farming ways get away from you.

You can make your I H C engine work when and where and as long as you please. It is something you can own. It is all yours. You don't have to talk to it about getting up early or argue about quitting time. It is always ready and willing—just as well pump a tank full of water after dark as in the daytime. It is ready to start the saw, pump or any other machine going before daylight, if you are.

If you have a full day's work for it at grinding, you will get more out of it than you would get out of a half dozen hired men It's just the same with all kinds of work. Your I H C gasoline engine will work with all your machines—will push them—keep them going steadily—make them really valuable to you. You have nothing to pay it in wages; no fear that it is growing tired and thinking of quitting you. Its only requirement for its faithful service all day—every day or night—is a small amount of oil and gasoline.

Why not let an I H C gasoline engine be your hired man? There are a dozen ways you can use it. You will have it going at some kind of work pretty nearly every day. Attach it to a power-house and, whenever you do start it going, you know you will get at least as much work out of it as you would get out of two or three men.

The I H C gasoline engine is the latest and one of the greatest real aids to the farmer. You ought to have one for your steady hired man. Thousands are going out on the farms. There are many styles and sizes, from 1 to 25-horse power—an engine for every section and every problem, for all farm uses—vertical and horizontal (both stationary and portable) engines on skids; sawing, pumping and spraying outfits. It also includes gasoline tractors—first-prize-gold-medal winners—the best all-'round farm tractors.

Call and take the matter up with our local agent in your town. Or, write the International Harvester Company of America at nearest branch house for catalogue and further information.

Rev. Father Morriscy

Rheumatism for Several Years—Now as well as Ever

647 Main St., St. John, N. B., Nov. 27. 1908.

Father Morriscy Medicine Co., Ltd.

I am writing to tell you I have been a victim to Rheumatism for several years, and have been treated by seven doctors without finding any permanent relief until I got Father Morriscy's medicine. It has cured me so I am able to do my work and find I am as well as ever in my life.

Yours truly,
JOHN CRAWFORD.

Rheumatism cannot exist when the kidneys are in perfect working order for then they take out of the blood all the Uric Acid, which alone causes the Rheumatism.

Father Morriscy's "No. 7" Tablets

act directly on the kidneys, toning them up and helping them to clear the blood of the Uric Acid. If the Rheumatism is of long standing it may take some time to clear out all the poison, but almost from the first "No. 7" Tablets relieve the pain, and if used faithfully they rarely fail to cure.

Even if other remedies have done you no good, do not give up till you have tried Father Morriscy's "No. 7" Tablets.

50c. at your dealer's. 27

Father Morriscy Medicine Co. Ltd. - Chatham, N.B.

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad. as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, Sussex, N. B.

SHORTHORN BULLS FOR SALE.—WALTER E. EATON, Upper Canard, Kings Co., N. S.

WANTED.—Hides, calfskins, sheep and lamb pelts. J. J. McLEAN & SONS, Hopewell, N. S.

JERSEY BULL FOR SALE (3) years old. Write for particulars. CUNNINGHAM BROS., Bayhead N. S.

REDUCED PRICE FOR 30 DAYS.—Large Imperial Pekin Duck Eggs, $1.25 per 11. EGBERT DEVOUNG, Dartmouth, Nova Scotia.

GUERNSEYS FOR SALE.—Two yearling Bulls, one six months old Bull and several Bull Calves.—T. D. BLAIKIE, Great Village, N. S.

THREAD POWER FOR SALE.—Two horse Moody Thread Power, in good condition, for sale on easy teams. Write POWER, care of MARITIME FARMER, Sussex, N. B.

CANADIAN POULTRY REVIEW 48 to 72 pages monthly. Bright, practical, fully illustrated. Every department in charge of a specialists. 34th year of publication. 50c a year, 3 years one dollar, anywhere in Canada, outside Toronto. Address Toronto, Ont.

MALE HELP WANTED.—Wanted by April 1st, man to work in small orchard in Wolfville, Kings Co. Must understand care of fruit trees and grading. Highest wages paid to the right man. Apply Box 26, Bridgewater, E. PERCY BROWN.

WANTED.—An experienced implement or separator traveler for New Brunswick. Salary and expenses to right man. Give reference and experience. Correspondence treated confidentially. Address Box D, MARITIME FARMER, Sussex, N. B.

MONEY MANUFACTURED.—The progress now being made by Canadian manufacturers and merchants should be taken advantage of. Write for information about a safe, quick way of doubling your money. Address ROBERT E. KEMERER, Confederation Life Building, Toronto.

BEEKEEPERES—Advertiser contemplating emigration to Nova Scotia to practice fruit culture or fruit and dairying would be grateful to any beekeeper in province writing him respecting honey yield and any other details of interest to brother beekeeper. BRADFIELD, 31 NORTHLAND DRIVE, SCOTSTOUN, Glasgow Scotland.

CREAM SEPARATOR FOR SALE.—One No. 2 American Cream Separator, good as new, close skimmer, 400 pounds capacity. As we are installing a power machine, we will sell this separator cheap and on easy terms. Write for particulars to SEPARATOR, care of MARITIME FARMER, Sussex, N. B.

WANTED,—A reliable man in every locality in Canada with rig or capable of handling horses, on salary or commission, $15.00 a week and expenses, with advancement, introducing and advertising our Royal Purple Stock and Poultry Specifics, putting up our bill posters, 7 by 9 feet, selling goods to merchants and consumers. No experience needed. We lay out your work for you. Write for particulars.—W A. JENKINS' MFG., CO., London, Ont

Wearers of Amherst Shoes are a Satisfied and Loyal Constituency.

Say Amherst at any up-to-date store and get Supplied.

Homestead Farm

Has one of Canada's leading Holstein Herds. Have won more prize money in the last five years than all other Maritime Holstein herds combined. Have more officially tested cows than any other herd in the Maritime Provinces and more high records. 6 cows over 20 lbs. butter in one week and some of those close to 24 lbs. Our champion cow at the Winter Fair has no official record while the fourth prize cow has a 23 lb. record.

We have a lot of young stuff to sell of the very best breeding. You can't afford to miss this. A few cows cheap. We also offer a few ewes (not bred) lambs of 1909.

Our Clydesdales are in splendid shape, and we can part with the two foals of '09.

No. 1 Stallion.—Dam, Soubrette, Imp., by Laborl, champion at Halifax, 1909; 1st prize 1908. No. 2 Filly—Dam, Pink Rose, Imp., by Up to Time, 2nd at Halifax 1908; 3rd, 1909. Both are sired by Handy Andy, Imported by Marmion out of a Baron's Pride mare. Write or come and see us.

LOGAN BROTHERS, - - Amherst Point, N. S.

BELLEVUE STOCK FARM.

Ayrshire and Shorthorn Cattle.

Bellevue won female championship and all of the herd prizes in Shorthorns, with every animal our own breeding. In Ayrshires we have held the male championship for two years. Write for prices or call and see us. We breed our winners and sell them too.

C. A. ARCHIBALD, Proprietor, - - TRURO, N. S.

Opportunity for Breeders

Of the Maritime Provinces to secure breeding stock from the best herds, studs and flocks of Great Britain and the Continent of Europe by direct importation, without expense of special trip and at minimum cost.

An importer and dealer of many years experience is prepared to fill orders for all classes of stock, subject to inspection on arrival by officials of the Provincial Departments of Agriculture, delivery upon conclusion of inspection and quarintine. No inflated prices but turn over made as low as quality of stock will permit. Horses, Cattle, Sheep or Swine bought as orders may be received. Reference from prominent stockmen and officers of the British War Office may be seen at the Department of Agriculture, Fredericton. Correspondence solicited. Address

A. H. THOMSON,
Care Dept. of Agriculture, Fredericton, N. B.

KINNEAR POULTRY COMPANY.

We are ready to quote lowest prices on new Model Incubators and Brooders. We also have some second hand Machines, guaranteed in first class order, on which we are quoting a low figure.

Our specialties in eggs for hatching are B. P. Rocks, R. I. Reds and White Pekin Ducks.

SUSSEX, - N. B.

Wish - Ton - Wish Stock Farm.

HOLSTEIN CATTLE,

We are offering two young bulls from six weeks to two months, and one fit for service by late summer or early fall.

HARDING BROS., props.,
Welsford, Queens Co., N. B.

Do you want a bull from a high testing dam? The great grand dam of the bull we are offering was the noted Sadie Vale Concordia and the eight nearest related females of his sire had an average record of twenty-seven pounds butter in seven days. This bull was sweepstakes bull calf at the Fredericton Exhibition in 1907

THE MARITIME FARMER

AND

CO-OPERATIVE DAIRYMAN.

Official Organ of The Farmers' and Dairymen's Association of New Brunswick; The Nova Scotia Farmers' Association; The Nova Scotia, New Brunswick and P. E. Island Fruit Growers' Associations, The Maritime Stock Breeders' Association and The Maritime Bee-Keepers' Association.

Volume 15. Sussex, N. B., March 8, 1910. Number 11.

The N. B. Farmers' and Dairymen's Convention.

THE thirty-fourth annual meeting of the New Brunswick Farmers' and Dairymen's Association was held in Fredericton, N. B., on February 21st, 22nd and 23rd.

The opening meeting was held on Monday evening, in Church Hall, with President O. W. Wetmore in the chair and the seating capacity of the hall taxed to its utmost limit.

President Wetmore, in his opening remarks, outlined the programme for the farmers' deliberations and laid particular stress on the deviations from previous custom by the addition of live stock demonstration lectures and judging classes and also the Provincial Seed Fair, which he trusted would open up avenues as sources through which farmers could procure reliable seed in years to come. He had travelled through the counties bordering on the Upper St. John river and thought it a lamentable fact that dairying was so much neglected in those counties. He had found nearly every body raising potatoes. He expressed the opinion that live stock raising and systematic rotation of crops must be carried on if one wishes to maintain the fertility of his soil, and if the up-river farmers paid more attention to the latter, they could, at least, raise enough grain for the home supply. Shortage of help and expensive mill feeds were some of the detriments to dairying on an extensive scale, but the latter could be greatly ameliorated by growing more roots. Long hours were also a detriment, but in cases, where it was necessary to occasionally work long hours, the employer might take turns with his hired help and by using them right—by using them as men—there should be no great deal of trouble along that line. Depleting the fertility of our soils, by careless farming methods, was a crime and should be prevented and cured as rapidly as possible by intelligent dairying and a rotation of crops, in which clover played an important part. He would like to see several experimental farms in New Brunswick, well managed by some of our own boys, who have taken courses at various agricultural colleges. The taking up of depleted farms and upbuilding them in such a way that they would furnish a good living for an average farmer, would do an unestimable amount of good as object lessons for others, possessing similar farms, to follow. He questioned the advisability of following a specialized system of farming in New Brunswick and went on record as being favorable to a general system, with, perhaps, a little specializing along one or more lines. He would not advise farmers to follow the system of "putting all their eggs in one basket." Some counties paid dearly by following such a practice. Illustration or model farms would solve the problem of getting settlers for our vacated farms. Our farmers want something in the line of practical work and not too much of the theoretical. The application of common sense soil management and hard work, to most of our farms, would bring success in its train, without having to resort to drudgery and would very materially assist in developing all our resources.

Mayor Chestnut welcomed the delegates to Fredericton and expressed the confidence that they would go back to their homes, after the sessions were ended, better equipped to deal with the various problems, which they would encounter. He was glad to state that matters were pointing to a practical solution of the transportation problem in the long-suffering St. John River Valley.

Dr. Landry, Commissioner for Agriculture, was present and expressed his pleasure at seeing such a large gathering of farmers and trusted that in future years delegates would look back with pleasure to these meetings. It was, indeed, a note of progress to have such a delegation from all parts of the province. The general response showed a willingness to co-operate in making the respective associations represented a success. As the head of his department, organization was his watchword. The number of agricultural societies in the province was rapidly increasing. There was room for at least 150, and although the Government grant to agricultural societies had already been increased from $8,000 to $10,000, he was of the opinion that it must be increased this year to $13,000. "The farmers' call" can not be slighted and they must get their share of the Government funds to carry on the promotion of the interests of their profession. Every community of farmers should cast any petty differences aside and band together for their mutual welfare and he went on record as to assure them that any reasonable requests from them to his department would be granted. When farmers would band together in this way and notify his department that "Our district wants so and so," then the Commissioner can boldly stand up before his coleagues and say "the farmers want this and their call can not be refused." While some farmers and their sons had taken advantage of the opportunity to attend the Nova Scotia, St. Anne and Guelph Agricultural Colleges, the numbers were not up to his expectations. Young men, and old men, too, should attend those seats of learning. There they learn to know their profession. Young men, who are planning to remain on their farms, should make a special study of farming and crowd to those institutions in such numbers that the colleges would have their utmost capacity and then we might look for a college of our own. The Commissioner approved of the idea of demonstration farms and trusted that ere long he could arrange for one at Fredericton, where the present U. N. B. College professors could be utilized to assist in the work. He referred to the success of New Brunswick fruit at the London Fruit Exhibition, where it had captured a gold and three silver medals. He thought if farmers would pay more attention to judicious general farming, and less to specializing, there would be fewer disappointments. He explained the negotiations his department had conducted re helping New Brunswick potato shippers to gain a market for their produce in Havanna. He thought the change in the programme, to include practical demonstrations, would be interesting and welcomed by the majority of the delegates and concluded by saying that as the Farmers' Association was the connecting link between the farmers and the Department of Agriculture, he would welcome any suggestions they might offer from time to time.

AGRICULTURE IN OUR PUBLIC SCHOOLS AND COLLEGES

was the theme of an interesting address by Mr. W. S. Carter, Supt. of Education, who referred to the intelligence that the farmer must put into his work to drive away the drudgery that was so commonly associated with the industry in years bye gone. As everything comes from the land, the attention of every one, who desires a compitency in old age, is being turned to the farm. In the past, people, in their ignorance, thought they knew all about farming and laughed at scientific knowledge and, in their blindness, robbed the soil of its richness. Views re this matter had been changed and now the farmer realizes that he must be the best educated of men. Book farming is no longer ridiculed, as the theoretical and practical work hand in hand. Farmers, who are not striving to educate themselves re the most approved methods for conducting their operations, are dearly paying for their ignorance.

Schools and colleges had done a great deal in the past and will do more in the future, as education assumes more practical tendencies. Learning by doing was the type of education that did the most good. Agriculture, as taught in the schools in the past, had no practical application, but now school gardens and other practical work was giving it a more useful aspect. Indeed, if it only taught them the need of a war on weeds and moths, it will pay the province to establish school gardens all over the province. In Manitoba it is estimated that the loss due to the pressure of undesirable weeds would pay the cost of public education many times over. If farmers were more liberal with their children and gave them an opportunity to help in conducting the business affairs of the farm, there would not be so much discontentment. Where the farmer follows the practice of forming a joint stock company with his sons, he has little or no cause for complaints if he uses his boys right.

The Superintendent advocated the establishment of model farms all over the country, where boys could learn the principles of modern farming, and fathers should give their boys some land and some stock with which to apply these principles on their own account. While New Brunswick has the need for a more extensive system of practical education, it has not the means to carry on the work as extensively as one would wish. School gardens and nature study, as now presented to teachers in training in the Normal School, would have a tendency to give the pupils a bend towards rural associations. Mr. Carter thought it might be a good idea for the Government to rent a farm and have it conducted by an expert, where the boys and girls, from several school sections, could congregate for practical demonstration work. The farm should be worked in a manner suitable to the district in which it was located. The benefits accruing

from such a training would be: habits of neatness, arrangement, observation, physical work, love of home and training for industrial life. Noxious weeds and insects pests were yearly becoming more numerous while there is getting to be a scarcity of birds. Agricultural Societies might offer prizes for essays on the eradication of weeds and the Department of Agriculture might offer prizes to boys and girls who get the first brown tail moth nest in their district.

In order that a boy or girl may be the most successful in fighting the battles of life it is necessary that he or she know a smattering of everything and everything of something. A good common school education was a good foundation on which to build.

Mr. Carter outlined the advantages of a consolidated school. The extra cost to maintain them was insignificant in comparison to the gains in affording better opportunities for promoting a more and varied practical system of training. The people bred in and trained by the conditions of country life were the backbone of the nation, its stay in time of war and the source from which the cities derive fresh blood and continuous moral uplift.

THE FARM RESOURCES

was the theme of a well thought address by Mr. R. P. Steeves, Inspector of Schools for Kings Co., who may be termed the "Agricultural School Inspector" from his deep interest in a practical agricultural training for boys and girls. He took the soil as the principle on which he based his address and subdivided it under the three headings: Its fertility. Its productions and Its people. He considered that New Brunswick was as fertile as any country that lies out of doors. The resources of its marshes, river valleys and hillsides were the finest that any country could possess.

The problem of the conservation of these resources was largely a problem of education. In some parts of the province, however, where at one time flourishing settlements and large schools exhisted, the scene has been changed by injudicious farming methods that have so depleted the soil fertility that many of the land owners, particularly the younger people, have now moved away and the scene is now a picture of "the deserted village" and not infrequently the schools are closed. The strength of a country was its population and our schools should be the salvation of our country. Had the farmers of the district referred to had sufficient education to realize that a proper system of farming would have maintained the fertility of their soil, their farms would be to-day flourishing as of yore and they would not be so prone to tell their sons that it would be advisable for them to get an education that would fit them for some other walk in life than farming. These farmers did not realize the possibilities or dignity of their calling. During the first six years of its life, a child receives its education in the natural, easy way of asking questions, but when it goes to school he has to assume a different method of acquiring knowledge and the change is so abrupt that the child very often rebels. Our present system of education does not follow the natural process which enabled the child to learn so much during the first six years of its life. A system more in harmony with nature and its ways should be adopted by teaching more nature study and thus enable the child to study the object Our school readers should contain more articles of a rural character and thus help to put our children in closer relationship to the soil out of which all must derive sustinence.

Education should be more specific for general information has lost its value. Give a young man an education equivalent to passing an examination for a second class teacher's license and if he has no other ties he will be away from the farm in less than six months.

Arethmetics for use in rural schools should contain practical farm accounting as every farmer should keep accounts.

It was the back settlements that suffered the most from depopulation and therefore their needs should be promptly attended to, by introducing systems of education, that will give the boys and girls a more general interest in their surroundings.

A teacher for agriculture should be in every grammar or high school in every county so that a greater number of our young people would be lead to prepare for agricultural colleges instead of to colleges that very materially assist them to look to distant fields for their livehood. We should strive by every possible effort to build up our home country before we go afield.

TUESDAY MORNING.

On Tuesday morning the farmers met in the Arctic Rink, where Professor Cumming gave a most instructive and interesting address on "The Relation of Cattle Raising to Fertility of the Soil." He pointed out the need of giving greater attention to cattle raising, and explaining the various points and characteristies of cattle suitable for dairy purposes. Although the weather within the rink was of a somewhat arctic nature the professor held the attention of his audience for nearly three hours, and judging from the questions put to him and the animated discussion at the close, managed to convince many of the farmers that the problem of raising both dairy and beef cattle demanded more study than it has received in the past, and offered possibilities of greatly increasing their earnings.

In opening his address Prof. Cumming declared that the main reason why farming in the Maritime Provinces was not as profitable as it might and ought to be, was that our farmers were not obliged to make farming a paying business. Many did not even realize the possibilities of proper farming methods, and gave more attention to lumbering and fishing than they do to their farms. As a result they had impoverished their lands, and were turning longing eyes to the west. But the fact was that the land of the Maritime Provinces was, in most sections, just as fertile as the lands of the west, and, with the adoption of efficient methods of farming, would yield as large returns as the lands of most countries.

The farmers' policy of cutting hay for export, which prevails so largely in the Maritime Provinces was a great mistake. Nothing impoverished the soil so quickly; even wheat raising was not so fatal to fertility because the straw was left behind and returned many needed elements to the soil.

The right policy was to feed the hay to cattle and horses and so make possible the returns to the soil of those elements taken up by the grass. By proper handling of the manure, the farmer secures a return to the soil of 90 per cent of the fertility which is embodied in hay.

Men who raised hay for export were not farmers at all—they were simply land miners, robbing the soil of its producing properties.

"According to the census of 1901," the professor continued, "the area of the farming lands of the Maritime Provinces was about 10,000,000 acres. In this area, which of course only represents a small proportion of the land available for cultivation, the farmers kept a herd of about 650,000 head of cattle and other live stock. This gave one head of cattle to every 16 acres of cultivated land. In Denmark the farmers find that it pays them to keep one head of live stock for every 2 1-2 acres of land. In Ontario, where the relation of cattle raising to the fertility of the soil had been recognized for some years, the farmers maintained one head to every 5 acres. On the best paying farm in that Province there was one head to every two acres.

While the question whether a farmer should specialize on raising beef or dairy cattle would be determined by local conditions, it was well to bear in mind that the dairy business presented great possibilities. In the Maritime Provinces there were in 1901 a little over 300,000 milch cows; and the production of milk averaged about 3,000 pounds per cow.

If the farmers of these Maritime Provinces kept as many cows as the preservation of soil fertility demands, the annual output of our dairies could be increased at least eight times—say to a value of $80,000,000 per year. And that is only a very moderate estimate; at any rate Denmark, which is no bigger than New Brunswick alone, does a dairy business aggregating over $100,000,000 a year.

"Too much emphasis," continued the professor, "cannot be laid on the fact that the policy of raising cattle and other live stock not only provides a means of assuring the salvation of farming in these provinces by preserving the fertility of the soil, but also offers tremendous possibilities of achieving such a measure of prosperity here that the west would lose its attraction for our young people, and even for a considerable number of the immigrants that come to our shores.

The professor then proceeded to describe the various features and characteristics that distinguished cattle suitable for dairy purposes from those which were mainle suitably for fattening for the beef markets. He demonstrated his points by reference to the cattle which have been loaned to the Association for this purpose.

Cattle suitable for milk production could readily be distinguished by a man of experience. In form they were invariably wedge-shaped as viewed from the front and top, narrow at the withers, with the vertebrae somewhat higher. Their stomach was equally large, and the chest was proportionally deep, and with no depression behind the shoulder blades. The udders were wide and long, and fairly deep, though not pendulous.

Good dairy cattle are active, vigorour, and in temperament are inclined to seriousness, though they are neither irritable nor vicious.

The Professor declared that, contrary to general belief, the heavy feeder was usually the best for dairy purposes, giving a persistently large supply of milk of a high quality. Speaking of the type of bull needed to breed cattle for dairy purposes, he said farmers usually selected bulls with heavy hindquarters, and a general aspect of burliness. This was a mistake. The good dairy breeding bull, like the good dairy cow, was characterized by an angular formation in general.

BEEF CATTLE.

On Tuesday afternoon Prof. Cummings gave a demonstration of the methods of judging beef cattle, and pointed out the characteristics that should be considered in breeding cattle for the market. The Maritime Provinces were breeding large numbers of what he called "dairy steers"—a type of cattle that would never make good beef however much they might be fattened.

Cattle that made good beef were deep and broad, and built on the lines of a parallelogram generally. Their shoulders were compact and broad on top, and covered with flesh well laid back over the ribs. The chest was deep and broad; the ribs long, well arched and thickly fleshed. Their body was more like a barrel than that of the milch cow.

The Professor claimed that if the farmers made a point of studying the characteristics of beef cattle, and then made a point of breeding with a view to developing such characteristics, the results would be infinitely more satisfactory to them and the meat consuming public.

TUESDAY EVENING.

After the meeting was called to order on Tuesday evening Mr. W. A. Walsh entertained the audience by giving several readings from Drummond's Habitnt. Drummond's readings are always appreciated and Mr. Walsh can give them in good style.

COUNTY VICE PRESIDENTS REPORTS.

CARLETON COUNTY.—The past year has been rather a prosperous one when we consider the amount of rain that fell.

We who live along the St. John River had the water over the lowland all summer, but the good prices received for the produce raised on the farm has helped the farmers out. I hope something will be done to help the farmer along agriculture work and that our country and people will be thus helped on to prosperity.

C. L. SLIPP.

CHARLOTTE COUNTY.—From a farmers standpoint the past season cannot be called a satisfactory one to Charlotte County farmers. In certain districts turnips are the staple crop. Farmers are finding it more difficult each year to grow turnips of the desired quality, and this winter there is no sale for them at paying prices. The potato growing fever has also struck certain districts and many farmers have paid out a great deal of money for commercial fertilizers. There is evidently a good opening for potatoes if we develop the trade steadily and do not make it our main crop. This winter the prices are poor and some of the farmers already feel discouraged, but every cloud has its silver lining. However, I am glad to be able to state that along educational lines we have made good progress during the past year. Our local institute has been working in a quiet, effective way and I am most pleased to report that a strong lusty youngster has developed in the Charlotte County Agricultural Society which held a most successful Country Exhibition at St. Stephen last fall and also held under its auspices, a series of farmers' meetings throughout the county, which were well attended and much interest was manifested in the subjects discussed. The majority of our farmers recognize that they have not been making the progress they should and are quite willing to adopt any other system of farming which will give better results.

J. R. OASTLER.

NORTHUMBERLAND CO.—The crop throughout the county the past season is as follows: Hay, a fair crop; oats, good; wheat, fair; buckwheat; a fair crop, potatoes, a good crop, but have not and are not keeping, being very badly affected with rot. In many cases where 100 barrels were housed, ninety per cent went bad and were unfit for use. The very wet fall is accountable for the rot. Turnips a good crop and so were carrots, beets and mangles.

The Seed Fair held last spring by "The Northumberland Agricultural Society No. 90 was a sccess. Many lots of good-seed wheat, oats, barley, buckwheat, peas, beans and potatoes were exhibited in the different classes and scored very high and exhibitors in general were pleased with the results.

The same Society conducted a standing field grain competition with very satisfactory results. About thirty farmers of the county entered into competition and the score ran as high as ninety-four points in a possible hundred. The scores equal the best and are very much better than many throughout the province of Quebec and the other two Maritime Provinces At this competition, the first of its kind conducted in the Province, it was shown, that the farmers of the County of Northumberland are not neglecting to take advantage of up-to-date methods when assisted by the Department of Agriculture and to endeavor to produce in their own county as good, if not better, seed grain than any other more favorable districts throughout this great Dominion of ours.

In some districts in the county efforts are being made by the more progressive farmers to obtain better stock. In the Parish of Blissfield, the Northumberland Agricultural Society No. 81 have been using their funds for the past few years in importing pure-bred stock. Their last purchase was a Short Horn bull. They are endeavoring to get the farmers to make use of pure bred sires to build up their stock which hitherto has been ordinary scrubs.

At down river points or that part of the county east of the town of Chatham bordering on the Marimichi many farm-

ers are making use of mussel deposits in the river and bays, with splendid results. Particularly good results have been obtained when this fertilizer has been applied to clay and clay loam soils. But as the means used in raising the mud and mussel deposit is by horse power, during a short period in the month of March, only a few farmers whose farms are situated on the banks of the river and shores of the bays, are able to secure this valuable fertilizer, where as, if a proper power plant with suitable scows by which the mud could be raised and delivered at a smaller cost at several points along the river or put on cars, it could be shipped to any part of the province. This would necessitate the assistance of the Department of Agriculture, in order to bring this fertilizer to a price which would pay the farmer to use it.

It is regrettable to state that many of our young men are going to the United States instead of settling down on the land. It is hoped that steps will be taken to encourage these young men to settle down in their native counties.

R. A. MURDOCH.

ST. JOHN CO.—Representing, as I do, one of the oldest sections in this province and situated at the most important busines centre, we note to a greater extent, perhaps, than others further remote from that point, the importance the farmer plays in the export business of this country. And the question naturally arises: Are the farmers of New Brunswick taking advantage of the opportunities of the present age by raising more dairy products, beef and poultry, that are required by the changed conditions of the last ten years? To see the carloads of beef and pork products brought in from other provinces, and keeping in view the prices asked for poultry, I think my question will have to be answered in the negative.

We hear a good deal of the high cost of living; then note the number of ocean steamers that come and go from St. John weekly during the winter months and it is readily seen where our surplus supply of farm products disappear.

And we, in New Brunswick, are not keeping abreast of the times. We have a market but that market has to send outside our province for a large part of the supplies that should and could be raised here in our own province.

But to get back to our Agricultural Societies, for, if we had no Agricultural Societies we would have a poor convention our three Agricultural Societies in St. John Co. are doing work in their respective districts. We have one at St. Martins, one at Loch Lomond in the Parish of Simonds, and the one I have the honor to represent, City and County of St. John

We still assist our members in procuring pure bred stock and the best seeds obtainable and make importations from year to year but find our Biennial Fair our greatest drawing card. It is our main-stay, for interest in our Society, and it is our principal means of sustaining our membership. We lost an important factor when our Institute meetings were discontinued and hope some substitute will be provided to fill this large gap. If the Societies had the means, they might well take this question in hand and give to the different sections of their counties the needed advice, adapted to their particular sections by practical men. But with our greatly decreased Government grant this matter is not in our power and it seems that if the appropriation for Agricultural Societies is not increased it will curtail to a larger extent the work for which our societies were organized.

This year, as you are all aware, the Dominion Exhibition is to be held in our City, and on behalf of the Agricultural Society of the City of St. John, we invite the members of this Convention to visit our county. Come as exhibitors if possible, and combine business and pleasure. We want to make our live stock and agricultural departments truly New Brunswick. We have the stock in the province, and, as for agriculture, no province under the sun can excel us if we take the necessary labor and care. With a greatly increased premium list you do not have to take the increased trouble for honor alone. Again, I say come, if not as exhibitors then as sight-seers, and enjoy with us the best exhibition that a bigger and better St. John ever had.

FRANK V. HAMM.

SUNBURY COUNTY.—Root crops gave a good yield of fine quality. Potatoes were affected by the rot in some districts; this, however, was not general. Turnips were a heavy crop, with an increased average being grown, both for feeding and market.

Grain crops were good, but some difficulty was experienced in harvesting, owing to the continued wet weather. Hay was short in some sections of the county.

The experimental orchard, in my section of the county, which has been managed according to instructions, is doing exceptionally well and demonstrated that apple trees, properly handled, are a success in our county.

The market gardeners, along the river, are making a success of that line of farming.

A Cow Testing Association has been formed and is doing good work. No doubt, in a few years, good results will be obtained from this branch of the dairy work and I would strongly advise anyone, who keeps cows for profit, and who wishes to improve their herd, to try the weighing and testing of each cow's milk at least three days in each month.

To-day we read and hear much about the increased cost of living in the cities and we are led to ask ourselves, does the farmer get the benefit of the increased cost of the products of the farms to the consumer in the city? I think not. In most cases some have to look elsewhere for a solution of the problem and we turn to the souless transportation companies and the middle men. The local freight rates, on company owned railways, are responsible for about one-third of the value of produce shipped, and, in some cases, more. The small farmer is practically prohibited from shipping in small lots and is thus placed at the mercy of the middle men, who buy and ship in car lots when they, too, are compelled to pay rates out of all reason.

I believe it is in the interest of the farmers that we should have Government owned and operated railways in this country. Last year, in my report, I mentioned the need of the farmers being able to have telephones in their homes at a reasonable rate. I am pleased to note the agitation in St. John for an independent company, whose benefits, I hope, will be extended to the farmers in the rural sections of New Brunswick. M. A. SMITH.

GLOUCESTER COUNTY.—In submitting a report to the Farmers' and Dairymen's meeting, as Vice-President for the County of Gloucester, I am pleased to be able to say that the future hopes of our farming population are bright and cheerful.

The crops, generally, last year, were very good, especially can this be said of the potato crop, which was one of the largest in the history of our county. This crop suffered slightly from dry rot, but this was only noticeable in one or two districts. The efforts made to secure a market for the potato crop of the St. John River Counties could be, with profit, extended to Northern New Brunswick and it is to be hoped the Department of Agriculture will not lose sight of this point.

Our hay crop was somewhat more than the average and was all saved in excellent condition. Oats, in some sections, was light, but in general, the crop was a good one.

Our two cheese factories, one at Petit Roche and the other at Bathurst Village, were in operation last season and turned out a good quantity of excellent cheese, considerable of which readily found a local market at good prices.

The future for agriculture interests in this county is a hopeful one. Great activity in the development of the large mineral deposits, lately discovered, both in the upper and lower parts of Gloucester County, will give a new impetus to the farmers, who see a more ready and better home market for their products.

Several new agricultural societies have lately been organized in this county, as a result of the visit of representatives and experienced speakers, sent by the local Government.

STANISLAS DUMAS.

MADAWASKA CO.—The spring season of 1909 was very late. The first grain was sown about May 24th.

On the lowlands, the hay crop was a full average. On the uplands, the cut was very light. The weather was such as to give the farmers a chance for storing the hay almost all in good condition. In the first part of the fall, hay was worth about $11.00 per ton. In December it was worth from $14.00 to $16.00 per ton. Harvest time was very late on account of the rainy weather.

Only half of the oat crop was housed in good condition. It is supposed, though, that a fair average crop has been obtained. The best quality was worth 50 cents a bushel.

Generally speaking, potatoes and turnips turned out fair crops. However, complaints were made of a smaller yield of potatoes than the preceeding year, and in some sections, considerable rot was found at digging time. Both crops were sold from $1.00 to $1.25 per barrel.

Lamb, beef, butter, eggs and milk sold, all season, at high prices in local markets.

Our County needs government imported horses, both road horses and draught horses, so as to improve the breeding. If a part of the sale of those horses was made no further down than Woodstock it would be a great accomodation to our farmers.

B. R. VIOLETTE,

YORK COUNTY.—The principal crops of this county are, hay, potatoes and turnips, all of which were damaged to considerable extent by the excessively wet season. Highland hay was about 20% of a full crop but island and interval hay was up to the average.

Rot affected the potato crop and caused considerable loss. From over twenty fields examined in different parts of the country I have concluded that the rot was due to excessive rain, the only land not affected was the very porous soils that allowed the water to drain off quickly.

I might also state that these farmers who have sprayed thoroughly, the great majority at least, are convinced that the rot was greatly checked by so doing.

Turnips were a good crop but on heavy land the quality was poor and they find a very slow sale in Boston.

Much grain was lost at harvest time. In many fields the grain sprouted and it was almost impossible to get it threshed. The yeild was very good where the grain escaped the rain, fifty bushels of oats and twenty-five to thirty of wheat were obtained.

In live stock, can report little progress, except in draft horses. Clydes and Percherons are being used for sires and there is a steady improvement in size and quality of farm horses.

High prices of raw products, the last few years, have greatly affected stock keeping, and commercial fertilizers are being freely used instead of manure. This, to my mind, is a short-sighted policy as this last season has shown. It is hard enough on the man having good shipping faulities to get rid of stuff on a poor market, but what of a man who has a long expensive haul to market, and who has contend with low prices, etc. when his fertilizer bill is a heavy cash outlay?

I trust something may be done to stimulate dairying in this section. Cattle, generally, are kept in a wretched condition. As a rule, they are thin in the spring, when they calve, and it takes all summer to get them in any kind of condition, as feed fails in the fall they go off in flesh and get barely a maintenance ration all winter.

A keener interest in stock raising would greatly affect pork production and increase the fertility of our soil in the only and sane way.

S. B. HATHEWAY,

VICTORIA.—In making an estimate of the material and social condition of any community, the most important item in the calculation is that of health. No community can be prosperous and happy if the conditions under which they live are not favorable to the enjoyment of good health. Good health must be reckoned among our assets when taking account of stock. In this connection I have to report that several sections of the county during the summer and fall of 1909 suffered from a general outbreak of typhoid fever, the origin of which was traced, in the most of cases to impure water. The province is generally supplied with pure water and the possibility of its becoming contimated was never seriously considered and our people became careless and neglected to give the sources of their water supply the attention it deserved. This neglect brought about serious results, and has emphasized the importance of every community giving carefully, intelligent and scientific attention to keep the water supply for domestic purposes free from contamination. This lesson should be heeded by every section of the province.

Boards of Health should take practical means to disseminate information among the people as to the best way in preventing the spread of contageous diseases and in the looking after the wells and streams from which the water supply is obtained, and if necessary in certain sections to have a health officer appointed to see that sanitary conditions are complied with. The board of education should see that the important subject of physical culture and health instruction gets its due share of attention in our schools. Eternal vigilance is not only the price of liberty but combined with scientific knowledge it is the price of health and the immunity from preventable diseases including the much dreaded scourage of the white plague.

The past season has been a rather disappointing one to the farmers. So much depends upon the weather conditions over which he has little or no control that "his best laid schemes gang aft a glay and leave him not but grief and pain for promised joy." Owing to the dry weather in the first of the season the hay crop was injured and the yield was below the average, and owing to wet weather at the last of the season the potato crop was much injured and in many sections they rotted badly and caused many farmers to doubt the value of spraying to prevent rust and rot. It is said that good farming consists in raising big crops and leaving the land better than it was. The farmers of Victoria County used last season in the neighborhood of 50 or 60 thousand dollars worth of phosphate and the land may be in good condition for the crop of 1910 but the potato crop will not pay for the phosphate bill. The land may be the richer but the farmers are poorer, and the fact remains that the potato crop has put the farmers into a hole and they will have to wiggle out as best they can, and yet the potato crop is one of the most profitable crops the farmer can raise. The shippers and the Government are trying to induce the farmers not to be discouraged as there will be a new market for potatoes when the Cuban market is captured. But the farmers better do a little thinking on their own account. Artimus Ward did not object to his cow kicking. He thought she had a perfect right to kick, but what he did object to was her putting so much expression into her kick. Our farmers have simply put too much expression into their potato crop.

Perhaps the most prosperous section of the county is the Danish Settlement where they give good attention to the dairy cow. They bonus her with good feed and attention and if they cannot sell their potatoes they can feed them to the cows.

The wheat crop was an average one. Early oats were a good crop, and the buckwheat was nearly up to the average. Root crops of all kinds were

good. The apple crop in some sections was good, in others not so good.

The supply of stock in the county is now very small excepting perhaps that of horses, of which there are several good Clyde sires and a few Clyde mares.

I do not know to what extent the instruction in our schools tend to interest the children in farm work and country life, and will assume that all is being done in that direction that public opinon demands, that practical work ithrough the medium of school gardens is not yet attempted, even the school garden in connection with the Grammar school at Andover, that was so successfully introduced by the McDonald movement was not operated last season. The experiment of having a little practical agriculture taught in our common schools has not yet had a fair trial and the effort in that direction should be continued. While ideal conditions in many branches of our agriculiural work, may not exist, yet the county is progressing and many evidences of progress is visable in all directions. To the enterprising man, whose only capital is his labor, this country offers encouraging inducement. We have 50,000 acres of wilderness land in the centre of the county awaiting settlement, which, owing to its location, should very largely eliminate the hardships connected with pioneer life. The lumber interests give employment in the winter season, and when our water powers that are now attracting the attention of capitalists are utilized, new industries willl be developed. With the northern part of our province, which is now opened by railways in course of construction, we may naturally look for development and growth. Let us hope that agriculture will be the chief and leading industry.

G. E. BAXTER.

AGRICULTURAL SOCIETIES—THEIR WORK AND THEIR RELATIONSHIP TO THE DEPARTMENT OF AGRICULTURE.

There are some people, who state that agricultural societies are of no benefit to either their members or the province. And perhaps the history of occasional societies would justify such a sentiment, if one or two societies were singled out. However, we must not judge all the societies, or the possible value of the efforts of any society, by the few failures that are made. Much to-day is said about the value of co-operation, and co-operative societies throughout the world have demonstrated the value of the association of men engaged in one line of business for their mutual benefit.

To be entirely successful, our agricultural societies must be, first of all, co-operative. As was stated so well last night, any individual, who wishes to get the most out of life, must first adopt the principle of giving, and the more he will give to society, as a rule, the more benefit he will ultimately receive. If we acknowledge, and I think we must, in the light of the experience of the last twenty years, of the results of co-operation in different countries, the benefit of co-operation, we must then admit the benefit of the principle underlying the formation of agricultural societies. It is not essential that co-operative associations should be incorporated under the Agricultural Act or any act. It is by no means essential, nor is it always desirable, that they should receive Government assistance.

For many years ithas been recognized by the Government of the province, and apparently with the approval of all classes of its citizens, that co-operation among the farmers should be encouraged and sums of money have been annually appropriated to encourage this.

The regulations of the Act, under which our agricultural societies are incorporated, state that the object for which the societies may be incorporated shall be as follows: "The encouragement and promotion of improved methods of dairying, of the breeding of improved stock, of improved methods of fruit raising, and of improved methods of agriculture and horticulture; the dissemination of literature and other inofrmation relating to agriculture and stock raising, and generally the promotion of agriculture." And the regulations go on to say: "The societies incorporated under this Act may hold meetings for discussion and for hearing lectures on subjects connected with the theory and practice of agriculture, improved husbandry and kindred arts; may promote the circulation of agricultural and horticultural periodicals, or periodical devoted exclusively to stock raising; may import or otherwise procure seeds, plants and animals of new and valuable kinds; but this shall not extend to authorized societies to traffic in ordinary seeds, or to procure animals already in the district in which the society is located; may offer prizes for essays on agriculture, horticulture, dairying, fruit raising, stock raising; may award premiums for excellence in stock, agricultural products, fruits, vegetables, plants and flowers, and generally for the excellence in any agricultural or horticultural production or operation."

While it is very desirable that the largest possible measure of home rule should be allowed every society and every facility given for individual effort and the development of the society's work for the special benefit of the district in which it is formed, it is yet essential, if the greatest value is to be secured, that the efforts of all societies should be along some definite and systematic line.

Some of our societies appear to think or act as if the holding of an exhibition was the only work for which they were incorporated. The Act, from which I have quoted, does not bear out this idea; the holding of an exhibition is the last thing mentioned.

Stated, generally, the objects of our societies should be the development of agriculture in its broadest sense.

At the meeting, last evening, it was clearly demonstrated that one reason that agriculture was not as prosperous as it might be, in this country, was because of the lack of conception of the opportunities available to our people in their own localities. As was so well stated, we have, here in the province of New Brunswick, opportunities unexcelled, so far as agriculture is concerned, by any part of the American continent. We hear much about the opportunities of the West. I will venture to say that if either the province of Saskatchewan or Alberta had this province set down in their midst, that they would be ten times as enthusiastic as they are at present over their country. If our province, with its climate, with its water supply, with its ability to grow nearly all the crops and fruit involved in the highest type of farming, with its magnificient lumber supply and other resources, it would be found to be so superior to the country already there, that we would never hear the end of it.

It seems to me the first work for our agricultural societies to do is to increase the faith of their members, and particularly the boys and girls of the district, in their own country and to show them the opportunities for development, to show them that they can make more money, that they can live better lives, have more real pleasure from living right here in New Brunswick than can be obtained almost anywhere else. So, then, it seems to me, the first duty of agricultural societies is education—such education as can be had from lecturers, from experts in various lines of farm work, from demonstrations in field work and in the judging of live stock and from distribution of the best agricultural literature. No agricultural society is doing its full duty to the district in which it exists, unless it is taking some interest in the schools, where the farmer receives his first education. Prizes might well be offered for the best papers or essays written by school children, in regard to agricultural topics, that are particularly applicable to the district, and interest should be taken in a school garden.

Second, the next work that follows in agricultural improvement, in any section, is the procuring of the best seeds, at the cheapest rate, and assisting society members to have these seeds tested. Good crops and prosperity all come from good seeds—good seeds lay at the foundation of successful agriculture.

Third, as live stock must play an ever increasing part in the improvement of agriculture in this province, the procuring of the best breeding stock is a most important work.

Fourth, in some sections where special crops are grown and where considerable quantities of commercial fertilizers can be advantageously used, a society may save a great deal of money for its members and insure honest treatment for them by purchasing fertilizer ingredients or mixed fertilizers, properly compounded and brought subject to test.

Fifth, encouragement may also be lent to the growing of good crops, destruction of weeds, proper methods of cultivation, etc., holding standing field crops competitions, as was so well done by the Northumberland County Agricultural Society last year.

Sixth, to complete the work, so far as the actual business of farming is concerned, the next step in co-operation will be the marketing of the products, and very great benefits can be conferred upon its members by co-operative systematic marketing, and I can see no objection, whatever, to our agricultural societies being used in that way.

Seventh, the work of the farmers of the district may be encouraged and the district itself afforded a pleasant holiday by the holding of an exhibition. When an exhibition is held, it should be made as educative as possible, expert judges and every facility, for all, who wish to see the judging and hear the explanations as to why one animal or one product is better than another, should be provided. Those societies, which are using their funds merely to provide a holiday for the district, to bring trade to a local centre, and, as sometimes happens, incidentally to distribute the prize money to a few people, who organize and manage the society, are not fulfiling, either the letter or the spirit of the Act and should not be entitled to any share of the Provincial money. The exhibition should be, not the foundation, but the coping stone of the agricultural society structure, if the society is to do the most good, and when well managed, may be made of great benefit to everyone. It may be, that in certain localities, that the holding of an exhibition for a few years may precede and make possible other activities by raising a general interest in agriculture. Time will not permit a discussion on the exhibition question, on which there are many opinions—but I have just thrown out the above views that they may be debated and the united wisdom of all interested be obtained. My views are suggestive and not conclusive and anything that I have here stated is not to be taken as an official statement of the position of the Department, but, rather, as my personal contribution to the debate.

The Agricultural Department exists at the pleasure and for the benefit of the farmers of the province and it must be conducted in accordance with their wishes, as expressed in various ways. There can be no dictatorship in this democratic country. The people have the power to say what they want and to enforce it.

As the Department exists at present, it is extremely desirous of knowing the wishes of the people and of working in harmony with their wishes and doing anything that can properly be done to assist in the general development of the province. So far as the relationship of the Department to the various agricultural societies is concerned, it exists for mutual help. It is necessary that the business of the societies be carried on under certain rules and regulations to safeguard the expenditure of public money and to best insure the benefit of the membership. And while, as I have stated, it is extremely desirable that the largest possible measure of home rule should be given to every society, it is those societies which conduct their business in a systematic way and work in harmony with other societies and with the Department, that will be most likely to achieve the best results.

I would like to see every society visited by a representative of the Department once in each year, for the purpose of inspection of work, audit of accounts and mutual discussion for future efforts.

CO-OPERATIVE POULTRY ASSOCIATIONS.

Following Mr. Hubbard's report, Mr. Geo. E. Baxter explained the operations of co-operative poultry associations and expressed the wish that ere long several such associations would be organized in New Brunswick in connection with some of the most progressive agricultural societies.

President Wetmore explained the methods followed by the Clifton Society in buying fertilizing ingredients for home mixing and also in the buying of seeds.

Mr. Holder then gave some banjo selections, after which Mr. Bliss Fawcett read an interesting paper on

"CAN FARMING BE CARRIED ON IN NEW BRUNSWICK WITHOUT LIVE STOCK,"

which will be published in next issue of the FARMER.

Mr. J. R. Oastler, who followed in the discussion, referred to the decrease in wheat fields of the West, where cropping practices were carried on, consequently little or no profit can be derived by selling crude products, when soil depletion is taken into consideration. Success with commercial fertilizers might hold good for a while, but we, in New Brunswick, have reached the stage where we must look more to our live stock for maintaining the fertility of our soil; but we must not keep them for necessity; we must keep them for profit.

S. L. Peters thought New Brunswick farmers should get back to conditions of twenty-five years ago, when farmers kept cattle for fertilizing purposes and for profit. The farm that carried as many cattle as possible was always successful. Twice as many cattle were kept in Queens County as there is to-

(Continued on page 291)

SEED OATS.

Start in right now as a seed grain grower. Use every care in preparing the soil. Procure some of our Regenerated Banner Scotch grown Oats, and you will find that not only will you increase your yields by 10 to 30 per cent. as our last year's customers did, but also will your neighbors come to you each season for your seed, and pay you high prices. It costs no more in land, labor, horse flesh or machinery to grow our best seed than common run-out seed, but the prices and yields obtainable are very different. We offer these oats, while the stock lasts, freight paid, at **$1.50** per bushel, in 5 bushel lots. Bags free. Send for samples also catalogue.

Clovers & Timothy

Below find our present prices for guaranteed **No. 1 Government Standard** Clovers and Timothy, delivered, freight paid, at your nearest station, provided you order 200 lbs. or over. Bags 25c each extra.

Send for Samples.

Red Clover, "Sun" Brand, at $11.00 per bushel, (60 pounds.)
Red Clover, "Moon" Brand, at $10.25 per bushel, (60 pounds.)
Mammoth, "Sun" Brand, at $11.00 per bushel, (60 pounds.)
Mammoth, "Moon" Brand, at $10.25 per bushel.
Alsike, "Ocean" Brand, at $9.50 per bushel.
Alfalfa, "Gold" Brand, at $13.40 per bushel.
Timothy, "Diamond" Brand, at $3.75 per bushel, (48 pounds.)
Timothy, "Crescent" Brand, at $3.25 per bushel, (48 pounds.)

MAPLE SYRUP AND SUGAR MAKING

BY PRACTICAL MAKERS

The maple leaf has been emulated for years in song and story and holds the proud distination of being one of the emblems of Canada. The tree itself is a source from which valuable lumber is procured. As a furnisher of heat what can surpass good dry maple wood? What is more beautiful than the leaves of the maple when they present innumerable tints of green and gold in the autumn? When the first settlers of Canada wished to taste some of the sweets of life how they used to look forward to the sugaring season, for from it they must, of necessity, procure their sugar supply. Is it therefore any wonder that a tree possessing such virtues should be emulated by our predecessors?

In response to a request for contributions on maple syrup and sugar making the following interesting articles have been for warded to us:

SUGAR MAKING BY MODERN METHODS.

In sugar making local conditions make a difference, trees situated on high land with a northern aspect do not get ready to run sap so soon as those on lower land with southern exposure. The "bush" in question has the latter location and by the way the trees have been tapped for eighty consecutive years by father and son, first with an axe and gouge and an old fashioned wooden spout, with birch-bark receptacles to catch the sap, then after being gathered and hauled by hand on a toboggan to some central situation, 40 and 60 gallon pots were filled and hanged on cranes over a hugh open fire and the boiling process was gone through with. Now everything is changed.

Any time after the tenth of March, sometimes before and sometimes not until the fifteenth, just according as the weather is spring like with cold nights and days that the snow is thawing or the reverse. We make ready to begin the operations by washing our buckets which have been piled in the camp separate and bottom up since the spring before, and scattering them through the woods one to each tree. Our storeage tubs (galvanized tanks are better) are thoroughly washed and scalded and set in place, smoke stack put up, evaporator, (we use the Champion, manufactured by the Grimm Co.) placed on furnace, then everything is ready for a flow of sap.

The first fine morning that the trees are thawed sufficient for the sap to start two men begin the tapping. A 7-16 bit is used to bore a hole from one and a half to two inches deep. A Grimm tap spout, No. 2, is driven in gently until it fills the hole nicely so there is no leakage. Tapping operations are hurried as much as possible while the sap is running, but not otherwise, if the sprout is driven while the tree is frozen leakage is sure to follow from the splitting of the wood under and above the bore hole.

Next comes the gathering, a tank holding three barrels is firmly placed on a sled drawn by a pair of horses and the work begins. Two men, with pails holding eighteen quarts, take each a side of the road and the woods are quickly gone over. The feeding tub being full, connection is made with the evaporator, fire started and as soon as possible the sap is turned into syrup. It is very important in making a prime article not to allow the boiling process to linger. The syrup is boiled until it will test 13 lbs. 2 ozs. to the gallon then put in tins holding one gallon each. If candy is wanted we further reduce the syrup until it will stick to a ball of snow and and when cool break with a crackling sound, it is then dipped into firmly packed and smoothed snow allowed to cool and placed in boxes made of birch-bark when it is ready for market. If sugar is called for, the syrup is treated in the same way only instead of putting on snow we take the pot from the fire and and after allowing it to cool some time stir the contents until it grains when it is ladled into tin boxes holding from 1-4 to 1-2 lbs.

Eating Candy off the Snow

THE MAPLE SUGAR INDUSTRY OF THE PAST AND PTESENT.

For many years the sugar industry of Eastern Canada was carried on in a very primitive manner. Tradition says that the Indians first discovered the art of making maple sugar. In the earliest stage of this industry the rock-maple was tapped with an axe and gouge. A wooden spout was then driven to convey the sap to the bark placed at the foot of each tree for storage purposes.

In those days the sap was gathered and put in a small tub, then drawn to the camp by hand and boiled in large pots holding from thirty to sixty gallons each.

About twenty-five years ago an iron spout was invented, which made tapping much easier and saved much sap that was wasted by the old method. The trees are tapped with a bit and the spouts driven until the shoulders fit tightly to the bark, to prevent leakage. The spouts are equipped with a wire hook to hold a tin bucket in which to catch the sap, which is a great improvement over the barks used in former days.

About thirty years ago pans were invented in which to boil the sap; they rested on arches built of stone, and were considered superior to pots for boiling purposes,

Five years later evaporators were manufactured which boil the sap much quicker, with less wood and modernized the sugar industry to a large extent.

In these days spouts coated with tin are used, being less injurious to the tree than iron spouts. Most of the sugar makers of today use evaporators manufactured by the Grimm Mfg. Co. or some other up-to-date firm. They are built of tin and rest on a steel arch lined with brick and are so arranged that the sap can be boiled down to syrup thick enough for market. This syrup, when boiling, registers 220° by a thermometer and weighs 13 lb. 2 oz. to the gallon.

If the operator desires to make sugar he puts the syrup into a kettle which he has for the purpose, resting on a steel furnace and a small fire will boil it down thick enough for candy and sugar.

When the boiling liquid will register 240° the kettle is removed from the fire, and if candy or wax is to be made, he either pours it on hard snow or into tins or barks used for this purpose; these are set away to cool. In making sugar the liquid is allowed to cool until it thickens a little, it is then stirred and put into moulds. The large tanks for holding the sap and other utensils made of tin make the sugar of today much purer and lighter in color, and it demands a ready sale in all the markets of the Maritime Provinces.

RICHEY F. SHIPLEY,
Fenwick, Cumberland Co., N. S.

GUARANTEED PURE MAPLE PRODUCTS.

In order to make good maple honey or sugar, it is necessary to have a first-class equipment. Everything with which the sap comes in contact should be made of tin or metal. In the sugary it is necessary to have a sap spout and sap bucket for each tree tapped and a team of horses attached to a wooden shod sled to draw the gathering tank around when collecting the sap. I find that it takes a man to every thousand trees or buckets.

I have my sugar house so arranged that, after the sap is in the gathering tank and hauled to the reservoir above the sugar house, that I do not have to handle it again until I draw it out of the evaporator, ready for bottling or sugaring off. I use three strainers in connection with the manufacturing of maple honey, the last used being a white felt strainer, made for the purpose. It is essential to have a large sap holder at the sugar house for holding the sap as it is gathered from the trees. It is always best to keep all the sap outside of the boiling room and for this purpose make some kind of a shelter in which to store the sap until it is transferred to the evaporator, as I find the boiling room too hot for it. It is necessary to keep it as cool as possible, to prevent souring.

After the sap is boiled into honey, it is drawn off into a settling can or tank, to settle and cool for bottling or putting into cans for the market.

I find it best to use the old iron pot for the sugaring off process. I have tried the small arch and tin pan and had no success. Some claim it to be all right, but every man to his own fancy.

When selecting a site for a sugar house, a side hill should be chosen, so that the gathering sled can be driven to an elevation at the side, high enough for the sap from the gatheaing tank to run into the sap holder by its own gravitation and then from the sap holder to the evaporator. The house need not be expensive, just a plain building, the size being regulated by the number of trees and size of the evaporator. It should be well lighted and ventilated. The ventilator should be about the same length as the evaporator, put in lengthwise of the ridge, and should be of large dimensions, so that the steam from the boiling sap can readily escape.

The evaperator should be made from a heavy grade of tin plate. There are a number of modern evaporators, each company claiming to have the best, but the choice must be left with the purchaser. One of sufficient size to do the work, with the least amount of fuel and labor, should be selected.

It is very important to have the outfit of a capacity greater than is necessary for the number of trees tapped, as the trees are steadily on the increase in growth and new ones are coming on. When I purchased my equipment, a few people thought I lacked good judgment in selecting so large and expensive evaporator, but I knew my own business the best, as I have since conclusively proved.

I use the Champion evaporator, manufactured by the Grimm Mfg. Co., Montreal, and it has given the best of satisfaction, for as I said before, when the sap leaves the gathering tank for the evaporator, I do not have to handle it again until I draw it away from the evaporator, ready for the market. My aim is to make one of the purest and best grades of maple products among my brother sugar makers. I do not say that I make the best, but I like to come

POPULARIZING FORESTRY.

In the discussion which followed the reading of a paper on "The Lovers of Out-of-Door Life and the Forest" by Mr. L. O Armstrong, Colonization Agent of the Canadian Pacific Railway, before the Canadian Forestry Association at Montreal in March 1908, Rev. T. Hunter Boyd, of Waweig, N. B., a valuable contributor occasionally to the columns of the MARITIME FARMER said:

I have just one word to say on a matter to which I think further attention might be called in Mr. Armstrong's paper, and that is the allusion to the children. Possibly owing to the fact that this Association meets in a mercantile centre, and in a building devoted to the interests of business, it may be that the other end has not received the attention it deserves. I believe the Board of Directors of this Association has under its consideration a scheme of bringing these matters before you, and before the boyhood of this country.

"Dr. Fernow in his address at the Canadian Club suggested three aspects, the old timber, the young growth and the forest covering. I suggest that many of the aspects brought up appertain to the old growth. There is an increasing attention to the growth coming on, but in relation to this we should take it as a symbol that the forest cover should be considered in respect of the very infancy of this country's resources fifty years hence, there is another thing to be thought of, and without presuming to offer anything in the nature of a resolution, I would ask to be allowed to emphazize the aspect brought up recently at the meeting at Ottawa, that the Association inaugurate steps looking to the popularization of printed material which is now available for its members and others, and very especially, that as soon as possible an attempt be made to bring this matter before more of our people than the University students. It is, I understand, already in use at the University, of Toronto, and will be introduced this summer in New Brunswick. But that is not enough. A short course should be arranged for our normal colleges and brought before Teachers' Institutes throughout the Dominion with the splendid illustrative materials that is available in the older countries. Whilst we do not advocate the preparation of a great exhibit, we do not advocate that all children in Canada should be asked to do what Sir William Macdonald and Dr. Robertson suggested in respect to seed grain, that they should be taught to know and love the work which will result in making two bushes grow where before there was but one. They started with a very crude test, only a matter of co-relation and co-ordination with what has been done in other departments of horticulture and I trust this popularizing of the movement Dr. Fernow is associated with, and which at present makes us all look to Toronto University, as we cannot to any other place in Canada, to give information in a good, direct form, in small doses, to children, will be carried on in Canada. This will do much more good than the issuing of any amount of information in newspaper paragraphs or in the literature of your Society. I would suggest that a move be made to emphasize this aspect of the educational work which has already been so ably dwelt upon by Mr. Armstrong in his paper."

Dr. Fernow who followed Mr. Boyd in the discussion said:—"With regard to the education of the young, I would like to say a few words to plead guilty of misconception in former years. I am a professional forester and when I started on this propaganda I supposed I was appealing to men and that they were the proper people to secure the proper methods of treating their own property. If I had ever thought that it would take twenty-five years to make as short a step as we have taken in that direction I should certainly have favoured beginning at the schools. At every meeting in the early history of the Association there was sure to be somebody who said that what we wanted to have in the nation must first be put into the schools. That is a good German philosophy, and it was resolved that the Association should instruct the young in the schools, and there was a sort of idea that I was the man to prepare the text books. I always refused to do this, first because I was not capable of writing such a text book, and secondly, because while public schools were hardly able to teach the necessary subjects satisfactorily, it would hardly do to put another subject into the curriculm, like Forestry.

"Since then I have found that in a country of dempcratic Government, to secure any action, first public opinion must be formed, and the school furnishes a remarkably satisfactory place in which to begin to form public opinion. The only trouble with the proposition is the difficulty of method. We cannot introduced the subject as a separate study, but occasional talks from the teachers are properly advised. And I think in this direction this Association is perhaps not doing its full duty by merely meeting once a year and publishing a report, and in addition publishing a journal which comes out only quarterly, to be put upon the shelves without reaching the large reading public which we want to get at, or even the teachers of the country. I hope that during the next year the Association will attempt to carry out Mr. Boyd's suggestion, and the University of Toronto in its Forestry Faculty will be anxious to assist in the propagation of such common sense literature as may be used to reach the young. I sincerely hope that during this year the Association will take some steps to secure a wide distribution of such material."

LET FARMERS ADVERTISE.

If a man is about to start in the mercantile, manufacturing, or almost any other business, the first thing he does is to advertize. He goes to his local paper and inserts an ad. announcing his business intentions and when and where he expects to do business. When he is established he makes his business known to the public by displaying his goods and wares to the very best advantage possible and does all he can to call the attention of passersby to his display; and everybody knows the advantages derived from this expense and trouble.

If it did not pay to thus advertise, merchants and others would have stopped it long ago. If it pays in all other kinds of business to advertise why not in farming; but how many farmers advertise?

"Oh," they say, "it costs money." Very true, but it also brings money; and besides it need not cost so very much, after all.

The best advertising medium of the country, of course, is the newspaper; but there are other ways that are very beneficial and comparatively inexpensive.

A merchant places over his door or in some conspicuous place a sign with his name and business in glaring letters. If that is an advantage to him, why should not the farmer follow suit? Is not his business as important and as honorable as any in existence?

Let every farmer have some appropriate name for his farm. That is the first step towards advertizing. A name once selected, let him put out in some conspicuous place a signboard with the name of the place at the top, either painted or printed on cardboard. Below this let him advertise from time to time whatever he has to sell or wishes to buy, either on printed cards or written on the smooth board with a croayon in large, plain letters that can be readily read by passersby. Such a bulletin board will be found of great value if intelligently used by the owner. A few placards with the different products which the farmer is likely to have for sale can be procured at a slight cost and may be made to last for a long time if put out in their season and then taken in and laid away for another season.

There are several devices for displaying such cards. Let each farmer use his judgment as the best method, but by all means name the farm (your business) and then advertize in some way the produce of that farm.

THE NEW BRUNSWICK PROVINCIAL SEED FAIR.

It has been customary for a number of years to hold seed fairs annually at Woodstock, Chatham and Sussex. A departure was made this year from the usual routine by holding a provincial seed fair at Fredericton.

The fair was held on Wednesday, the 23rd ult. while the Farmers and Dairymen were in annual session. Had it been held on the day following or preceeding the sessions we believe it would have been a decided advantage to both exhibitors and visitors. As it was the farmers were so engaged with their regular convention meetings that they could not attend the seed fair, and as a consequence the greater percentage of the delegates did not see the seed fair, and those who had seed grains to offer for sale did not find it as good a selling medium as they expected. As an educational feature we believe, one day could be very profitably spent at the seed fair, by all the delegates. There they could be instructed in seed judging and listen to instructive addresses on seed growing and selecting in its various phases. We know Inspector S J. Moore could have spent an afternoon with the farmers and would have made matters interesting for them had he had the opportunity. We trust that if only one fair is held next year that arrangements will be made for one day especially devoted to it without any counter attractions, otherwise we believe more good can be done by holding several smaller district fairs. Indeed we believe the latter method would give the best results. We expected to see a much larger seed fair at Fredericton than was found there, we have seen larger local shows. The exhibits, however, were of high quality. Mr. S. J. Moore, who judged the exhibits spoke very highly of the quality of the exhibits and made the statement that with a little more attention to selection the time should not be far distant when the importation of seed grains from abroad should cease.

Maple Syrup and Sugar Making.

(Continued from page 267.)

up as near to the standard as I can and I guarantee all my maple products genuine.

ORINGTON McKEEN,
Kingsclear, York Co., N. B.

THE MAPLE SYRUP INDUSTRY.

It is to the maple tree that we are indebted for one of our rarest luxuries. The maple holds a most prominent place among the various other species of New Brunswick trees and yet the maple syrup industry is one, as yet, little considered by New Brunswickers as a source of livelihood.

The most important consideration in this industry is, of course, the orchard or bush, as it is sometimes called, and its situation. Although a southern slope, on raised land, is preferable, it is not in our power to turn the hills and swamps around and up as we would like them, so we must take them as they are and receive good dividends on the amount invested and the labor spent thereon.

In the manufacture of maple sugar and syrup, from a financial point of view, there are two points of importance that will be necessary to remember from the first and these are : We must make a first-class article that will assure a good price when placed on the market. Failure is sure to overtake the man that takes up this industry with the expectation of finding it all fun, unless he is one of the few, who considers unceasing labor and endurance a pleasure.

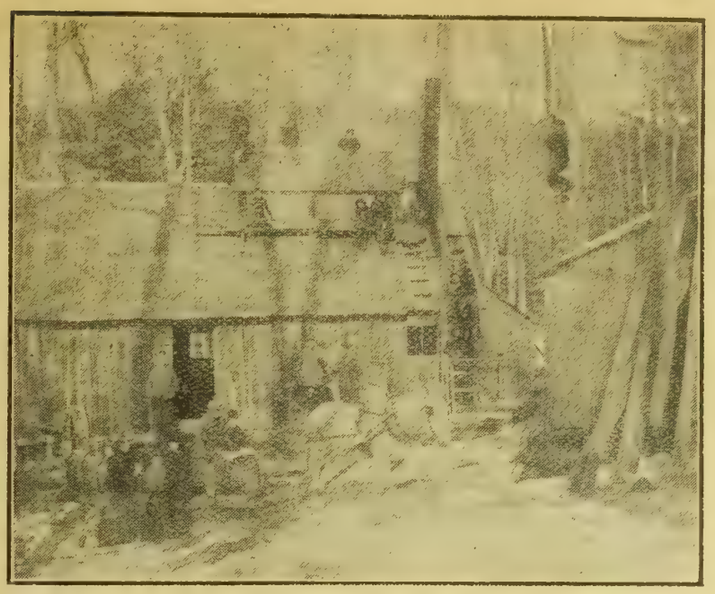
In order that a first-class article will be assured, the first matter of importance would be the outfit and this is one of the all important factors in the making of maple syrup. As soon as the sap has accumulated in the cans on the trees, prompt action must be taken to get it boiled down The longer the sap remains unboiled, the darker will be the syrup, therefore, it is necessary to have an evaporator in order to get it done quickly. Although we have had no experience with any of the later types of machines but that of the Grimm Mfg. Co., we consider such would be unnecessary, as their evaporator is perfectly satisfactory in every respect.

It might be well to mention here that all vessels, cans, strainers, thermometers and such like utensils, that come in contact, in any way, from the time the hole is bored in the tree until the finished product is placed on the market, must be, in every way, void of smell, taste or coloring, as the least of any of these will affect the sap or syrup and spoil it as a first class article. Utensils of tin, are far superior to those of any other material and it is thus in the tin boiler of the evaporator that we score another point over the old fashion iron pot, or galvanized iron pans.

As to the cost of an up-to-date outfit it is estimated that a, 1000 cans equipment would be about $500., but as to this, I might say, that on a farm he would likely have team and sleds at hand and a gathering tank can be substituted with a cask if thoroughly soaked and cleaned, while part of the cans might be purchased each year when he could see fit to do so. Covers could be discarded altogether for a few years by taking care to gather the sap when a storm threatened and then empty the cans immmediately after the storm ceased. Though covers are beneficial as they keep the leaves and moss and drippings of the trees from the sap.

The cans should hold not less than eight quarts and be smaller at the bottom than at the top, so as when it freezes the ice will raise in the can and not burst the sides. When gathering, do not throw the ice away as this only decreases the quantity of syrup for the season. If placed in the storage tank by the evaporator it will thaw of its own accord.

Let us now turn our attention to the tapping, this should be done about the last week in March. If the tree is tapped too early in the season it retards the flow of sap. the hole should be 7-16 to 1-2 inch in size and 1 1-4 inch to 1 3-4 inches in depth, according to the size of the tree. The auger must make a clean cut slanting up giving a chance to drain out. Clean out the cuttngs and insert the spout.



Waiting For a Candy Treat
Scene at True Hodgson's Sugar Camp, Collingwood Corner, N. S.

The spout should be of the latest type and rest on the bark of the tree and not driven into the wood.

The tree should be tapped on the southern side ranging from south east to sout west and change sides alternately, taking care not to tap directly above or below the old cut.

As to the size of the tree the smallest should be eight or nine inches through, while a tree eighteen inches or more through, could be tapped two or three places at once according to the size of the top of the tree.

When a tree of another specie grows close to a maple tree, cut it down as the roots of both will stretch out parallel and the small roots or feeders coming in contact with each other retards the supply of nourishment for the maple tree. Also cut small soft wood trees to allow the sun to shine directly, if possible on the tree where it is tapped.

When the syrup is ready for shipment, it should be placed in attractive packages and labeled bearing the makers name and post office address. Clear glass bottles are preferable for the retail trade, while one or two gallon cans may be used for larger quantities.

Maple syrup making is like butter making, it has advanced of late. Where our fathers used the old milk pans we now have the latest cream separators, so also the old iron pot with its thick black contents, (though it was sweet), has given way to the evaporator, with the sap running in at one end and the clear, pure syrup running out at the other.

EDGAR SHAMPER.
Kingston, N. B.

THE OLD WAY AND THE NEW WAY.

I have been making maple sugar for fifty seven seasons. When I first commenced operations we used to go in the woods in summer, peal birch bark and make it into receptacles in which to catch the sap. We made our own spouts and tapped the tree with an axe and gouge chisel. Large pots of a capacity of from 15 to 30 gallons each were used to boil the sap. These pots were hung on cranes outside and had a large log of wood called the back log to one side of the fire and a smaller log, the front log on the opposite side of the fire. I have often worked in the open air all night watching the boiling pots. To keep fire going under four or five pots was no small job. The first improvement was to build a stone furnace on which the pots could rest and the trouble of keeping the fires was diminished very materially and consequently it was a great improvement over the back log system and we did not burn so much wood. We also bought sap cans to hang on the trees and again our work was lessened and then we had no more trouble with making birch bark receptacles.

Finally we bought an evaporator which is a great improvement over the pot system for boiling sap. We believe the acme of perfection has been reached in those evaporators. It is a pleasing sight to see the sap enter the evaporator at one end and after passing through several compartments come out at the other end as golden syrup.

DAVID STILES,
Lutz Mountain, N.B.

FACTS AND FIGURES RE SUGAR MAKING.

Although I have not as large a maple sugar business as some of my neighbors I have been in the business a considerable length of time, beginning with the laborous birch bark system for catching the sap, and pots on an open fire for boiling.

The barks were placed on the snow and as it melted, they, on reaching the ground, were some considerable distance from the tap and sap spout, which gave the wind a chance to blow the drop on the wrong side of the bark.

After many years we procured a pan set on an arch or furnace for boiling the sap which we caught in tin kettles hung to the sap spouts which were of metal instead of wood. Finally I procured a Champion evaporator from the Grim Mfg. Co., 58 Wellington Street, Montreal, P. Q., size 3 ft by 10 ft for $100. The workmanship is good and satisfaction guaranteed.

My sap kettles cost from $10 to $12 per hundred with sap spouts. This price does not include the covers for which we purchased the tin and made them ourselves at leisure.

Instructing in Candy Bark Making

I have between 500 and 600 kettles which I hang on trees from 2 feet to 8 feet in circumference. I gather with tin buckets and carry it to the camp on a sled drawn by a horse. My hauling tubs have faucets in them to empty them.

We build our camps on a slope so that gravitation will carry the sap into the tank without lifting the hauling tub from the sled. As the sap leaves my hauling tub I strain it through flannel, and again I strain it as it flows into the tank that feeds the evaporator which is below the main tank. I strain the hot syrup through flannel to remove the sediment called nitre, or sugar sand, which is a combination of malic acid and lime which I believe is always present in sap.

For the next season I have procured felt strainers from the Grim Mfg. Co to strain the syrup and will strain the sap through cheese cloth. When we strain through flannel we find it necessary to use a settling tank.

I use a pot for making sugar. For an arch I used sheet iron in shape like a section of pipe set on end on a brick and mortar base, just large enough to receive the bottom of the pot, with a door in one side and a pipe in the other leading to the smokestack of the evaporator arch, which being tall gives it a good draught.

The size of my camp is 16 ft. by 20 ft. with a woodshed on the end of it about 10 ft. by 20 ft. with a trolly to carry the wood into the main building.

The average annual yield of sugar is about 1 lb. per kettle. On Some large trees we hang two buckets.

The sugar is worth 12 cents a pound. We purchase syrup cans for 12 cents and sell the syrup in cans for $1.25 per gallon. One gallon will make 9 pounds of sugar. We test the density of syrup and sugar with the thermometer which makes it of an equal quality or consistency.

Now this yield is over and above much that is consumed by the operators and visitors, as you who have sampled any of these delicacies know that they are a luxury in the sugar camp as well as elsewhere.

The prices that I have quoted are local and are advancing.

D. W. DIMOCK.
Farmington Cum. Co., N.S.

MAPLE SUGAR MAKING IN NOVA SCOTIA.

When the weather begins to warm up and there is a suggestion of spring in the air, with sunny days and frosty nights, then it is time to tap the maple trees and get ready for the sugar season. In order to make a good article of maple sugar and syrup it is necessary to have a first class equipment. Everything with which the sap comes in contact should be tin or metal. The trees are tapped by boring through the sap wood of the maple tree and inserting a spout from which the sap will flow drop by drop quickly or slowly according to the climatic conditions The sap buckets are of tin, fastened to a hook on the spout. Each bucket is provided with a cover as a shelter from storm, dirt and leaves. The sap is carried from the trees to the gathering tank in large tin pails. It is then taken to the sugar house and strained into the sap holder. A pipe or feeder conducts it to the evaporator which is a Champion manufactured by Grimm Co., Montreal, size 4 by 16, feet large enough for a bush of 1500 trees. The sap passes through the pans, over the arch where the fire is. coming out at the back in syrup where it is tested with a thermometer to get proper thickness. It is then put into setting cans and afterwards drawn off into gallon cans ready for market. If sugar is to be made, the syrup is put into the "sugaring off" pan and boiled until it reaches a state hard enough to cake into sugar. It is then put into tin boxes the required size and left to harden.

To have amber colored, transparent, syrup, the sap must be boiled immediately after it is gathered. The longer

(Continued on page 288.)

HORTICULTURE

New Brunswick Fruit Grower's in Annual Session.

The fifth annual meeting of the New Brunswick Fruit Grower's Association was held in Church Hall, Fredericton, on Thursday, February 25th. A representative number of interested fruit growers were present. A very good show of winter apples was also tabled and judged by Messrs W. Saxby Blair, of St. Anne de Bellevue, and A. G. Turney, the Provincial Horticulturist. President Isaac Stephenson occupied the chair and after calling the meeting to order read the following address:

PRESIDENT'S ADDRESS.

"Gentlemen:—

I am glad to welcome you here to the 5th annual meeting of this asssociation after a year marked by some progress in our business of fruit growing. Orchards for the most part came through the winter of 1909-1910 in very fair shape. However, there has been quite a large amount of injury in some sections, due to girdling of trees by mice. Crops were hardly up to the average. Insect pests seem to be steadily increasing in numbers, and I would strongly urge upon our fruit growers the necessity of going more deeply into the spraying of their orchards.

"New Brunswick apples show that they can compete with these of other countries, and have won honors for their growers, as well as advertising the province.

"Both at London, England, and at Amherst, N. S., our exhibits have in strong competition won high honors. We are to be represented at the Brussels Exhibition during the present year with a collection of 1909 fruit, The result of these exhibitions should give our people hope and encourage them to develop the business for which so many sections are so well adapted.

"Another step in advance since our last meeting is the appointment of a Provincial Horticulturist, Mr. A. G. Turney, who is present with us to day, and will address the meeting this afternoon. The duties of this gentleman are to co-operate with our fruit growers in the development of the New Brunswick Fruit Industry. His work this summer will in all probability largely consist of visiting the various sections of the province, and the illustration orchards, and holding meetings at which appropriate methods of orchard practice will be demonstrated, and all matters pertaining to fruit growing discussed.

"I am of the opinion that the adoption by the Association of a uniform score cards for the judging of the different kinds of fruits and the circulation of such cards among the fruit growers, would possibly enable them to select their fruit for show purposes with better chances for success.

"It has been customary to hold the annual meeting of this association and the show in connection with it some time in February at Fredericton. For many reasons it is advisable to hold this meeting earlier in the year, preferably in November. If this association is to continue as the New Brunswick Fruit Growers Association, it's annual meeting ought to be held in a more central place, and at a more favorable season; so that it may be accessible to all, instead of to one fruit section. If we are going to extend our membership and make the association exert an influence for good throughout the country some such step is very necessary. We have done good work in the past, but the time has come for us to take a step upward. By holding our show at St. John in the early part of November, we ought to be able to get a larger attendance and display of fruit on account of the ease with which everybody could get there, and because it is a far better time of the year to exhibit fruits. The one day's programme which we now have might well be extended then to one of three days duration, with the most expert men we can get as lecturers. I invite discussions on this point, and merely throw this out as a suggestion.

We have been very fortunate in securing the assistance of Professor Blair at this meeting. His name is too well known to need introduction.

"In conclusion I would urge you all to redouble the interest and enthusiasm which you have manifested in the work of the past, and to enlarge the membership of this association with a view to placing it upon a firm and more satisfactory basis."

After a brief discussion on the Presidents address, the various points of which were heartily concurred with by the members. Mr. S. B. Hatheway, the Secretary read this report and gave an interesting account of the various orchard and other meeeings held during the year.

Treasurer, Henry Wilmot's report showed a healthy financial condition.

In the absence of Mr. Vroom, Chief fruit inspector for Nova Scotia, who was to demonstrate the box packing of apples, Prof. W. Saxby Blair took his place and gave a very interesting, practical demonstrative lecture.

OFFICERS FOR ENSUING YEAR.

President, C. N. Vroom, St. Stephen. Vice-President, W. B. Gilman, Fredericton. Treasurer, Henry Wilmot, Ormocto. Secretary, A. G. Turney, Fredericton.

THE CARE OF THE ORCHARD

was the subject of a very interesting talk by Mr. W. Saxby Blair. He advised the New Brunswick fruit growers to stick close to the McIntosh Red. The quality of the fruit on the tables was a demonstration of what might be accomplished by keeping apples under proper storage conditions. Drainage, fertilization and freedom from weeds were some of the essentials for successful orcharding. In regard to growing an average crop of well grown and well colored fruit the speaker said: "If you want to develop first class fruit you must, besides attending to the other details of orcharding, do some thinning of the fruit after it has set."

The mulching system gave trees a shallow root system. Cultivation gives a deeper root system and consequently a larger feeding area. In regard to a question, re protection of trees from mice he said, paper, veneering, wire netting, or cinders might be used or one might tramp the snow around the base of the tree.

In setting out a young orchard Mr. Blair would recommend the use of fillers between the permanent trees as a means of lowering expenses until the permanent trees came into bearing.

KEEPING BLACK KNOT IN CHECK.

Prof. Andrews, of Sackville, gave his experience in combating black knot on plum trees. He had found that when his plum trees were sprayed with blue vitrol water and afterwards with a soft soap emulsion that black spot was kept in check. He has been using this remedy for 6 years with very gratifying success.

Mr. H. H. Smith of Hoyt Station, handled the subject of Strawberry Growing in a very instructive manner. He pointed out the profits from systematic strawberry culture and outlined his own methods of cultivation. Mr. O.W. Wetmore, of Clifton, another successful strawberry grower, related his methods and enumerated the varieties with which he has been most successful.

The committee appointed to report on the President's Address brought in the foltowing resolutions:

THE PROVINCIAL HORTICULTURIST.

The president then called on Mr. A. G. Turner, the newly appointed provincial horticulturist, to address them, and in complying Mr. Turney said that owing to the short time he had had been in the province he would not be able to do more than outline the plan which he proposed to follow in the endeavor to make it a great fruit growing centre.

out of the province to Ontario for Apples. This in the face of the natural advantages which the province possessed for fruit growing, was a condition of affairs that is humiliating. But he saw hopes that by reason of the enthusiasm which seemed to be evidenced by these present, a change in the present condition would soon take place.

It had now become well demonstrated that varieties of apples could profitably be grown in the province, and there was no reason why the cultivation of the varieties could not be considerably increased. Fruit growers of New Brunswick had no reason to envy the fruit growing capacity of any other province. In this province they had the soil and the climate and all that was wanted was the man. As soon as the man could be found the result would follow that New Brunswick would quickly take that place among the fruit growing localities in the Dominion, that her good qualities entiled her to.

NEXT MEETING IN ST. JOHN.

During the afternoon a discussion took place on the point suggested in the president's address as to the time and place of the next annual meeting and it was ultimately decided to hold the next meeting at St. John in November next, the reason given for the change in time and locality being that the month of February when the meeting was usnally held, was too late in the season to secure a fair exhibit of these early varieties of apples which could be better obtained in November.

Fredericton it was thought, was too far away from the fruit growing districts of Kings Co., for the people of that locality to take part in the meetings of the association. By continueing to hold the annual meetings in Fredericton the membership of the society was practically restricted to local men, and if it was to be an association of New Brunswick fruit growers, it would become more available to the other parts of the province.

The President's address was referred to a committee who brought in the following repurt:

"Your committee to whom was referred the President's address touch only some of the more important points of the same in their report.

We beg to emphasize the recommendations he makes for the more general and thorough spraying of orchards for the suppression of insect pests. This practice if followed by orchardists will not only result in the lessening of insect injuries, but will abundantly pay for the expense and labor ineurred by a large yield of better fruit.

The appointment of a Provincial Horticulturial referred to by the Presidents is certainly a great step in advance, which should be highly appreciated by this Association and should work much good to the fruit growing interests of the province. We are glad to learn that Mr. Turney has already made arrangements for the beginning of demonstration orchard work, and we look for increased interest and better methods in fruit culture as a result of his labors.

Your committee would recommend that the Association adopt the form of score card forwarded to the President by the Nova Scotia Fruit Grower's Association as it is most desibable that a uniform system of judging should be in vogue among all fruit growers.

Perhaps the most important point in the address of the President so far as the work of the Association is concerned is his reference to a change in time and place of the annual meeting of the Association. Your committee feels that this might well result in better exhibits of fruit and a larger membership and attendance at the meetings. We therefore recommend that the next annual meeting of the Association be held in the city of St. John, on November next, before the close of navigation on the St. John River.

Respectfully submitted,
WM. B. GILMAN,
C. N. VROOM,
WM. MCINTOSH.

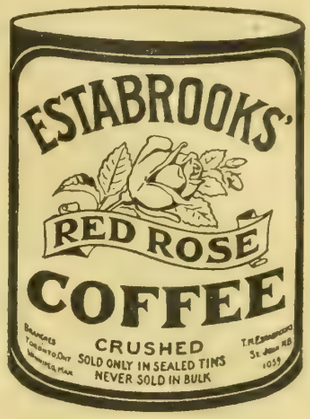
Crushed Coffee— what is it?

By a new process of crushing between steel rollers, instead of grinding, the skin, which remains in the eye of the bean after roasting, is separated from the kernel and removed by air suction, while the kernel is broken into small even grains. These grains when steeped, being free of the skin or chaff, settle quickly, leaving the liquid clear and bright, and give the true coffee flavor.



Estabrooks' Red Rose *crushed* Coffee is as easy to make as Red Rose Tea. Directions are in each tin.

It is strictly pure, not a particle of chicory or any other adulterant being used, and is packed in air-tight tins the same day it is roasted so to retain its full flavor, fragrance and strength.

A good combination is Estabrooks' Coffee for breakfast and Red Rose Tea for other meals.

Estabrooks' RED ROSE Coffee

DAIRYING.

C. W. McDougall, Dairy Inspector, staff Contributor.

Developing Dairy Heifers.

When the heifers have reached an age when they will thrive without milk, they should have the best hay that the farm affords and some form of succulent food, such as ensilage or roots. My experience in feeding young heifers has convinced me that oats are the best grain food to use as a part rationins feeding young heifers from the time they are taken from the skim-milk ration until they are to be bred. We have no grain food superior to ground oats for developing the organs of maternity of young breeding animals or to promote their breeding qualities.

Every dairy-bred heifer has an inherited tendency of function that enables her to reach a certain development or dairy capacity. If she is placed under unfavorable conditions, or environment, this development is arrested in whole or in part and the young animal's capacity, for future development, is weakened, according to the degree to which development was retarded. The younger this development was retarded, the more severe the future results will be.

A ride through almost any dairying section and a look at the calves and young dairy heifers and their developments, their humped-up, half starved, scrawny appearance, proves, rather conclusively, the chief reason why so many cows, in our dairy herds, are incapable of paying for their feed and care. Personally, I believe that the growing and developing of young dairy heifers has much to do with the amount of grain foods that they will require to return a profit after they are put to use in the dairy.

The heifer that is raised upon good, nutritious farm roughage and given plenty of fresh air and exercise and fed a small amount of good, wholesome grain foods, will have her digestive system so well developed that she will be able to make better and more economical use of our home grown dairy foods than the heifer that has been fed and developed largely upon highly concentrated protein foods.

Another matter is that of breeding the heifers at too young an age or before they have attained a fair development. We make a great mistake when we try to rush nature, and much of this talk about early maturity is wrong. The man, who gives his heifers time to build up a good, strong individuality, is on safer ground than the man, who will not wait for this maturity. We must breed early to get the best results, but not until the heifer has reached a fair size and is in good flesh condition. From 24 to 30 months of age is an ideal time for the heifer to drop her first calf, when she has been rightly fed and cared for.

From the time they are bred, until the time they drop their first calf, is another critical time in their lives and, in most instances, they will do better if they are kept away from the other cattle. It is better to keep them thus by themselves, on account of the danger from abortion, either through neglect, injury from the larger cattle, or from contagion, as there are few herds of dairy cattle that are entirely free from this complaint, which is one of the most serious that dairymen have to contend with at the present time.

Many dairymen differ in their opinion regarding the size of the bull that the young heifers should be mated with. Personally, I like to use a small animal, owing to the difficulty that many heifers have during parturition when bred to a large bull.—W. MILTON KELLEY, in Successful Farming.

Economy of the Round Dairy Barn.

Name.....

P. O. Address.....

County..... Province.....

Important Facts You Should Know about Cream Separators

There are six important things a cream separator should do in order to be a paying investment.

First: It should get all the cream.
Second: It should get the cream in perfect condition.
Third: It should save you money.
Fourth: It should save you work.
Fifth: It should be durable.
Sixth: It should make money for you.

Unless a cream separator does every one of these six things it is not a really good cream separator. It is a losing, instead of a paying, investment. It is not the machine for you.

There are a host of machines that are claimed to do these six things. But Empire separators are the only ones that are actually doing the whole six. That's certainly a bold statement. It's the truth, nevertheless.

For example, we will show you how the Frictionless Empire meets these six requirements.

First: The Frictionless Empire skims to .02 of one per cent. and often less. That means the loss of only one pound of butter fat in every five thousand pounds of milk, which is equal to the loss of one pound of butter in all the milk a cow gives in one year. The Frictionless Empire **gets all the cream.**

Second: The few smooth skimming parts of the Frictionless Empire are as easily and thoroughly washed as a glass tumbler. This cannot truthfully be said of skimming devices with corners, slots and crevices that soon get clogged up and cannot be thoroughly cleaned. Cream in perfect condition—cream without a taint—can only be obtained from a separator that **can be thoroughly cleaned.**

Third: The Frictionless Empire gets thirty per cent. more cream than old style methods. **The more cream saved the more money saved.**

Fourth: The Frictionless Empire does the skimming in a small fraction of the time required with old style methods. **It saves many hours of work.** It almost runs itself. So nearly frictionless that it will run for half an hour after you've completed the skimming unless you use our brake to stop it.

Fifth: The very best materials that money can buy are used in the Frictionless Empire. The working parts are perfectly turned—true as a die. They fit together accurately, thus reducing friction and wear close to the vanishing point. You can judge the durability of Empire Separators when we tell you that the average cost per machine has been but thirty cents per year for repairs during ten to fifteen years of service—**years of service prove their worth.**

Sixth: The Frictionless Empire **gets thirty per cent. more cream** than old methods. The cream is first quality—commands a higher price than gravity cream. More cream and higher price cream necessarily mean more money.

No other separators will fulfill all these six requirements. They cannot do so, because they cannot use the Empire patented devices and mechanism.

These patented features are found only in the Frictionless Empire (cone method) and Empire Disc. They are **both high-grade machines.** And in these machines you have your choice of the only **actually standard** methods of cream separation.

Whichever machine you choose you are bound to be satisfied, for every Empire Separator is sold under a binding guarantee—**a guarantee as good as a gold bond.**

Some day you'll Own an Empire

No matter what machine you buy now sooner or later you'll buy an Empire Separator. An Empire is the only separator really good enough for you. An Empire will make more dollars for you, cost less to run, save you more time, than any other make you can purchase. There is nothing in cream separators equal to an Empire, remember that. 1

The EMPIRE Line of Cream Separators

All Sizes of Both Cone and Disc Machines

We give you your choice of either the cone or the disc method. Both are good methods. The most important thing is the choice of the make. So be sure your new separator is Empire-make.

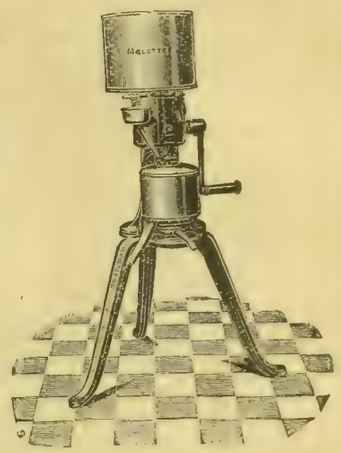
GOOD LIVE AGENTS WANTED



R. A. LISTER & CO. Limited, 62 Stewart Street, TORONTO.

men have compared a circular 40-cow barn with the common rectangular building containing the same area? How many understand that the circular structure is much the stronger; that the rectangular form requires 22 per cent. more wall and foundation to enclose the same space; and that the cost of material is from 34 to 58 per cent. more for the rectangular building?

To the writer's knowledge, heretofore there has never been published a carefully figured out, detailed comparison of a properly constructed circular barn with the rectangular barn. This information is given in Bulletin No. 143 of the Illinois Experiment Station, Urbana, which has just gone to press, copies of which may be obtained upon request. This bulletin is freely illustrated, and offers practical help to dairymen in the matter of barn construction. The objections that have been raised to round barns have usually been made by people who have not gotten far enough into the subject to really understand the relative merits of the two forms.

It has been found by comparison and experience that the round barn has many advantages over the rectangular form. In order to compare the amount and cost of material in the round and rectangular barns, the figures given are based on the careful, detailed estimates of an expert barn builder. Two comparisons, figured on wood construction throughout, are made, in which round barns 60 feet and 90 feet in diameter are compared with both plank and mortise frame rectangular barns containing the same number of square feet of floor space, respectively.

SUMMARY OF THE BULLETIN.

1. Round barns would be more generally built if their advantages were known and if the few which have been erected had been rightly constructed.

2. The round dairy barn offers greater convenience in storing, handling and distributing the feed.

3. In the circular construction, much greater strength is secured with less lumber.

4. Detailed account, with cuts showing how the round barn at the University was built.

5. Itemized statement of cost of a 60-foot round barn.

6. Brief description with cuts and plans of several round dairy barns in actual use.

In summing up the data given in this bulletin, it is obvious that the advantages of the round barn are convenience, strength and cheapness.

The round barn is more convenient because of the greater ease and fewer steps with which the feed can be gotten to the cows, owing to the central location of the supply, and because of the unobstructed mow, which reduces the labor required in mowing hay.

The circular construction is the strongest because advantage is taken of the lineal strength of the lumber. All exposed surfaces are circular, and withstand greater wind pressure because the wind can get no direct hold, as on the sides or gable ends of a rectangular barn.

In round numbers, rectangular barns require, according to their construction, from 34 to 58 per cent. more in cost of material than round barns of the same material.

Prof. W. J. FRASER.

Good Records From Brooklands' Holsteins.

EDITOR MARITIME FARMER :

I am sending the milk records of five of Mr. Giles' Holstein cows from the date of dropping their last calves, ranging from a little over nine months down to three months, with the average per cent. of butter fat for the time of milking. Every ounce of the milk has been weighed from each cow, night and morning, and a sample taken from each cow's milk every day and tested every month. The highest test in that time has been 6.4 and the lowest 2.6. You will see by the records below that they have made a good average, although they are Holstein, that are said, by some people, to give blue milk. Eke DeKol Paul's Queenie is a three-year-old heifer, with first calf. She has only been milking three months, during which time she has averaged over 1,000 lbs. of milk a month. Now, these five cows are all home bred. They were bred and reared at Brooklands. Lady Rose Akkrum's calf is a fine bull, sired by Ormsby Beeman, a young bull, imported from Mr. W. A. Mattison, Utica, N. Y., and sired by Paul Ormsby. His dam, Beeman Vale, has a butter record of over 23 pounds butter in seven days, as a three-year-old. That should make the breeding of Rose Akkrum's calf all right, as you see she is a very high tester, with an average of 4.68 for the five months in milk.—HARRY ALLISTON, Herdsman for C. H. Giles, Fredericton, N. B.

8,000 Pound Scrub Cows.

EDITOR MARITIME FARMER :

In reading Mr. S. B. Hatheway's article, in the FARMER of Feb 8th, on "Weighing and Testing Milk," I thought it was very good until I came to where he said he had some 8,000 lb. good cows that never heard of a pure bred bull. Now, what I want to know is how Mr. Hatheway knows he has some 8,000 lb. cows that never heard of a pure bred bull? I suppose those cows would be called scrubs. What I am trying to come at is this : Mr. Hatheway has been weighing his milk only a short time; then how does he know about his 8,000 lb. cows ? I don't think you can go through York County and buy many 8,000 lb. scrub cows. If you can, what need is there for pure breds? For I can tell you if a man can get a herd of pure bred dairy cows to average 8,000 lbs. of milk a year, he has good cows. I have been weighing and testing milk in the herd of Holsteins, owned by Mr. C. H. Giles, for six years and I can tell you the only way to tell how much milk a cow gives in a year, or between calves, is to weigh every pound at every milking; not weigh one or two months and guess at the rest, for what a cow gives, she gives, and what she don't give, she don't give. I am not going to say that Mr. Hatheway has not got any 8,000 lb. cows that never heard of a pure bred bull, or I am not going to say that he has, for I don't know and he don't know himself, because he has not weighed their milk a year and he can't tell what his cows will give until he has done so. I don't think that the public should be led to believe that we have 8,000 lb. scrub cows in York County, when we don't know it for a fact One more thing I would like to say about weighing milk : In my six years of experience, I would say, I have often looked ahead too much and thought the milk record would be a great deal larger at the end of the year than it really was, as some times the cows will start with a very high record and that is why I say you cannot guess at an average after weighing for only two or three months.—HARRY ALLISTON, York County, N. B.

Chamberlain's Cough Remedy never disappoints those who use it for obstinate coughs, colds and irritations of the throat and lungs. It stands unrivalled as a remedy for all throat and lung diseases. Sold by all dealers.

LIVE STOCK.

Diseases of Sheep.

Sheep in Canada are particularly free from disease. The climate of this north land has proven to be particularly healthful for sheep Alike in the clear, cold climate of the west and the snowy winters of the east, sheep do well, their warm coats protecting them sufficiently, while the pure air and sunshine keep the lungs and consequently their whole system in good order, so that good health is practically assured, if the management is even half what it ought to be.

The diseases of sheep may be divided into several classes. First those caused by external parasites such as scab and foot rot; along with these may be mentioned ticks and lice, which when neglected, frequently bring about unthrifty condition bordering closely on disease. Then there are internal parasites such as worms of various forms, which may infest the stomach, the intestines and the respiratory organs or the head.

Digestive derangements, too, manifest themselves at times. To these may be added the diseases and accidents peculiar to reproduction.

Scab.—Sheep scab, when once introduced into a flock, must be dealt with by thorough mearures. It is a strictly contagious disease caused by a minute specific mite technically known as Psoroptes Communis Ovis. It is so small as to be difficult to discern with the naked eye. This disease generally affects the parts which are covered with wool. It usually begins at the upper part of the body, thence spreading over the neck, shoulders and hips, extends slowly but surely in ever-increasing areas. In two or three months the entire body may be affected. The disease spreads, as a rule, much more rapidly during the winter than in the warm weather. In sheep on grass, after shearing and washing it may remain for a long time in an almost latent condition. Sheep well fed and otherwise strong and healthy resists its ravages in a remarkable way, while those which are thin or badly notrished, rapidly become debilitated, and if left untreated, live but a short time. Affected sheep experience great itchiness with irritation, formation of pauples, inflammation, and the development of crusts or scabs under or near the edge of which the parasite lives. The sheep are restless, they scratch and bite themselves, rub against fences, posts etc., as if in great torture. The fleece assumes a tufted, ragged and matted condition. Tufts of wool are pulled out by the sheep with the teeth, or are left on fences, poost, etc., where they have rubbed; to each tuft scabs are attached, which are usually replaced at the seat of origin, by thicker or more adherent crusts. The skin becomes more or less bare and furrowed, and from the furrows blood oozes. Without treatment the disease goes from bad to worse, spreading the infection, which is readily taken up by other sheep which may come into contact with a diseased one or with infected objects.

Under the provision of the Animal Contagious Disease Act it is the duty of every owner, on perceiving the appearance of sheep scab in his flock, to give immediate notice to the Minister of Agriculture at Ottawa, and to the nearest veterinary inspector of the Department of Agriculture, of the suspicion or presence of the disease. Instructions will then be issued and carried out according to government regulations.

Two principal preparations are recommended for the treatment of scabby sheep, the lime-and-sulphur dip and the tobacco-and-sulphur dip. The former is recommended and used by the Department of Agriculture. Its preparation is as follows: Take 10 pounds fresh lime and add enough water to make a paste. Sift into the lime paste 24 pounds of flowers of sulphur and stir thoroughly. Boil this mixture in 30 gallons of weter for three hours, frequently stirring the mixture. The solution should then be a brown or chocolate color. Allow the mixture to stand for a few hours, preferably over night, and then draw off the liquid. Care should be taken not to disturb the sediment, which is slightly injurious to the fleece of the sheep. To this liquid add sufficient water to make 100 gallons. It should be used for dipping at a temperature not lower than 106 degrees, and not higher than 112 degrees Fahrenheit. The hot dip softens the scabs and destroys the mites. The sheep should remain a full two minutes in the tank. The head should be plunged, and if there are thick crusts on the skin the dip should be rubbed into the wool with a stiff brush or otherwise. Two dippings are necessary at intervals of from 10 to 12 days. In very bad cases a third dipping may be necessary. The sheep should be clipped whenever possible before dipping. When the flock has been dipped once, their quarters should be changed; the barns, fences, etc., where thye have been kept should be well covered with a lime wash containing at last 5 per cent of the pure carbolic acid or creolin.

Foot Rot.—Foot rot is of two kinds, viz., contageous and non-contageous. The latter is a simple disease usually due to excessive wear of the hoof and the irritation caused by the introduction of dirt to the sensitive tissues of the foot. It is, therefore, most prevalent on low, wet land and in filthy yards and barns.

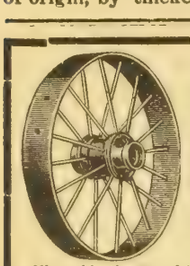
Prevention is better than cure. Sheep should not be fed in wet, muddy or filthy places. Their hoofs should be examined and pared when necessary to remove superfluous horn. When the disease appears in a small flock the hoof should be trimmed down closely and the feet washed or soaked in a solution of copper sulphate, 1 ounce to 2 1-2 pints of water, then dress with watery solution or chloride of iron or with a mixture of equal parts of chloride of antimony and tincture of myrrh. After such dressing the raw surfaces should be protected by a coating of pine tar or gutta percha varnish. Then remove the animals to a dry, clean pasture. If the disease is not of long standing this treatment will generally effect a cure, although in confirmed cases where much destruction of tissue has taken place it may be necessary to repeat the dressing several times.

For large flocks on the range or elsewhere a more general treatment is necessary. A suitable solution is made in the preparation of ten pounds of copper sulphate, dissolved in five gallons of water. The solution is put in troughs two or three inches deep. The sheep after being driven through water, preferably running water, to cleanse their feet, are, by using a narrow chute, made to pass one by one through the preparation. An alternative to the above, affected sheep may be held for a short time on a floor sprinkled to a depth of three inches with freshly slaked lime.

Canadian sheep men may be thankful that the contageous form of foot-rot is almost unknown in this country. The few cases seen are as a rule in recent importations. For this reason imported sheep and others that have travelled in dirty cars should be carefully examined on arrival and treated at the same time as they are dipped. Prevention of the trouble is much cheaper than effecting a cure. The treatmet is similar to that described above although owing to the persistant nature of the disease recovery is generally much more protected. As in this form the trouble begins in the skin of the interdigital space and works downwards through the sensitive laminae, it is advisable to dress the skink between the dew-claws with a mixture of one part carbolic acid to ten parts glycerene, or with vaseline twenty parts to one part of iodine.

Ticks and lice.—In examining sheep for skin diseases it is well to remember that they are subject to infestion with lice and ticks. Of these the louse is most to be dreaded, both on account of the rapidity with which it multiplies and the serious effect which it is liable to produce on the health, as well as the wool, of its unwilling host. The tick, which by the way is not a true tick, but really belongs to the louse family, while much less prolific, develops rapidly and is most frequently troublesome in lambs, although like the white louse it is found on sheep of all ages. As in other species of domestic animals, these parasites are most frequently found and appear to flourish best on the thin and badly nourished sheep rather than on those in good condition. When present in any number both ticks and lice induce great irritation, causing the sheep to scratch with the hond feet, gnaw the sides and rump and rub on any convenient object in a manner very similar to those affected with scab. In this way the fleece is often seriously depreciated, while from its mode of feeding, the louse also cuts the fibre near the root, thus greatly lessening the growth and value of the wool. The effects on the skin of the attacks of these animals, may very easily be mistaken for scab unless a careful examination is made. It cannot, however, be too often repeated that there is no excuse for error in a diagnosis of this kind, for although scab, lise and ticks may undoubtedly exist on the same animal, a sufficiently close and painstaking investigation, with the aid of a moderately powerful pocket magnifying glass, will enable any intelligent observer to reach a definite conclusion as to the nature of the trouble, whether it be simple or compound. It must be borne in mind that the presence of lice is no proof that a sheep is free from scab. While the converse is also true, it is not so important, as while lice and ticks are disagreeable and unwelcome guests their presence is a matter of slight consequence, especially to the sheep owning public, as compared with that of the of the smaller but more deadly and persistent scab mite.

J. G. RUTHFORD,
Veterinary Director General.



If you have a wagon needing new wheels, get Dominion Low Wide-tire Steel Wheels. Stronger, lighter, cost little, save roads and make pulling easier. Fit any axle. Distributes strain equally. Outlast wooden wheels many times. Guaranteed not to break in rocky roads or coldest weather.

The wide tires and low wheels of Dominion Handy Wagon make pulling easy. It saves half in time and labor in loading and unloading. Low and convenient—no high lifting Can be changed into platform wagon in few minutes. Enables one man to do work of two. Lasts a lifetime Parts arranged for easiest draft. Write for free booklet on Wheels and Wagon.

The Purebred Sire.

By judiciously using a purebred sire common animals can be greatly improved in a few generations to resemble closely the purebred. This is by reason that the purebred sire is capable of transmitting qualities, such as he possesses himself, in a much greater degree than the animal with which he is mated. This arises from his prepotency produced by intensive breeding. He is prepotent for the reason that he is purebreed, and the dam is not prepotent because she is of mixed breeding, having no one quality strongly and firmly fixed. Let the difference in blood properties between the sire and the dam be represented by 100. The progeny will not possess 50 per cent. of the blood properties of the sire and 50 per cent. of the blood properties of the dam, but it will possess as many more than 50 per cent. of the blood properties of the sire as his power to effect change exceeds the power of the dam to resist change. In this he found the explanation why the progeny so much more nearly resemble the sire than the dam, when the sire is purebred and the dam is of heterogeneous breeding.

Continue to choose good sires from the same breed, and in a few generations of such breeding animals will be produced practically as good as the purely bred. Of course, the food and care should be such as the improved condition of these animals would call for. This practice would bring about an enormous increase in the value of the live stock throughout Canada. This increase could be produced cheaply, and without the purchase of any more dams, providing that only those possessing the highest quality were used for breeding purposes.

The breeder should first determine from what particular breed he will choose his sires. Thereafter in all breeding operations he should persist in using sires from that breed only. If a sire is chosen from one breed one time and from another the next, there is no assurance that, what it has gained in the first, it will not lose in the second. There can be no stability of character produced by such indefinite breeding.

Crossbreeding is often recommended as a means of improving live stock. It has its place, but that place is not on the average farm. Crossbreeding was a necessity in forming new breeds, but after that its benefits end In the hands of unskilled thermatologists it becomes a menace to the production of improvement in breeding operations. There should be no place for crossbreeding in the ordinary practice of the farmer even in producing mere butcher cattle. Many potent reasons can be given in proof of this assertion. When pure breeds are crossed the progeny will not be as valuable as that of either of the breeds so crossed. It is true that sometimes superior individuality may be gotten in the progeny, but even so such animals are only worth market values for making meat, producing milk or growing wool. Besides, when purebreed females have thus been crossed, there is a possibility that they may not breed true to the type again.

Every progressive farmer should recognize the full value of the purebred and well-bred sire in improving his live stock. If he thinks that he can afford to go into purebred live stock altogether than he will require to purchase purebred dams as well. In every breeding operation the strictest attention should be paid to the mating. The merits and demerits of each animal should be closely judged, and an attempt should be made to mate the animals so as to bring as large a predominancy as possible of the superior qualities in the progeny. Animals that are both suffering from the same defect should never be mated together, since in the progeny this malformation will be found existing in still more intensified form.

MOVING PICTURES
OF DAN PATCH 1:55

ABSOLUTELY *FREE* POSTAGE PAID

If you are a Farmer, Stockman or Poultry Raiser and correctly answer, in your postal card or letter reply, the specified questions.

THIS IS THE LATEST SENSATION AND GREATEST TRIUMPH IN THE GREAT MOVING PICTURE ART.

It is a *New Invention* that you can carry in your pocket and show your friends instantly, day or night, either once or a hundred times, and without a machine, curtain or light. It is the first successful moving picture ever taken of a World Champion Horse in his wonderful burst of speed. The original film contains

2400 INSTANTANEOUS PICTURES OF DAN PATCH

and every picture shows the King of all Horse Creation as plainly as if you stood on the track and actually saw Dan Patch 1:55 in one of his thrilling speed exhibitions for a full mile. 2400 distinct moving pictures taken of Dan in one minute and fifty-five seconds means twenty-one pictures taken every second all of the way around the entire mile track from the back seat of a high power automobile. You can see Dan shake his head to let his driver know that he is ready for a supreme effort and then you can watch every movement of his legs as he flies through the air with his tremendous stride of 29 feet. You can see his thrilling finish as he strains every nerve to reach the wire, you can see his driver dismount and look at his watch while thousands of people crowd around. you can see his caretaker force his way through the crowd and throw a beautiful woolen blanket over Dan to prevent his catching cold and then you can follow him up the track before the madly cheering multidudes. As a study of horse motion it is better than the actual speed mile because you can see Dan right before you for every foot of the entire mile. When first shown to the public this marvellous picture caused people to stand up all over the theatre calling "Come on Dan"—"Come on Dan."

This remarkable movir ; picture is the most realistic and the most thrilling ever presented to the public.

We have taken a part of these 2400 wonderful and sensational pictures and made them into a *Newly Invented Moving Picture* that you can carry in your pocket and show to your friends at any time, day or night. It does not need a machine, it does not need a curtain and it does not need a light. It is all ready to show instantly either once or a hundred times and creates a sensation wherever shown.

THIS MOVING PICTURE WILL BE MAILED TO YOU ABSOLUTELY FREE, WITH POSTAGE PREPAID, IF YOU ARE A FARMER, STOCKMAN OR POULTRY RAISER, AND CORRECTLY ANSWER THE THREE QUESTIONS.

YOU MUST ANSWER THESE 3 QUESTIONS IF YOU WANT THE MOVING PICTURES FREE

1st. In what paper did you see my Moving Picture Offer? 2nd. How many head each of Horses, Cattle, Sheep, Hogs and Poultry do you own? 3rd. How many acres of land do you own or how many acres of land do you rent?

I will not mail this wonderful moving picture of Dan Patch 1:55 free unless you are a Farmer, Stockowner or Poultry Raiser and unless you correctly and honestly answer the three questions.

IF YOU ARE NOT A STOCKOWNER AND WANT THE MOVING PICTURES SEND ME 25 CENTS.

In silver or stamps to pay postage, etc., on Moving Pictures. I will mail this wonderful Moving Picture of Dan Patch 1:55, the fastest harness horse the world has ever seen,—to you if you send me Twenty-five Cents in silver or stamps even if you do not own any stock or land. It costs about $2700.00 cash to have one of the original pictures taken and reproduced. ☞ Write me to-day so that you will be sure to secure one before my supply is exhausted.

SPRING & SUMMER CATALOGUE 12

MONTGOMERY ROSS & Co.
OPERATING THE
NATIONAL CLOAK & COSTUME Co
MONTREAL CANADA

This is the big new catalogue issued by Montgomery Ross & Co. and the National Cloak and Costume Co.—the first since these two well known houses joined forces.

The object of this amalgamation is to give to those living at a distance from the city, an opportunity to deal direct with an exclusive Mail Order House. It enables them to buy by Mail with the same satisfaction as coming to the city and personally selecting goods at the largest and most extensive departmental stores. We want to send a copy of this money-saving catalogue to every man and woman in Canada, who is interested in getting the newest and most reliable goods at the lowest prices. We handle everything needed for personal and home use—and know that

Our Prices are at least 25 p. c. Lower

than the same goods can be obtained in the smaller stores. Our catalogue describes and illustrates the goods as they really are. You can see what you want at a glance, and you are certain to get just what you order. Every article in our catalogue is sent you on the distinct understanding that

Money Refunded if You are not Satisfied With Purchases

—and we will pay return charges. There's money in this big catalogue for you—and lots of satisfaction. Let us send you a free copy—now—today. Your name and address on a post card will bring it.

MONTGOMERY ROSS & CO., Dept. D Station B Montreal, P. Q.

THE HORSE.

Points on Horse Management that are Sometimes Overlooked.

At the season of the year horses suffer greatly from the annoyance of flies, and blankets of gauzy material for the circulation of air should be used when out of doors; and darkened stables when in-doors will be the means of saving both grain and flesh, as well as the work of fighting these pests both in-doors and out. Thin skinned and highly nervous horses are so worried that they become almost insane without some protection from flies and motquitos when driving on the road or working in the fields.

The annoyance of the gad-fly or bot-fly can be greatly lessened by attaching a piece of cloth to the throat-latch of the bridle and extending down under the jaw and fastened to the bit-rings, so as to hang losely.

Many preparations as washes have been used for both cattle and horses, but they are generally too temporary to give universal satisfaction; therefore put thin blankets or nets on the horses when at work and hang curtains or gunny-sacking up to the doors and windows to darken the stalls in daytime, leaving sufficient spaces at the bottom of each for ventilation.

WATERING THE HORSE.

The question of watering horses is important, and one that is frequently answered in a number of different ways according to the individual opinions of the authorities consulted. One of the United States Department of Agriculture bulletins contains the following summary dealing with this question:

"The rations fed consisted of different mixtures of corn, oats, hay and stray, and a number of experiments were made in which the only condition that varied was the time of watering. In some of the tests the horses drank before and in some after eating, and in others after the grain portion of the ration was eaten, but before the hay.

So far as was observed, the time of drinking had no effect on the digestibility of a ration of grain and hay. When hay only was fed there seemed a slight advantage in watering before feeding. The general conclusion was drawn that horses may be watered before, during or after meals without interferring with the digestion and absorption of food. All these methods of watering are equally good for the horse, and each of them may be employed according to circumstances. It is obvious that certain circumstances may make it necessary to adopt one or the other method. For instance, after severe loss of water, such as occurs in consequence of long-continued, severe exertion, the animal should always be allowed to drink before he is fed, as otherwise he will not feed well.

It has been found that less water is required when the ration consists largely of concentrated feed than when large amounts of coarse fodder are consumed and it is a matter of common observation that less water is consumed when green, succulent feeds form a considerable part of the ration than when it consists of dry feed. That the amount of water taken, even in dry feed, may be considerable is shown by the fact that a ration of twelve pounds of oats and fifteen pounds of hay furnishes some twenty pounds of water. A succulent ration would furnish much more"

According to the extract just quoted the time of watering makes little difference. In supplying water to the horse before it is fed and after it has performed some hard work, too much should not be given. Horses suffer a great deal during hot weather on account of not being watered often enough. The horse's stomach is small and frequent watering is necessary for the health and endurance of the animals when working hard and prespiring freely. Some farmers take water to the field for the horses during hot weather and supply them with a little occassionally. Large quantities should not be given, however, or the horses health will be impaired.

WARM WEATHER SUGGESTIONS.

During the excessively hot weather the removal of the harness at noon will pay. When the horse comes in from the field in a lather of perspiration and is allowed to dry off, the danger from sore shoulders is greatly increased. The collar should be removed and the shoulder washed or at least dried off with a piece of cloth.

On many farms the horses are turned out to pasture over Sunday, and appreciate the change and holiday very much. Where for any reason this is not convenient a bran mash may be given on Saturday night with good results.

Everybody is suppose to know how to make a bran mash, but it is only in racing stables and large studs, as a rule, that one sees it done properly. To make a bran mash, first wash out a bucket with boiling waser, then pour in the quantity required, say three pints, and stir in three pounds of bran, cover up and leave it for a couple of hours or more if not required for immediate use. A mash takes houos to get cold, and is often offered to a sick horse too hot, and refused, when it would have been taken if properly prepared, and given warm insead of scalding. The addition of a tablespoonful of salt in the ordinary mash of a Saturday night can be recommended to keep down parasites and promote digestion, but should not be a part of the invalid diet, unless specially ordered. A mixture of linseed and bran is often prescribed both as a food and a poultice. One part of linseed or two of bran is a desirable proportion for both purposes. To get all the feeding value out of linseed, several hours should be allowed for cooking, not merely infusing, as with a bran mash, but gently "simmering" on the side of the stove. The vessel should be filled, and toward the end the lid may be left off, and evaporation permitted while cooling.

Much of the usefulness of the farm horse depends on the manner in which it is treated. Horses are susceptible to education, and the hired man or person in charge of the horse who does not realize this, is a serious obstacle in the way of successful farming. By proper handling the efficiency of a horse for work can be greatly increased. Rough, unreasonable treatment is not only a waste of time, but the horse is rendered nervous and excitable and is often injured to such an extent as to have its market value considerably reduced.—Horseman, Pictou Co., N. S.

Training the Horse.

It is easy to see the need of better training of horses. On every hand you see teams that are unsafe, or awkward or ignorant—all due to lack of culture.

Recently an old man, found innocent of the charge, was released from prison where he had been confined for 30 years He was put in an automobile and when the thing started he tried to climb out, he was so frightened. When he saw a street car he nearly went into spasms of fright Things on every hand struck terror into his sold because they were new to him. He lacked confidence because he lacked knowledge.

And so with the horse. He is struck with terror when he sees an automobile the first time. He exercises nature's way of seeking safety in flight—in runing away.

Just as the old ex-prisoner had to be quieted by the calm behavior and assurances of his companions so the horse must be calmed in the same way. A cut from a whip at such time only associates pain with the sight of the horrible thing and makes him worse instead of better.

A horse will apparently be broken and for years cause annoyance by his shying at every bit of paper or shadow or stone. He is not broken. His nervour system has never been brought under control.

It is natural for a horse to shy. In the wild state he owes his life to his ability to quickly jump sidewise when a wild beast or rattlesnake lurks by the way. It is the outcropping of that natural instinct for self preservation. Perhaps the foolish whippings he has received at such times has only intensified his fear of the shadow or paper.

The horse is a very nervous animal, especially the lighter breeds. Certain acts are reflex—that is, done without thought. Just as you wink when an

HORSEMEN ATTENTION!

Dr. J. Woodbury's Horse Liniment and Dr. J. Woodbury's Condition Powders will save and preserve the life of your horses. They cure Cough, Cold, Distemper, Colic, Glanders, Spavin, Pink Eye and all diseases of the Horse.

TRURO, N. S.

Dear Sirs,—One of my horses had a bad cough, and I made a complete cure with three bottles of Dr. J. Woodbury's Horse Liniment. The cough was of twelve months standing. In my large experience with horses, I consider this liniment to be the best made for all diseases of the horse, and I recommend it to my friends.

E. J. ANDERSON.

BEAR RIVER, N. S.

DEAR SIRS,—

We do not hesitate in recommending your Dr. J. Woodbury's Horse Liniment. We have used it in the woods for coughs, colds, distemper and cuts, and would say that no lumberman should be without it.

Yours truly,

CLARKE BROS.

FREE-FARM ACCOUNT BOOK

Know How Much You Make This Year

No one shall pay a cent for Bickmore's Farm Account Book. It will be sent free to any farmer who will be good enough to tell who and where he is. The cost of a crop never demanded closer attention. Business farming puts money in the bank This book is arranged to keep all accounts in simple form—more simple, and certainly more practical, than trying to remember them, shows what to charge against crop production, has a laborer's time record; and section for personal accounts. 64 pages; for ink or pencil. Not a cheap affair. It is meant for business. Its quality is in keeping with

BICKMORE'S FARM ACCOUNT BOOK

POULTRY.

The Principles and Practice of Poultry Breeding.

(Continued from last issue.)

3. Exercise of Functions. As soon as the chick develops organs for blood circulation, food digestion and muscles for moving, there comes into play another set of influences in the life of the creature. It begins to use its powers and the exercise of the parts tends to the best development and maintaince of these functions. Excessive use or abuse of any of these powers tends to react disastrously upon the functions and upon the bird's whole organism. This matter is very largely within the control of the poultry breeder For example he may, by early hatching and high feeding, cause his pullets to develop rapidly, and begin laying while still quite young. The eggs of these precocious pullets will be found lacking in hatching quality to a considerable degree if the attemp is made to incubate them. If some of the eggs yield chicks they will usually prove to be weaklings. Moreover the pullets, after laying a while, will very likely begin to molt and delay further egg-production until the following spring, the natural nesting time of the birds. Thus even in a commercial way, the pullets prove the futility of the poultryman's plan for forcing egg-production at the expense of the development of the other functions.

Again the poultryman may, by close confinement of his adult fowls and by too generous a diet, especially of Indian corn, induce habits of laziness in his flock. The fowls lay on fat, their eggs become infertile, later egg-laying stops altogether, the birds stand about in idleness, they get listless, their system become clogged, they topple over and die of apoplexy. An entirely different result is secured simply by compelling the hens to take bodily exercise. By making them scratch for at least a part of their living, the circulation of the blood is increased, digestion is improved. there is flesh formation in place of fat deposition and active operation of all the bodily functions. The fowls are lively, springtly and healthy. Their eggs prove to be fertile and yield chicks which are vigorous, thrifty growers.

CO-OPERATION OF INFLUENCES.

The influences of the three great groups do not act separately and independently in the development, growth and breeding of the fowls. Rather are they commingled and combined in their action so that it is very difficult and oftimes impossible to determine just what influences have produced certain results in the animal organism.

Evidently there are some influences that the poultryman cannot control and others which are only partially under his command, but there remain many conditions which are entirely within his power to regulate. His part in the breeding of the beautiful and useful birds is to exercise his power of selection as applied first to the parent birds which are the medium of hereditary influences, second to the surrounding conditions of the breeding stock and the progeny and third to the management of the fowls in the use of their functions and productive powers.

Considering what a multitude of agencies are co-operating in the breeding and growing of a chicken, the poultry breeder is compelled to acknowledge that he can never know these factors too well if he is to learn to manage them successfully for producing perfect poultry.

Many men have given earnest thought and careful study to the problems of stock breeding. Some of the facts developed in the experience of breeders of domestic animals in the past, are stated in the following brief explanations of what are sometimes termed.

(Continued next issue.)

Blackhead in Turkeys.

In many localities turkey growing has become almost extinct as the result of the scourge known as blackhead. This disease was first noticed in New England, but quickly spread throughout the entire country. It first attacks the secum—the blind gut situated between the large and small intestines. It also attacks the liver, this organ becoming very much enlarged, often to twice its normal size, and showing over its surface discolored spots varying from one-eighth to two-thirds of an inch in diameter, shading in color from whitish lemon to dark yellow.

While this disease is attributed to microbes, it is thought to be very much aggravated or increased through in-breeding. In other words, many attribute the prevalence of what is known as blackhead to the depleted vitality of the stock of breeding turkeys making it possible for the germs to grow and gain destructive foothold.

Diarrhoea is the most marked and constant symptom, and may be expected sooner or later in the course of the disease; it results from inflammation and internal weakness. A peculiar discoloration of the head occurs when the disease is at its height which has led to the popular designation of the blackhead. This disease attacks very young turkeys and often lasts for several months before causing death.

The use of medicine has not proven very successful. Among the remedies most recommended are sulphur, sulphate of iron, quinine, and salicylic acid. Sulphur may be given, 5 to 10 grains being combined with 1 grain of sulphate of iron; or sulphur, 10 grains, sulphate of iron, 1 grain, and sulphate of quinine, 1 grain. It is necessary that such treatment be repeated two or three times a day and continued for considerable time to obtain results.

Some people who have had experience with this ailment in recent years believe that it results largely from in-breeding, the infection being transmitted from one flock to another by affected birds or eggs. The remedies applied proving of little benefit, the only alternative is the introduction of new, strong and healthy stock. Some have gone so far as to destroy their entire flocks, and having thoroughly disinfected the premises, started with new, healthy stock, while others have introduced wild blood into their flocks.

In all bowel trouble in turkeys, feeding boiled rice has proven of benefit, and it has been largely practiced by experienced growers. Many feed the boiled rice to the young poults to prevent the coming of the destructive diarrhoea.

The most successful way to obviate a dangerous looseness of the bowels is to avoid feeding wet and sloppy food and guard the young from taking cold. The feeding of small particles of charcoal is beneficial to the young from the fact that it sweetens the crop and gizzard and prevents fermentation, which is very injurious and destructive. Above all things, never make use of infected turkeys for breeding stock.—Farm Stock Journal.

Put Exhibitors Name on Entry Cards.

EDITOR MARITIME FARMER.

Do the management of exhibitions realize the injustice done to exhibitors and to the public by the rule "Name of exhibitor not to be shown until after the judging is done."

I hear some exclaim, "Injustice! why you'r crazy, its the only fair way." Wait a moment and think what that rule implies. Does it not imply that ownership of exhibits must be kept a secret until the judging is done?

How many respect that rule? just those who send their exhibits but can't come themselves. Often the judging is not finished until the last day.

Enforce the rule to the letter and you prohibit any of the big breeders from the chance of advertising their stock and making sales.

Carry the rule out and stop Logan and Dickie from showing their Holsteins, McMonagle his Jerseys, McIntyre Bros. their Ayrshires. Prohibit Craig, Jones, Reade, McMonagle or a host of others from showing their birds to admirers and prospective layers and how long would they exhibit. But how about the exhibitor who sends his stock and can't attend the show? Anyone wanting his stock may find out who owns it a week or so later through the columns of a paper printing the prize winners, but in the mean time he has bought from one of those who were on the spot ready for business even if it were before the judging was done.

The public has a right to know who owns the exhibits. Some would say that is not a fair way, sure to lead to partility on the part of the judges, why? If a judge were dishonest, is it not as easy to tip him on a number as on a name?

I am glad to be one who believes the judges are honest in their words even if I can't see eye to eye with them in all cases.

The shows are held to encourage the breeders and the greatest encouragement a bird can have is the sale of her stock and that can be helped by having the exhibitor's name shown on her entry cards.

I hope the plan will soon be adopted by all our shows in the Maritime Provinces, as it has been done with perfect success in some of the larger shoes in our sister provinces. EXHIBITOR,

Pictou Co., N. S.

DEALERS EVERYWHERE

This contractor got results.

He knew how to feed his men.

Some years ago a contractor building a railroad in a warm climate was troubled a great deal by sickness among the laborers.

He turned his attention at once to their food and found that they were getting full rations of meat and were drinking water from a stream near by.

He issued orders to cut down the amount of meat and to increase greatly the quantity of Quaker Oats fed to the men.

He also boiled Quaker Oats and mixed the thin oatmeal water with their drinking water.

Almost instantly all signs of stomach disorders passed and his men showed a decided improvement in strength and spirits.

This contractor had experience that taught him the great value of good oatmeal. 53

THE FARM HOME

This Department is now being edited by a very competent lady, who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

The Ordeal; or, the Spring and Mid-Summer of a Life.

(Continued from last issue.)

It was so provoking to be separated from Lucy, and to find the aisle blocked up with a quantity of women, after all; not a man among them, or even an acquaintance to whom she could say, "How ridiculous !" when Archie Cushing tripped on his gown and almost deposited himself on the floor of the stage; or, "What a pity !" when Ellis blushed and stammered, and lost the prompting that would have saved him from that awkward pause, fairly stage-blind at finding all that sea of faces turned up to his. And after a while, the band played again, and some gentlemen friends of the Martins pushed along and talked over her in such a loud, vulgar way. Altogether, Miss Jane did not find herself as pleasantly situated as her caste-loving, admiration-seeking nature could have desired.

And Lucy, who had aimed less selfishly, would have desired nothing better than she had found; she could see perfectly from her more remote corner of the pew; she had discovered her father next to Governor Green, his great friend and ally, in the fifth pew from the platform, as became so generous a patron of the college. She could see Henry, every now and then, moving about a little restlessly, for, after all the trouble he had taken to point out the most eligible seat to Miss Beckford, he was sure she would never be able to hear a word of his oration, with all those boys stamping about the gallery. What in the world did they allow such shavers to crowd up the church, any way ? Henry had forgotten how he walked after the fascinating trombone and cornet players in the days of his own youth, and had eaten nuts and apples in the midst of an equally interested audience.

But above all there was a face in full relief against the dark pillar by which it leaned, a pale face, with large, luminous eyes that sought the nook which sheltered her with a constancy and boldness unlike their late chance intercourse. Turn when she would, Carrol Austin was looking towards her, and now and then his face seemed to light with intelligence and an earnest warmth that startled her, he had seemed of late so reserved and unconscious of her presence. What would the stranger near her think? for she had evidently noticed those glances, as how could she help it? But it was his last day, poor fellow, and her heart sank down like lead with the thought, and she clasped her hands with a wringing, nervous gesture, and tried to forget it again. Only once could she banish the thought—when her brother came forward, with his firm, manly tread, such a contrast to the hesitancy of some and automaton stiffness of others, tossed his clustering hair from his forehead with his own careless grace, and, in clear, ringing tones, drew back the wandering attention, and moved the listless faces before him into interest in him and his theme. It was a real triumph, and Lucy felt her cheeks glow with pleasure, and smiled back to her father's energetic and delighted nod. Mr. Bradstreet would not have changed places with Governor Green himself, at that moment.

"It was my brother," said Lucy, simply, to the lady in the corner, for there was an answering sympathy in her quiet face, as the young girl turned, still flushed and excited.

A strange glow, a sudden trembling of the mouth, made Lucy wonder as she looked into the lady's eyes. The slender, ungloved hand was put out towards her own and then withdrawn. How the strange likeness to some familiar face puzzled Lucy again ! but it was only a fancy. The lady seemed very, very kind, as if she knew just how that little sister felt, when she whispered : "I congratulate you, my dear; I do not wonder that you are proud of him."

"Have you any relative in the class?" Lucy ventured to ask, for she wanted to see that smile again; it drew her towards the stranger irresistibly.

"My son—" but another speaker had appeared, and there was no time for explanation.

One more, and the Valedictory. A strange faintness came over Lucy, as she saw it was so near; she turned towards the fresh air from the window. The lady was very pale, too, and her eyes were fastened upon the stage, and her mouth had almost a painful compression.

How nobly dignified the tall figure of the Valedictorian seemed, in the sweeping folds of the silken robe that fell to his feet, as he stood for a moment without speaking! He did not trust himself with even a glance towards the dear face that was so near him now, but Lucy's eyes never left him until she felt a hand laid heavily upon her arm. The face beside her was bent down, and the frail figure was trembling with excitement. Lucy understood it all then; the revelation swept over her in a moment. She laid her hand in the long, slender fingers so unconsciously put forth, drew closer, closer to the bowed form, and whispered—"Mother !"

The craving, yearning for sympathy in that day's trials and triumphs seemed suddenly filled, and the two women, so lately strangers, clung to each other until the last word of farewell died sorrowfully away.

Even strangers were moved by the earnestness of tone, the high self-devotion of the aims they listened to; they felt that a noble purpose, and an unlooked-for maturity of experience had found voice, and good men blessed him in their hearts, when they heard he was to enter their ranks, and prophesied great usefulness in the field their strength had been spent upon.

"Throwing himself away; fine fellow as ever was," said Mr. Bradstreet to Governor Green, while the hum of complaint and favorable criticism sounded around him; and, in spite of the soreness, he had at times felt when Carrol's name was spoken, he scarcely knew which boy he was most proud of as he folded up his programme to hear the president's "few remarks."

Yes, Commencement was over, to all but the hungry men, anticipating the bountiful public dinner they were now at liberty to turn to, and the young girls, who were prepared to look their loveliest at the evening's levee. Jane Perkins beckoned to her friend, and to a passing escort at the same moment; Lucy and Mrs. Austin stood up together.

"I am so glad that I have seen you," said Lucy, shyly, her face covered with a quick blush as she remembered her exclamation. But the kind eyes looked so lovingly down upon her—Carrol's eyes ! and seemed like Carrol's voice, too, as the lady said :—

"I shall not forget you, my dear child."

Poor, sad-hearted, lonely Lucy! lonely for all her father's kindness and her brother's pride; sad for all the wealth that was her portion, and the envy that pointed her out as she moved among the gay throng at the evening's brilliant reception. It was here she first knew that Carrol loved her, here in this very room, as she sang "I do not love thee." How happy she was that night, leaning on his arm, as they passed out of the door together; and now she could not even speak to him; only a bow, and such a lingering look as they passed ! But her father was very kind. "It could not do any harm," he reasoned, as he thought that the boy was going to-morrow, and they could both be trusted.

"Good-evening, Carrol; you did well, to-day"—and he shook hands warmly. "I was proud of you. Can you take Lucy off my hands for a while? I must speak to my old friend, Senator Story."

So they were together once more, and alone, for no one remarked them in that busy crowd; and when they separated, with aching hearts, poor children, Lucy said: "Remember, Carrol, I will wait."

CHAPTER VI.

"I will wait."

It was a promise given unsolicited, one that he was too generous to trust, for he knew all that she would meet with when once society had claimed the rich man's lovely daughter as its own. The homage, real and insincere, the love that she could not fail to attract, her father's solicitude for her happiness, the natural result of time and absence in wearing away the vivid remembrance of him, and the disenchantment of a fuller appreciation, a woman's knowledge of all she must give up for his sake.

So Carrol Austin did not rest upon that parting valediction; but, in spite of reason and of will, it haunted and comforted him—not that he gave up to idle dreams—his life was too real, his work too earnest—but there were hours when the fulfilment of his noblest hopes seemed afar off, and the knowledge of all he was accomplishing for those who leaned on him, and the unswerving friendship of more than a mother's love, seemed insufficient to satisfy the craving for daily sympathy, for a nearer human companionship, and then the remembrance of these words came with a soothing, like the touch of a soft hand upon his forehead. Lucy had loved him well enough to say it and believe it, however life might change her purpose, and he held her free as air to do so, only praying that she might be happy.

Hal Bradstreet and Ella Beckford were both married, but not to each other. They had children growing up around them, and laughed lightly at their childish flirtations. Jane Perkins was a faithful, faded wife, selfishly, exacting, as such a nature could not fail to be in its full development ; and her friend Lucy could but wonder, and sometimes chide the restless mourning of a life that outwardly would seem to have every desire fulfilled.

Lucy Bradstreet still, Miss Bradstreet now living alone with her father, and entertaining his friends and the distinguished men he likad to gather around him with quiet dignity and composure, yet with the ease and grace of a woman of the world. No wonder that Governor Green used to say that she realized the old English epitaph

"Polite as she in court has ever been,
Yet good as she the world has never seen;

and it was especially kind, when it was generally supposed that she rejected him, confirmed old bachelor as he had beed considered.

Mr. Bradstreet did not advocate that marriage, flattering as the proposal was, for his friend had been groomsman at his own wedding, and though well preserved, could not be more than forty years younger than himself ; but it was rather annoying to see all suitors, however wealthy or humble, transform into steadfast friends. It never occurred to him that the foolish affair of ten years ago was underlying the reserve that so perplexed him. Lucy was the soul of truth, and he knew perfectly well she had never heard from young Austin, or he from her, unless indirectly, and he trusted to the wise man's saying, "Where no fuel is, the fire goeth out."

"We are to dine at Henry'y to-morrow, Lucy, if you have no engagement, to meet some distinguished individual, I believe."

Mr. Bradstreet gave the intelligence causally at the tea-table, and relapsed into the journal immediately.

"Did he tell you who, papa ?" Lucy asked with very little interest.

MORE PINKHAM CURES

Added to the Long List due to This Famous Remedy.

Glanford Station, Ont.—"I have taken Lydia E. Pinkham's Vegetable Compound for years and never found any medicine to compare with it. I had ulcers and falling of the uterus, and doctors did me no good. I suffered dreadfully until I began taking your medicine. It has also helped other women to whom I have recommended it."—Mrs. Henry Clark, Glanford Station, Ontario.

Gardiner, Me.—"I was a great sufferer from a female disease. The doctor said I would have to go to the hospital for an operation, but Lydia E. Pinkham's Vegetable Compound completely cured me in three months."—Mrs. S. A. Williams, R. F. D. No. 14, Box 39, Gardiner, Maine.

Because your case is a difficult one, doctors having done you no good, do not continue to suffer without giving Lydia E. Pinkham's Vegetable Compound a trial. It surely has cured many cases of female ills, such as inflammation, ulceration, displacements, fibroid tumors, irregularities, periodic pains, backache, that bearing-down feeling, indigestion, dizziness, and nervous prostration. It costs but a trifle to try it, and the result is worth millions to many suffering women.

If you want special advice write for it to Mrs. Pinkham, Lynn, Mass. It is free and always helpful.

Sickness is usually caused by the accumulation of waste matter and impurities within the body.

Dr. Morse's Indian Root Pills,

enable the bowels, the kidneys, the lungs and the pores of the skin to throw off these impurities. Thus they prevent or cure disease. 12

Be Good to Yourself.

EDITOR MARITIME FARMER.

It is a rare thing to find people who are really good to themselves. By saying this I do not mean that they shall be selfish or grasping, neither do I mean that they shall be indolent or lazy. We find that the men and women who master what they undertake, who approach their duties with the assurance of a conqueror and are able to grapple vigorously with life's problems, are good to themselves mentally—think well of themselves. Taking for granted that people live in a truly moral atmosphere, why are they not justified in so doing. How can we have too much respect for these bodies wherein lies the will and mind, that gives the incentive to do and dare.

Very few people think well enough of themselves, have half enough esteem for their divine origin, their abilities, their character. Have faith in yourself, believe in the brotherhood of man the fatherhood of God, deliberate wisely your course, take honesty and justice for your keynote, and in nine cases out of ten, yours will be a career where failure will never be written. There are some people who persist in seeing the weak side of themselves, who think they do not amount to much and never will, who are always exaggerating their own defects and see only the small beginnings. Such people never grow into that bigness of manhood, that grandeur of womanhood, God intended for them. Their souls are dwarfed, their minds weakened, their manners spoiled. Their appearance, their lives picture their poor opinion, they actually think themselves into littleness. Verily the old adage "as a man thinketh in his heart, so is he" applies most fitly. Whenever you think of yourself form a mental image of a healthy, beautiful, noble being not lacking in anything; then strive with all the force and ambition within you to bring yourself up to that standard, and having reached it, be diligent, indeed to sutain it. The estimate you have of yourself, the image you carry in your mind, means infinitely more to you than what others think. Busy people, people who have accomplished much, have no time to ponder over what gossips are saying. Their conscience is their director they have already established their ideal. Again if we would make the most of our lives, we must also be good to our bodies in order to produce minds capable of doing great things. It is our sacred duty to keep ourselves in condition to do the biggest thing possible. If you would amount to anything in this world value your time and energy. They are your success capital and you cannot afford to throw them away or trifle with them. The great aim of your life should be to keep your powers up to the highest possible standard, to so conserve your energies, gained your health, that you can make every occasion great. Again I repeat, if you would make the most of yourself, never picture yourself anything different from what you would actually be.

"To thine own self be true; thou canst not then be false to any man."—MRS. JAS. PORTER, Carleton Co., N. B.

HAWTHORNE.

Action may not always bring happiness, but there is no happiness without action.—DISRAELI.

Virtue alone outbuilds the Pyramids; her monuments shall last when Egypt's fall.—YOUNG.

The soul's armor is never well set to the heart unless a woman's hand has braced it, and it is only when she braces it loosely that the honor of manhood fails.—RUSKIN.

LOCAL TREATMENT FOR WOMEN'S DISORDERS

The health we enjoy depends very largely upon how the blood circulates in our bodies; in other words, if we have perfect circulation we will have perfect health.

There is a constant wearing out of the tissues in every part of the body. The blood flowing through the veins carries off this waste or dead matter, while the blood coming from the heart through the arteries brings the fresh new living tissue, the essence of the food we have digested, to replace what has been carried off. This constant wearing out and expelling of the dead matter and the replacing of it with new matter, atom by atom, goes on day and night, until in about 7 years a complete change has been effected. Thus every man and woman has an entirely different body in every particle of it from what he or she had 7 years before.

It sometimes happens, however, from a variety of causes, that the blood becomes congested in certain portions of the body. This means that the blood vessels in these parts become weakened, and the circulation in that section of the body becomes sluggish and stagnant. The consequence is that the dead matter in that part of the body is only partially carried away, and that but little of the new, vital matter is introduced there to build up and strengthen the tissues and nerves.

This condition invariably exists in all cases of female disorders. The dead matter retained in the circulation, which should have been expelled, causes irritation and inflammation of the delicate memberane, and oppresses the nerve centres. This condition is the cause of the grievous physical and mental suffering which accompanies female troubles.

To obtain relief it is evident that the first thing to be done is to get rid of the dead matter which is being held in the circulation. If this dead matter is allowed to remain there a species of blood poisoning will result and nature will endeavor to get rid of it by forming ulcers, tumors, etc.

The above explanation will also show why ORANGE LILY is so successful in curing this condition. It is a local treatment, and is applied direct to the affected organs. Its curative elements are absorbed into the congested tissue, and from the very start the dead matter begins to be discharged. A feeling of immense relief, both mental and physical, accompanies it, and the improvement is constant and positive. This feature of the expelling of the dead matter is always present to a greater or less extent, and in some cases it is so marked as to be amazing The case described in the following letter is not exceptional:

Dr. Coonley—I am thankful to Mrs. F. E. Currah, your Canadian representative, for my health restored by your wonderful remedy. I have suffered for 17 years, but not so bad until 3 years ago. Then I had a doctor, who told me I had a tumor, and could live no more than a year. If I went through an operation I would not live through it. A year later I sent for him again, and he gave me up to die. My husband then sent for another doctor, who performed an operation, and it did me much good. I doctored with him 3 or 4 months, but became so bad again that I thought I could live no longer, and I began to long to die. One day my husband came home and threw a slip of paper to me with Mrs. Currah's address and told me a lady had advised him to write to her for a treatment that would cure me. I said it was too late, that I would die anyway. I could not lift a teacup without hurting me. Then the first doctor told me I was worse than ever. However, my husband sent for ORANGE LILY, and the third treatment brought away one tumor. Others followed, until 7 tumors had been expelled, 3 large ones and 4 small ones. I know if it had not been for ORANGE LILY I would have died, for I could not live much longer. I would have thought it cheap at one hundred dollars for a month's treatment, instead of one dollar. It is worth its weight in gold.—MRS. GEO. LEWIS, Huntsville, Ont.

The above letter is published with Mrs. Lewis' permission. All letters received are treated as being sacredly confidential, but occasionally some patient feels so grateful for being cured that she is willing to make the matter known for the benefit and encouragement of her suffering sisters.

ORANGE LILY is a positive, scientific remedy for all disorders of the female functions. As explained above these troubles are of local origin, and require local treatment. It is just as sensible to take medicine internally for female troubles as it would be to take medicine internally for a bruise, a boil or an ulcerated tooth. In all these cases some dead matter is being retained, and the cure is effected by employing local methods for expelling the dead matter. ORANGE LILY has antiseptic, soothing and healing properties, and also tones up and invigorates blood vessels and nerves. I am so anxious that every suffering woman may satisfy herself, without cost to her, that ORANGE LILY will cure her, that I hereby make the following

FREE TRIAL OFFER

I will send, without charge, to every reader of this notice who suffers in any way from any of the troubles peculiar to women, if she will send me her address, enough of the ORANGE LILY treatment to last her ten days. In many cases this trial treatment is all that is necessary to effect a complete cure, and in every instance it will give very noticeable relief. If you are a sufferer, you owe it to yourself, to your family and to your friends to take advantage of this offer and get cured in the privacy of your home, without doctors' bills or expense of any kind. Blessed is the man who has the gift of making friends, for it is one of God's best gifts. It involves many things, but above all is the power of going out of one's self and seeing and appreciating whatever is good and noble in another man.—THOMAS HUGHES.

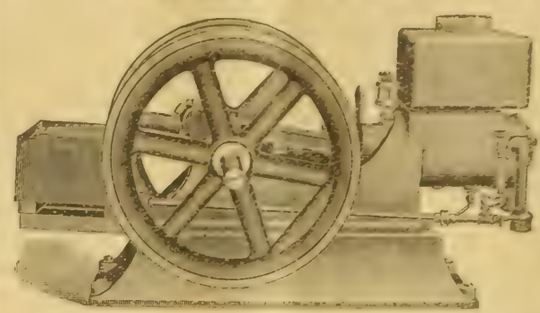
Not a day passes over the earth but men and women of no note do great deeds, speak great words and suffer noble sorrows. Of these obscure heroes, philosophers and martyrs, the greater part will never be known till the hour when many that were great shall be small and the small great.—CHAS. READE.

All that we are is the result of what we have thought—it is founded on our

WE WANT AGENTS RIGHT AWAY

In every section in the Maritime Provinces where a gasoline Stationary engine can be sold. The one we have to offer, which appeals most to farmers, is the

"Waterloo Boy"



Frost Proof Stationery Engine.

These Waterloo Engines are well and substantially constructed of the best material, by skilled mechanics, and are so durable that the makers have no hesitancy in extending to users their five years' guarantee. Engines are built on the interchangeable plan, all parts being made from jigs and templates, each and every part of the same kind being perfect duplicates, so in future years repairs that may be required can readily be placed without delay.

All the working parts are exposed to view and the duty of each part is readily understood by the user of the engine. The construction of these engines is such that they combine great strength and durability, yet it has been the manufacturers constant study to do away with all extra parts and simplify the construction as much as possible.

If you are looking for a good, reliable and up-to-date gasoline engine to handle—one which sells itself and leaves you a fair margin—write to-day for particulars.

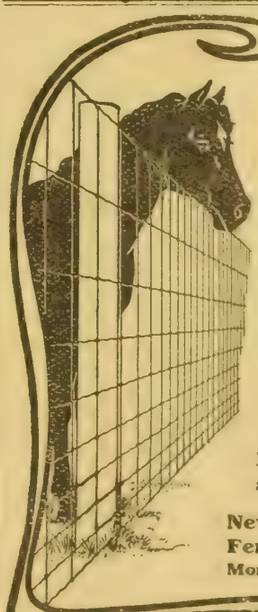
Eastern Warehouse - SUSSEX, N B.



Sturdy Elasticity

The wire for "Maritime" Wire Fence is imported direct from England. We have found that this English wire is distinctly superior. While stiff and hard it is not brittle, or as easily broken when subjected to a severe strain as the ordinary hard steel wire. It is real "live" wire, pliable and springy, capable of withstanding hardest usage and unaffected by any degree of temperature recorded in this country.

Will you let us mail you our **free catalogue** which tells more about Maritime Fence and its absolutely secure lock?

Up-to-Date Specialties For Farmers And Gardeners.

Things you need—implements and tools that should be on every truck garden and farm. Our way of making these specialties assures adaptability, strength and service at the minimum price for the best goods of their kind on the market

"TRUE" Wagon Box and Rack

Without wings and ladder, it is a perfect wagon box. With them, it is the best Hay, Stock, Wood, Poultry, Corn or Fruit Rack ever invented. Adjusted to any position in a minute without wrench, hook or rope.

"EureKa" Churn

Barrel of finest stoneware—top of clear pressed glass. Churns by hand lever. The only sanitary churn made. 3 sizes—8, 10 and 12 gallons.

"EureKa Root Cutter

will slice or shred from 1 to 2 bushels per minute. Fastest machine made—easiest running. Tapering cylinder—10 best steel knives.

"EureKa" Combination Anvil

Best iron anvil, with vice, pipe vice and drill attachment, and saw clamps. Just what you need for repairing tools and machinery. Weighs 60 pounds.

The "Bacon" Seed Drill

will handle the most delicate seed without bruising or breaking, and will sow evenly to the last seed.

Write for Catalogue

Every farmer, who wants to make money out of his farm, ought to have our new catalogue. It shows our TOOLS, Rakes, Hoes and Machines as they are, and describes their construction in detail Write for free copy.

The EureKa Planter Co., Ltd. Woodstock, Ont.

Hartland Poultry Show.

The third show of the Carleton and Victoria Poultry Association was held in Hartland on the 10th and 11th. To say it was a success is scarcely enough. The entries were nearly double of former years and the pleasing feature was the participation of the farmers. This association is featuring utility stock and the farmers are showing their appreciation. Mr. Hillhouse of Burdville, Quebec, represented the Dominion Department of Agriculture and at the public meeting gave a splendid address upon the work of the Poultry Producers Assoociation. It is likely a branch of the Association will soon be organized at Hartland. The attendance was away in excess of other years. The old veteran of poultry work in Northern New Brunswick, Geo. E. Baxter was present and was happy in the sucess of the association with which he has been so closely identified. Following is the prize list which speaks for itself.

Note,—c, cock; h, hen; r, cockerel; p, pullet.

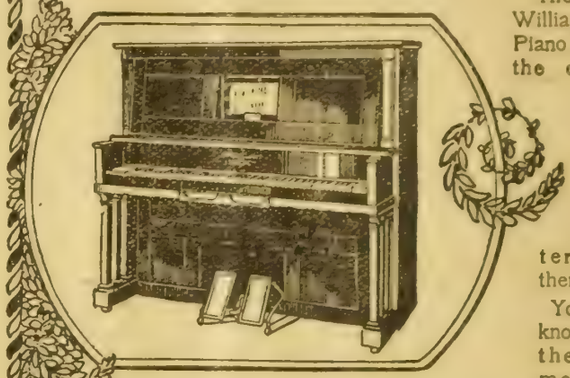
NEW SCALE WILLIAMS PLAYER PIANO

answers that oft repeated statement "of what use would a Piano be in our house? Nobody can play".

The fingers of the great pianists are but highly trained pieces of mechanism. It is the soul of the artist, communicated to the fingers, which plays the music.

The New Scale Williams Player Piano gives you the fingers of the masters. The years of drudgery of practice—the expense of teachers—are wiped away.

The man and woman, who had not the time or opportunity to train their fingers, can still produce the music that is a part of their being.



The New Scale Williams Player Piano brings forth the enchanting melodies of the masterpieces of music just as the masters wrote them.

You—without knowledge of the purely mechanical part of piano playing—can still put into this music all the soulful expression which you possess.

New Scale Williams Player Piano is the universal storehouse of music. Playing 88 notes, it reproduces everything that has been written for the piano—the classics, grand opera scores, favorite hymns, songs and melodies in a lighter vein.

We make both the 88 and 65 note New Scale Williams Player Piano in Louis XV, Mission and other handsome designs.

Our richly illustrated booklets show the wonderful mechanism of this Player Piano and give descriptions in details. Write for free copies and also our plan of easy payments.

They Pass the British Government's Acid Test for Galvanizing

Do you know that PRESTON Safe-Lock Shingles are the ONLY kind you can buy that are made according to British Government Specifications for Galvanized Sheet Metal?

The British Government is the most particular buyer in the world. The sheet metal it buys for public works must be made and galvanized far better than ordinary sheet metal.

Each sheet must be carefully sheared to exact dimensions, thoroughly cleaned, and afterwards galvanized with best Virgin Spelter, which must consist of not less than 98 per cent. pure zinc—Extract from British Government Specifications.

Each steel sheet is cut to the exact size of a PRESTON Shingle before it is galvanized with 98 per cent. pure zinc. In this way even the edges are thoroughly galvanized.

The sheets must be heavily and uniformly coated with zinc.—Ex. from B. G. S.

Ordinary galvanized sheets are not nearly so heavily coated with zinc as those galvanized according to British Government Specifications. To secure a thin coating the spelter is heated to a very high temperature. When the steel sheets are dipped into it only a small portion adheres to the surface.

Your eye cannot tell a thinly coated sheet from one heavily coated. That is why there are such a lot of cheap steel sheets on the market. They are considered good enough for ordinary shingles. But they couldn't pass the rigid specifications required of the steel sheets we use for PRESTON Shingles.

The steel sheets for PRESTON Safe-Lock Shingles are dipped into spelter kept at a lower and correct temperature. The sheets thus become very heavily coated. And, the coating is made perfectly smooth and even.

The sheets must stand bending without cracking the galvanizing.—Ex. from B G. S.

Unless the steel sheets for PRESTON Shingles were of perfect quality and galvanized according to British Government Specifications not only would the galvanizing crack, but the metal also, where our top lock is folded to produce three thicknesses of metal. Look at a PRESTON Safe-Lock Shingle and you'll find the steel and the galvanizing perfect at our top lock as well as everywhere else on the shingle.

THE ACID TEST

The galvanizing must be able to stand the test of dipping the sheet into a solution of sulphate of copper at a temperature of 60 degrees Fahrenheit, allowing it to remain in the solution for the space of one minute, and then withdrawing it and wiping it clean. The galvanizing must allow of this being done FOUR *times without showing signs of a reddish deposit of Copper.—Ext. from B G. S.*

The reddish deposit shows up the thinly galvanized spots. Ordinary galvanized sheets, treated to this test, would be thickly spotted with reddish deposits. Yet you are asked to pay the same prices for shingles that cannot pass this test as you are for PRESTON shingles, which will easily do so.

This Acid Test is more severe on the galvanizing than twenty years of Canadian weather. You see, sheet steel galvanized according to British Government Specifications is galvanized to last. PRESTON Shingles are good for twice the service of ordinary galvanized shingles.

The construction of PRESTON Safe-Lock Shingles is far ahead of all others.

Other shingles merely slip or slide together at the sides and are easily pulled apart. PRESTON Shingles are securely locked together at the sides on the principle of the "sailor's grip." The heavier the strain, the firmer the grip. You cannot pull them apart.

The top lock of PRESTON Shingles is TWICE as strong as our wonderfully secure side lock.

The top of the shingle is where the greatest strain falls. PRESTON Safe-Lock Shingles have a top lock consisting of three thicknesses of sheet steel, so that they can easily withstand the strain due to shrinking of sheeting or settling of building.

No other shingles can have such a top lock, because this feature is patented by us. The top lock of most shingles isn't as strong as the side lock of ours.

Lightning causes the loss of thousands of dollars each year to Canadian farmers. With every PRESTON roof you get a FREE Lightning Guarantee which secures you against this terrible destroyer.

You do not get a Free Lightning Guarantee with other shingles. Neither do you get shingles safe-locked on all four sides. Nor shingles with the nailing fully protected against the weather. Nor shingles made according to British Government Specifications. Nor shingles so easy to lay.

We have just issued a new booklet "Truth About Roofing." We should charge something for this, as it contains information of real value to anyone who has a building to roof. But we will send it FREE as a reward to all who cut out, fill in and mail the coupon to us. Just you send it to-day.

Grading Up a Milk Herd.

This is the commendable undertaking of a young Nebraska dairyman, A. Righter Wood, who has started a family milk supply depot and plant near Omaha. The idea which this young man has conceived, and is now developing in actual breeding operation, is to select, from the common cow stock of the country, about fifty head of choice milkers, regardless of breed or previous condition of ownership. The standard of excellence will be based upon quantity and quality of milk, good constitution, soundness of body, even to the tuberculin test and a veterinarian's certificate of freeness from this dread disease. With this quality of cow, he purposes breeding up a high grade of Guernsey milkers, that will possess merit and desirability as family cows and commercial milk producers.

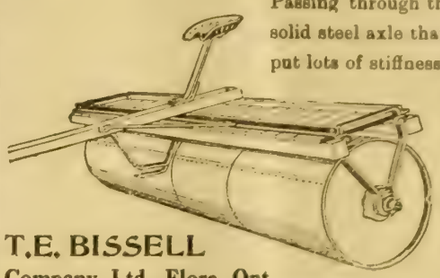
This is one of the feasible undertakings that is sure to win out, if persistently adhered to. The use of one of the highest standard milk bred Guernsey bulls, that could be found in America, and the use of the Babcock test, in analyzing the quality of the cow that is to pass muster in the make-up of this foundation cow stock, are the principles laid down in the premises of this enterprise.

The saving of all the likely appearing heifer calves, from this mating, and the developing of them into producers, and the breeding again of these into the same deep milking strain of Guernsey, is the detail in breeding that is now outlined and has been under prosecution for six months past. The same system of close testing and culling out will be carried on through each succeeding generation, until the very highest standard obtainable is reached in production.

This grading up enterprise is commenced with the very best backing be-

Buy the Strongest Roller
The "Bissell."

When you purchase the "Bissell" you get a land roller that packs the soil just the way you want it done. More than that, you get the strongest, sturdiest land roller made. We make the "Bissell" to withstand hard knocks. We fit the heavy steel drums with pressed steel heads. The seams are securely rivitted every two inches. We make these drums so strong that we guarantee them not to dent or dinge under the hardest work.



Passing through these drums is a heavy two inch solid steel axle that will never bend or break. We put lots of stiffness and rigidity into the well-braced frame. It has the strength to withstand all the hard strains you may place upon it. If you would like to know more about the "Bissell" write to Dept. M. for catalog or ask your local dealer to show you our different styles.

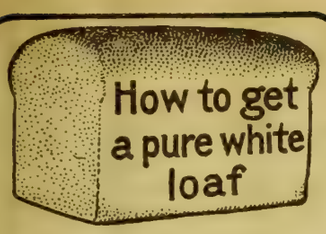
Better Than Spanking

Spanking does not cure children of bed-wetting. There is a constitutional cause for this trouble. Mrs. M. Summers, Box W. 309 Windsor, Ont., will send free to any mother her successful home treatment with full instructions. Send no money but write her to-day if your children trouble you in this way. Don't blame the child, the chances are it can't help it. This treatment also cures adults and aged people troubled with urine difficulties by day or night.

Chamberlain's Cough Remedy is not a common, every-day cough mixture. It is a meritorious remedy for all the troublesome and dangerous complications resulting from cold in the head, throat, chest or lungs. Sold by all dealers.

Have you a weak throat? If so, you cannot be too careful. You cannot begin treatment too early. Each cold makes you more liable to another and the last is always the harder to cure. If you will take Chamberlain's Cough Remedy at the outset you will be saved much trouble. Sold by all dealers.



THE object of all expert bakers and cooks is to make a pure white loaf

And this object is attained by the use of

PURITY FLOUR

Purity is a hard-wheat flour of decidedly superior whiteness. It bakes into a pure white loaf. So, you see, to get the really beautiful white loaf you must use PURITY hard-wheat flour.

"More Bread and better bread."

Mills at Winnipeg, Brandon, Goderich.

hind it. A good 160 acres of rich agricultural land, new, up-to-date farm and dairy improvements, even to the most minute detail of the business, every conceivable appliance, fixture and machine for handling the milk and preparing it in the most sanitary and healthful condition for the consumer, is in use.

The milking machine, the cement cow barn, the perfect system of ventilation, the absolute freedom from all unsanitary influences is a feature in connection with this cow improvement enterprise that makes it almost a guarantee that this is the beginning of a milk dairy cow improvement that is worth while for the public to follow as an example of where the profit in the milk cow business is found to the largest possible degree.

A Good Record.

Following is a record of a dairy herd, owned by Mr. Isaac Schofield, Hampton, Kings Co., N. B. :

Cream sent to factory, net returns	$310.64
For home use	30.00
27,893 pounds milk (skimmed, at 20 cents)	55.78
Two calves, one at $10 and one at $20	30.00
	$426.42
DR.	
Cottonseed meal and mill feed	$ 84.70
27,893 pounds milk to cows and calves	55.78
Hay and other farm feed	117.00
	$257.48
Net returns	$168.94
Net average per cow	42.23

J. H. GRISDALE.

Chamberlain's Cough Remedy is a very valuable medicine for throat and lung troubles, quickly relieves and cures painful breathing and a dangerously sounding cough which indicates congested lungs. Sold by all dealers.

PEOPLE use ML Floorglaze for the hulls of sailboats and motor-boats, and are satisfied with the way it looks and lasts.

That proves M L Floorglaze is water-proof. A good all-purpose finish, therefore.

PEOPLE use ML Floorglaze on vehicles, too, and find it looks better and lasts longer than any kind of varnish or paint.

That proves M L Floorglaze is fade-proof and weather-proof. The perfect protector for all woodwork, therefore.

PEOPLE find that ML Floorglaze helps housewives keep floors dust-free because the surface stays glass-hard and glossy.

M L Floorglaze doesn't mind wet, sun, scuff of feet nor dragging of furniture across it.

ML FLOORGLAZE is the best thing you can get to help renovate the whole house. Fine for all woodwork, indoors and out. Makes old furniture look new again. Goes farthest, too—gallon covers 500 square feet.

Choose among 17 pretty colors in solid enamel—seven Lacs to imitate hardwoods—and Transparent for natural finish. Comes in little and big tins. Easy to put it on right. Ask at your dealer's or write us for news of the hundred uses you could make of M L Floorglaze. The Imperial Varnish & Color Co., Limited, Toronto

N. B. Fruit Growers' in Session.

(Continued from page 275)

HON. D. V. LANDRY.

Just prior to adjournment, Dr. Landry entered the hall and in response to calls expressed his pleasure at the large number of gentlemen present, a fact which looked well for the increased interest that was being taken in fruit growing. For his own part, as head of the Department of Agriculture, he was prepared to do all in his power to assist them in their work, and he trusted that now that a specialist had been engaged to assist the fruit growers the province would be in the happy position of being able to supply its own people with all the fruit they needed without having to import from Ontario. What the province could do, as has been shown both in Great Britain, and at the Winter Fair at Amherst and he trusted that the farmers would take up the matter of fruit cultivation with a will.

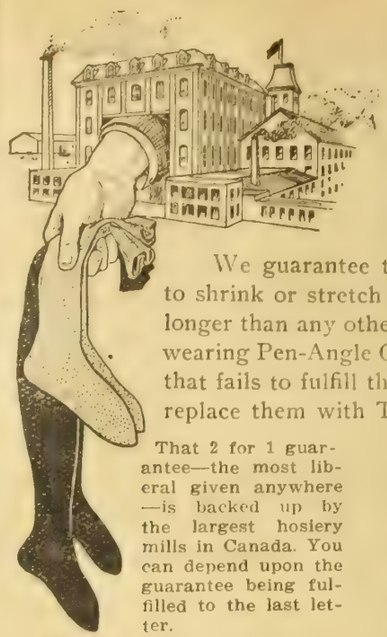
Training the Horse.

(Continued from page 276)

object comes at your eye, or you dodge when a missle comes at your head—done without time to think—so the horse shies, jumps, or kicks at imaginary foes when none exists. The reflex nerves are working to protect the animal and they do it without consulting the mind.



Buy Hosiery Made by the Largest Mills on a 2-for-1 Guarantee

We guarantee the following lines of Pen-Angle Hosiery to fit you perfectly, not to shrink or stretch and the dyes to be absolutely fast. We guarantee them to wear longer than any other cashmere or cotton hosiery sold at the same prices. If, after wearing Pen-Angle Guaranteed Hosiery any length of time, you should ever find a pair that fails to fulfill this guarantee in any particular, return the same to us and we will replace them with TWO new pairs free of charge.

That 2 for 1 guarantee—the most liberal given anywhere—is backed up by the largest hosiery mills in Canada. You can depend upon the guarantee being fulfilled to the last letter.

Buying hosiery on this plan you make doubly sure of satisfaction, for if the hosiery does not fulfill the guarantee the makers have to pay a double penalty.

But after you've worn a pair of Pen-Angle Hosiery you'll understand why we give this 2 for 1 guarantee, for you will have discovered your ideal hosiery—form-knitted, seamless, longest-wearing.

The reason for Pen-Angle superiority is due to the exceptional quality of the cashmere and cotton yarns we use. And because we knit them on Penmans' exclusive machines. We have the sole rights to use these machines in Canada.

Seamless Hosiery

These machines form-knit the hosiery to fit the form of the leg, ankle and foot perfectly, without a single seam anywhere to irritate the feet or rip apart.

They reinforce the feet, heels and toes—the places that get the hardest usage—without you ever being aware of any extra thickness.

Don't be content another day with hosiery which has those horrid seams up the leg and across the foot—with hosiery less serviceable—but get Pen-Angle 2 for 1 guaranteed hosiery

For Ladies

No. 1760.—"Lady Fair" Black Cashmere hose. Medium weight. Made of fine, soft cashmere yarns. 2-ply leg. 5-ply foot, heel, toe and high splice, giving them strength where strength is needed. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1020.—Same quality as 1760, but heavier weight. Black only. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1150.—Very fine Cashmere hose. Medium weight. 2-ply leg. 4-ply foot, heel and toe. Black, light and dark tan, leather, champagne, myrtle, pearl gray, oxblood, helio, cardinal. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1720.—Fine quality Cotton hose. Made of 2-ply Egyptian yarn, with 3-ply heels and toes. Black, light and dark tan, champagne, myrtle, pearl gray, oxblood, helio, sky, pink, bisque. Box of 4 pairs, $1.00; 6 pairs, $1.50.

No. 1175.—Mercerized. Same colors as 1720. Box of 3 pairs, $1.00; 6 pairs, $2.00.

For Men

No. 2404.—Medium weight Cashmere half-hose. Made of 2-ply Botany yarn with our special "Everlast" heels and toes, which add to its wearing qualities, while the hosiery still remains soft and comfortable. Black, light and dark tan, leather, champagne, navy, myrtle, pearl gray, slate, oxblood, helio, cadet blue and bisque. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 500.—"Black Knight." Winter weight black Cashmere half-hose. 5-ply body, spun from pure Australian wool. 9-ply silk splicing in heels and toes. Soft, comfortable, and a wonder to resist wear. Box of 3 pairs, $1.50; 6 pairs, $3.00.

No. 1090.—Cashmere half-hose. Same quality as 500, but lighter weight. Black only. Box of 3 pairs, $1.00; 6 pairs, $2.00.

No. 330. — "Everlast" Cotton Socks. Medium weight. Made from four-ply long staple combed Egyptian cotton yarn, with six-ply heels and toes. Soft in finish and very comfortable to the feet. A winner. Black, light and dark tan. Put up in boxes. Box of 3 pairs, $1.00; 6 pairs, $2.00.

Instructions

If your dealer cannot supply you, state number, size and color of hosiery desired, and enclose price, and we will fill your order postpaid. If not sure of size of hosiery, send size of shoe worn. Remember, we will fill no order for less than one box and only one size in a box.

WARRANTED HIGH PENMANS GRADE HOSIERY

A SEARCHING INVESTIGATION WILL PROVE SUPERIORITY OF

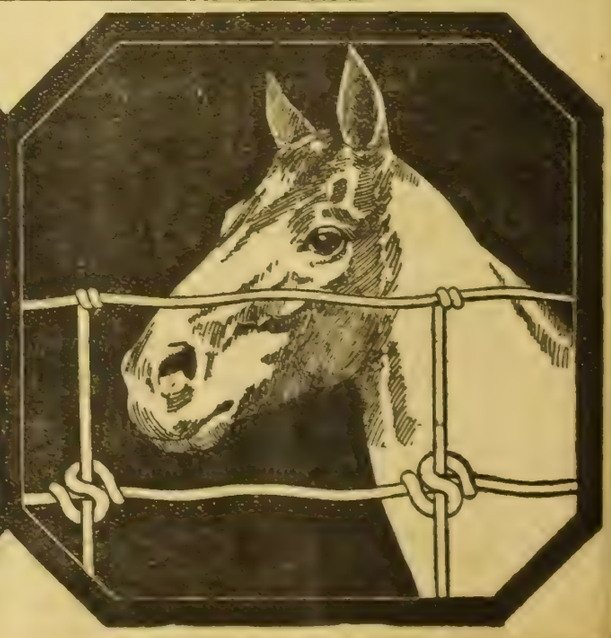
IDEAL WOVEN WIRE FENCE

Investigate IDEAL fence. Do like the railways. Test the laterals for elasticity—the uprights for stiffness. Test both for smoothnesss and heaviness of galvanizing. Test the lock for gripping-tenacity. Put a roll on the scales and weigh it. The more searching your investigation the greater the triumph of IDEAL fence. When finished, you will have indisputable evidence that IDEAL is the stiffest, strongest, heaviest, most rust-proof woven fence. If you are like the railways you will erect for permanency. That means an order for IDEAL fence. But first of all let us send you our free booklet, so you can see the different styles for hogs, cattle, etc.

HAVE WE AN AGENT IN YOUR LOCALITY?

If not, there is a splendid chance for someone to increase his income. IDEAL fence is an easy seller. Its weight, quality and strength are appreciated by every man who is looking for a permanent fence investment.

THE McGREGOR-BANWELL FENCE CO., LTD., WALKERVILLE, ONT.



So if you want to train a horse well do so by controlling the nerves. Use this law of reflexes to make the horse safe instead of dangerous. Smother out the foolish acts and put better ones in their place.

A word of command or assurance will do more to control a well trained horse than yanking or whipping. Let the horse know you have no fear of the street car or auto, of the shadow or stump. If you are afraid something will happen you may be sure the horse will share your fear.

More should be done to teach horses our language than to teach them signs. You may train a team to gee or haw, to go slow or stop by certain touches of the lines. But what if another driver does not know your signs. He tries the common word signs and fails to get control of the team.

One thing every horse should be taught, that is, to stop short at the word whoa. The safety of such a training is apparent. If anything goes wrong the team will stop, though frightened, when they hear the command whoa. The writer had his team trained to obey the word and not a pull on the lines. He threw the lines down and said whoa good and distinct. They stopped at once One time when shredding corn the wagon was full of ear corn and left at the crib alone. They got frightened and ran away. Down the hill and circling around they went pell mell with the big load pushing them on. The owner went to the hillside and called out whoa. They came to a halt as soon as they could stop the load. Not an ear was spilled, not a thing broken. It might have been very different had they not instinctively obeyed the command.

Use gentle and firm means of controling the horses without slashing around with whip or yanking on the lines so much. Speak only when you expect the order obeyed. Like children they soon learn to pay no heed to your commands if too freely given and too losely enforced.

Help for Weak Backs

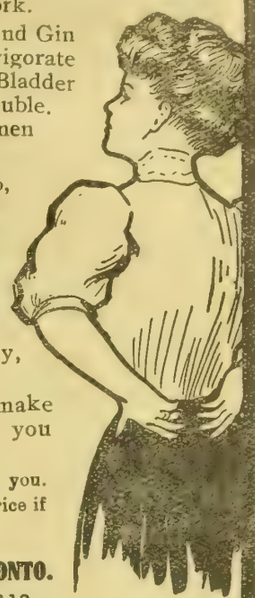
WOMEN WHO SUFFER

with Backache, or sharp, shooting pains through the hips and down the legs, should heed Nature's Warning. You have strained or weakened the Kidneys and they are calling on you for relief.

Probably you are delicate—you may be doing too much work—and yet you may not be in a position to give up doing your own cooking, washing and housework.

You can take Gin Pills, however. And Gin Pills will so heal and strengthen and invigorate the Kidneys, and soothe the irritated Bladder that there will be no sign of Kidney Trouble.

They have helped thousands of women—just as they helped Mrs. Dixon.



59 Hoskim Ave., West Toronto,
May 20th, 1909.

"After ten years of suffering from Kidney Disease, I believe I owe my life to Gin Pills. Before I began using Gin Pills, my back ached so much that I could not put on my own shoes, but after taking three boxes of Gin Pills, these troubles are all gone. It is a pleasure for me to add one more testimonial to the grand reputation of Gin Pills." MRS. MOLLIE DIXON.

We want to help you to be free of pain—to be an active, healthy, happy woman—just as much as you want to be well.

We know that Gin Pills will help you, take away the pain, and make your Kidneys well and strong. So sure are we of this that we will let you try Gin Pills and test them at our expense.

Just write us for a free sample. We will send it by return mail, without cost to you.

Gin Pills are sold by all dealers at 50c a box—6 for $2.50. Sent on receipt of price if your dealer does not have them.

POTASH MEANS PROFIT.

Experiment on TURNIPS

By Alex. Anderson, Baddeck, C. B., N. S.

Plot I.	Plot II.	Plot III
Unfertilized	Complete Fertilizer	Fertilized Without Potash
882 bus.	1722 bus.	1320 bus.

(Increase due to POTASH is 402 bus.)

The Majority of the readers of the MARITIME FARMER are now quite familiar with the word POTASH and some have stopped to consider its meaning. The PROGRESSIVE farmers have thoroughly tested it and found that it means PROFIT. Are you a Progressive Farmer? Have you used POTASH? POTASH is an essential ingredient of all Complete Fertilizers. If you are to be a successful farmer, you cannot afford to remain ignorant of the uses of Commercial Fertilizers. POTASH promotes maturity and improves both the quality and the quantity of the produce.

POTASH in the highly concentrated forms of

Muriate of Potash & Sulphate of Potash

may be obtained from all leading fertilizer dealers and seedsmen.

Write us for FREE copies of our publications, which include:—

"Fertilizers, their Nature and Use"
"The Potato Crop in Canada"
"Records of Fertilizer Experiments"
"The Farmers Companion" etc.

Maple Syrup and Sugar Making.

(Continued from page 269)

it is exposed to the air the darker it will be.

There is always a demand for a good article. The sugar season comes when when there is no other work demanding attention and the returns prove a good investment.

AMOS H. HANNAH,
Lakelands, N. S.

SUGAR MAKING NOT DESTROYING FORESTS.

I have been making maple sugar for ten years and tap about 1300 trees. I use a 7-16 bit for boring the holes and use No. 2 Grimm sap spouts. I gather with a horse and sled. Take into a tank house that is situated on a side hill higher up than the evaporator house. We strain the sap in the tank house and we also have a metal strainer in the feed tank. I use a Grimm arch and evaporator size 2 1-2 by 14, which well easily evaporate the sap from 2000 trees. The sap enters it at one end and comes out as syrup weighing about 13 pounds per gallon at the other end. I use a thermometer when making syrup so it is always of the same consistency. The syrup is strained through a white felt strainer which makes it very pure. I have kept 30 gallons of syrup in a tank for three days without showing any signs of settlings. When making sugar I use the old fashioned pot but I believe a sugaring arch would be much better. I test the sugar or wax with a snowball. I have taken $150.00 out of my grove of 1300 trees in 17 days. I use eight quart cans on the trees. I have found that nearly all beginners make the mistake of being doubtful re the advisability of buying a complete outfit. They need not hesitate to make the investment as the rig will pay for itself in one year if properly handled. Maple products bring in a nice lot of money at a season of the year when farmers cannot do much else. When a man is making sugar he is not performing the destructive practice of cutting away his lumber reserves. The trees will always be there to turn in useful dollars in future years.—WILLIAM COLBURN, Collingwood Corner, N. S.

FROM SAP TO SUGAR.

Maple sugar making is one of the most profitable undertakings on a farm that has a nice grove of maples.

In this locality the sugar season generally opens about the 20th of March. In tapping trees, the first operation is to bore a hole in each tree with a one-half inch auger and brace, such as is usually used by carpenters. The holes are made about three or four feet from the ground and of varying depths, according to the size of the trees. We usually bore about two inches deep in the larger trees. One man usually does the boring and is followed by another, who drives the spouts and hangs the cans on the trees by means of the wire hook on each spout. Either prior to or following this operation, the sap house and boiling room are put in order.

Sap does not run from the spouts in a steady stream, as many, who are not acquainted with the operation, suppose. The fastest I ever saw sap run was at the rate of one hundred and twenty drops per minute. The average run during the season would be in the vicinity of one drop per second. At the rate of one hundred and twenty drops per minute, it takes about three hours to fill a six quart can. When the cans are about half full, we commence to gather. From 1,000 trees we get about five thousand quarts of sap, which, when boiled, makes about thirty gallons of syrup or three hundred pounds of candy or about two hundred and fifty pounds of sugar.

For hauling the sap to the camp, we use a horse and sled, on which a large cask is fastened. The men carry large five gallon pails, into which they empty the smaller cans, and when the pails are full, they are emptied into the cask, which is drawn to the sap house as soon as it is filled, where it is emptied into a large tank, made for the purpose by the Grimm Manufacturing Co., of Montreal.

For boiling we use a Champion evaporator, which is made by the same company. For a grove of 1,000 trees, sugar makers usually requre a 3x12 foot evaporator which has three pans that cover the entire surface of the arch shaped store or firebox. The sap is run into

Cheap twine is not good economy

WE want every farmer in this country who uses our twines to go through the entire harvest season without one break in the field. We have set out to make that the standard test of all twines, and we believe that I H C twine comes nearer being such a grade than any other twine.

We have taken this matter the more seriously because we have stood back of the Sisal and Standard Sisal twines and the better grades of Manila ever since twine was made.

85 to 90 per cent of all the twine used is Sisal. It comes in a larger strand than the Manila twine; and as all binders are adjusted to use this twine, the result has been that the bigger, stronger twine has proved more satisfactory in actual mechanical binding. Its only equal is the higher grade, higher priced Manila, which also bears the I H C trade-mark.

These two twines represent the highest point of excellence thus far attained in binder twine. You get the best when you ask your dealer for an

I H C Brand of Sisal—Standard Sisal—Manila or Pure Manila

You get a twine that has made its record in millions of wheat fields.

One that is guaranteed of standard length and standard strength.

One that is smooth-running; that works at a steady tension, without kinking or tangling in the twine box, and consequently without any loss.

One that has the smallest percentage of breaks and that works well in the binder knotter. Good binder twine is as important to you during harvest as good weather. You cannot regulate the weather, but you can pick your twine. If you want to be positive that you will have no twine delays, choose your twine—Sisal 500-ft.; Standard (which is made from pure Sisal) 500-ft.; Manila 600-ft., or Pure Manila 650-ft.—from any of the following I H C brands:

Deering McCormick International

These brands mean time-insurance for you during harvest.

Let your local dealer know well in advance what your needs will be. The mills are working now. And if you want more interesting facts on binder twine, write the International Harvester Company of America, at nearest branch house for particulars.

CANADIAN BRANCHES: Brandon, Calgary, Edmonton, Hamilton, London, Montreal, Ottawa, Regina, Saskatoon, St. John, Winnipeg, Yorkton.

Take Your Pick of The Two Best

Fences Made

Whether you want a Machine-made or a Field-built Fence, you cannot find equals to the Frost.

We'll send you a free booklet, describing in detail the Frost Woven and the Frost Field-built Fences.

We have figured out the real reason why so many Wire Fences in Canada rust about 12 or 15 years sooner than they should.

And we have also figured out the only method of Wire-making to overcome this vital weakness.

So we now Make and Galvanize our own Wire. No other exclusive Fence Maker in Canada does that.

Two-thirds of the life of a Wire Fence depends upon its Galvanizing. Yet in the very face of this, nearly every Fence made in Canada is Galvanized too thinly.

One reason is because Zinc costs four times more than wire.

The other reason is that if most Fence were Galvanized thicker, that Galvanizing would peel off.

Because heavy Galvanizing here cannot adpermanently to greasy, scaly Wire. That scale is certain to chip off, and with it goes Mr. Galvanizing.

The Frost Fence is double Galvanized—not merely "coated." But it will not peel off. Because Frost Galvanizing is a part of the Wire itself.

You see, Frost Wire goes through three thorough "Cleansing" processes before it ever goes near a Galvanizing Furnace.

This positively removes every bit of grease and scale, and leaves the surface clean.

This double Galvanizing will endure the severest Canadian weather changes. It will fight off rust for 25 or 30 years.

The Frost Fence can be safely stretched tighter than any other Fence we know of.

Because Frost Wire is Annealed to the proper degree of temper. This makes it more elastic, and stronger, than any Fence in Canada.

But because the "Frost" degree of temper is a secret, no other Wire in Canada is tempered to withstand Canadian conditions.

That's why the Frost Fence is the strongest. We are anxious to prove this.

We are anxious to send you our free booklet on Fence, together with samples of the Frost Fence and Locks post paid.

This booklet tells all about Fence, and shows you how to buy the right kind for Canadian purposes. It's worth a lot of money to you. Send for it to-day.

The busiest and mightiest little thing that ever was made is Chamberlain's Stomach and Liver Tablets. They do the work whenever you require their aid. These tablets change weakness into strength, listlessness into energy, gloominess into joyousness Their action is so gentle one don't realize they have taken a purgative. Sold by all dealers.

the evaporator to the depth of about three-quarters of an inch. This depth is regulated by an automatic feeder which connects the supply tank with the front of the evaporator. As the sap boils it gradually works from one pan to another by a syphon system, until it reaches the back pan whre it reaches the syrup stage and from which it is drawn off and strained through a piece of felt or fine woolen cloth into a large pot with a capacity of thirty or more gallons. When the pot contains about twelve gallons it is hung over a fire and boiled for from thirty minutes to one hour to make it into candy or sugar. By dipping a snowball into the boiling liquid one soon learns to know when it has the proper consistency for good candy. The candy is then poured on the snow and it soon assumes a proper degree of hardness.

When sugar is wanted the boiling syrup is kept constantly stirred and when it reaches the proper stage it is poured into monlds and when cool it is ready for use.

ALONSO WILSON,
Stilesville, N. B.

PIONEER USERS OF EVAPORATORS.

The primitive method of tapping trees for sap was by cutting an oblique gash in the trunk of the tree, and under this gash another horizontal cut was made into which a wooden wedge was driven which conducted the dripping sap into the receptacles which were placed on the ground or on the snow. The sap was gathered to some central place where it was boiled in pots over an open fire. The pots were refilled as the sap evaporated. This process was continued until the whole was reeuced to a syrup. The principal equipment in those days was the iron pot which did slow but good service until the introduction of the Bellow's Falls Evaporator.

I bought th first evaporator that came to Nova Scotia and sugar makers from far and near came to see it. This make of evaporator was then generally used until the introduction of the Grimm evaporator which is superior in every respect.

According to our present practice we do not tap our trees until after the 20th of March. We bore holes with a 7-16 bit and use Grimms sprouts and 6, 8 or 10 quart cans which are hung on the spouts. For covers we took blocks to

(Continued on page 296)

Here's a fence that is strong and springy—remains taut and will not rust—

Peerless the Fence that saves expense

Put a Peerless fence around your farm and you'll get real service.

It will last through years of the hardest kind of use.

It will not rust—and rust is the greatest enemy of wire fencing.

It will not sag—when struck by a wagon or unruly animal it springs right back into position.

Our No. 9 Peerless fence is made of heavy English galvanized wire—all No. 9 gauge.

We tested all kinds of wire and found this English wire the best of all. No other wire we have tested is drawn and galvanized with such care and thoroughness.

For this reason Peerless Fence will not rust—the spelter never chips off. The fence will last for years.

You can test and know how good any fence is before you buy it. Write for our simple formula for testing wire. We'll also send samples of Peerless Fence to test.

We know there is no fence made that will last as long and give you as much satisfaction as the Peerless Fence. Write to-day for our simple test and samples.

FLORICULTURE.

All inquiries in this department will be answered by H. E. Goold, Florist, Sussex, N B

CORRESPONDENT asks whether an Easter Lily, that has three buds, about two inches long, could be brought to perfection by Easter Sunday. If so, what treatment would be required?

ANS.—I should say that an Easter Lily, now with buds two inches long, should be in bloom by the first of April, if kept in a warm, sunny place. You will probably have to keep them back. You can place it in the cellar for at least a week before Easter, without injury to the flowers, but keep well watered. One sure thing is, that with good treatment, a Lily will bloom just six weeks from the time the bud shows its form.

A ST. J. CORRESPONDENT writes: I have a Renet Geranium that I got in December, when a small slip. It has grown well until lately. Now it seems to be fading and the leaves turn yellow. What had I better do to save it? It is in a small pot, a little larger than a tea cup.

ANS.—The plant evidently wants repotting, badly. Do so, using a pot two sizes larger than the one in which it is now in. Water freely and give a sunny window. This is the season of growth of these plants and they will shortly bud and bloom profusely. Nothing is nicer for a house plant, for the next three months, than a Pelargenium or Renet Geranium. Some people say that they are troubled with lice on them, but it is no more trouble to keep them clean than any other plant. They should be kept in as small a pot as they can, without injury to the foliage.

A HARTLAND CORRESPONDENT writes: How shall I treat a Turk's Head Cactus to make it bloom? Are the thorns on it poisonous? Will a Century plant bloom oftener than a hundred years? What makes the leaves fall off a flowering Maple and how would you cut off a slip from it to make it grow and when?

ANS.—I should keep the Turk's Head Cactus dry and cool during the winter and thoroughly pot bound. About the first of April bring to sunlight and heat and give it plenty of water. It should bloom in July or August, if it is going to bloom this year. I have found them very uncertain plants, as regards bloom. I could not say as regards the poisonous character of the thorns, but this quality is ascribed to many varieties of Cacti. Century plants bloom in their native land at different ages and plants, under cultivation in tubs, have bloomed at the age of twenty years. I could not say where the trouble would be with the flowering Maple, without further information, as regards size, age and previous treatment. A new shoot, with three or four leaves, would be apt to root at this season of the year, but from the time it is placed in the earth, until rooted, it should never be allowed to become dry.

Dutch Hyacinths should be well rooted now and the early varieties ready to be brought to the light. Give them plenty of water, and if bleached from their dark quarters, do not give sunshine for a few days, until they have regained their green appearance. A moderate temperature gives better foliage and bloom than a high one and you will not be troubled with a weak flower stalk, necessitating tying up.

Help for Those Who Have Stomach Trouble.

After doctoring for about twelve years for a bad stomach trouble, and spending nearly five hundred dollars for medicine and doctors' fees, I purchased my wife one box of Chamberlain's Stomach and Liver Tablets, which did her so much good that she continued to use them and they have done her more good than all of the medicine I bought before—SAMUEL BOYER, Folsom, Iowa. This medicine is for sale by all dealers. Sample free.

REQUESTS FOR THE

Authentic STYLE BOOK

The first appearance of our beautiful new **Spring and Summer Catalogue** is bringing an avalanche of requests upon us. Had it appeared earlier it would not have been authoritative with regard to styles. It will show you the approved wearing apparel for 1910, as well as all the new novelties just brought back from Europe by our army of buyers. Your address on a post-card will bring it to you free of charge.

The N. B. Farmers' and Dairymen's Convention

(Continued from page 286.)

day. Mr. Hatheway's farm, near Fredericton, which was carrying cattle to full extent of its feeding capabilities, was an object lesson to the province. A farmer, who kept cows, pigs, etc., was independent of the potato market, because he could feed his surplus to his live stock and secure a profit that way.

C. F. Alward said the prosperity of Ontario was due to its live stock. Instead of buying fertilizers, he would buy feed and keep more live stock. Ninty per cent. of the potatoes used in Toronto were imported from Ontario, but lack of proper seed selection and rotation of crops was responsible for the deterioration in potato quality and should be remedied.

ON WEDNESDAY MORNING.

at the Arctic Rink, Dr. Standish of the Nova Scotia Agrtculture College gave an interesting lecture on "The Horse". He explained the various points by referring to the horses in the ring and farmers should study to acquaint themselves with the most common ailiments and characteristies of their most valuable asset in farming operationst—he horse.

"With all due respect to the inventors," said the doctor, "the horse as a motor power is never likely to be superceded."

"In the west, where the traction engine might be supposed to have found its best field of usefulness, horses were in greater demand than ever before. Even in Ontario the price of horses has increased $65 per head during the last year alone.

"The farmers could not adopt a more profitable industry than horse raising. No product yielded such large returns, or was so easy upon the soil. The food required for the horse exhausted the fertility of the soil less than that of any animal except the sheep.

The doctor declared that these provinces needed to give more attention to the breeding of draft horses, and horses adopted to agricultural purposes. In this age farming with slower motor agencies like oxen was not effective. The farmer needs better motor power—a problem that can be solved by finding and developing a type of horse useful for the advancement of agriculture.

The possibilities of horse farming were large. In all communities where horse raising was a recognized industry, property abounded to a greater extent than any other farming communities. Draft horses could be sold for $500 and upward in the west.

In judging the points of a horse, continued the doctor, it was necessary to regard the animal as a motor mechanism. There was a common opinion that the best type of draft horses was low set and heavy, but the fact was a good draft horse should have weight as well as thickness, because strength or traction power depended upon the length and thickness of the muscles. The horse with the shape of a bull dog, which was usually considered a desirable characteristic, was not the right

HAVE YOU READ IT ?

THE SPECIAL ARTICLE OF THE EDITOR entitled "FARM ACCOUNTS" which appeared on page 206 of February 8th issue of this journal? If you have read it YOU will be looking for US. If you haven't go to your paper rack, get down this particular copy, turn to page 206 and READ IT. It is excellent advise, but are you prepared to carry it out? If you are all well and good but if you are not then you NEED US.

WE TEACH YOU RIGHT AT YOUR HOME IN YOUR SPARE HOURS how to **KEEP BOOKS**—Our course in **ACCOUNTS** includes Bookkeeping, Arithmetic, Rapid Figuring, Business Letter Writing, Banking, Writing, Spelling. It is exactly suited to the NEEDS OF THE FARMER.

It is just as important that the farmer keep books as the merchant. If you do not wish to learn yourself have one of the boys or girls LEARN HOW.

REMEMBER—We give you a regular bnsiness college training right at home for less than half the cost.

type. A bull dog was physically constituted to pull back and not to draw ahead. The efficient horse has a good volume of shoulder arching over its fore-legs, which should be straight and not too far apart.

Strong fore-shoulders were not enough; in order to have good drawing power the horse must have strong hind-quarters and a good sized body. Consolation of parts was the main thing; abnormal or disproportionate developments of any part might be considered a sign that the horse had been abused in some way and was past its usefulness.

He declared that a trained eye could tell a horse by merely looking at him. A horses head always gives a fair indication of its character; the shape and action of the ears, being depended upon the condition of its nervous energy, and tells the trained horseman a great many things.

ON WEDNESDAY AFTERNOON.

Mr. Good, manager of the Dominion Exhibion, addressed the meeting and urged every one present to put their best foot forward and educate the outside world by helping to make the exhibition a successful demonstration of Canada in general and of of New Brunswick in particular.

OFFICERS FOR ENSUING YEAR.

President, S. B. Hatheway, Fredericton; Vice-President, Walter Stevens, Charlotte Co.; Corresponding Secretary, Geo. E Fisher, Chatham, N. B.; Recording Secretary, Bliss M. Fawcett, Sackville; Treasurer, H. H. Smith, Blissville, Sunbury Co.

County Vice-Presidents. York, Wm. H. Moore, Scotch Lake; Sunbury, Henry Wilmot, Oromocto; Queens, Isaac Baird, Chapman; Kings, Charles Peters, Elmhurst; St. John, Alex. F. Johnson, Upper Loch Lomond; Albert, C. S. Bishop, Hillsboro; Westmorland, Fred. C. Violette; Victoria, S. B. Wright, Long Settlement; Restigouche, Hon. Chas. LaBillois, Dalhousie.

RESOLUTIONS.

Whereas it has been clearly proven and substantiated by facts and figures, that the average production of Dairy stock as kept on the farms of this Province at the present time, shows no profitable return to the farmer, for the feed consumed and labor expended, and Whereas:—It is almost absolutely necessary that every farmer must keep some Dairy cattle, in order to keep up the fertility of the soil on his farm, and,

* * *

Whereas:—The market price has already reached about as high an average for this class of product as he can hope for, and as competition will allow, and yet cannot reach a profit production, on account of the individuals and the extreme high cost of feed and labor,

* * *

Therefore Resolved:—That it is the opinion of this meeting that the only remedy lies in the increasing of the production of the individual without the same corresponding increase in cost to produce.

Wear Ruthstein's STEEL SHOES

Absolute Protection Against
Colds Rheumatism, Stiffness, Discomfort
No More Blistered, Aching Feet
GOOD-BYE to CORNS and BUNIONS!

Pat'd Dec. 4 1906 Others pending

FREE

Write for book, "The Sole of Steel," or order a pair of Steel Shoes on blank

Off With the Old Rough, Wrinkled Leathers! On with the Comfortable STEEL SHOES!

There's more good wear in one pair of steel Shoes than in three to six pairs of the best All Leather Shoes. And **comfort!** The very first time you slip your feet into Steel Shoes they feel fine. They need no "breaking in." And the longer you wear **Steel Shoes** the better you like them, for they keep your feet warm, dry and comfortable—though you work in mud or slush up to your shoe tops. Steel Shoes are shaped to fit the foot, and the rigid steel bottoms and sides force them to keep their shape. No warping, no twisting, no leaking possible. **They are as light as any ordinary work shoe.**

How Our 1910 Model Steel Shoes Are Made. The Wonderful Steel Bottoms.

Steel Shoes solve the problem of the Perfect Work Shoe for all time to come.

The **soles** of Steel Shoes and an inch above the soles are stamped out of a special light, thin, **rust-resisting steel**. One piece of seamless steel from toe to heel. As a further protection from wear, and a means of giving a firm foothold, the bottoms are studded with adjustable steel rivets.

The adjustable steel rivets of the 1910 model Steel Shoes add the finishing touch of perfection. Practically all the wear comes on these steel rivets. When steel rivets wear down you can instantly replace them with new rivets. And the rivets at the tip of toe and ball of foot are the only ones that **wear**. Steel Shoes never go to the Repair Shop, for there's nothing to wear but the rivets. And the Steel Shoes **shed Mud** almost as easily as they **shed water**. The cost is only 30 cents for 50 extra steel rivets. No other repairs are ever needed.

The uppers are made of the very best quality of pliable waterproof leather, and firmly **riveted to soles**. There is greater strength and longer service and more foot comfort in Steel Shoes than in any other working shoes in existence. It's in the **steel** and the pliable **leather,** and the way that they are **put together**.

Throw Away Rubber Boots, Felt Boots and "Arctics!"

Rubber or felt boots heat the feet and make them sweaty and tender. Nothing more uncomfortable or more harmful to the feet. One pair of Steel Shoes will outlast at least three pairs of felt or rubber boots.

A man who wears Steel Shoes doesn't have to own three different styles of working shoes. No arctics or felt boots necessary.

Secret of Steel Shoe Elasticity

Steel Shoes have thick, springy Hair Cushion Insoles, which are easily removable for cleansing and airing. They absorb perspiration and foot odurs—absorb the jar and shock when you walk on hard or stony ground. They fleep your feet free from callouses, blisters and soreness.

Steel Shoes Save Doctor Bills

Wear Steel Shoes and you need not suffer from Colds, Rheumatism, Neuralgia, Lumbago Stiffness of the Joints and other troubles and discomforts caused by cold, wet feet. Keep your feet always warm, dry and comfortable in Steel Shoes. They protect your health and save doctor bills, while adding to your comfort.

Low Prices on Steel Shoes

Sizes. 5 to 12. 9 inches, 12 inches and 16 inches high.

Steel Shoes, 6 inches high, $2.50 a pair · better grade of leather, $3.00 a pair · extra grade of leather, black or tan color, $3.50 a pair.

Steel Shoes, 9 inches high, $4 a pair · extra grade of leather black or tan color, $5 a pair

Steel Shoes, 12 inches high, $5.00 a pair; extra grade of leather black or tan color, $6 a pair.

Steel Shoes, 16 inches high, $6 a pair; extra grade of leather, black or tan color, $7 a pair.

One Pair Will Outwear 3 to 6 Pairs of Leather Shoes

The comfort of Steel Shoes is remaakable. Their economy is simply astounding! Practically all the wear comes on the rivets in the **bottoms,** and the rivets can be replaced very easily. Don't sweat your feet in rubber boots or torture them in rough hard, twisted, shapeless leather shoes. Order a pair of Steel Shoes today. Sizes 5 to 12.

Order Steel Shoes Today!

We strongly recommend the 6-inch high, at $3.50 a pair, or 9 inches, at $5, as they give best satisfaction for general service.

In ordering, **state size shoe you wear.** Enclose $3.50 a pair for 6 inch high, and the best and most comfortable working shoes you ever wore will promptly be shipped to you. Your money refunded if Steel Shoes are not exactly as represented when you see them. Send today!

It Won't Rub Off

VISIT the finest hotels, the costliest homes, and you will find Alabastined walls. Alabastine is used in these palatial places, not because it is the most expensive wall decoration, but because it is the most artistic and effective. An Alabastined wall is a delight to the eye—so soft, velvety and beautiful. It will not rub off or fade. Alabastine is cement, and hardens with age. Its beauty is permanent. It is the most sanitary and inexpensive wall coating known. Alabastined walls are now the general vogue, in cottage and mansion alike. Wall Paper is out of fashion. The sales of Alabastine in Canada *have doubled in two years.*

CHURCH'S COLD WATER Alabastine

MARKET REVIEW AND FORECAST.

GRAINS.—Oats is about the only grain grown here for sale. There's a little wheat sold in some sections but mostly for seeding. This will bring about $1.25 per bushel. Oats are slightly lower, as shippers seem to think that there is not likely to be much money made on them at prices that have been paid lately. We quote to-day, black, 43c; white; 41c and 42c.

Feed stuffs are almost all imported and sold on retail basis, and the same applies to seeds. There is no fruit on the market now, except imported stock, with the exception of a few apples, and as these are in small quantities and each farmer makes his own prices, it is impossible to quote a price that would be of any use.

The local demand for potatoes has been fairly well supplied, and as there is no demand for shipping, it is simply a question of what the farmer can get for them when he brings in a load, and while a limited quantity can be sold each week to the retail stores, a few hundred bushels extra would glut the market and prices would be much lower; but at present there is only a very limited supply of all kinds of farm produce.

Hay is offering in fair supply and shippers are paying from $10 00 to $11 00 p r ton for pressed stock of good quality. There is considerable demand for hay for export at present and there is some going forward by almost every trip of the boats.

Dressed meats, with exception of pork, are about as last reported. Pork is now selling at 11c per pound and supplies not sufficient for the demand.

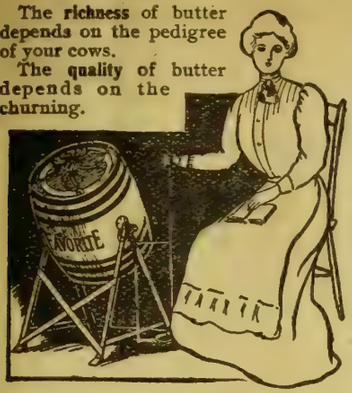
Dealers in horses report good demand and prospects of high prices this spring. Quite a few are changing hands and some fairly large shipments have crossed to the mainland.

If you have pure bred stock of any ind, for sale, it will pay you to advertise in these columns.

BETTER PRICES FOR YOUR BUTTER

The richness of butter depends on the pedigree of your cows.

The quality of butter depends on the churning.



The "FAVORITE" CHURN means a deliciously smooth butter that will bring the "top" price. And the "FAVORITE" will get every particle of butter fat out of the cream. Hand lever and foot tread—8 sizes.

"Puritan" Washer washes a tubful of clothes in five minutes.

Write us if your dealer does not handle the "FAVORITE" CHURN and "PURITAN" WASHING MACHINE. 71

E. A. SCHOFIELD,
Hampton N. B.

St. John Poultry Show.

The last poultry show of the season in the Maritime Provinces was held in St. John February 23rd, 24th and 25th. The show on the whole was an improvement over last years show. For a city like St. John that contains a lot of fanciers of poultry the exhibit was a disappointment. Sussex and Moncton carried off the honors in most all classes. Mr. Geo. Robertson of Ottawa, placed the awards and his work was all that could be desired for fair, impartial and painstaking work. Mr. Robertson always makes friends wherever he goes. He has a genial smile that never fades away.

The location of the show, the cramped quarters and the piling up of tier on tier of coops of all kinds of construction very much handicaped the show.

One exhibit of Brown P. Rocks was worthy of mention. In classes where there was competition and quality the Leghorn easily took the lead, both brown and white. Black Minorcas was popular too, some nice reds came out and looked good. Wyandotte class had some good stuff in white, golden and silver, Orpingtons, small class in Buff and wtite, Bantams and Pigeons fair. A lone pair of ducks represented the great water fowl, and one pair of turkeys were all that faced the judge.

Olds Engines

Send for our new catalogue.

YOU can learn engine facts you really should know before deciding on your gasoline engine.

The catalogue proves why it is good judgment to own an Olds engine and be sure you have the most practical, most economical, most durable rather than to get a cheap engine and take chances on losing all it costs you.

Besides the highest quality of workmanship and material the Olds Engine has many special and exclusive features. Each one means a great deal to you.

1. Removable water jacket—may save you $100 00.
2. Seager Patent Mixer has not a moving part to wear or get out of order.
3. No gasoline pump of any kind to leak or be primed.
4. Cylinders and Pistons of special metal—ground to exact size.
5. Cylinder and head one piece—water cannot enter cylinder.
6. Safety Governor—positively prevents engine's running away.
7. Absolute guarantee—NO REPAIR BILLS for the FIRST YEAR.

Tell me what you need an engine for and I will assist in selecting the proper size. Write the nearest office.

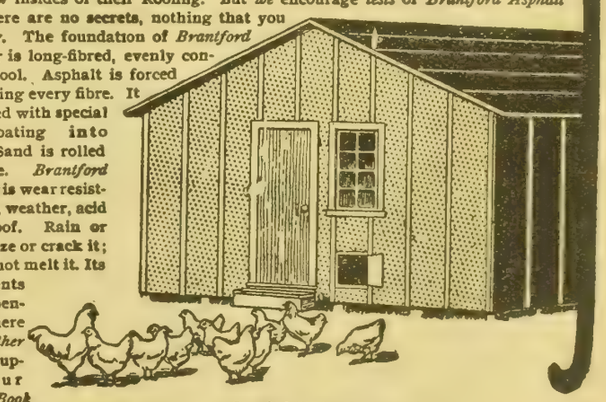
HOW THE VERY LIFE IS EATEN OUT OF MOST ROOFING.

Not two Roofings in a hundred can withstand the slow, secret, dangerous attacks of acid—a deadly enemy to most Roofing. Because few Roofing makers care to spend the extra money necessary to make such Roofing. Acids are caused by green or damp hay, or the cattle in your sheds. These cattle sweat, producing vapor which contains acids and gases destructive to most Roofing. These enemies attack the underside—which is weak in most Roofing—and does its ruinous work where you cannot see it, till too late. The first you know that it is not what the fellow claimed is the startling sight of a million "pin-holes" all over. Examine the Roofing of your barn *now*—you'll likely find this defect. This is caused by weak insides, which *should* be the strongest part, but the portion hopelessly slighted by most makers because *you* won't test it. Nearly all Roofing, except *Brantford*, has as a foundation wood pulp, jute, cotton cloth, etc., which cannot absorb sufficiently. It possesses nothing to hold it together, and is coated with cheapest covering obtainable: animal fats, greases, oils, tar, or some other refuse. These dangerous coatings are so weak that they are readily at the mercy of the acids. And the foundation! It has no barrier! It has already wilted. No amount of supposedly preventatives can save this Roofing. It is bound to go to pieces sooner or later and just when you least expect. Most Roofing makers will try to avoid the issue if asked to show insides of their Roofing. But *we* encourage *tests* of *Brantford Asphalt Roofing*. There are no secrets, nothing that you shouldn't know. The foundation of *Brantford Asphalt Roofing* is long-fibred, evenly condensed pure wool. Asphalt is forced into wool, soaking every fibre. It is heavily coated with special waterproof coating into which Silicia Sand is rolled under pressure. *Brantford Asphalt Roofing* is wear resisting, fire, water, weather, acid and smoke-proof. Rain or snow can't freeze or crack it; heat of sun cannot melt it. Its pliability prevents cracking or opening at seams. There are many *other Brantford* superiorities. Our Big *Roofing Book* with *Brantford* samples is *free*. Write us or your dealer *now*.

Brantford Roofing



Brantford Roofing Co., Limited, Brantford, Canada.

When writing advertisers please mention the FARMER.

1 Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only one cent a word, you can advertise anything you wish to buy, sell or exchange. The address must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issue. No black faced type or display of any kind will be allowed under this head, thus making a small ad, as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, Sussex, N. B.

Homestead Farm

Has one of Canada's leading Holstein Herds. Have won more prize money in the last five years than all other Maritime Holstein herds combined. Have more officially tested cows than any other herd in the Maritime Provinces and more high records. 6 cows over 20 lbs. butter in one week and some of those close to 24 lbs. Our champion cow at the Winter Fair has no official record while the fourth prize cow has a 23 lb. record.

We have a lot of young stuff to sell of the very best breeding. You can't afford to miss this. A few cows cheap. We also offer a few ewes (not bred) lambs of 1909.

Our Clydesdales are in splendid shape, and we can part with the two foals of '09. No. 1 Stallion.—Dam, Soubrette, Imp., by Labori, champion at Halifax, 1909; 1st prize 1908. No. 2 Filly—Dam, Pink Rose, Imp., by Up to Time, 2nd at Halifax 1908; 3rd, 1909. Both are sired by Handy Andy, Imported by Marmion out of a Baron's Pride mare. Write or come and see us.

LOGAN BROTHERS, - - Amherst Point, N. S.

BELLEVUE STOCK FARM.

Ayrshire and Shorthorn Cattle.

Bellevue won female championship and all of the herd prizes in Shorthorns, with every animal our own breeding. In Ayrshires we have held the male championship for two years. Write for prices or call and see us. We breed our winners and sell them too.

C. A. ARCHIBALD, Proprietor, - - TRURO, N. S.

Wish-Ton-Wish Stock Farm.

HOLSTEIN CATTLE,

We are offering two young bulls from six weeks to two months, and one fit for service by late summer or early fall.

HARDING BROS., Props.,
Welsford, Queens Co., N. B.

Do you want a bull from a high testing dam? The great grand dam of the bull we are offering was the noted Sadie Vale Concordia and the eight nearest related females of his sire had an average record of twenty-seven pounds butter in seven days. This bull was sweepstakes bull calf at the Fredericton Exhibition in 1907

For 10 years I have put away the light milkers and am only now breeding from heavy producers.

Satisfaction guaranteed.

Bliss M. Fawcett,
Sackville, - - N. B.

Barred P. Rocks.

Our claim to be the foremost breeders of this variety in Eastern Canada has been established by ten years of the keenest competition in the show ring with this class of birds. Our latest triumph at the Amherst Fair, winning, for the second time, the silver trophy for the best cock, hen, cockerel and pullet, of any variety, and the specials for the best shaped and the best colored bird of this kind, seals the fact. First cockerel, first pullet, first hen and second cock at Amherst means quality now. First cockerel, first hen, first pen and second cock at Halifax, all in one year, endorses it. Stock and eggs for sale. Satisfied patrons our aim.

CRAIG BROS., - Amherst, N. S.

Farmers, Attention!

We have in stock at present and for sale a few Ayrshire and Guernsey Fresh Milk Cows, young—also some Heifers of both breeds, from one month to two years old. We have likewise decided to dispose of our flock of Shropshire Ewes, Rams and Lambs. All the above are first class stock and registered in the highest registration in their respective classes. Prices right. Call on us or write. Would be pleased to meet prospective buyers, either at Bloomfield Farm or at the coming local exhibition—Colchester and East Hants—or the Provincial Exhibition.

John McDonald & Son,
Bloomfield Farm, - Shubenacadie, N. S.

Maple Grove Ayrshires

I have for immediate sale several young Bulls fit for service, many of them prize winners at the recent exhibitions. Correspondence solicited. Prices reasonable.
